The Wave

1900

An Illustrated Weekly

This Paper not to be taken from the Library.

122600

VOL. XX. No. 28 SAN FRANCISCO — JANUARY 6, 1900 — SEATTLE PRICE 10 CENTS

MINING ON KLONDIKE CREEKS.

1 Trying a Pan off the Dump of No. 13. 2. Bench on Hillside Mine. 3. Sluicing Winter Dumps, Bonanza. 4. Washing Gold in Sluice Boxes.

THE WAVE

Is published every Saturday at The Wave Building, 24 Montgomery street, San Francisco, Cal., and Colman Building, Seattle, Wash.

Entered at the Post Office as second-class matter.

Subscription: Per year, $3.00; six months, $1.75; three months, $1.00. Foreign subscription (countries in al union) $1 per year additional. Sample copies free.

The trade is supplied by the San Francisco News Company 342 Geary street; east of the Rocky Mountains by the American News Company, New York.

The Wave is kept on file and is for sale at Brentano's, 17 Avenue de l'Opera, Paris, France; 31 Union Square, New York City; 1015 Pennsylvania Avenue, Washington, D. C.; and 206 Wabash Avenue, Chicago.

For advertising rates and on all other matters pertaining to city business, address The Wave, 24 Montgomery street, San Francisco.

All business matters pertaining to the Northwest should be addressed to Trevor Corry, Colman Building, Seattle, Wash.

EVENTS CURRENT.

Progress of the Boer War.

There is comparative quiet along the front in Natal. Buller before Colenso, Methuen at Modder River, and Gatacre on the borders of the Orange River Country are waiting for reinforcements from home. Meanwhile the beleaguered garrisons would seem to be in tighter straits than ever before. Mafeking holds out bravely, but there is a general feeling that Ladysmith and Kimberley are in a far worse way than the War Office at London is willing to admit. It is known that the Boers have renewed their bombardment of Ladysmith. Last week a shell burst among a party of officers at mess, killing one and wounding seven. This alone would indicate how close the lines are being drawn. It is even reported that General White is dismounting his artillery with the intention of making a desperate sortie. While this is probably untrue, the very existence of such a rumor proves that his case is considered desperate, for an attempt to cut out in that manner would be a forlorn hope. Outside, General Buller, with thirty thousand men, can not make his way in, and it is therefore unlikely that anything other than a last chance would tempt White to try it with a force of less than ten thousand. Of course such estimates are merely guess-work, as are all other attempts to forecast the course of events in this, the most strictly censored of modern wars. General Methuen remains passive in front of Modder River. So, too, Gatacre, for all that anyone knows to the contrary, is resting in camp. The only move of the week was a small British victory, an attack on Colesburg, once an important strategic point, but now of less significance in view of the rapid change in events. This was accomplished by General French in a brilliant advance, in which he lost but few men. This success, small as it was, had the effect of somewhat restoring confidence in London. On the eve of his departure for the front, General Kitchener of Khartoum spoke very bluntly on the situation and its probable outcome. He says that the whole affair has been bungled, that his first task must be to retrieve the blunders of his predecessors, and that it will take a year's time and one hundred and fifty thousand men to conquer the two republics. Indeed, there is a general feeling in London that there must be a day of reckoning when the war is over. The responsibility for the stupid and disastrous plan of campaign seems to lie between General Wolesley, General Buller, and Lord Lansdowne of the War Office, with the chances most against the last-mentioned.

International Complications of the British-Boer War.

The South African affair begins to assume international aspects. Practically the whole Caucasian world, except the colonies and the United States, is in sympathy with the Boers, not so much from the merits of the case as from hatred of England and fear of her sea power. While Germany is officially friendly, the popular feeling is all pro-Boer. In view of this fact, the British authorities made what must be regarded as a very stupid blunder in seizing two ship-loads of American flour consigned to Lorenzo Marque. The international law on this point is not quite clear, and it would require the judgment of a court to straighten out the matter, but the inexpediency of the seizure is undoubted. England is isolated from food supplies; economists believe that in the event of a blockade of the British coast, the supply of bread-stuffs in her granaries would not last three weeks. Once let her establish the precedent that a neutral nation's goods consigned to one belligerent party are contraband to the other, and she is cut off from her strongest source of supply in the event of a general European war. Moreover, the British need our friendship as never before. The London press seems to feel this, and the editorial utterances regarding this diplomatic slip have been very conciliatory. Even the *Saturday Review*, which has been a strong opponent of an Anglo-American agreement, is apologetic and friendly at this juncture. Directly after this first *faux pas*, the Naval Patrol on the South African coast perpetrated another seizure which may lead to future complications. The German steamer *Bundsrath* was overhauled by a British cruiser under the pretext that she had recruits for the Boers on board. This action is less open to criticism than the capture of the flour-ships, but it is still unwise and on a par with the tactics of the British generals who, disdaining tactics, strike the Boers in front as though they were savages. The Delagoa Bay problem is a vexed one. England wants that territory. It affords the best possible base for operations against Transvaal. An army might be landed there and could advance by the easiest route possible into the very heart of the enemy's territory. But it is pretty certain that the Portuguese will not sell. The continual passage of arms and recruits for the Boers through the bay gives a pretext for seizure, but the act would give an excuse to the hostile Latin countries of Europe, and British statesmen hesitate to take the risk.

The Philippine War.

The Philippine insurrection resembles nothing as much as one of those mysterious and unquenchable fires which break out, now and then, in the saw-dust heaps of the great northern saw-mills. Drenched with water, seemingly quenched in one spot, it suddenly appears in another; when it is extinguished there, it is odds that it has burst out in the first place again. It seems to smoulder under the surface, making no sign until a jet of flame forces its way upward to the top, and only a long and thorough drenching of the whole heap can finally quench it. Just so with the war in Luzon. The American army strikes what seems to be the crushing blow; the insurgent army melts away; the country appears to be pacified. Then, in some other point which was regarded as safe and friendly, the opposition spurts out again and the army has its work to do over. Three weeks ago, the crushing blows of Lawton and Young seemed to have ended organized opposition for good and all. The main body of the native army was scattered, the leader and his advisers were driven into hiding. Then, the trouble broke out again in provinces formerly held safe, and much of the work has now to be done over again. Only by thoroughly beating the natives on all parts of the islands, and beating them over and over again, can we hope to put an end to the insurrection. They are a curious people, deceitful, mobile and yet stubborn; paradoxical as it seems, we must first overrun them by force and then win them by kindness. Otis seems to be going at the work systematically; perhaps, after all that has been said about him, he is well suited for the task now to hand. When there was swift, hard, dashing work to be done, he lost himself in a maze of detail and let the chance slip by; now that the whole thing has become a question of system, he is better fitted for the command. The revolution will burst out in little spurts, like the one just succeeding the death of Lawton, but each spurt may be expected to be fainter than the last, until the war degenerates into a guerilla struggle. The most surprising event of the week has been the discovery of an uprising in Manila. It appears that there was a plot to create a disturbance at General Lawton's funeral on December 30. That day, Recarte, an insurgent leader, was in Manila, having taken refuge from his pursuers there. Failing utterly in an attempt at a general uprising, he concocted a plan to make trouble for the Americans at the funeral, when the main body of American troops would be drawn away from the guard. The plan was to throw a dynamite bomb into the midst of the foreign consuls, marching in the procession, and thus involve the United States in international complications. Preparations were made, but the plan failed, owing to the fact that the funeral did not, through a change in plans, pass the building on which the dynamiters were stationed. Next day the American patrol came upon the evidences of the plot while they were searching for Recarte. Trouble is brewing in the city, but it is not thought that there will be any open uprising, as the natives fear the direct proximity of the American troops.

Porto Rico and the Tariff.

No section of the President's recent message to Congress attracted so much attention throughout the country as the one having reference to the removal of customs duties from Porto Rican products. The change advocated virtually makes the island commercially an integral part of the country. That this must come sooner or later there has never been much doubt. Porto Rico is, or will be when Congress completes action in the matter, as much a territory of this country as Arizona. Therefore when the New York *Press* came out editorially and called this "the greatest blow ever struck at the protective tariff system," there arose a protest from the press of the entire country. Republican organs show a disposition to support the measure because it is the policy of the administration, and democratic journals, most of them devoted to free trade, are naturally strong in its favor. The only dissenters are the independent organs which are against the President on one hand and not committed to free trade on the other. Seldom has the opinion of a Chief Executive been so strongly endorsed by both sides. The great objection to the measure is the argument that Porto Rican sugar and tobacco, admitted duty free, would lower prices and injure our farmers. The advocates of the measure admit that this is true, but add that the American farmer will be benefited in the long run. Where we take one dollar's worth of products, in the shape of tobacco or sugar, from Porto Rico, we send ten dollars' worth in flour, corn meal, etc. Furthermore, it is shown that the markets of Spain and Cuba were open to Porto Ricans under the old regime; if we refuse them free trade in our markets, we give them worse treatment than the Spaniards.

Congress and Our Territorial Dependencies.

It goes without saying that the Fifty-Sixth Congress will be concerned mainly with problems arising from our new dependencies. The question of keeping the Philippines and of deciding upon a policy with regard to Cuba must, of course, be settled first, but this will hardly be the most difficult task. The question of the form of government to be adopted in each individual case is likely to be much more perplexing. Even Hawaii, which came in by request of the inhabitants, seems fated to give us trouble on that score. Senator Cullom's plan for admitting these islands as a regular territory of the United States was favored by most of the Republicans las session. Now, it seems that the administration party is divided on the question. Democrats will, of course, do all in their power to stir up the dissension. The Philippine question is still clouded beyond all hope of rapid solution, nor is the Cuban situation much more clear. Probably, bills providing for the annexation of both these territories will start the discussion. The disposal of Porto Rico is decidedly easier than that of the other new dependencies, but even in this case a warm controversy has been started over tariff rates. But outside of this perplexity over territories without our borders, the Fifty-Sixth Congress is destined to have trouble with three old territories which will knock for admission this year, viz: Oklahoma, New Mexico and Arizona. There is great uncertainty regarding their chances. All three have the required population, but Congress is sure to be wary about admitting new states before a presidential election. Arizona is in least danger, but as all have joined to fight the issue, they are most likely to stand or fall together. The general opinion is that if these bills go through at all it will be accomplished at the second session, next year.

The Chicago Drainage Canal.

One of the great engineering feats of the century was completed January 2d, at Chicago, when the great drainage canal, destined to dispose of the sewage of the city of Chicago and for use as a connecting waterway between the Great Lakes and the Mississippi, was completed and thrown open for use. This great channel, thirty miles long, has been under construction for seven years and has cost upwards of $30,000,000. It was at first designed solely as a main sewer for the drainage of the city's refuse, but the authorities of Chicago and the State of Illinois decided that it ought to combine the functions of a sewer and a waterway, and insisted that the work be done in such a manner as to render it permanent. This more than doubled the cost, but the expenditure was a wise one. The channel begins on the Chicago river, at a point near the stock yards, and reaches the Illinois river at Lockport. The new departure will change the point of disposal for Chicago's sewage. It has formerly been run through the Chicago river into Lake Michigan, but the increase brought about by the growth of the city and the construction of a new system of sewers threatened to clog that stream and rendered the city water-front unsanitary. Realizing this, the municipal engineers provided for a stream running through the Illinois river into the Mississippi and strong enough to carry the refuse matter to a point where the action of air and water would destroy its poisonous quality. At full capacity, the canal will run 500,000 cubic feet of water per minute, yet this great flow may be checked at any time by the action of gates, sluices and traps. The work of draining was begun as soon as the last cut was made, but it will be some time before ships will be allowed to make use of the channel. The control of this great scheme is peculiar. It is not in the hands of the city of Chicago, but is directed by the Sanitary District, a corporation including a large part of the city of Chicago and many of its suburbs—a wheel within a wheel, like the Clyde Company of Glasgow. The controlling officers of this company are chosen by a popular election, entirely separate from the regular municipal elections. They have the power to levy and collect taxes up to one-half of one per cent. of the district's assessed valuation; this power of taxation has lately been increased. In this way, a part of the indebtedness incurred has already been paid, while the rest is secured by bonds running over a period of from one to twenty years.

The Year's Work at the Lick Observatory.

In a late issue of the San Francisco *Examiner*, Director James E. Keeler summarizes the year's progress at the Lick Observatory. The work is progressing very quietly. Much of it is specialized and expert investigation, the uses of which would not be understood by the uninformed layman. The big telescope has been used principally for the measurement of star motion with the help of the spectroscope and for celestial photography. The most remarkable discovery made at the observatory this year was the establishment of the fact that the Pole Star is triple. In the same way, some fourteen or fifteen other stars have been shown to be compound, and about ninety to be double. The Crossly reflector for nebular photography is now in good working order. During the past year, about seventy exposures have been made. While this is not a large number, it must be remembered that each exposure takes from three to four hours. One result of this work has been a great increase in the number of known nebulae. Thirty-one were discovered on a single plate. So greatly has the number been increased, that Mr. Keeler estimates the total number in the sky at 120,000, whereas our present catalogues show only 8,000. More important than this has been gain of further knowledge about the nebulae already known. Already this process has shown that the great majority of nebulae are spirals, a form hitherto regarded as an exception, rather than a rule. Mr. Perrine, the "comet man" of the observatory, has found only three this year, a number rather below the average. Attention is called to the fact that the force employed in spectroscopic work is inadequate. More assistants are needed.

Latest Developments in Physical Science.

Professor John Trowbridge of Harvard University contributes to the new *International Monthly* a paper on the progress of physical science in the last two years, an instructive summary of the definite and practical results accomplished during that period. In a general way, there have been no great and startling discoveries like that of the X-ray, in the years 1898–9. Wireless telegraphy, owing partly to the advertising it received at the time of the International Yacht Race, has attracted the most attention. The experiments have not been nearly so successful as the public has been led to imagine. It has been demonstrated that messages may be sent a distance of some thirty miles, and apparently through all obstacles. However, it is not yet possible to send messages in a definite direction—to individualize the calls. Every one within the radius may obtain the wireless messages. No practical use can be made until the call is individualized. The study of this subject has led to the discovery of new data in regard to the length

of electric waves. There has never been any practical means of producing rapid electric sparks—a necessity in wireless telegraphy. The invention of the Wehnelt apparatus promises to accomplish this, although the method still requires improvement. Experiment with the X-rays has been continnous, but has led to no definite result. Although these rays are being used more and more in dentistry and surgery, their range of application is not increased. The thicker parts of the human body still baffle them. The most surprising discovery in this section is the fact that various substances, such as the salts of uranium and compound of pitch blend have the same property that Crookes' tubes have of giving out the rays. In time it may come to pass that powders made from these substances will supplant the costly apparatus now in use. Much interest has been excited by the production of liquid air in commercial quantities. However, newspapers to the contrary notwithstanding, liquid air as a power is not yet harnessed to much practical advantage. Spectrum analysis continues to attract investigators. By this means a new metal, victorium, has been discovered. Certain results obtained lead to the hope that color photography is at hand. The rise in the price of copper has turned attention to the use of aluminum as a means of conducting electricity, and it is now being employed on a large scale. At Niagara Falls aluminum conductors connect the power-house and the works. For the same weight, the conductivity of aluminum is more than double that of copper. The great barriers to the use of this substance are its liability to destruction by the action of liquids and the impossibility of soldering bard and wires of the metal. There has been a steady growth in the practical use of electricity. The alternating current, much more economical than the direct, is in increasing use throughout the country. Close study of this subject is sure to yield even greater results. In purely theoretical physics, the most striking hypothesis is one advanced by Prof. J. J. Thomson concerning the size of atoms. He believes, from his experiments with the X-ray, that certain substances smaller than atoms exist.

Editorial Comment

Briton and Boer.

A BOOK that pretended to present an impartial analysis of the South African question, and yet maintained a ratio of one to six against one of the parties to the contest, might be thought misleading. *Briton and Boer*, (six parts Boer to one part Briton), just out from the Harper's, comes very near to being such a book. It comprises papers by Hon. James Bryce, Sydney Brooks, Andrew Carnegie, May Nordau, and others, only one of which in any measure is a defense of Great Britain. Some of the writers are anti-British on principle. One or two are French. One of them is himself a Boer. Yet the facts are fairly well agreed upon. The reader may ignore the partisanship, if he can, and make his own deductions.

The history of South Africa is too complicated to be gone into except at length. Briefly, Cape Town was settled by the Dutch in 1652, and was taken by England during the great war against Napoleon in 1806, the compensation to the Dutch being $30,000,000. Since then the influx of English settlers has been less than the natural increase of the Dutch population, so that in Cape Colony the Dutch today outnumber the English, and the Dutch language, outside of the towns, prevails. In 1836 occurred the first emigration of Dutch cattlemen from Cape Colony into the interior. These ranchers eventually settled the country beyond the Vaal river—the Transvaal—driving out and enslaving the natives, with whom they were at continual war. British assistance was required in 1877 against the Zulus, the Transvaal government being inefficient and unpopular with the Boers. Great Britain thereupon annexed the country. Three years later the burghers changed their minds, revolted, Majuba Hill was fought, and Gladstone, in order to retain the loyalty of the Cape Colony Dutch, the Boers' kinsmen, called off an overwhelming British force and concluded peace with the rebels. By the terms of this peace the suzerainty of the queen was acknowledged, and Great Britain reserved the control of all foreign relations. In 1884 Lord Derby was induced gratis to grant autonomous concessions to the Boers, but reserved the treaty-making rights and other rights. In 1885 gold was discovered.

So much for history. The Boers have altered little, if at all since the days when the Dutch East India company planted them at the cape, except to add some of the vices of the nineteenth century to the ignorance of the seventeenth. "In some of the elements of modern civilization," says Mr. Bryce, "they have gone back rather than forward." Half nomad, of sullen and unsocial temperament, separated from the influences of civilization for over two hundred years, living rudely and contentedly on their huge ranches, disdaining trade, disdaining agriculture, ignorant to an almost inconceivable degree of ignorance, possessing neither music, literature nor art, cruel, superstitious, intolerant, grimly religious—such are the Boers of today. They are two hundred years behind the times. The Transvaal Boer today believes that the sun moves. He believes that the earth is flat. And his ethics are those of the seventeenth century. He is an uncompromising Calvinist. He believes that the Boers are God's chosen people. He finds Scriptural warrant for slavery, and himself owns Kaffir slaves. Politically he is hopelessly corrupt. He believes it to be a praiseworthy thing to do, to accept money for his vote, so long as the Gentiles pay the piper. To make as much as he can from the Uitlanders, in any way that he can, is his religion. The sons of Sodom and Gomorrah he considers can have no rights as against him and his. He has no reverence for justice, or for process of law. And being what he is, he takes his bribes openly, as in the case of the seventy-five American buggies for the Volksraad, or secretly, as it suits him, all with a good conscience.

The Uitlanders, most of whom are English or Americans, outnumber the Boers two to one. They contribute practically all of the public revenue. And they possess an even greater share of the intelligence of the country than of its wealth. Among them are thousands of the most progressive men in the world, men who stand at the top of their profession. Almost all of them are well educated. And yet they are held in complete subjection to men who are more ignorant than the American negro. They pay all the taxes and spend not one cent of them. They see millions of dollars lavished on the secret service and fortifications at Pretoria, while Johannesburg remains a pesthole. The English language is proscribed in the schools and law-courts of a city where not one man in a thousand speaks anything but English. Their children are not even taught pure Dutch, but a dialect as much beneath pure Dutch as Czechish is beneath Russian; and they are forced to use Dutch text-books that are centuries behind the imes.

It is quite beyond belief that Englishmen and Americans should rest passive under such treatment. The grievances are such that they fall hardest, not upon the absentee capitalist, but on the engineers, superintendents, chemists, lawyers, doctors, business men and artisans. These men settled in the Rand district to make it their home. They have not only taxation without representation, but taxation without police, without sanitation, without schools, without justice, without freedom of speech, without liberty of association. Johannesburg, because it is English, is ill-paved, ill-lighted, abominably sewered, and poorly supplied with water. All process of law is prostituted to the whims of the First Volksraad, in defiance of the written Constitution of the Republic. Education, except in the Boer taal, is forbidden above the third standard, in the hope of forcing the English to unlearn their native tongue. And against these indignities the Uitlanders have had no recourse.

These facts are admitted by these various writers. Great Britain recognized them long ago. For many years she has been trying to secure some kind of minority representation in the affairs of the Transvaal for the Uitlanders. The problem has been mainly this one of franchise. The First Volksraad is the law-making division of the government. At present no immigrant can vote for the First Volksraad unless he have passed the age of forty and lived, after taking the oath and being placed on the "government list," for fourteen years in the Transvaal; this "with the consent of the burghers." It is practically impossible for anyone to qualify. For the Second Volksraad, created in 1890 as a sop to Great Britain, aliens are allowed to vote upon two years' residence. But the Second Volksraad is not allowed to discuss taxation, and all its decrees are subject to the approval of the First Volksraad, which does not require the assent of the lower house to its acts. It has not, nor was it intended to have, even the mild power of an American school board.

At the same time, as the six writers show, the Boers could hardly be expected to turn over their keys of government to strangers. The Uitlanders came with their eyes open. The country, said the Boers was theirs, by conquest from the Kaffirs. Being in power, they would be fools not to remain in power. Then, too, there was a difference of opinion about the meaning of the word "suzerainty." All this and much more is expounded at six to one length in the book of Boers and Britons.

The New Regime in San Francisco.

BY a handsome majority at the ballot box, San Francisco has determined to extend its Park Panhandle to Van Ness avenue, to construct new schools, a new hospital and a sewer system, at a cost of many millions of dollars, which will hereafter constitute the bonded debt of the municipality. The voter who never paid a dollar of taxes, and whose improvident ways hold out no hope of his ever owning anything taxable, may at such an election, have a hand and a voice in compelling the more thrifty citizen to disburse his money. It was made apparent at the late election, however, that no great opposition to the contemplated improvements existed among those who would be called upon to pay the piper. The minority who opposed the bonds may take some comfort from the advantages that must come with the debt. There is every probability the money will be honestly spent. Mayor Phelan, who evidenced a hearty interest in the bonds, will unquestionably see to it that but little if any of it sticks to dishonest hands.

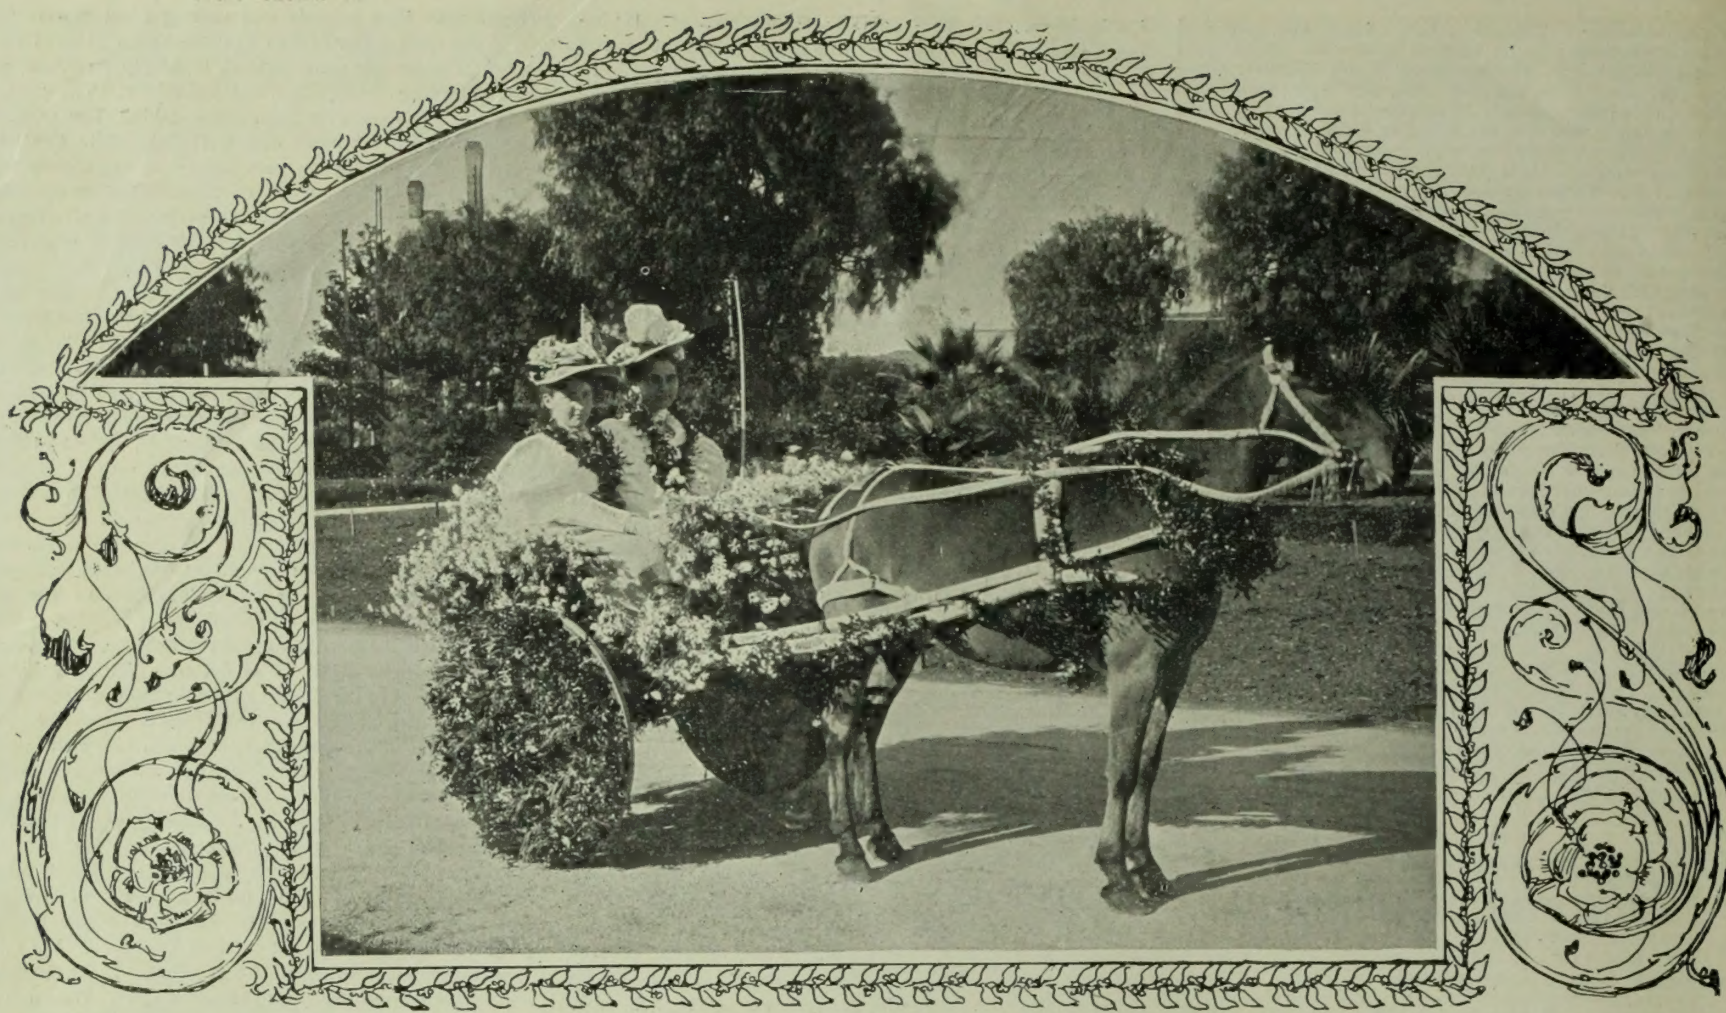
The schools, sewers and hospital are all necessary improvements. New schools and more perfect sewers will add to the desirability of San Francisco as a place of residence. The present sewer system is simply wretched, the school buildings antiquated and unhealthy. The jails of San Francisco have ever been comfortable. The criminal has been warmly housed and well fed, while the poor wretch, driven by poverty and disease to the county hospital, has had but scant comfort. Such things are shameful in a city of the wealth of San Francisco. In all three of these things San Francisco has been criminally neglectful.

The Park Panhandle scarcely comes within the category of "necessary improvements," and yet it is just such features that give character to a city, render it attractive and habitable, not only to the denizens thereof, but to the visitors from the country and tourists, who it is profitable to cultivate. Eastern visitors have invested millions of dollars in Southern California; Eastern capital has also developed the bustling Northern Coast cities, while San Francisco has depended for its growth in the way of improvements upon its own capital, which has not always shown itself as venturesome as conditions warranted. There is no lack of capital in San Francisco. The contrary is the case. The banks of San Francisco are literally glutted with gold. This is particularly true of her savings banks. The Federal Government, it is estimated, has disbursed in California alone since the opening of the Spanish war between twenty and thirty millions of dollars. Yet with this immense addition to the State's wealth and the growth of seaward trade, there are no visible evidences of increased prosperity outside of the congested surplus in the bank vaults. The spirit of enterprise is infectious. The example set by the San Francisco voters in approving of the bond issue and setting on foot vast public improvements, is bound to have a beneficent effect upon private property owners. One energetic man in a community infuses like life in others. A municipality, energetic itself, attracts as well as creates energetic citizens. The wise men of the East are prophesying a great future for San Francisco. We of the West Coast are standing at the threshold of a new epoch, and it is fortunate for the metropolis at the Golden Gate that her own people have given a vote of confidence in her future. Wealth locked up in bank vaults scarcely adds to the prosperity of a state. It is comforting, perhaps, to know it is there, but it does not quicken the pulse of enterprise or development.

The statement was recently published that one savings bank in San Francisco has on deposit more than double the amount of money deposited in all the savings banks of the State of Nebraska. Every San Francisco bank in its semi-annual report to the Bank Commissioners shows an increase of business, the smallest, an advance of $50,000, while the Hibernia Bank's increase amounts to over $10,000,000, with its entire deposits aggregating nearly $54,000,000. Some one has said that the San Francisco bankers are merely pawnbrokers. It is true banking business is not conducted on lines similar to those prevailing in the East. San Francisco savings banks will loan money on a small list of stocks, but only on call. Local savings banks as a rule do not loan on the securities of private enterprises. It can scarcely be denied there are many establishments of a manufacturing character whose stocks would afford the lender ample security for reasonable loans. But the door is not open to them, development along industrial lines is retarded, and the community itself suffers. In the East, savings banks are loaning on industrials. Cheap money opens the way to the establishment of manufacturing and commercial enterprises. Permanent work is provided for labor, and with that comes general, far-reaching prosperity. Should the savings banks of San Francisco be permitted to change their policy as to loaning money on private enterprises, the effects would be apparent in less than twelve months.

The chance remark of an intelligent and progressive Chinese merchant suggests to me a factor in the Eastern problem which we have overlooked. He was speaking of the annual pilgrimage of his rich countrymen to spend New Year's at home. "I suppose those who don't come back will be as Chinese as ever," some one said to him. "Maybe," he responded, "But they won't throw stones at railroads." Every year, a great number of our Chinese are going home to end their lives in their own land. Comparatively few of our yellow people expect to stay in the country; the hope of the good Chinaman is to lay his bones beside those of his ancestors. In a sense, our Celestial population return home untouched by Occidental influences, and in a sense they do not. They have not absorbed our ways of thing or of doing things, but they have ridden on our devil-cars and used our telephones. They know that there is nothing supernatural about these things, that they are man-propelled and have their uses. So when they return to China, they are in a neutral state of mind. They will not do anything for themselves in taking up European ways, but they will not hinder others who wish to do these things for them. "They won't throw stones at railroads." And this constantly increasing element in her population is one of the bright spots in the outlook for China.

The sum of £775 was paid for Rudyard Kipling's poem, "The Absent-Minded Beggar."



A CHARMING TURNOUT AT THE PASADENA FLOWER FETE.

WHEN a Spanish town wants to make merry over the returning harvest, it organizes a bull-fight; when a French village is keyed up to the point of organized merry-making, its city fathers hold an exposition; when a Yankee town of New England feels thankful over a bountiful harvest, it combines business and pleasure in a county fair. Mardi Gras in New Orleans—tournaments in Virginia—horse-racing in old Kentucky—harvest home in rural New York—it is all the same principle. The populace organizes for a good time, and turns loose to have it according to its ideas. Because the idea of chivalry still lingers in the South, the Virginian must put on some of the pomp and parade of the days of Launcelot, and tilt for the hand of the fairest. In New England the love of the almighty dollar is close and near to the hearts of the people, and therefore they gather to swap things and enjoy themselves in subdued fashion on the side. The French spirit of raillerie lingers in the Creole blood, and so the youth of New Orleans masks for a day. And finally, in California, where the beauty-loving Spanish blood has left its mark on the tastes of the raec, and where flowers that mock all hot-house blooms flourish on every hedge, the people celebrate the coming of the season of blossoms by a fiesta.

Now the fiesta is a Spanish survival. It was borrowed from those who held the land before us and we keep it as a heritage, along with the names of our towns. But California is now basically Anglo-Saxon, and the true carnival spirit is not in us. You cannot separate any Anglo-Saxon institution, least of all any American institution, very far from the chase of the dollar. So it happens that the fiesta is pretty much a business concern when all is said and done, a grand chance to air the resources of the country and its attractions as a tourist resort. The appointment of the committee of arrangements and the choosing of the queen is purely a commercial proposition. The committee in charge is made up of those who know best how to run a business; the queen is chosen because her father is captain of a industry in the region, or is an influential politician with a "pull," or because he has the ready coin to buy the votes, for there is no registration and no purity of election law about an election for a fiesta queen. She is supposed to be the embodiment of all youth and beauty, the accepted belle of the region. Sometimes she is. Sometimes—she isn't. Outraged gods of beauty, decidedly she isn't! It is hard to light in any home in California without finding a girl as pretty as the flowers, but the good citizens of the fiesta towns are most often successful in missing her.

After the free advertising for the town, the most important part of a fiesta is the grand floral parade. Now, as before stated, the good citizens in charge are not picked for their artistic sense. The man who gave a big contribution to the fund is of more importance in their eyes than the one who knows how to do things. Perhaps one person in a hundred can decorate a stiff phaeton or trap so that it looks otherwise than ridiculous. This may be an exaggeration—one in a thousand is better. So it chances that the average parade has one or two, even five or ten vehicles which are distinctly pretty and decorative, and fifty which match the average queen. There are carriages with calla lilies stuck in the hubs and wilted wreaths strung over the poor, sweating horse, and drays with allegorical groups in stiff gowns draped with flowers of mismatched hues, and pageantries of the Sons of Temperance or the Ancient Order of Tagalos, and bicyclists in green and yellow jockey suits mounted on bunting-wreathed wheels, and—but 'tis enough. When a rig which has been content to display only a bevy of California girls in summer costumes heaves in sight, one breathes a sigh of relief. It is hard to spoil the decorative effect of a California girl.

Here is an entirely accurate description of Section Two in a floral parade which came off not over fifty years ago and not a thousand miles from San Francisco. This is not described out of the imagination; the facts were noted on the spot. The record is hardly so bad as that made in San Francisco at the last Fourth of July parade, which probably excelled all possible competitors for general homeliness, but it will pass. The order of march in the section noted was as follows:

1. The aide to the grand marshla. He was a gentleman long past his lithe prime, and the horse he bestrode sagged under the burden. The rider was dressed Spanish cavalier fashion, it having been decreed as the uniform for aides. He resembled nothing so much as a black pear in riding-boots.

2. A float of a certain prosperous fraternal association, intended to represent the work of the order. A partition divided this float in the middle. On one side were three worthy and honorable grands of the order sitting in high-backed chairs, presumably holding a session of the lodge. On the other side, an invalid in bed, surrounded by his weeping family, was being ministered unto by three members of the order in full regalia. One was reading to him, one, with an insurance policy in his left hand and the invalid's hand in the other, was offering consolation; a third was presenting a bouquet to the weeping wife.

3. Allegorical float, "The Rescue of the Pioneer," representing a plainsman smitten by Indians being rescued by a cavalryman who had just dismounted from a wooden horse borrowed from a harness store. The rescued pioneer had been hard to obtain, as the job involved lying, face up, in the broiling sun. The wight who had been bribed to try it was the toughest citizen in town, and looked it. He insisted on chewing tobacco all the way and disposing of the overflow on one of the *papier-mache* rocks. I believe that this monstrosity took second prize for floats!

4. A neat single trap, finished in tan wood and leather, and decorated, or rather smothered, in geraniums. They were so arranged that they gave the idea of lavish profusion but without seeming "sloppy." The large, thoroughbred *Californienne* who drove was dressed in tan and red with a red hat: the big lithe fellow beside her, her brother he seemed to be, was "gotten up" to match. The taste and

California's Flower Fiestas

Through Which $18,434,000 of Klondike Gold has Been Converted Into Gold Bars.

beauty of this turnout was enhanced by the fact that behind it came—

5. A vehicle which the great American people call a "buggy," being about the only bit of furniture ever put near that beautiful beast, the horse, which can never by any chance be made either fair or picturesque. On this hopeless foundation were strung garlands of flowers of divers sorts and colors, a compound of many elements, like a German dish. These garlands were wrapped around the vehicle like serpents around a snake-charmer, and the abused horse was swathed in them. The wheels were smothered in paper of the sort that butchers hang from the ceiling to attract flies. And in this rig sat a girl in white, with the bunchy appearance which generally ensues when an o'er-large maid tries to deck herself in white muslin. Ripe, bursting, blooming, with a beauty all of the flesh, exactly like a California peach, she shone by contrast with her surroundings. "Lilies that fester smell far worse than weeds"; that outfit should have held a homely girl, but no, the horror of the whole thing was made complete by the introduction of a pretty one.

6. An omnibus filled with school children in white. The floral decorations, besides being somewhat faded, were on the plan of those just described on No. 5. And on the front seats, raised in state, sat the Fifth Grade Orchestra of the Dennis Kearney School, composed of three violins, a guitar, and a drum. They were playing "Denny Murphy's Daughter Nell," which had just come out as musical supplement to the Sunday *Examiner*.

7-8-9. Twenty bicyclists in jockey suits riding arm on arm, and two more vehicles on the order of No. 5, except that in the second one not even the girl was pretty.

This was the second division; there were five more, all on the same order.

MAGNOLIA AVENUE, PASADENA.

The scribe is waxing critical. There is plenty of rejoicing for the eye in a fiesta, if one looks away from the parade. There are the country gentry who flock in and line the streets, the biggest, finest, happiest-looking set of people on this our Western Continent. There are the blue skies and the scents of the awakening earth, the flowers blooming from the wayside to mock their wilted sisters on the hot pavement; there is the fun of the big dance which closes the affair. And mayhap there may yet arise a community which will put the affair into the control of someone with an artist's eye for color, mass, and effect. He will take the thing into his hands, making each separate unit beautiful and the whole harmonious, and we shall have a fiesta worthy the Land of Flowers.

JOHN STOLLARD.

When a Washington river gets on a rampage it carries everything before it. The Nooksack river in the northern part of that state was flooded the other day and five bridges were carried away in a remarkably short space of time. The several railroads which cross this waterway dropped carloads of rocks about the piers of their bridge, but they were quickly torn away. Glacier fed streams are just a little different from the ordinary mountain rivers. Chinook winds melt the ice in a moment almost and then comes the flood, and the flood is only to be compared to one started by a cloud burst in a mountain canon.

Great statesmen are not always successful editorial writers. On one occasion John Bright wrote the leading article for the *Morning Star*, of which he was part proprietor, and the policy of which he controlled. It was a very poor thing in the opinion of the editor, but, of course, it had to be published. Next day a conservative newspaper had a reply to the article, which began: "The great Tribune has laid aside his pen, and some miserable hireling of the *Morning Star* has taken it up." Mr. Bright called at the office that afternoon, and said good-humoredly, "I don't think leader-writing can be my forte."

The far famed totem pole is in Seattle to stay now. Indictments found by the Juneau grand jury against the Seattle men who secured the monument have been pigeonholed, for although turned into court over a month ago no warrants have been issued. The Indians who owned the pole have been paid for it and everything is lovely. Seattle has a unique feature and one that strangers are never tired of gazing at.

An ex-English soldier who has seen service in South Africa placed an "ad" in a Seattle paper asking English people to furnish him with transportation to South Africa, so he might fight Boers. Strange to say, nobody responded. The price of a passage from Puget Sound to the seat of war is a small fortune in itself and although this may not have anything to do with the fact that there is no rush to send the man to war.

The analytical commission appointed by the London *Lancet* to investigate the composition of American cigarettes, as well as that of the most popular English makes, reports that the tests failed to show opium, arsenic, phosphorus or mercury in a single instance. "There is not a single scintilla of evidence," says the *Lancet*, "on which can be fairly based the allegation of the presence of any substance injurious to health."

The Chinese Emperor, who is still a prisoner in the Dowager Empress' palace at Pekin made an attempt to escape recently. He had himself wrapped in blankets and carried from the palace by eunuchs who are devoted to him, or rather were devoted, because they were later bestinadoed to death. It is also said that through the medium of the Japanese Ambassador in Peking he has prayed assistance from the Emperor of Japan.

The most important biography of [illegible] will undoubtedly be the *Letters and Remin[illegible] of Robert E. Lee*, by his son, Captain R. E. Lee, which the Harpers have in preparation. An enormous mass of material has been examined—private journals, letters, family and government records. It is believed, new light will be thrown upon the causes which governed the manœuvres of the Confederate army during the closing days of the war.

Things & People

The Traffic in Justice.

JUST how much do the "bunko men" of Seattle and vicinity pay for the privilege of plying their calling? It must be a good sum, or the protection would not be so thorough and complete. Whoever heard of a "hand-shaker" being convicted? Just now, the announcement that one of them has been arrested brings forth only a shrug of the shoulders from any one who knows. Every now and then an unlucky one is subjected to the inconvenience of being arrested, bailed out, arraigned in court, and released with apologies. The chances are that his victim stays all night in jail. "Held as a witness" is the name given to this form of punishment. Of course, it is not done to discourage prosecution. Perish the thought! A man who has been robbed of several hundred dollars and has complained to the police would be likely to run away. But just how large is the "rake-off," how is it divided up, and how much of it comes from the gambling-houses in which the genus bunko moves and flourishes?

* * *

Mayor Phelan's Appointments.

THE first impression of the average San Franciscan on reading his paper Sunday morning last was of congratulation to Mayor Phelan. The set of men he had appointed to office under the new charter by which the metropolis of the Golden Gate is henceforth to be governed, is eminently respectable. They are leading citizens, so well known that the average man identified them at a glance and breathed freely, convinced that all property interests would be safe for another two years. Considering the Mayor in his personality as a young man and a Democrat, the list is rather a surprise. In the first place, the Republicans have a majority of four over their victorious opponents, the balance standing 13 against 18. In the second, the appointees are nearly all men of advanced years. The younger generation has but few representatives—the Democratic organization even fewer. How completely the guessers were out in their reckoning as to Mr. Phelan's intentions may be realized from a perusal of the putative tickets published on the preceding days by the *Call* and the *Chronicle*. It is evident he tried to recognize a great many claims, to reconcile innumerable conflicting interests, but I imagine that the men who bore the heat and burden of the late electoral contest will hardly feel satisfied with the share allotted to them, however agreeable the division may be to the public at large. It would be unprofitable to enter into a discussion as to the manner in which the Mayor's selections were made. The men are before the public to be judged by their doings. Their identity renders it certain that nothing derogatory to the city's interests will happen under the new regime—also that radical departures from accepted conditions will not occur to disturb the sleep of conservatives. Had Mr. Phelan followed his inclination and appointed active and vigorous young men identified with his own official career, there might have ensued an era of violent changes, and, as Matthew Arnold says, "Change doth unknit the tranquil strength of man."

* * *

Attention was especially attracted to the personality of the new Board of Public Works, which under the charter, will direct expenditures for the creation of the new system of parks, school-houses, hospitals and sewers. The Mayor selected two engineers of established repute—Colonel Mendell and Marsden Manson, and Jeremiah Mahoney, perhaps the most prominent building contractor in San Francisco. There will be no lack of experience on this commission from which good service may be expected. Next in importance comes the Police Commission. William Thomas, a very able and active lawyer, the organizer of the Fruit Canners' Combine and of the Alaska Packers' Association, is one of its members. George Newhall, ex-president of the Chamber of Commerce and a leading citizen, is a second; Ex-Registrar Biggy, and Dr. McNutt, a prominent physician are others of the quartette. The assumption of the *Call* that the composition of the Board portends the appointment of the bugbear Esola as Chief is absolutely unwarranted. On the contrary, pledges have been given in the highest quarter that he should not have the place. I believe the department will be faithfully administered by the new commissioners and a good man selected for Chief of Police. Perhaps it would have been wiser had the Mayor constituted the Board of Education differently, for while James Denman is a veteran educator, his experience is not that of to-day. Mr. Mark is clever and up-to-date, but Mr. Casserley's lines have hardly led him in scholastic places, though I imagine he will prove a conscientious official. Mrs. Kincaid's participation should prove valuable, for she has had training in abundance. The Fire Commission is strong; the Election Commission should give a good account of itself, while the Park Commission seem to meet all requirements. As I have stated, one need not expect either radicalism or violence, but the outlook for an honest and conscientious interpretation of the new charter is excellent.

Retirement of M. Benard.

MY strictures on the late Reinstein-Maybeck University competition prove to have been better founded than the amiable friends of these gentlemen were ready to admit. I will not go so far as to say that the Benard plan has been definitely abandoned, but its accomplishment in this generation need not be looked for. The truth is, Mr. Junghaendel's much debated criticisms set forth the views of most intelligent men and the technical objections of capable architects. It was a fantastic vision, impracticable, undesirable, and inappropriate, and M. Benard had discovered as much after he had been two hours in Berkeley. Now he returns to France thoroughly disappointed and disillusionized. The original proposition was to have the eminent Frenchman remain as supervising architect, and he was satisfied to do so at a salary of $15,000 per year. Strange to say, this proposition met with no welcome from the Regents of the University, nor did Mrs. Hearst exhibit a desire to meet the deficiency. The Frenchman had come westward imagining that untold millions awaited conversion into brick and mortar, and he found a campus paved with generous if undefined intentions, and a skeptical body of business men anxious to have explained the mysteries of his great scheme. He is ready to return, wiser if sadder, and quite satisfied in future to leave American architectural competitions to American architects.

* * *

It was pointed out in *The Wave* long ago that the competitive scheme, as outlined by Messrs. Reinstein and Maybeck, was impracticable. Prominent architects of New York and Chicago refrained from entering, because they realized the fatuous vagueness of the prospectus. It is the lot of many a good idea to be spoiled in the doing, and one can but express regret that so much money should have been wasted with so little result. Mrs. Hearst, I imagine, is not easily discouraged, and will hardly give up her noble ambition because the first attempt has failed. A competition restricted to a dozen of the leading architectural firms of the country would yield a plan that, for beauty and utility, would be to the fancy frill-work of M. Benard as light to darkness.

* * *

British Defeats and Boer Sympathy.

NO better example was ever shown of the tendency of mankind to tag on to a rising cause and damn a falling one than the uproar aroused in America and Ireland by the late Boer victories in South Africa. When the war opened and it looked as though England would crush the two republics at once, those people of sentimental bias who sided with the Boers because they were a small nation against a big one, or because Kruger's people call their oligarchy a republic, confined the expression of their sympathy to mild encouragement. Now the Boers win a few victories and these sentimentalists come out of the woods and hold mass meetings. If the Boer cause is a good one now, when they are on top, it was a good one then, when they were at the bottom. Under the same condition, it will be a good one after the next British victory puts a stop to these mass meetings. The principle is the same one that Mr. Dooley set down in his remarks about the unpopularity of Dewey: " 'He's a coward,' says wan, 'let's stone his house.' 'No,' says another, 'he might come out. Let's hiss his picthur in th' kinettyscope.' "

* * *

Harvard Democracy.

HARVARD University, despairing of a natural restoration of her ancient democracy, is striving to achieve the result by artificial means. A good portion of the loose funds coming her way this year from the good citizens of Massachusetts, whose religion involves leaving something to Harvard, will be devoted directly to the Harvard University Club, an institution designed to bring all sorts and conditions of university men together on common ground. The old college on Charles River has met and conquered many crises in her progress from a case of books and a school house to the leading university of the Western Continent; her regents and faculty are meeting this crisis with characteristic determination. The anti-democratic spirit at Harvard is one of those evils which are half corrected when the fact of their existence is made public. As soon as the cry arose against moneyed aristocracy, there action began, and the result was apparent in her recent athletic victories—for successful application of a university's athletic material is always in direct proportion to college spirit, which is the same thing as the democratic spirit. I do not believe that the new Harvard University Club will be of much benefit, in itself, but the very fact that it stands as a protest will serve to shame those for whose benefit it was erected.

The Chinese Question on the Sound.

FOR the first time since the invasion of the Pacific Coast by the Chinese, there is a lack of this sort of labor in the Northwest. The canneries along Puget Sound cannot get enough Chinese this year, and are pressing into service Japanese and white men. The Japanese constitute the real cheap labor of the Sound country. They are crowding the cheaper branches of employment, pushing out white women and boys. They have not learned, possibly they will never learn, to hold up the labor market like the Chinaman. Chinese cheap labor is now a myth in the Northwest. For the same grade of labor, the Chinamen is paid as well as the white man and perhaps better. The wily Japanese is the real menace to industry in Washington.

* * *

The Rush to Nome.

THERE is a new development in the situation at Cape Nome, that gold camp of romantic history and unknown resource. It has been a generally accepted belief that the miners now straining in leash for a chance at the new diggings would have to wait until spring to make their rush. Now it appears that the present winter is an open one, so that vessels may sail within a mile of the gold beach. Accordingly a number of vessels will start north this week with hardy miners willing to take chances. It is a gamble, a game with gold as the prize and life as the stake. The Arctic weather is so uncertain that a few hours of cold weather suffices to freeze everything in sight. Caught in the ice off the uninhabited coast of Alaska, these voyagers would have to spend the winter in ships unprovided for a winter's stay and so frail that the ice pack would be almost sure to crush them. Nevertheless, many miners of Seattle are going to take the chances. Locations there are in plenty, if half the reports are true. It has been discovered that not only is the beach and the hill land rich in gold, but that the mud under the bog moss is rich in the precious metal. More than this, there is reason to believe that the beach deposits, which show pay dirt clear down to tide water, continue for an indefinite distance out at sea. No one knows whether mining by dredger will be profitable for the simple reason that it has never been tried, but the experiment is going to be made in the spring. Even this is not all. There is still the parent lode to be found, the deposit from which all this gold was scattered over the land, and there is also a well-founded theory that the Alaskan deposits continue into Siberia. These facts are known in the Northwest, and the spring rush promises to be enormous. All unattached Seattle will be on the way when the season breaks; the smaller towns will furnish their quota, and Representative Murray of Butte is authority for the statement that fifteen thousand men will go in from his state. A big rise in steamer rates is sure to follow. Already speculators are buying advanced passage, hoping to sell at a raise when the crowding commences.

* * *

Whoever has doubts about the wealth of the Alaskan and Klondike gold fields has only to consult the figures given out by the Seattle Assay Office. This institution has been established but seventeen months all told, and during that time it has purchased gold dust to the amount of $18,433,946 20, an average of over a million a month. This does not account for all the gold brought down from the North, for much of it was sold in San Francisco, New York, Denver, and Philadelphia. Only two other assay offices in the United States show a better record than the Seattle institution. They are located at Denver and New York. Miners and Alaska newspapers estimate the total output from the new gold fields at about twenty-five million dollars. The estimates of pursers of the various vessels coming from the North during the past year place the sum at about the same figures. This is a pretty good showing. During the first year of the life of the Seattle Assay Office, six and one half millions were received, and during the last six months nearly thirteen millions came in. The dust was paid for at an average rate of $16 per ounce. It weighed fifty tons, and would make a pretty good cargo for three freight cars. Only a few million dollars in Nome gold is accounted for in this total, but next year the coast diggings will probably rival the Klondike.

* * *

Settlement of the Carbonado Claims.

THE owners of the Carbonado Hill Coal Company, in whose mines occurred the recent disaster, have taken a very sensible and practical method of settling the recent lise claims with the families of the dead miners. To each widow they have given five hundred dollars and to each orphan one hundred. This is probably more than the widows and orphans would have obtained had they gone to law, because the history of similar cases shows that such litigation drags out for years, involving long delay and heavy expense on the litigants of both sides. The money will not bring the dead to life, but it will keep the mourning families from want.

* * *

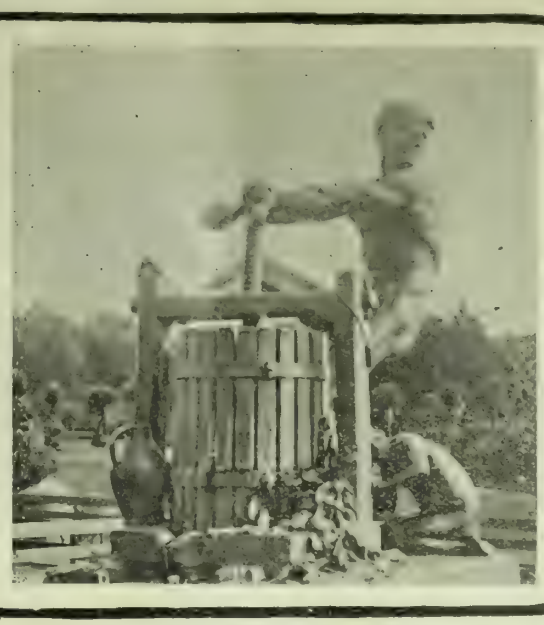
The "P.-I." Deal.

THE mystery surrounding the ownership of the Seattle *Post-Intelligencer* remains as deep as ever. The old management is gone, but the new has not shown its hand. With the exception of the heads, the editorial staff remains the same as ever, and the paper's policy has not changed to any notable extent. The journal has lost little by the change; the people continue, as formerly, to subscribe for it on its merits.

BOSWELL, JR.

The Park Museum

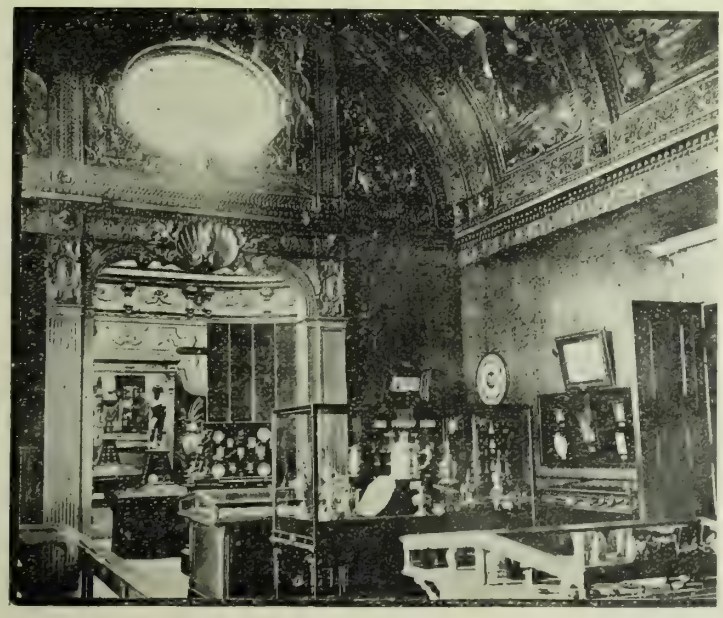
THERE are good reasons for believing that San Francisco has just entered upon a new era, in which it may be expected to rid itself of its crude and provincial features and to assume the character and dignity of a true metropolis, not only by enlarging its material prosperity and importance, but also by recognizing and satisfying the just claims of things intellectual and aesthetic. It would therefore be a timely undertaking to inquire what things San Francisco already possesses appropriate to a great and noble city, and to what extent each of them meets, or falls short of, the requirements of metropolitan greatness. Of this large question one point only is to be considered here. The subject of the following remarks is a critical description of the art collections exhibited at the Golden Gate Park Museum.*



· THE FOVNTAIN ·

The Park Museum, a relic of the Midwinter Fair, was presented to the city by the Executive Committee of the Exposition in March, 1895. It is a real museum of the people in this, that it is open every day in the week, and free of charge. Another commendable feature is the location. Situated in the heart of our glorious park, the great Sunday rendezvous of the people, the museum no doubt attracts visitors in far greater numbers than could be expected anywhere else. Certainly thousands, to whom it would never have occured to go in search of art enjoyment, in the course of their walks in the park come upon the museum and as a matter of course enter it. The external appearance of the building is less worthy of praise. Plain straight walls, with a few Greek columns supporting a pediment, would have sufficed to make the building pleasing to the sight, and to suggest the serious, collected attitude of mind appropriate to the contemplation of art works; while these bizarre forms would be suitable rather to a wax-works museum.

The very finest object belonging to the museum presents itself before we have crossed the threshold. In front of the entrance, among a number of indifferent bronze statues, we find a work of the same material, a work of real excellence, which is hardly surpassed by any other production in the same branch of art in our century. This is a large bronze vase, richly decorated with sculptured figures, by Gustave Doré. It is certainly remarkable that this great artist, who in his paintings and illustrations, however imaginative and spirited, never attained perfection, should have been completely succeesful in decorative sculpture, which he did not take up until toward the end of his life. Our vase was one of his first works of this class. The clay model was exhibited at the Paris Exposition of 1878, where it created a sensation. The work is equally satisfactory in general effect and in details. We may feast our eyes on the elegant shape of the vase itself, and on the extremely rich and graceful effect of the figurative decoration scattered over its surface, forming a different picture from every point of view; or with equal pleasure, look more closely and examine every little group and figure separately. Doré named his work "The Vine," and the sculptural part of it represents the powre of the wine god. A horde of followers of Bacchus, satyrs and bacchantes, are seen climbing up the surface of the vase in a state of exultant jollity, surrounded by numbers of little winged Cupids. The god himself is among them, but, having evidently imbibed too freely, he is unable to move himself; three of the winged genii endeavor to drag and push him upward, which by reason of his bulk is by no means an easy task. Not far from him are Venus and Cupid, quietly watching the frolic, and forming a restful group in the surrounding turmoil. On the base of the vase are more Cupids, engaged in playful occupations; two are trying to hold a wriggling snake, one is pulling a rat by the tail, another embracing a fly as big as himself, and so forth.



ROYAL PAVILION.

Entering the museum, we at once proceed to the works most interesting to the general public, the only class of art works which is really popular nowadays: the paintings. Unfortunately this branch of art, the most important of all, is poorly represented; in fact, this one is the weakest of all the departments of the museum. Most of the pictures are almost worthless, and not a single one in the whole collection is thoroughly enjoyable. A few, however, have more or less merit. Most of these do not belong to the museum, but are only loaned. First of all must be mentioned a work of one of the greatest painters of the century, Corot: a quiet landscape with a river or pond in the center, groups of trees on both sides, and some figures of nymphs in the foreground. It is not a first-class Corot by any means, having little of the subtle poetic charm of his best works; still it is attractive, at least to a trained eye, by the masterly and artistic character of its technique, which presents a striking contrast to the surrounding works. A simple meadow landscape with cows, by Van Marcke, recommends itself by forceful treatment and a very lifelike effect. While these two works belong to the naturalistic school of modern French art, the academical school is represented here by a large painting entitled, "Recreation in Capri," by E. Sain. It is rather insignificant, and the technical treatment, smooth, cold and marble-like, is not particularly attractive; still the work shows a certain refined grace and sweetness, which are not without charm. A much better piece of painting is Leloir's 16th century battle scene, a bright-colored and striking picture, representing a group of soldiers in the fanciful and picturesque costume of the period, in their midst the standard-bearer with the standard of the Holy Roman Empire. Not far from this picture we find a good example of Grutzner's work, a small picture of a monk holding his beer-glass up to the light and looking as happy and contented as possible. Next to this there is a large painting by Avanda, representing a crowd of people listening to an open-air sermon in a Spanish town. The heads and costumes are, as is commonly the case in Spanish pictures of this class, carefully and cleverly painted, with a good deal of individual character and expression in the former; yet as a whole the picture is rather uninteresting. The large painting "Sunday in California in the Olden Days," by Charles C. Nahl, also deserves to be mentioned. This picture, painted in 1874, has a certain historical interest as a work of the first artist who ever settled in California. But it is also artistically interesting. It is true, the technique is dreadfully old-fashionate, as is also the composition with its academically grand and dramatic style. But on the other hand, there is something brisk and spirited in the picture, a certain dash and vigor, which are quite attractive; nor is it entirely devoid of grace and natural charm, as may be seen, for instance, in the reclining figure of an Indian boy in the foreground. The merits of this work become more conspicuous if we compare it with three other pictures by the same artist — representing the story of the rape of the Sabine women —which are to be seen in the same room; they are academical productions of the worst kind, and simply mirth-provoking. Two not uninteresting works, which have but recently been added to the collection, are the two pictures ascribed to Piazzetta. The one represents an old woman telling a pretty girl's fortune: the other a man, a woman and a boy, smoking and drinking. They are evidently Italian works of the eighteenth century, and, while only moderately attractive, exhibit a very respectable degree of artistic skill, especially a very sound technique. The figure of the young girl in the first-named picture is particularly well painted and decidedly pleasing.

The pictures described so far are all contained in the large picture gallery. Some others are to be found in one of the adjoining rooms. Here there are a number of old portraits, a few of which are rather attractive. Side by side with them is an old painting of the Madonna and Child. It is a Flemish work of the first half of the 16th century, in the style of such artists as Barend Van Orley and Jan Gossaert, surnamed Mabuse. Artistic merits it has none. In the same room are exhibited a number of miniature portraits, some of which are pretty.

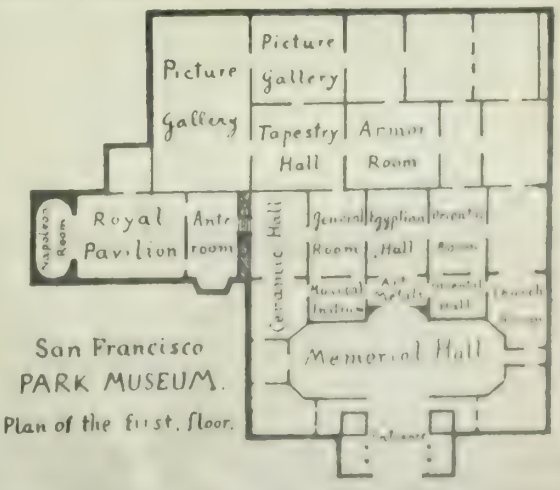
So much about the paintings. The sculptural works (exhibited for the most part in Memorial Hall) are more satisfactory. However, the large marble statues, which first strike the eye of the visitor on entering—works done in the weakly idealizing, detail-suppressing, characterless style much in vogue forty years ago—are among the least valuable possessions of the museum. A much less pretentious, but much more attractive work is Henri Plé's small bronze statue 'The Mahdi,' showing a fine specimen of an Arab chieftain, majestic fierce and war-like, heavily armed, holding the sacred standard in his left hand, and with the right drawing his sword. The dark brown of the bronze is tastefully relieved by a moderate application, chiefly in the accessories, of gold, silver, and black. The finest objects in the sculptural collection are the four busts of Roman emperors, done in several kinds of marble: white for the heads, colored for the costume. The two bearded busts are especially fine. Of the few plaster casts in Memorial Hall that of the Laocoon group is the most important. This group is, as everybody knows, one of the finest of all extant works of ancient art. The effect of the cast is much impaired by the quality of the light, which is too strong and not sufficiently concentrated; also by the glaring white of the plaster, which might have been got rid of by the simple and frequently used expedient of giving the cast a yellowish tint; and finally by the absence of a suitable background. Most of the casts in the Egyptian Hall also suffer by reason of too much light and are positively trying to the eyes, while a few, being painted black or dark-grey, can be looked at with perfect comfort. If to the works mentioned we add Rupert Schmid's busts of prominent Californians, in the picture gallery, and the spirited little bronze representing a troika or Russian sleigh going at full speed, in the General Room, we have given a pretty exhaustive list of whatever is worthy of note in this department.

Apart from the Doré vase, the finest and most enjoyable thing in the whole museum, to my mind, is the Royal Pavilion; not the objects exhibited there, but the room itself. It was originally exhibited at the Columbian Exposition by a Munich firm; I suppose it is a reproduction of an antique room in some royal castle of the 17th or 18th century. The beauty of the Pavilion (I speak of the interior) lies equally in its architectural form and in the decoration. It is an oblong room, measuring about ten yards by seven, and covered with a semi-cylindrical vault. The decoration, in the late Italian Renaissance style, while very gorgeous, is by no means loud and gaudy, but perfectly quiet and harmonious. The red silk hangings covering the walls, the magnificent gilt ceiling, and the paintings on the same, (these latter by no means masterpieces, but perfectly sufficient for the decorative purpose) all go to produce an effect of noble and dignified splendor. A very fine feature is the two oval windows of greenish glass, with a gilt bust in front of each, in the upper part of the transverse walls.

Adjoining the room just described, there is another which is also a veritable work of art. Much more modest than the Royal Pavilion both in size and manner of decoration, it is its equal in taste, elaboration, and consistency. It is a small sitting-room in the style of the early German Renaissance, entirely finished in wood, except some parts of the walls, which are covered with white-and-blue hangings. The whole room down to the last detail is a consistent and consummately tasteful artistic composition. It is also extremely cosy and homelike, and full of beauty. The woodwork is richly carved and in places embellished with delicate ornaments in color.

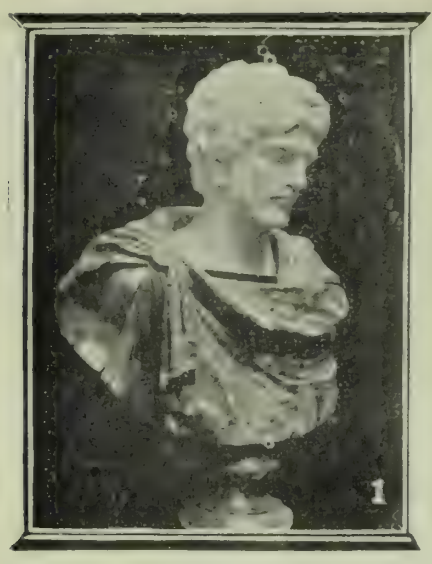
One class of art works remains to be considered, the class constituting the chief bulk of the objects contained in the museum: productions of the industrial arts. Such works are here found in great variety and abundance. In one sense, it must be admitted, their great number constitutes a disadvantage. The really excellent things are much in the minority; to pick them out from the surrounding mass of inferior works requires a good deal of trouble, which very few visitors care to take, besides demanding a greater measure of taste and discrimination than the average citizen can be expected to possess. It would be a great improvement if the finest things could be separated from the rest and placed on exhibition together; a single room would be quite sufficient to contain them; and I am convinced that the contents of this one room would afford the visitor much more pleasure than the entire collection now does.

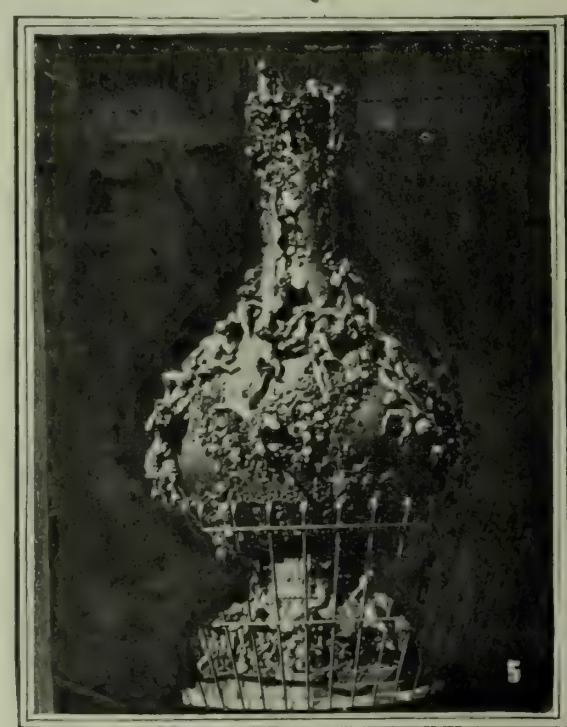
Let us turn first to the Tapestry Hall. This room has a very stately look, owing chiefly to the old tapestries which hang on its walls. Two of them, representing landscapes, are very fine; the others are much less so, but the richly ornamented borders of some of them are beautiful. The collection of antique furniture is decidedly good. First of all, there are a number of cabinets, tables and chairs in dark-brown wood, unvarnished and richly carved, in the Renaissance style. Inlaid wood is not so well represented. Of Buhl work one splendid example is to be found here, a double writing desk of the 18th century. There is also a good Empire cabinet in rosewood with gilt bronze ornaments. Among the finest and most interesting objects in

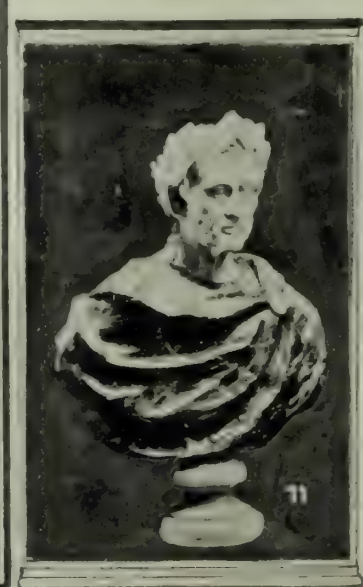


this room are two large antique coffers. The one, labeled "Holland, 17th century," and very well preserved, is plain in shape, but otherwise gorgeous; it is entirely gilt and decorated in relief with lions in gold and lilies in red.

* The thanks of the writer are due to the Park Commissioners and the Park Superintendent for permission to take the pictures accompanying this article, and to the Curator of the Museum, Mr. C. P. Wilcomb, for his very courteous interest and aid in displaying the objects to the best advantage.







ART AT THE PARK MUSEUM, SAN FRANCISCO.

THE BUBONIC PLAGUE

In Honolulu

Fighting the Plague in Honolulu's Chinatown.

Photo by Dooley.

That there should have been a plague outbreak in Honolulu is not extraordinary. The outpost of Anglo-Saxon civilization in its reach toward the teeming East, it draws from all sorts and conditions of Oriental peoples, and lives in continual terror lest some of these bring their Oriental diseases with them. Leprosy was the bugbear for many years; old islanders can well remember the time when the bite of a mosquito was feared like death, because it was believed that these insects carried the germ. And now, there is a scare, rather better grounded than the ordinary, over the bubonic plague.

The disease had unmistakably broken out in the Chinese quarter. When it was first reported, the usual rumors incident to an epidemic followed. There were two cases—there were ten—there were a hundred. The establishment of a rigid quarantine and investigation by government physicians reduced the number to two proved cases and half a dozen doubtful ones. These were isolated at once, the Chinese quarter was quarantined, and the whole environment was overhauled and cleaned with a thoroughness peculiar to the United States Army when on sanitary service. In this sense, the scare was a good thing; it gave Chinatown the scouring it has needed for many a day.

The bubonic plague is a disease which travels slowly, but with terrible certainty. Suppressed in one place, it will appear, after a period of quiescence, in another. It is the most cunning and subtle bacillus with which medical science has to deal. Therefore, no one can say that it is stamped out in Honolulu, although externally it seems as though the situation were under control. The fact that this has been done is one of the first blessings of annexation. Under the old monarchy, there would have been only a panic and a little rescue work by individuals; under the Republic, the forces at hand would have been inadequate. But the American army of occupation has taken hold of sanitary conditions and grappled with the situation in such a manner as to nip it in the bud. Again Honolulu breathes freely.

A NATIONAL LOVE-FEAST.

A JOURNALIST of my acquaintance says that he has seen an incident which throws a new light on Deroulede, arch-*poseur*. It is one of those bits out of a man's life which reveal the whole; a moment when the prevailing characteristic shows through the artificial mask of fashion and convention. I will not say but that my friend of the profession was eaves-dropping when he obtained this *morceau*. Eaves-dropping and enterprise run so close together in journalism!

It happened at the benefit entertainment for the Boers. In passing, let me say that every anti-semite of the *affaire Dreyfus* is now a wild Boer sympathizer. The two things run together. The faces one saw in pit and boxes at the theatre that night, were the same that appeared in house and platform at the anti-Dreyfus demonstrations last summer. Deroulede, Guerin and their fellow prisoners, "out on bail"—the French have a politer term for it, but I choose to put it in the language of Mr. Dooley—they crowded the boxes, and the rabble-babble, howlers, born agitators, crowded the pit. It was at first "*vive* Krueger!" "*vive la liberte!*" "*A bas* Rhodes!" "*Conspuez L'Angleterre!*" as, six months ago, it was "*Vive l'armee*" and "*Conspuez les juifs!*" But, as the evening went on, the agitators, went back to first principles just for variety, and cursed the Jews and the government.

The play was admirably suited to its audience. It was the first night of *Freres d'Armes*, a loud, impossible Gallic melodrama of the Crimean war, fairly vozing jingo. The author is M. Muniot, acting editor of *La Libre Parole*, and an anti-semite, as a matter of course. Scene after scene, the enthusiasm grew, until it came to the pass where a Russian and a Frenchman, temporary enemies of course, meet and prophesy the one to the other, the future alliance and greatness of their countries. The lines go something like this: "Some day, the blood spilled for hated England under the walls of Sebastapol shall cement forever the alliance of our two great nations. Let us embrace!" The meeting of their two stage moustaches, as they fell into

Park Museum—Continued from Page 7.

Probably the coffer was intended to receive a wedding trousseau, and the lions and lilies are the heraldic emblems of the two families which were to be connected by the marriage. The other coffer, which has suffered a good deal from the effects of time, while not so gorgeous, is even more artistic, and very elegant both in shape and decoration. It is covered with deerskin, and decorated with vegetable ornament of the pure Renaissance style, consisting of narrow bands of tin wrought in repoussé and nailed on over the deerskin. It is undoubtedly of Italian workmanship. The label ascribes it to the 15th century; I should say that in all probability it belongs to the time between 1460 and 1530.

The glass cases in this room contain a collection of fans, which, although hardly giving an adequate idea of the possibilities of this charming branch of industrial art, is well worth an inspection. There is also an interesting collection of old knives and forks. The handles are made of different materials—silver, wood, ivory, bone, onyx, mother-of-pearl, or china—and not a few of them are artistically decorated. The finest objects in this collection are the knives and forks with handles carved in wood.

In the Church Room one finds chiefly antique wood carvings from churches and monasteries. The finest work here is the noble shrine containing a polychromous statue of the Madonna. The shrine is of wood, richly carved and gilt. The label ascribes it to the 14th century, but the style both of the shrine itself and of the statue points unmistakably to the 16th century.

In the Oriental Room the chief attraction is a fine collection of ivories. Japanese works form the greater part of it; they are very interesting and attractive. However, to the Occidental mind Japanese art, except where it is purely decorative, nearly always has something strange, something uncongenial, which precludes complete satisfaction. The European ivories, which fill only one of the four glass cases, are certainly much more enjoyable. By far the finest things among them are the beautiful slender vase in the centre, and a magnificent oval platter showing alternating bands of ivory and silver. Of the other objects in this room, I must not forget to mention several beautiful East Indian vases of copper and brass, and, in the glass case opposite, an unusually fine example of Oriental inlaid work, an oval ray of dark-brown wood, inlaid with ivory, mother-of-pearl, and silver.

The Egyptian Hall contains a good collection of ancient Greek vases. This is a very interesting class of art works, showing a common material ennobled by the highly artistic use of a style of decoration which is as plain and primitive as the material, being restricted in the main to only two colors (the bright red of the burnt clay, and a black glaze) and to the representation of forms in silhouette only, without any modelling. This simple style of decoration admits, however, of a good deal of variety, as may be seen in our collection. The finest examples here are two black figure vases of the archaic period, in the second row from the top. In the same room we find a collection of small bronzes, among which are reproductions of some very elegant little works of ancient Græco-Roman art.

A visit to the Armor Hall must not be omitted. Arms and armor have very frequently been fashioned with regard not only to their practical purpose, but to artistic beauty as well. Here, however, we find only a few objects which are remarkable for artistic form. Among the swords hanging on the walls are some of Oriental make, which, without any ornamentation, are artistically pleasing merely by their gracefully curved shape. The finest object in this room, however, is an Albanian yataghan in one of the glass cases, with a silver hilt and a most magnificent sheath of silver in repoussé work. A few swords and daggers of equal excellence may be found in the Royal Pavilion; they are of Persian and Indian origin, and decorated with exquisite taste. The Armor Hall contains in another glass case a number of antique muskets, the wooden parts of which are tastefully inlaid with bone.

The General Room contains a not very remarkable collection of Oriental embroidered stuffs and the like. More interesting is a Japanese dragon vase, a bronze of considerable size. The workmanship is admirable, the composition very effective, and the large dragon who holds the vase proper between his teeth, is invented with great imaginative power, and most vividly and naturally represented; yet the whole is too bizarre to be thoroughly enjoyable.

The last room to claim attention is the Ceramic Hall, which, though it contains a great number of objects, has but few deserving unreserved praise. In this department of our museum more than in any other the visitor is impelled to wish that instead of so many second-rate objects the collection might contain one-fifth the number of first-class ones; then it would be small indeed, but much more enjoyable than it now is. Of the really valuable works to be found here, the following seem to me the most noteworthy. On the wall adjoining the Royal Pavilion, to the left, there are some fine Majolica vases and platters: some hispano-moresque ones, white with gold ornaments which have a metallic lustre; and some Italian ones, creamish white with ornaments in blue, green, and yellow. In one of the glass cases are two large Dresden china vases, ornamented with garlands of flowers in relief; in another, two Sèvres vases of moderate size, gilt and decorated with delicately executed landscape paintings. This brings us to the end of our tour of inspection.

In conclusion I would say, that, if in the course of the preceding remarks I have insisted rather extensively on weak points, I have done so because the subject seemed to me to require it, but not by any means from a desire to represent the collection described as unworthy of consideration. On the contrary, I should be much pleased if I might hope that some of my readers, at least, would from these remarks gain an increased interest in our museum, a perception of some attractions in it unnoticed before, and a stimulus to more frequent visits to it and to a more accurate study of the good things to be found there. But, while we certainly ought to be grateful for that which we have, and derive from it all the benefit we can, on the other hand it is important that we should understand and keep in mind what is wanting, so that we may not fail through ignorance or negligence to do whatever may be in our power toward effecting an improvement. It is much to be desired that the public spirit of our citizens may in the future more than in the past move them to exert themselves to bring about the highly desirable consummation, that San Francisco may count among its other attractions an art museum worthy of a great and enlightened city.

ARTHUR ALTSCHUL.

Modern Financial Manipulation.

THE best stories of the day are the tragedies and comedies of speculation as enacted on the bourses of America and London. The availability of this class of incident for the purposes of fiction was abundantly illustrated in Harold Frederic's *Market Place*, but the deal executed in that tale fades to insignificance in comparison with the coups which Yankee money kings execute daily in Wall Street.

In bygone days fortunes were developed out of commercial pursuits; today they are the result of speculation. The giant accumulations of the last two decades were created by artificial regulation of commodities or by dealing in railroads. There are certain exceptions, of course—the real estate fortunes of New York, the mining fortunes of California, Denver, and Montana, and the iron fortunes of Carnegie and his associates. But the millions of the Standard Oil and of the Goulds and Vanderbilts originated in financial manipulations, and have been swelled by operations of gradually increasing breadth. Notable among late deals in which millions were lost and won was the great copper juggle that occasioned the downfall of the Globe National Bank of Boston and enforced liquidation of stocks and bonds throughout the country. It was originated in the ambition of W. H. Rogers of the Standard Oil Company to control copper productions as the Standard controls oil. He organized the Amalgamated Copper Company and proceeded to reach out after the Boston and Montana stock, which then sold at $398 per share. The principal investor in this institution was A. S. Bigelow, and an elaborate campaign was inaugurated to drive him to the wall. A newspaper war was begun against the property and the price was depressed to 225. Then Bigelow, backed by the Globe National Bank, went into the market to support the stock and took in 60,000 shares at this figure. To create public distrust in copper, the Amalgamated stock, which had sold at 120, was pressed down to 77, and a policy of alternating and retreat was maintained, which resulted in loading the Boston-Montana combination until they could carry no more. Then came the manipulated stringency in the money markets of the world. The money panic forced liquidation in all sorts of securities and precipitated the downfall of the Globe National Bank. A few days later, three and one half millions of Bigelow's Boston and Montana stock was purchased by Mr. Rogers at his own price, and, put into the bargain, the Standard set picked up other copper properties at bottom figures. The deal caused a shrinkage of $200,000,000 within the year on the speculative value of copper stocks, but the profits are enormous.

Let us take for example a modern fortune which has been evolved from a moderate sum, say from one or two hundred thousand dollars to ten millions. On averages, this "pile" has grown at the rate of about a half a million a year. In reality, it has come up by sudden bounds. The shrewd or lucky capitalist has invested his money in some sort of industry. The time comes when he manipulates affairs so that he may combine at an advantage for the control of a large interest. He may have worked and strived toward this consummation for many years, or kind fortune may have thrown it in his way; it all amounts to the same thing. The opportunity is presented, he seizes it and doubles or quadruples his accounts. Then there may follow a few years during which the only advance is through the ordinary profit on the money invested, until another crisis brings a doubling of the total investment. In other words, fortunes used to pile up by arithmetical progression, while now they increase by geometrical progression.

All this has tended toward the development of the Napoleonic financier. Deals involving millions are sometimes conceived and consummated in a single day. He who would be wealthy beyond the dream of avarice must act with the cool and rapid judgment of the great general. It is simply a test of nerve, a nerve to which that of the general is in no wise inferior.

No better example has ever been furnished than the experience of John W. Gates and Colonel Elwood with the American Steel and Wire Consolidation. It was a rather complicated case, in that three or four crises came the same week, but it shows admirably how modern fortunes are acquired. These two Chicago men had just cleaned up a fortune in Federal steel, of which Gates was the pioneer, and had sold their interests for a sum which mounted into many millions. Gates was preparing to retire and take a trip around the world—had even invited a party of friends to join him—when one night he received a long-distance telephone message from Pittsburg, saying that the directors of a certain steel wire company had fallen out among themselves and that a man with a million dollars might make an advantageous trade. Gates and Elwood took the next train for Pittsburg with a certified check for a million in their possession. They held an all-night session with the owners, and by 5 o'clock next morning the property, worth double the amount of the purchase money, was in their hands. The party adjourned to the Duquesne Club for refreshments; there, they met the owner of a wire mill from up the State.

"If you fellows are buying mills, I'll sell you mine for nine hundred thousand," he said.

In the very few minutes during which Gates hesitated, the plan of the Wire Combination formed in his head.

"It's a go," he said at length.

The same day the money was paid over.

Here were two great wire mills in hand. The partners retired to a private room and talked it over.

"If we are going into the wire business, we must have a base of supplies," said Gates.

"Well, there's the Cleveland Rolling Mills," suggested Elwood. "What's the matter with buying them?"

"Worth trying."

The next train took the partners to Cleveland. En route, they laid their plans. They visited the owner at once.

"What will you take for your mills?" said Gates.

"They're not on the market."

"I will give you five million dollars for the business—plant, steamers, mines and all, cash down here, now."

"And how long do I have to make up my mind?"

"Until to-night."

The partners returned to their hotel and tried to catch up their lost sleep. At 10 o'clock that evening, the bell rang for "visitor in the parlor." That ring signaled the establishment of the American Wire and Steel Combine, for the owner had come to accept. All that night, the two Chicago men sat up with the managers of the concern figuring on the bonds. They found that the outstanding credits rotated nearly two and a quarter millions. Thus, for two and three-quarters millions they had obtained possession of a property worth about seven millions to their wire business, which exhibits the specific virtue of cash in a business deal.

In spite of the secrecy they had maintained, the omni present reporter at last got wind of the deal. The morning papers had a pretty fair account of the transfers. By afternoon, offers of mills in every quarter of the East rolled into Cleveland by telegram. Elwood started towards the seaboard and Gates south, buying up such small concerns as would take a fair price. They met in New York forty-eight hours later.

"Well, John, how much have you blown in?" asked Gates.

"A little over two millions—and you?"

"A little under three."

Thus, in one week, the space between Christmas and New Years of last year, the two Chicagons had put twelve millions into steel and wire works. A week later, they had organized the big mills of the East into the American Combine, capital ninety million dollars, and within a little over three weeks of the telephone message from Pittsburg, the stock of that trust was in the hands of its shareholders.

Gates postponed his trip to Europe indefinitely.

A NATIONAL LOVE-FEAST.

each other's arms, was like the contact of two electric wires It set off the fireworks. Oh, that Mark Twain could have been there to describe the love-feast that ensued!

A PRINCE OF POSEURS.

But I was telling about Deroulede. My fellow-journalist in the next box had been watching him the whole evening. The arch-poser had kept himself away in the background, concealed behind the curtains. From time to time, the others in the party, some of them "out on bail" like himself, stepped to the front at some outburst of applause. Finally, at this last explosion, the troubled Nationalist asked: "Is it time?" The others nodded. Just as the applause was subsiding, Deroulede rose, threw back the curtains, and leaned from the box. His whole manner had changed. He had the air of one who has been struggling with an overmastering enthusiasm which has at length broken all bonds. "*Vive l'armee!*" he yelled; "*a bas les Juifs!*" and he tore a tricoler from the drapery below his box and waved it in air.

I shall not attempt to describe the scene which followed. In my seat in the pit, I was nearly smothered by the rush of my Gallic friends rising to howl for this prince of the streets. And that man Deroulede stood there and wept—real, salt tears!

I have observed at home, during college football games, that there is a limit to the human power of producing noise. So it happened in this case. Deroulede's friends marked the moment when the shouting began to die out and hauled him back. We in the pit only saw him disappear suddenly, blotted out by the curtains, but the man in the next box described the rest. As the demagogue sank out of public view, he wiped his tears away, and an expression of easy weariness settled on his face. Then, turning to the nearest friend, he said, nonchalently.

"Is that enough? Shall we go?"

The best acting of that evening was not done on the stage. And such men hold the destiny of France!

A THEATRICAL GALAXY.

The French theatre of the twentieth century may open with such a combination of talent as France has never seen. This is no less than an alliance between Sarah Bernhardt, Coquelin and Rostand—each supreme in the world in his own special line. This reads like an advance agent's notice, but it is the truth. If the twentieth century is to beat that record, it will be a great era for the theatre. The plan is to have Coquelin and Sarah star together in Rostand's new play, *L'Aiglon*, during the early days of the Exposition. There is a splendid Coquelin part in it—that of an old soldier of the Grand Armee—and the chief female role was written for the divine Sarah. Moreover, the character around which the whole scheme is built is that of Napoleon, still a name to conjure with in France. What more could any good Frenchman ask of heaven than to be a witness of such a play?

ETIENNE MARCEL.

Paris, Dec. 3, 1899.

IT seems these days, my dear Diary, I have nothing to do but congratulate girls on their engagements. Think of the number that have been announced this last month! Arthur says it is a fine ending to 1899. First of all, there was Annie Voorhies and Tom Bishop, then Helen Hopkins and Gus Taylor, Mrs. Christine Moore and Willis Polk, Gertrude Forman and Arthur Brander, Alice Latham and Wyatt Allen, Clara Hamilton and Geo. Martin, and this last week, that of Helen Thomas and Fred Kimble.

Betrothal cups are flowing in rapidly. Clara Hamilton is still in the lead, though Helen Hopkins and Helen Thomas are both exceedingly popular girls. I am so glad Helen Hopkins and Gus Taylor are to be married, they are such a stunning looking couple and have so many of the same friends. Helen has a superb ring. A ring has a tremendous fascination for me. Helen Thomas has a jolly ring, too. I do not know Mr. Kimble very well, but he has a fine face, and is the sort of man that looks as though he might have a brilliant future. Helen is a very interesting girl and I think they will be really happy.

My beloved sister Leila has postponed her marriage for a year. She is such a queer girl; just because she discovered that 1900 was not the beginning of a new century, John was put off until it did commence. He expostulated, and entreated, but in vain. A really sensible man would have turned around to younger sister, and in a winsome sweet way would have said, "Well, Cricket dear, so long as Leila is so hoity-toity, let you and me get married." Now John is rich, awfully nice looking, and has a very winning manner, so I might have been willing. It's a curious thing that Leila cannot get common sense. There are lots of girls regretting the fact they have been either too hard to please or too negligent of a nice man's attention. As mama says repeatedly to me, "Cricket, dear, there are many worse things in this world than being married." But mama in her usual irrelevant way, has allowed Leila to talk her into the fact that it will be much better for her to be married a year hence. So John returns to New York next week via. the South. Mama, papa and Leila will go to Coronado with him, and I shall remain in town until I have had a few more parties, and then, on mama's return, I shall, I think, give a fancy dress ball. Of course, I could not dream of giving that until the return of the *Iowa* and *Philadelphia*, which I hope will be in about a month. I do so miss my navy friends. Mr. Bulmer had a very soft place in my affections, and as for Jack Babcock and David Sellus, well I know girls who never leave their homes in the afternoon until the arrival of the southern mail.

MISS LUCIA KITTLE,
whose engagement to Dr. Harry Sherman w s recently announced.

I have had a fine week. In the first place we had a jolly Christmas. We just had our own family. Aunt Sybil and mama spent the entire day without a quarrel. That is so unusual in our household, that it is rather a shock to our nervous systems. Mama is, of course, decidedly exigeant, and Aunt Sybil a woman who has always prided herself on having the courage of her convictions. Each of them received valuable Christmas presents from the other. Ever since I read that book of Lee's, *He, She and They*, I always call "returned presents" blackmail. We girls sent several to people who had no suspicion of our doing so, and nice flowers or calendars came to us on New Year's day. I have quite made up my mind not to give any one of those people a present next year, and I am sure each will send me a gift. Think of the wrath of one treated that way!

The party of this last week was that dance of Mrs. Horace Hill's. John said it was the most beautifully decorated house he had seen out here. There were garlands of berries, and wreaths, and ferns, and huckleberry until it really did not need any kind of an imagination to fancy oneself in a wood. I looked around and wondered how she had ever contrived to make it so beautiful. The delicious odor of the Christmas tree permeated the whole place. I heard a man say he could almost believe he was at the midsummer jinks of the Bohemian club. There were about a hundred and fifty of them. We had fine dancing, and then supper, and then more dancing. Alma McClung looked awfully pretty, so did Charlotte Ellinwood and Therese Morgan. Edith McBean, too, was at her best. But it was really a question of all the girls looking so nice I could not make up my mind as to the belle. It is difficult, for just half a dozen girls have a faculty of always looking just a little more charming than the rest, and of course I have to particularly notice them, but there are a number of others I admire almost as much. Now, of this years debutante, I have come to the conclusion that Miss Kline is quite the most stunning. She has quite a strong personality; and will in a year or so be admired more, I think, than any girl in town. Georgia Hopkins, too, will be much prettier in a few years. Just take Lilian Follis. When she made her debut she was quite pretty. People used to say "Lilian has pretty eyes and hair; I think she has days when I really admire her." Now Lilian Follis is as strikingly handsome a girl as we have in San Francisco, and she has the sweet grace and manner that made Mrs. DeVecchi so great a favorite.

Friday night I had a jolly time at "La Jeunesse." The hall was decorated in greens and red berries. I believe some of the boys did it all, and they really changed the appearance of Cotillion Hall. It is such a fearfully ugly place when it is bereft of decorations. I always think of a barn, but with greens and red berries, well, I can just enjoy myself thoroughly. Roy Pike made a fine leader, he has a wonderful amount of executive ability, and was so quiet and easy in his directions we all got on beautifully. It is remarkably funny how stupid people are in a german. Notwithstanding the fact that one is specially told to go to the left, one turns to the right, and the fun of it all is the leader must not lose his temper. I thought the "Maltese Cross" figure was a brilliant success. If Roy Pike likes he can have this winsome wee thing as his partner in the next "La Jeunesse." All the Oakland gi ls are very pretty. That sounds like a sweeping assertion, but it is really true. Each one that I know has an individual charm. Miss Kline was the handsomest girl on the floor. Arthur and I both agreed upon that score, so I think it must have been quite true.

Saturday night fifty of us went to Addie Murphy's to a dance. It was a calico affair; we all wore dominoes and the girls, masks. It was tremendously jolly. How we guyed the boys! Strange to say, you know, they were not particularly clever guessing as to who was who. One can be such a marvellous wit when one wears a mask. I just adore any party where one is able to lose one's individuality and not have to live up to anything. In other words, be natural. But being natural is with me being unconventional, so I have to have either a mask or some costume. Addie is the cutest and brightest little girl; she really has won all my family from papa down. When I say she is as good a hostess as her sister Ethel wrs, I pay her the highest of compliments, Leila says.

I almost forgot to tell you of the Riding School entertainment for the benefit of the Armitage Orphanage. It was crowded. Those who came late had to stand on chairs to get any kind of a view. Fortunately, I had all the comforts of home, and one of the men I like best beside me, so I was in my element. There was fine riding and a queer-looking gray horse called "Deadwood" jumped the most remarkable hurdle five feet two inches in height I wanted to get on him and jump, for I pride myself on my skill, but did not like to suggest it to Captain Dillon. He has his own ideas as to my equestrian ability, and they do not exactly coincide with mine.

Sunday night, the last of the year, I wanted awfully to go to the De Youngs, but papa has an idea that we should celebrate that day at home, so I had to put desire in my pocket and welcome the New Year on papa's best port wine and cake mama makes just for that occasion. One of the girls told me, however, that she had one of the times of her life at the De Youngs' house. There was all sorts of vaudeville, cake-walking, dancing and a very cute farce and pantomime. It is so nice to have a real stage and a beautifully decorated house in which to be amused. I do not wonder in the least that Mrs. de Young's affairs are so successful. After the entertainment there was a jolly supper, and when twelve o'clock struck the New Year could not have found a more delightful place to find a welcome.

On Monday there were several receptions in Oakland. First of all, however, I went to see Mary Bell Gwinn and Jim Follis married. Mary Bell was beautiful; she wore a rich, cream white satin gown, over which was a web of Point d'Alencon lace. They were married at her grandmother's house, which was charmingly decorated with banks of flowers and ferns and palms. A sort of chancel was arranged in the main drawing room and was a bower of greens and roses. What really won me in the decorations was the barricade of poinsetta blossoms; it was really beautiful. Reverend Mr. Foute performed the ceremony. There were no bridesmaids. I missed them so much, too, though, of course one has a chance to think entirely of the bride. She received beautiful presents. I believe in a few weeks Jim and she will start off on a trip around the world via China and Japan.

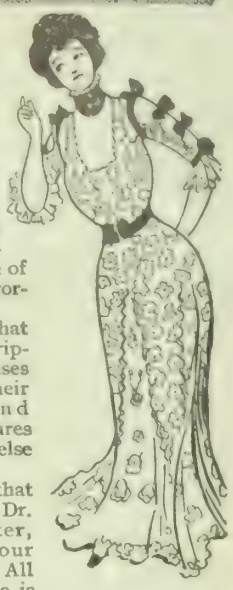
In the afternoon I went over to the oore's reception. I met young Mrs. Moore who I found very charming indeed. The prettiest girl there was Miss Sanborn of Fruitvale. The Hush girls, Miss Woolrich, Katharine Dillon, Mrs. Fred Bixby, who is the sweetest little woman I know, Ethel and Carrie Moore, Miss Valentine, and I all helped to receive. Notwithstanding the rain which came down in buckets, there was a great crowd there. Mrs. Smith's reception, owing to the very sad and unexpected death of Mrs. Hall, was postponed. After leaving the Moore's house, which was charmingly decorated with long, beautiful ferns, we drove over to Mrs. Howard's and had a New Year's welcome. George Newhall had a luncheon down at Burlingame, but I was unable to attend; however, those who were there said it was awfully jolly. Mr. and Mrs. George Pope chaperoned it.

This coming week we have Ethel Hager's "baby dinner." I have the sweetest organdie dress for it; the Gibbs and the Scott luncheon, the Fortnightly on Friday night, after which Mrs. Maurice Casey will give a large supper to Katharine Dillon's friends, so it seems to me, the New Year bids fair to continue the gayeties of the season.

MISS CRICKET.

For more than half a century the famous Jesse Moore whiskey has been the standad brand of the world.

DON'T FORGET.



Don't forget to use Doctor Pierce's Favorite Prescription for that backache.

Don't forget that over half a million women have been cured of women's ailments by the use of Dr. Pierce's Favorite Prescription.

Don't forget that "Favorite Prescription" cures diseases of women in their advanced and chronic forms; cures often when all else has failed.

Don't forget that you can consult Dr. Pierce, by letter, *free*. Tell your story frankly. All correspondence is private. Address Dr. R. V. Pierce, Buffalo, N. Y.

Don't forget to *write to Dr. Pierce to-day*, if you are sick from diseases which afflict women.

"*I wrote for advice* February 4, 1896," writes Mrs. Lena Halstead, of Claremore, Cherokee Nat., Ind. Ty. "I was racking with pain from the back of my head down to my heels. Had hemorrhage for weeks at a time, and was unable to sit for ten minutes at a time. You answered my letter, advised me to use your valuable medicines, viz.: Dr. Pierce's Favorite Prescription, 'Golden Medical Discovery,' and 'Pleasant Pellets,' also gave advice about injections, baths and diet. To my surprise, in four months from the time I began your treatment I was a well woman and have not had the backache since, and now I put in sixteen hours a day hard work."

Paper-bound edition of Dr. Pierce's Medical Adviser *free* on receipt of 21 one-cent stamps to pay expense of mail-*only*. Address as above.

Mr. and Mrs. M. H. de Young entertained a large company of young people and a few older friends on New Year's eve. There was a delightful vaudeville performance, followed by two quadrilles, one of fifty years ago, and the other, the modern, in which eight young people in white and red tennis costumes, cake-walked through its figures. In the old-fashioned dance, which concluded with the varsovienne, both the ladies and men were in the costume of the period. Mrs. de Young's gown was of pink gauze and pink silk over the great hoop skirts then in vogue. It had a trimming of black velvet ribbon and a lace bertha fell from a low neck. All the costumes were correct from the velvet-tied slippers to the ornate jewelry and the one-buttoned kid gloves. The company was at supper when the new year came and an hour's dancing concluded the evening.

MARRIED.—In the Episcopal Cathedral in Hong Kong, November 24th, 1899, by Rt. Rev. Bishop Potter, of New York, Mr. P. L. Sherman, of Ann Arbor, Mich., and Miss Luita N. Booth, daughter of Mr. and Mrs. L. A. Booth, of Piedmont, Cal. No cards.

ROYAL BAKING POWDER CO., NEW YORK.

A BUNCH OF FIVES.

Into an up-town pool-room there wandered a colored sport black as an overworked ace of spades. He was known to his envied intimates only as Mose, and the very large checked suit of plaid that he wore had a certain cake-walk suggestiveness, as did his huge red necktie, his patent leathers with blue polka-dotted uppers, and his three large yellow diamonds, two of them on his fingers and the other screwed in the middle of his shirt bosom, which showed horizontal green bars. He was a sport all right.

He entered the poolroom alone, looked up at the board, and then dug a bit of paper, obviously a telegram, out of his Oxford cloth Newmarket overcoat. A man who was rude enough to look over his shoulders saw that the telegram was a night message and that it bore the New Orleans date. It contained the names of five horses, with the initials of the sender.

"He's a po'tuh on uh Pullman," vouchsafed the sport to the privileged character who had looked over his shoulder. "An' he's uh babe, yo' heah me! He knows 'em lak he knows uh blackin' brush. Ah's uh gwine tuh mek uh combinashun on de hull five. De ticket 'll win in uh walk."

After sizing up the house betting on the New Orleans races for a few minutes, he walked up to the counter where the combination tickets exuded from the lightning calculator.

"Ah's got de hull five babies," he said with a grin to the ticket writer. "An' ah's uh gwine tuh tek 'em all tuh win. Doan' want none o' 'em fo' place or show. Dey's all got tuh come in all alone.

"Shoot 'em out," said the ticket writer.

The sport named his bunch of five; they were, in the order of the races, Mint, Sauce, Russell R., Deyo, Benneville and Donna Rita. The ticket writer executed his bit of lightning head work, with frequent glances at the board to get the prices on the runners, and then he looked up at the sport with a grin.

"Huntin' for a hog killin', ain't you?" he asked. "Goin' to put us out o' business? It figures a thousand to one. How much do you want on it?"

"Two dolluhs," replied the sport and he passed up the money. The ticket writer pencilled the names of the horses down on the ticket, placed the figures "$2,000 to $2" at the bottom of it, and handed the bit of pasteboard to the sport with the remark:

"You're a good thing. Come again."

"Yo' all kin do yo' hollerin' w'en de hosses run," was the sport's good-natured reply, and then he went to the extreme outer row of seats in the pool room and sat down to wait for $2,000 to accrue to him on an investment of $2.

Along toward 3 o'clock the betting came in on the first race at New Orleans. The horse Mint Sauce that the sport had in his combination ticket was the odds-on favorite, although he had been at a good price in the house bettiing.

Then they were off as the telegrapher announced with a bored air, electrifying the crowd into silence. It was a six-furlong race, and there was nothing to it but Mint Sauce all the way. At the three-quarters, when the telegrapher announced that Mint Sauce was third and just galloping, the sport leaned back in his seat with an it's-all-over expression, snapped his fingers a couple of times for luck, and said:

"It's uh cake-walk fo' dat baby, Ah'm on right so far."

"Mint Sauce wins by two lengths," announced the operator, and the announcement was received with silence. Poolroom crowds don't play favorites as a rule.

"Mah nex' is this heah Russell R.," said the sport, gazing at his ticket again, "an' Russel R. he'll buck jump in."

"Off at New Orleans," announced the weary-looking operator again, and then he began to call off the way the race was being run. "Sadie Burnham in the stretch by a length!" he announced, "Lomond second by a length, Russell R. third," and then the sport began to root for his horse. He swayed back and forth in his wicker rocking chair, moaning, "Come, yo' Russell—or yo' doan' git no oats—ketch him, yo' baby, an' yo' pa'll treat yo' right—"

"Russell R. wins, by a head!" announced the telegrapher.

"Oh, yo' wahm thing, yo' Russell!" suppressedly exclaimed the sport, his finger-snapping suddenly stopping and an upturned crescent grin spreading over the whole area of his chocolate countenance.

"De nex' on mah piece o' pas'e-boa'd" said the sport, ransacking through his pockets again for his ticket "is dain'jus. Ah doan lak dis heah hoss Deyo, but Ah ain't uh-playin' whut Ah laks, but whut's dun sent tuh me. So Deyo she's dun got tuh win, too."

It was after 4 o'clock by this time, and the poolroom was filling up with young fellows turned loose from the down-town offices. Many of these late arrivals had straight tips in the form of telegrams on the third race at New Orleans and they almost overwhelmed the ticket writers when the betting came in on that race. Well, Deyo did win. She beat the favorite by three lengths. The sport didn't have to snap his fingers or sway in his chair at all. Three-fifths of the $2,000 to $2 ticket was won.

By this time Mose was the cynosure of a good many pairs of eyes. The possibilities of the ticket he had in his pocket were whispered about, and a number of the real things in the sport line edged over and asked to have a look at it.

"It's alimpey-boolera," they said, and they rubbed the back of it for luck. Then a lot of them went up to the combination desk and got combination tickets for the remaining two horses that appeared on the colored sport's ticket.

"Dis heah hoss, Benneville, will now step out an' run seben fuhlongs fo' me," he said, referring to his ticket again. "Ah doan' know mahse' jest how good dis heah Benneville is jest now, but dis is his day tuh win by uh block."

Benneville came in an odds-on favorite, and won by three open lengths. The sport again was relieved of the necessity of rooting.

"Ah dun rode dat one mahse'f," he said, grinning, and he found himself in the midst of a crowd of sports of his own color.

"Look uh-heah, nigguh, doan' yo' all remembuh me?" a lot of them inquired of him as they crowded around him.

"Remembuh nothin'," said he impartially. "Ah doan' mek it mah bizness tuh remembuh nobody."

"Hey, what does your ticket call for in the next?" was a question that fifty men threw at him as he sat in state in his wicker rocker.

"De nex' skate on de list," he replied spelling out the letters on his ticket, which was being rubbed a good deal for luck by all hands within rubbing distance, "is de maiuh Donna Rita. Ah wouldn't give $2 fo' Donna Rita mahse'f, de way she's bin up-runnin', but Donna Rita's dun got tuh walk in all by huhse'f dis time," wheeeupon he returned the ticket to his pocket as if it already represented $2,002.

The sport sat enthroned like any monarch of Dahomey, with the crowd surging around him. One of the white gamblers, waving a roll as big as his fist, elbowed his way through the crowd surrounding Mose and flatly offered him $500 for his ticket, after looking at it and seeing that Donna Rita, much the best horse in the next race, had her name inscribed there. It was a temptation, but the sport was game and stood pat. "Dis heah ticket ain't fo' sale," he said. "De two thousand's good enough fo' dis coon."

Another man offered him $800 for his $2 ticket. The offer was declined.

"Off at New Orleans!" shouted the telegrapher, who knew about Mose's ticket by this time, and there was a note of unusual excitement in his voice as he called off the race. "Donna Rita in the lead!"

"Oh, yo' babe, Donna!" shouted all the sports in unison, and "stay right theah, yo' nigguh!" shouted the one particular sport.

"Donna Rita at the quarter by five lengths!" called out the telegrapher, and the poolroom might have been taken for an emancipation day festival. "Donna Rita at the half by five lengths!"

"Ef yo' lubs yo' man, come uhlong!" moaned the sport in ecstacy.

"Donna Rita at the three-quarters by three lengths, Kisme second, Virgie O. third," droaned the operator. "Donna Rita in the stretch by a head!"

The sport rocked to and fro and groaned.

"Virgie O. wins by a nose!" announced the telegrapher.

That settled the combination. The sport's followers fell away from him like autumn leaves from wind-tortured trees.

"They ain't nothin in this horse-racin' game is they?" the frequenters of the poolroom said to one another as they slouched out, and the grating tones of the cashiers counting bills soon echoed through the deserted room.—*New York Sun.*

Deafness Cannot be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

SPECIAL CORRESPONDENCE FROM THE TWO CAPITALS

THIS letter is going to be mainly Gossip I have no dealings, this time, with Tendencies, Movements, New Fads, those old refuges of the correspondent when all else fails. There is nothing new. No dramatic star has burst upon the firmament, no foreign social lion has cast his splendor upon us, no society bud or matron has invented and mothered a new fad; all is quiet along the Hudson. The regular affairs of the early season have been neither especially gay nor especially stupid. Greater New York moves along in easy mediocrity.

Of course, there was the pocket flurry on Wall street. It furnished, incidentally, a strong proof of Wall street's dominance in New York's gaudy society. That night occurred the opening of the opera season. As usual, all box-space was let far in advance, and society was slated to be there. The women were, most of them, but there were almost no men. The few who appeared were of the distinctively leisure class and even they did little visiting, but stood about talking in low tones. It was plain to see that the boxes were hard hit. Even the women were quiet and subdued, their gay costumes—for this is a year of gay costuming in the metropolis—appearing in marked contrast to their sober manner. And some of them had more visible cause to be subdued than any flurry in stocks, since this year a few who are on the borders of the Four Hundred have broken in and obtained parterre boxes, and many with old established claims had to be contented with the grand tier or the stalls. It was a grumpy occasion all around and resulted in the most tepid reception Madame Melba ever scored on a first night.

The costumes shown that night prove that more care is being lavished upon wraps than upon the gowns beneath. It used to be that my lady's costume was splendid under a sober wrap; when she entered and unwrapped it was the butterfly bursting the humble cocoon. Now, what shall I call it? To what shall I compare it? For the costume within is comparatively simple, since we have, just now, neither bustles nor wide skirts nor huge sleeves to distort the female form divine, while the elegance is shown in the wrap. The materials, the fur trimmings, the combinations of shade and color, were beyond anything seen previously in New York.

Perhaps, on the score of costuming and appearance, the women in Mrs. John Jacob Astor's box attracted the most attention. She and the three others with her, Mrs. Giraud Foster, her niece, Miss Van Nest, and Mrs. Starr Miller, are large and striking women to begin with. Beyond that, their dressing was such as to draw all the opera glasses in their direction when they entered. Mrs. Foster was in black and silver. The tight-fitting skirt was heavily embroidered in wide design of silver, and the bodice, decorated with silver and jet, was finished at the point of the corsage with a diamond star. Miss Van Nest, being the bud of the party, was costumed more simply—white cloth with silver pailettes. But Mrs. Starr Miller was absolutely startling. She wore black velvet, the waist as low as the scriptures allow, and held up by diamond shoulder-straps. Her hair was dressed enormously high and fairly seeded-down with diamonds. It was a dress to notice, but—Mrs. Astor was, as usual, well-dressed and shone by contrast. The same sort of conspicuousness achieved by Mrs. Miller distinguished the gowning of Madame Tallyrand-Peregord. Hers was also of black velvet, cut plentifully low, but it was ornamented with brilliants in such a fashion as to give her the appearance of one caught in a net of diamond ropes.

The stock-flurry was over by the time of the first assembly, and it was as gay and as successful as ever. The ball-room in the Waldorf-Astoria held nearly five hundred guests, a setback for the old idea that the "silly set" is limited to four hundred. Here, as ever, Mrs. John Jacob Astor was the presiding genius, the empress. It is said that Mrs. Astor favors the discontinuance of these functions, but, believing that the majority of those who have the say in society favor them, she continues to lend her presence. She looked queenly in a gray gown embroidered in silver and tiny spangles and many jewels. A diamond coronet in her hair, a wide pearl collar around her throat and above it a necklace of huge diamonds made up the most conspicuous part of these ornaments.

There were an unusually large number of debutantes, but none of special note. The society reporters have looked them over as they would scan the parade at a horse show, and tell us that there are no prospective winners in the lot, so I will let them pass. Buds are all off one pattern, anyway.

Had New York society known just exactly what they were going to see, I doubt if there would have been so many of our social leaders in the boxes on the first night of "Wheels Within Wheels" at the Madison Square Theatre. For look you, the society of New York, *the* society, mind you, is pretty middling respectable. Salacious plays pay in the metropolis, but it is because of the class just below the top, the "fast" circle of New York's numerous social circles, and because of that large and wealthy coterie whose women "look like actresses but aren't." But while the youths of the Four Hundred—would I had another name, for I despise this one—are won't to view such plays on the quiet, and while society does not exactly frown on them, still it keeps away as a whole. In London, it is different, which shows just "where we are at" in comparison with our cousins across the water.

But on this first night, things were different. It had been rumored that the thing was a bit risque, but one becomes accustomed to these little things, knowing that most of them emanate from the press agent. So they came, lured by the company, the theatre and the name of the playwright, on the first night, but they didn't repeat it—no indeed! There are a great many empty season boxes in the Madison Square Theatre this week.

It were most discreet of me to leave the play alone and say something of the new gowns Hilda Spong wore in the leading part. There was nothing wrong about these. In the first act, she was in a gown of fine steel on black net built over a green foundation of chiffon. It is in the *princesse* form, but falls straight from the waist. The steel embroidery is designed in a tulip pattern, and innumerable strands of fine steel beads are draped over one arm and across the bodice to be knotted above the other arm. It is a fair gown, giving a shimmery, mysterious effect. It is quite the most effective stage dress of the year, and the wearer knows how to wear it.

NETTA DYKE.

Late Verse.

Don't Squeal.

THE men that fought at Cannæ, they was
beaten; so is we.
But, bless you, what's a temporary check?
Tommy knows, "nor fear nor feud";
Tommy's "steeled in fortitude,"
An' precious soon he'll wring ole Kroojer's neck!
So the Trooper's on 'er way
'Crost the sea to Table Bay,
We've got our marchin' orders an' we ain't a goin' to shirk;
When a bullet drops a chap,
Why we goes an' fills the gap,
An' the British Empire's lookin' on to see us do the work!
Kroojer's got to step aside
With 'is "tyranny and pride,"
For we're goin' to take 'im down a peg or two,
An' we're bringin' with us Freedom
For these blarsted sons of Edom
An' I 'ardly think they'll like it much, do you?

—*Punch.*

Ballad of the Milkman.

HE came when morn in crimson broke
Athwart a sky of ashen gray,
And at his voice I straightway woke,
I woke and moaned at break of day.
Full bitterly as morning broke,
I brooded as I groaning lay.

I'd dreamed a sweet and soothing dream,
All carking care, all dole forgot.
When came a sudden whoop and scream
That made me jump as I were shot,
Vanished that sweet and soothing dream—
My anger rose upon the spot.

Who, lost in rapture and delight,
With everything as fine as silk,
Would not become chock full of fight,
Roused by that strident yell of "Milk!"
Who but a fiend would take delight
In waking folk by bawling "Milk!"

—*Chicago Record.*

Taps.

SLEEP.
Now that the charge is won,
Sleep in the narrow clod;
Now it is set of sun,
Sleep till the trumph of God.
Sleep.

Sleep.
Fame is a bugle call
Blown past a crumbling wall;
Battles are clean forgot;
Captains and towns are not:
Sleep shall outlast them all.
Sleep.

Lizette Reese, Atlantic Monthly.

Dr. Parker's Cough Cure.—One dose stops a cough. It never fails. Try it, 25 cents.

IT IS not a gay season in London this year; it could hardly be when every family in society has a son or some other connection away at the front. The new fashion for black and white has a much saner basis than most fads in dress. With half the aristocratic families wearing mourning, or likely soon to do so, it seems indelicate for those who have no personal interest in the War Office returns to be dressing gaily. Society continues its entertainments, as it would continue if the empire were tottering, but the pleasure of this season is quiet and subdued.

The wedding of the week was simple and unaffected, in accordance with the prevailing fashion—a cosy, quiet and rather informal affair, but very pretty for all that. It was a Scotch-Irish alliance, Miss Edith Chaplin from over the border marrying Young Lord Castlereagh, son and heir of Lord and Lady Londonderry, and was celebrated at St. Peters, Eaton Square.

The feature which lent this wedding its principal charm was the unconventional but none the less charming conduct of the bride. Radiantly happy, and yet collected, she seemed to realize that she was the center of the affair and took the running of things into her own hands. There was a wait for the bridal party train at the door before the groom took his place at the altar. The brother officers of the groom had some flowers to present her and a delegation from her own estates were there with some rare exotics for the bouquet. The presentation of these and the seating of the choir, which was late as choirs are wont to be, lengthened the delay. Now, certain brides I have known would have made this the excuse for much chafing and ill-temper or at least for nervousness; not so this Scottish maid. She was simply and unaffectedly happy, and showed it by chatting and joking with her bridesmaids until a bit of a ripple of laughter ran through the train and the congregation, trying to keep the conventional poise, would have liked to have eyes at the back. Presently, all was ready and the bride turned to her maids and kissed the very littlest one—her golden-haired cousin, Rosemary, daughter of the Duke of Sutherland. "I want Rosemary to carry my train," she said. Then her father, confused, as the male sex is likely to be at weddings, which are occasions wherein they have no real place, was for going down the aisle alone. The bride took a little skip at the door, and said, in a voice which could be heard in the back pews: "Father, you've got to take me!" In another sort of girl, this would have seemed vulgar and out of place, but in this simple, heather lassie, as fresh as the breath of her own moors, it was charming.

The wedding-gown was of soft stuffs, crepe de chine and mousseline de soie and fluffy lace, the best of it of old Irish lace and a present from the groom's mother. There was a long court train of the same transparent stuffs falling from the waist, and a tulle veil fell over everything. As suited so simple and bonny a bride, there were few jewels, only a slight tiara under the orange-blossoms and a diamond clasp at the waist and throat.

The bridesmaids, as pretty a retinue as I have ever seen, wore white satin with silver trimmings and rose felt hats. The skirts were absolutely tight at the back, the fullness being taken up at the waist in tiny tucks. They carried huge bouquets of lilies, to match the decorations of the church. And the bridal favors were appropriate to the occasion, tiny bouquets of shamrock, heather and orange-blossoms.

When Queen Victoria's reign is far enough back in history, I suppose we shall have historical plays about the golden age of England. The actress, whoever she may be, who is given the star role is anticipated. An English actress has already played the part of Queen Victoria. It happened at the Charing Cross Bazaar, and the story is just out. Miss Ellis Jeffreys was one of the saleswomen at that function, and was highly successful in peddling unconsidered trifles for considered sums. Now, Miss Jeffreys is tall and beautiful, and attracted more than a little attention. London is snobbish; a woman may have all possible charms of mind and body, but these weigh nothing against title. So it chanced that the many who asked the handsome "peddler" who she was seemed disappointed, one and all, when they learned her name. This fact was not lost on Miss Jeffreys, and she complained of it to Miss Lily Hanbury.

"Do they do that to you?" she asked.

"Yes," said Miss Hanbury, "and it is wearing on my nerves."

"I'll tell you what we'll do," said Miss Jeffreys, "tell the next one who asks you that you are the Duchess of Sutherland and I'll say that I am Princess Henry of Pless."

"You wouldn't dare!"

"Watch me!"

Just then, a woman of the worst type of *nouvelle riche* loomed up and put the question direct.

"Which of them are you?" she said.

Miss Jeffreys drew herself up to a q height.

"Madame," she said, "I am the Queen!"

KATRIONA.

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

The Frenchman likes his native wines,
The German likes his beer,
The Irishman likes his whisky straight,
Because it brings good cheer.
The Englishman likes his 'alf and 'alf,
Because it makes him frisky.
But they all go back on their favorite drink
For Jesse Moore "AA" Whiskey.

Hotel St. Nicholas, corner Market, Hayes Larkin and Ninth. American or European plan. Ira R. and James H. Doolittle.

IN THE SUPERIOR COURT OF THE CITY AND COUNTY OF SAN FRANCISCO STATE OF CALIFORNIA.

City and County of San Francisco, Plaintiff, *vs.* James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More B. More, and C. More Defendants. No. 67,877.

Action brought in the Superior Court of the City and County of San Francisco, State of California, and the Complaint filed in the office of the Clerk of said City and County of San Francisco.

FRANKLIN K. LANE
City and County Attorney, Attorney for Plaintiff.

The People of the State of California send Greeting to: James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More, B. More and C. More, Defendants.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the City and County of San Francisco, State of California, within ten days after service on you of this summons—if served within this County; or within thirty days if served elsewhere.

The object of said action is to obtain a judgment and decree of said Court adjudging that plaintiff is the owner in fee of all the real estate hereinafter mentioned, and to quiet plaintiff's said title as against each and all said defendants, and to obtain other and further relief and costs, as specified in said complaint, which complaint is hereby specially referred to for further particulars.

The following is a description of the property affected by this action:—

All that certain piece, parcel or tract of land situated in said City and County of San Francisco, State of California, bounded and described, as follows to wit

Commencing at the corner formed by the intersection of the northerly line of Bay street with the westerly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred (200) feet; thence at right angles northerly and parallel with said Fillmore street to a point at which the water of the Bay of San Francisco is twenty-five [25] feet deep at low tide, as the same existed April 27, 1863; thence at right angles easterly four hundred and sixty-eight 9-12 [468 9-12] feet; thence at right angles southerly and parallel with the easterly line of Fillmore street to the said northerly line of Bay street at a point thereon distant two hundred [200] feet easterly from the easterly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred and sixty-eight 9-12 [268 9-12] feet to the point of commencement.

And are hereby notified that, unless you appear and answer as above required, the said plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the City and County of San Francisco, State of California, this 20th day of March, A. D., 1899. [SEAL] WM. A DRANE, Clerk,
By WM. R. A. JOHNSON, Deputy Clerk.

NOTICE OF ASSESSMENT—OCCIDENTAL CONSOLIDATED MINING COMPANY.—Location of principal place of business, San Francisco, California Location of works, Silver Star Mining District, Storey County, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 29th day of November 1899, an assessment (No. 34) of five (5) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the Company, Room No. 69 Nevada Block, 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 3rd day of January 1900, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Wednesday, the 24th day of January, 1900, at 1 p. m. o'clock, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

ALFRED K. DUCKEROW, Secretary.

Office—Room No. 69 Nevada Block, 309 Montgomery street, San Francisco, California.

ASSESSMENT NOTICE. CHOLLAR MINING Company. Location of principal place of business, San Francisco, California. Location of works, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Directors, held on the ninth day of December 1899, an assessment [No. 50] of ten [10] cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin to the Secretary, at the office of the Company, Room 79, Nevada block, No. 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the eleventh day of January, 1900, will be delinquent, and advertised for sale at public auction, and unless payment is made before, will be sold on Wednesday, the 31st day of January, 1900, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

DIVIDEND NOTICES.

OFFICE OF THE HIBERNIA SAVINGS AND Loan Society, corner Market, McAllister and Jones streets, San Francisco, December 23, 1899, At a regular meeting of the board of directors of this society held this day a dividend has been declared at the rate of three and one quarter [3¼] per cent. per annum on all deposits, for the six months ending December 31 1899, free of taxes, and payable on and after Tuesday, January 1, 1900.
ROBERT J. TOBIN, Secretary.

DIVIDEND NOTICE.—Mutual Savings Bank of San Francisco. 33 Post st.—For the half year ending December 31, 1899, a dividend has been declared at the rate of three [3] per cent. per annum on all deposits, free of taxes payable on and after Tuesday January 2, 1900. GEORGE A. STORY, Cashier.

THE CONTINENTAL BUILDING AND LOAN Association of California, 222 Sansome St., San Francisco, has declared for the six months ending December 31, 1899, a dividend of 12 per cent per annum to class A stock, 10 per cent per annum to class F stock, 6 per cent per annum on term deposits and 5 per cent per annum on ordinary deposits.
CAPT. OLIVER ELDRIDGE, President.
WILLIAM CORBIN, Secretary.

SAVINGS AND LOAN SOCIETY, 101 Montgomery street. The board of directors declared a dividend for the term ending December 31, 1899 at the rate of three and sixty one hundredths [361] per cent per annum on ordinary deposits, free of taxes, and payable on and after January 2, 1900, Dividends not called for are added to and bear the same rate of dividend as the principal from and after January 1, 1900. CYRUS W. CARMANY, Cashier.

In Bookdom.

QUITE the best story of the month, and one of the notable stories of the season, is Jack London's "Odyssey of the North," in the January *Atlantic*. The feeling of true romance is in it; the personalities, rare, almost incredible types stand forth with a fine distinction, while the theme has veritably an epic sweep. Perhaps the idea is better fitted for a poem than a prose tale, for poetic it undeniably is. The wanderings of Naass, the Akatan Indian, through the icy north lands over the broad Pacific in pursuit of the yellow-haired giant, who has stolen his bride Unga, make a narrative superbly imaginative and tragic. Unless it be "Youth," of Joseph Conrad, I can think of no recent story that gives one so keenly the impression of romantic inspiration.

To the practiced reader, the beginning of this Alaskan epic must appeal, it so admirably suggests mystery and adventure. The figures of the taciturn guide, and of Axel Gunderson, in the making of whom "the gods had remembered their old-time cunning and cast him after the manner of men who were born when the world was young," and of the fascinating Indian wife, their strange and secret journey into the darkened north after the storied gold which lay over the mountains; the slow, sure process of Naass' revenge, the starving of Gunderson and the death of Unga are painted with real power and art.

Mr. London is a Californian—at least by adoption. One of his stories was published recently in the Christmas number of the *Wave*—a distinctly clever episode, done with the same picturesque quality which characterizes the "Odyssey." The work of another Californian that seems to have attracted national attention is that of W. C. Morrow, whose "A Man, His Mark," (J. B. Lippincott Co.), has recently been published. The story has interest, the narrative grips one to the end, but one finishes with a protest at the unreality of the situation and the artificiality of the characters. The members of the duet are the creatures of the plot. Beyond or outside its requirements they do not exist. Admitting the violence of the coincidence, which has brought Laura Andros and Adrian Wilder together in a hut under Mount Shasta and entombs them there through the months of veritable arctic winter, one must also consider the skill of the narrative which deals so brilliantly with the incidents of their incarceration. One revolts at the exposure of the woman's malevolent diplomacy—so unnatural, so theatrical, so arbitrary—and at the man's cloying chivalry and redundant delicacy, but nevertheless the sweep and mastery of the style atone for the errors of characterization.

The propriety of ranking Robert Barr as one of the most entertaining and versatile story spinners of the day was satisfactorily settled by *Thekla*, and its successors devoted to the exploits and adventures of stalwart fighting archbishops and marauding Rhine barons. In his latest excursion in fiction Mr. Barr utilizes a different type of adventure and constructs a series of lively and sensational incidents in which a woman reporter is heroine. *Jennie Baxter, Journalist*, (the F. A. Stokes Co.) is a first-rate yarn, brimming over with verve and action and interesting from start to finish. We will admit that the clearness and penetration of Miss Baxter are quite extraordinary, but the problems that confronted her required more than average intelligence to solve. If she was equal to such occasions so much the better. Miss Jennie is introduced in the guise of an applicant for employment on the staff of the *Daily Bugle*. While awaiting the editor she overhears a conversation which reveals a first rate news story that is under way in the office. A moment later Mr. Hardwick scouts her proposal—she declares she will convince him of her capacity. The result is, a rival paper gets the *Bugle's* scoop, and Miss Baxter is accepted by the discomfited editor at her own valuation. She is detective in chief and does marvelous things with a fine readiness and ease. Her discovery of the Princess Steinheimer's diamonds, is followed by her report of the Duchess of Chiselhurst's ball, from which all journalists have been excluded. There is also an extraordinary treasury explosion in Vienna that yields its secret to her penetrating mind, and she winds up by saving the life and honor of the handsome young English diplomat whose fancy she had captured while posing as the Princess at the Duchess' festivity. Good fortune sedulously attends Miss Baxter's efforts, but she is personally most fascinating and comely. No one need be astonished that her editor as well as the diplomat fall victim to her charms.

AT THE THEATERS.

"THE Christian" has had a record-breaking run at the Columbia, and the advance sale for next week, the last of the engagement, proves that crowded houses will continue to the end. The next attraction is the strong James-Kidder-Hanford combination in a classic repertoire. "The Winter's Tale," with which they open, has not been staged in this country for many years.

* *

"With Flying Colors," at the California, is a bad melodrama well acted. It is of the latest British style. The components of the British melodrama are no longer grand tank scenes and noble workingmen with daughters to ruin. It runs to clothes and titles, and elegant villains with the conventional villainous cigarette. There has to be a bank robbery somewhere in the performance, and there ought to be a murder. Herein we go back to first sources. In the old days, a murder was indispensable to the well-regulated melodrama. The tank drama dispensed with the murderer and his gloat, and the remorse of the sub-villain with a conscience, who is always afraid that they will "swing for it." But the new Adelphi product has revived the murder in full view of the audience, with the dear old phrases—"My God, you've killed him!" "Oh, Heaven, his eyes!" "Die like the dog you are!" "R-reven-nge!"

"The Fatal Card" does this sort of thing and does it well; "With Flying Colors" does it extremely badly. It is an improbable sort of play which wanders unconvincingly through sixteen scenes of villainy and gore, and ends because time is up. There is really no other reason for closing at the end of the sixteenth scene. At that point the sub-villain with a conscience has just murdered the villian, having escaped from jail with the persecuted hero on purpose to do the job. The officers of the law have just broken in to bear the murderer away to his doom, and the hero, in prison clothes, falls into the arms of the waiting heroine, while the warder declares on his own authority, "My brave fellow, you shall be pardoned tomorrow." But for the time limit, and the weariness of the scene shifters, these situations might easily be carried on indefinitely.

There is a strong scene—melodramatically—in "With Flying Colors." It is the climax where the villain, a naval officer, having worked the hero into the ranks, reprimands him in the presence of the heroine until, goaded to desperation, the common seaman breaks loose and throttles him. It is an old situation, as every dime novel reader will recognize, but it is done with more than a little skill.

Mary Van Buren is badly cast as the maid. That sort of part was not made for a stately beauty of Miss Van Buren's style. She has troubles with a Cockney accent. In the part opposite, 'Arry the serving man, Amory shines. Harrington Reynolds, the best melodramatic actor in the company, has a strong part and handles it adequately, although in one scene he yields to the temptation to rant. Mary Hampton is never quite at home as the unsophisticated young thing; her stronghold is the romantic drama. Perhaps the best work was done by Marion Barney in the part of *Florence Hackett*, the villainess overcome by remorse. The small parts, of which there are a multitude, are well handled, a fact which confers great credit on the management.

* *

Thanks to Mrs. Phoebe Hearst, the music lovers of San Francisco are to have a series of symphonies during the months of January, February, and March at prices almost ridiculously low. Mr. Henry Holmes and an orchestra of sixty-six musicians will give five concerts at the Grand Opera House on the afternoons of January 18, February 1 and 15, and March 1 and 15. Season tickets for the five performances will range in price from five dollars to one dollar, according to location of seats. This means that the cheapest admission will be at the rate of twenty cents a concert, a price lower even than that charged in Germany, where good music is in reach of the very poorest.

* *

"The Princess and the Butterfly," one of Pinero's masterpieces, has its first performance in San Francisco next week at the hands of the Frawley Company. This is the first departure in the present engagement from straight melodrama. The comedy of manners ought to be the stronghold of this company, and it will be a surprise if the play is not acceptably handled.

* *

Two sketches, presented by the Elinore Sisters and John and Nellie McCarthy, Frank Latona, the musical tramp, and Charles A. Gardner, the Dutch comedian, are the new features at the Orpheum next week. The holdovers will be: Billy Rice and H. W. Freeman, the Rezines, Dorothy Drew, Thorne and Carleton, and Fougere.

Mrs. Neville Castle, who is well known in San Francisco society, has decided to go on the stage. She is exceedingly pretty and bright and fascinating, and as an amateur has displayed undoubted capacity. Mrs. Castle makes her professional debut with the Frawleys Monday night, under her maiden name of Mary Scott. She is cast for the part of *Fay Zulani* in "The Princess and the Butterfly."

* *

The California Cantatrice
EMMA NEVADA,
at the California next week.

Madame Emma Nevada and assisting artists will give two concerts at the California Monday evening and Wednesday afternoon. This is the first opportunity of hearing this brilliant vocalist that her native city has had for many years, and it promises to be the musical event of the season.

* *

Next week Madelaine Lucette Ryley's successful comedy drama, "The Mysterious Mr. Bugle," is the bill for the Alcazar.

* *

Vladimir de Pachman gives the last concert of his series tonight in Sherman and Clay Hall.

QUEER.—On the southeast coast of Newfoundland, about half way between Cape Race and St. Johns, lies the wreck of the *Scottish King*, a British trading steamer almost a year ago driven in a storm upon that inhospitable rock-bound shore. Thanks to the precise spot on the coast where she struck, and the manner in which she slipped in between two protecting reefs, she still lies with her hull almost intact. She scarcely resembles a wreck indeed, and a plan is now on foot for salving her. The fact that she did not go to pieces at once was a subject for great rejoicing among the fishermen in the neighboring villages. A rumor went abroad that she carried large quantities of champagne in her cargo. The Newfoundlander toper of course does not aspire to anything but rum, but he has heard of champagne and its powers. It seems, however, that although the fishermen had not heard of it, and would have been no wiser if they had, the *Scottish King* carried just about as much apollinaris as champagne, and the cases containing the mineral water were on top. A glimpse of bottles was quite enough for the Newfoundlanders. The cases of apollinaris went merrily ashore, and the sampling began without delay. Disillusionment and despair! Where were the virtues of this celebrated drink? Bottle after bottle was patiently, gravely disposed of, with no approach to the desired result. One of the men summed it up tersely to a visitor afterward with this half pathetic, half scornful remark: "Sure, we tried it fair; drank quarts of it and kept on drinkin', but no use; we got no forrarder!"—*N. Y. Tribune.*

A modest Mississippi editor is credited with the authorship of the following: "We have hanging up in our sanctum a plain black band of generous dimensions, which appears too small for a belt and too large for a sleeveholder. The article was found on the street, and in case the owner comes in and proves property, the same will be turned over without the customary fee for advertising. It is not a dog collar."

The fool, the wit and the wise man,
Should ne'er forget great Nature's plan,
And that is: there is sure to be
A bigger fool, a greater wit, a wiser man than he.
B. H. H.

Don't drink the first thing the bartender offers — call for Jesse Moore Whiskey and see that you get it.

New Stories Re-Told.

x x x

A TERSE CRITICISM.—While General Grant was in Liverpool during his famous tour, Edward Russell, then an obscure literary man, but a great student of tactics, called on him. He was admitted and begged permission to ask a question in regard to a matter that had puzzled him deeply. "I've followed every move of the war," he said, "and understand 'em all—all but one. On such a day you were there and the Southerners were there"—pointing to plans on a map that he had brought. "Now, it seems to me that you ought certainly to have gone there, whereas you went there"—pointing again. General Grant, usually taciturn, but when not taciturn phenomenally terse, took the cigar from his mouth and said: "You're right, sir. Damned blunder!"

x

A CRUSHING RETORT.—Tom Benton and a man named Green were political rivals. Benton would not agree to a joint debate, but Green used to follow him around and take the stump to address the crowd after Benton had finished. One day Green took occasion to repeat some ugly charges against Benton's honesty. When he had concluded Benton turned to depart without replying. With apparently a second thought, however, he halted and faced Green. "It is written," said he, in deep, dramatic tone of voice, "Thou shalt not bear false witness." "It is also written," instantly replied Green, "Thou shalt not steal!"

x

ABUSING HIS PRIVILEGE.—In the House of Commons, during the days of Disraeli's preeminence there was a Radical member who was unfortunately very deaf and in the habit of using an ear-trumpet. During one evening of debate several violent, rambling and inconclusive speeches were delivered in succession from both sides of the House. Disraeli's eyes fell upon the deaf member, who was using his ear-trumpet unflinchingly during the boisterous, weary talk. "Look at that man," the statesman said to the colleague who sat next to him. "He is deliberately marring the peculiar blessing which Providence has bestowed upon him."

x

A COMPETENT WITNESS.—At a murder trial in Arkansas the important witness for the prosecution was a colored boy only ten years of age—too young the lawyer for the defense thought, to understand the nature of an oath. "Boy," he said, "do you know what would happen if you swore to a lie?" "Yes, sah. Mammy would lick me." "Would anything else happen?" "Deed dey would, case de devil would git me." At this point the Judge leaned over his desk and said with pretended sternness: "Don't you know, boy, that I would get you, too?" "Yes, sah. Dat's what I jus' said."

x

THE FARMER SCORED.—A farmer drifted into a hardware store at Stockton and was asked by the manager: "Don't you want to buy a bicycle to ride around your farm on? They're cheap now. Can give you one for $35." "I'd sooner put the $35 into a cow," said the farmer. "But think," said the manager, "how foolish you would look riding around town on a cow." "Oh, I don't know," said the farmer, "no more foolish, perhaps, than I would milking a bicycle."

x

MOSES' LUCK.—At a recent Irrigation Congress in Utah one of the delegates droned through a drowsy paper on artesian wells, which he declared always brought water except when they struck a rock. He repeated this statement several times. At the fourth repetition he defied anyone to deny the proposition. Congressman Geo. Q. Cannon looked up and asked, "How do you account for Moses' success?"

x

GRATITUDE INDEED.—The English statesman, Hastings Russell, deserted Mr. Gladstone at a critical moment in the latter's fortunes. He was asked why he had chosen to shift allegiance from a man who had covered him with honors. "That's it exactly," was the cynical rejoinder. "He offered me the Garter; he made my wife mistress of the robes; he made my brother a peer. What more could I get from him?"

x

"PORK, SIR."—An English inspector, well known for his weight, was trying to extract the word "flesh" from a class. His efforts had failed, but, taking hold of his fat cheek between his thumb and forefinger, he pulled it out, and asked: "What's that?" The unhesitating answer came promptly: "Pork, sir."

x

COLORED REPARTEE.—A black sergeant in one of the colored regiments was toiling up a hill near Cavite when he was hailed by a breezy Western volunteer, "Well, nig, what are you going to do here?" he replied. "We're going to take up the white man's burden, I suppose."

EVENTS CURRENT.

The Boers Press Ladysmith.

The interest in the Boer war centers on Ladysmith, now again the crucial point in the situation. That city, with the eight thousand men who form the remnant of General White's army, is closely surrounded and the Boers seem to be determined to take it before help can arrive from the outside. Here again the burghers have displayed clever generalship. Had they waited until the reinforcements arrived from England for Buller's command, they would have been on the defensive; they choose rather to take the chances of an assault, hoping to put this large force out of the final reckoning. The active bombardment recommenced several days ago and continued until Sunday of this week, when the entire Boer force began an assault. It was a fierce battle, stubbornly fought on both sides, and ended in a victory for the British, who beat off their assailants and captured their advanced positions. Nevertheless, the situation of the garrison is perilous and desperate. It is believed that disease has broken out among them, reports to that effect having drifted through the rigid censorship, and it is almost definitely known that they are short of ammunition. London has been waiting for Buller to advance on the forces at Tugela river which thwarted his former attempts at relief. He has not yet made the effort. He may be waiting to form a junction with one of the other columns, or it may be that his position is so critical as to render an assault impossible. At any rate, he has not seen fit to move. Relief from this source seems to be the only hope for Ladysmith, since the garrison can hardly hope to keep the place until the new reinforcements arrive. Nevertheless, White's repulse of the attacking column has created a strong feeling of encouragement in London. A small force of British has repulsed a larger force of Boers; it reverses the order of things which has prevailed thus far in the campaign and gives hope for future operations. The other important action of the week was a minor Boer victory. General French, co operating with Methuen, made an attack on a Boer position with four companies of the Suffolk regiment and was forced to retire with the loss of one company. This consummation seems to have been brought about by a characteristic Boer stratagem. It is said that, in the darkness and confusion of the attack, a Boer bugler blew the signal for the retreat, causing the English to retire in confusion, under the belief that the command came from their own side. The Transvaal forces have taken Kuruman, a British outpost which has been beseiged for some time, and captured 120 colonial police guarding it. Both this and the victory over French can have little direct influence on the general result, but the constant picking off of troops does as much as anything else to discourage the British in their difficult undertaking. Arthur Balfour, first Lord of the Treasury, has had something to say in defense of the artillery sent to South Africa. He maintains that the short-range guns were sent because cannon of this type are more easily transported than long-range guns. It was a choice between mobility and range, and the War Office, being unable to foresee the situation which now prevails at Ladysmith, Mafeking and Kimberly, chose the short-range, mobile type.

Germany Resents Seizures.

The seizure of the German steamer *Bundsrath* has turned out to be a much more serious matter for Great Britain than the taking of the American flour-ships. It is not likely that our government, remembering the good offices of Great Britain in the Spanish War, will make any trouble for our single supporter at a time when she has her hands full. The American people, or a section of them, seem to have forgotten the fact, but those who guided affairs when England stood between us and the anger of Europe are mindful of past services. A note asking for an explanation has passed between Secretary Hay and the British Foreign Office, but it is not probable that a demand for an early answer will be pressed. On the other hand, Germany, while officially friendly, is by no means warmly so, and practically the whole German people hate the British and are warm on the side of Kruger and his people. Therefore, the seizure of the *Bundsrath* has stirred up a storm in which official Germany seems likely to be drawn before long. It is reported that the attitude of the emperor is changing, and that he will press for an apology and indemnity. The law of the question is involved; it seems to hinge on the exact location of the seizure. According to the best authorities, a nation has the right to seize arms, munitions and supplies destined for a rebellious section of their own possessions when such seizure is made on the high seas. Although the Boers are not morally rebels, as they are subjects of a practically independent state, they are legally so, as the clause of the agreement granting England suzerainty over the Transvaal's foreign policy is still in force. But the question for contention is whether or no the seizure was made on the high seas. Germany claims that it was not, but in waters controlled by Portugal. On the other hand, it has never been established that foodstuffs are contraband of war, and only by the establishment of this principle could England show just cause for seizing cargoes of American flour. Moreover, England has weakened her case by releasing the offending flour ships.

American Prisoners Rescued.

The last important event in the Philippine affair ends one of the most romantic episodes of the war. Colonels Hare and Howse, by a brilliant and hazardous pursuit in northwest Luzon, have succeeded in recapturing Lieutenant Gilmore and the men of the *Urdanetta* and *Yorktown*, twenty in all, who have been prisoners in the hands of the insurgents since early spring. The object of the advance was to rescue these prisoners, and it was accomplished by a persistent pursuit which has lasted several weeks. The fleeing natives carried their prisoners with them, driving them ahead whenever they moved. At the very last, the pursuit became so hot that the column could no longer be encumbered and General Tino, in command left them with a lieutenant and squad under orders to shoot them. The conscience of this subordinate would not permit him to slaughter defenseless men, however, and he left them in the jungle, unarmed and at the mercy of the savage tribes in the region. For two days they wandered in the wilderness until they came to a river. Here, they had begun to build rafts in order to float to the sea, when 140 men of the rescue party found them. The whole party rafted from this point down the river to Vigan, undergoing much peril and hardship from rapids and rocks and from lack of food. Gilmore and most of his men are wasted from the privations they have undergone. They report that they were well treated while in Aguinaldo's jurisdiction, but that General Tino systematically abused and starved them. Charles Baker of the Third Artillery, one of the prisoners, was murdered by his guard because he was too weak to travel. In fact, this incident and General Tino's order to shoot the Gilmore party show a new attitude of the insurgents. When they were in a fair way to succeed, they accorded their prisoners the best of treatment, possibly because they hoped thereby to enlist foreign sympathy. As their case becomes more desperate, however, they become more disposed to resort to barbarity. A sample occurred in a reconnoisance near Trials, January 5. Five American artillerymen were there captured by the enemy and forced to face a firing-squad. Two were killed by the first fire, the other three were hacked by bolo knives so that, when they were recaptured by our men, two of them were past help. Of late the active operations have consisted in small skirmishes and reconnoisances, the purpose of which cannot be stated at this distance from the scene of hostilities. More than likely, it means that the Americans are opposing guerilla tactics with irregular warfare, striving to wipe out the small bands wherever they occur. There has been a suspicion for some time that American officers and civilian appointees were taking bribes from the natives in and about Manila. This suspicion is confirmed by an order from General Otis recalling to his subordinates the law provided for such cases and threatening to apply it rigidly in future.

A Serious Crisis in Austria-Hungary.

Austria-Hungary is involved in a ministerial crisis which involves the entire monarchy, and which may yet result in the overflow of the constitutional government. The dual monarchy is peculiarly constituted. No European power has so many elements of population represented in its borders, and each of these elements is a party within itself. There are the Slavs, supporters of the Clerical party, the Czechs, representing the major portion of the Hungarian population, and the German Liberals. The harmonizing of these conflicting elements has been the chief problem of the monarchy ever since constitutional government was established. The leaders of the three parties have worked continually for their own selfish ends, repeatedly blocking the sessions of the National Parliament and causing crisis after crisis in the ministry. Under the administration of the Badeni ministry, it was the violent obstruction of the German liberals that blocked legislation and forced the retirement of the Premier. Under the cabinet of Count Thun, the Slav Clerical majority, with a view to upsetting a ministry in which it was not represented, brought about the deadlock. In the last crisis, which resulted in the resignation of Count Clery, the Premier, and his cabinet, the Czechs were the obstructionists. Great hopes had been entertained of the Clery administration; it was expected that he would be strong enough to bring order out of chaos, just as Bismarck was strong euough to pull Germany through a similar crisis in the early years of the Empire. He has failed, and the political situation in Austria-Hungary is complicated and dangerous. Already this power is practically a cipher in general European affairs. The continual changes of administration and the obstructions placed in the way of foreign ministers have kept her from taking part in the concert of Powers for many years. These disputes have retarded the Emperor and his advisers in co-operating diplomatically even with the Triple Alliance. Thoughtful foreign politicians are beginning to talk of "Europe without Austria," considering her as an impotent factor. The result is likely to be a separation of the dual kingdom, since Hungary is the element which has caused the greatest amount of disturbance.

The Plague at Honolulu.

Last week advices from Honolulu stated that the bubonic plague scare had subsided, as the epidemic seemed to be under control and there were no new cases. The latest steamers bring news dated Dec. 30 of a fresh outbreak. This spurt occurred Dec. 24, and Dec. 28 two more cases were discovered, one being found in the Chinese hospital; the other that of a Chinaman found dead in an alley. Subsequently, a native Hawaiian and two Japanese showing unmistakable signs of the disease were removed to the pest-house. In addition, there have been a number of suspects, all Orientals. The provisional government was stricken by the plague-scare and called out the National Guard to enforce a shotgun quarantine. A cordon has been drawn around the infected quarter with orders to keep all the residents within the bounds. There is complaint both from without and within over the manner in which this quarantine has been enforced. The outsiders complain that whites with permits are allowed to pass too freely within the lines, while those shut in, including wealthy Chinese and Japanese and some whites, are bitter over their detention in the infected district. The work of fumigation and cleansing begun during the first outbreak has stopped, partly, it is supposed, through the difficulty of getting the sanitary force to face the dangers of infection. The enforced idleness of one-fourth of the population and the general state of suppressed panic have made business very dull in Honolulu.

Deroulede and Guerin Convicted.

The trial before the French Senate, sitting in High Court, of Deroulede, Guerin and their fellow conspirators, has finally come to an end, concluding, as did the more famous Dreyfus case, in a compromise verdict. Only three of the score of prisoners were convicted, and these three received comparatively light sentences. Deroulede and Buffet are banished for ten years and Guerin is to be detained in a fortress for the same period. Deroulede's record as a dangerous Nationalist agitator is familiar on this side of the water. Buffet is less known. He is a Royalist in the pay of the Orleans family, and is the person who acted as the agent of the monarchy. The punishment of banishment includes a general civic disability, and the offender must not set foot on French ground during the period on penalty of an imprisonment twice as long as the term. Guerin, having committed a civic as well as political crime by resisting arrest, may be confined in a prison instead of a fortress. In France, it is generally believed that President Loubet will exercise official clemency under the "first offense act" and pardon them all after a short time. The Nationalist party regards the result in the light of a victory, claiming that it proves the government to have been making mountains out of mole hills. On the other hand, the liberal element which supported Dreyfus is satisfied with the knowledge that a plot was proven. The trial cost France eight hundred thousand francs. Certain French Legislators are for assessing the costs to the condemned. If this is done, it will really prove the heaviest part of the punishment.

Cultivation of Reindeer in Alaska.

An important factor in the development of the gold fields of Alaska and British Columbia is the cultivation of reindeer as beasts of burden. Hitherto, the only practicable method of animal transportation was by dog team, a very unsatisfactory means at the best. Even before the Klondike rush, the government, through the Agricultural Department, was experimenting with these animals, but the first results were not encouraging. The deer had to adapt themselves to the new climate, and their keepers had to learn how to care for them. The first practical demonstration of their usefulness came when Lieutenant Jarvis made his expedition to relieve the whalers at Point Barrow, wherein they stood the work well and were more useful than dogs could have possibly been. Several miners used reindeer in the Cape Nome rush, and now their utility is so well established that they are coming into general demand. They forage for themselves, living as they do on moss, and require no special care. With a train of ten deer, a man could strike into desert country, carrying enough supplies to last him for a year with the assurance that he could kill a deer for food in case of need. The government, by purchase and increase, has got some three thousand of these animals into Alaska. Laplanders have been imported as instructors for the natives in herding and training and the deer have been distributed among the missionary stations under certain conditions. One of these is that at the end of five years they are to return the number of reindeer intrusted to them, they taking their profit in the increase. This is fairly rapid; half of the yearling does have fawns, half of which may be counted on to come to maturity. At the present time, trained animals bring one hundred and twenty-five dollars a head, with prices still rising, while the cost of raising them is not over seven dollars a head.

The "Open Door" Agreement.

Some few months ago a rumor was circulated to the effect that the United States, through Secretary of State Hay, had addressed to the European powers a communication proposing an "open door" agreement. At the time this was treated by the conservative public as a mere "correspondent's yarn." It now appears that the State Department has done this very thing, and that, moreover, the response has been particularly gratifying. Every nation questioned, except Italy, has returned a conditionally favorable answer. The first response came from Great Britain. It was very cordial in tone, and proved that the English were disposed to give us generous assistance. This delayed negotiations for a time; the European powers, always afraid of an Anglo-Saxon alliance, were apparently suspicious. Finally Germany came in, adding the proviso that it should be "all or none." France then gave assent, although less cordially and directly. The Russian negotiations proceeded with more difficulty. The question of "spheres of influence" seemed to be worrying the Czar's counselors. Finally Russia agreed, with the usual proviso that all or none should be in the agreement. Japan was next and now only Italy remains to be heard from. This

ilence does not imply hostility to the proposition, but only onservatism. Italy, the least important of the powers oncerned in Chinese affairs, is waiting to see how the reater powers will swing. There is little doubt but that his reply will be favorable. It is only fair to add that this eport does not bear official confirmation, the State Depart-ment refusing either to affirm or deny it, but it seems to ome from reliable private sources and is accepted by the nost reputable journals as true.

Editorial Comment

The Gratitude of Republics.

REPUBLICS are indeed ungrateful. Less than two years ago this country was thrown into serious and unexpected war with a foreign power. It was a small power and a failing one; of itself it could make no strong nor effective opposition against the United States. But it had the moral backing of every nation of Continental Europe. Germany, always with an eye to advantage, was watching for a chance at Spain's colonies; France and Italy were supporting her, because she was of Latin blood; Russia, for political reasons, was siding with France. Only one people in the wor'd stood by us; England was our consistent friend. Through the whole of that crowded summer, our statesmen were able to devote their entire attention to the task in hand, through the assurance that Great Britain stood between the United States and the European sympathizers of Spain. It is not an assured fact that, had we been unsupported by England, the powers would have interfered, but it was among the possibilities. The action of the British commanders who drew up their ships alongside of Dewey's at Manila was only a sample of Britain's attitude throughout the whole trouble.

Two years have passed, and England is involved in a war greater and more uncertain than our own. The European powers are arrayed, as they were in 1898, against an Anglo-Saxon nation. It is not likely that they will go out of their way to interfere, but it is a possibility. Under those circumstances it is our place to stand by the nation which so recently befriended us. At the outset it seemed likely that we would do so, and, indeed, the government, be it said to its credit, has taken a friendly attitude. But the great American people have played a strange game and by no means a creditable one. When the war opened and England scored two victories at the beginning, very little active sympathy was expressed for the Boers. A few anti-expansionist journals, papers, like *Life*, which have always opposed expansion and any talk of Anglo-Saxon alliances, devoted lukewarm paragraphs to a defense of the Boers, but that was all. The sentiment of the country seemed mildly pro-British. Then came the series of brilliant movements by which the Boers placed Great Britain on the defensive. It was then, and not at the beginning of the war, that certain of our countrymen began to hold mass-meetings to pass resolutions, to memorialize Congress, petitioning that body to take sides with the "struggling Boers."

Admitting purely for the sake of argument that our moral duty to England, in return for her active support two years ago, is a purely sentimental consideration, it may be asserted as justly that this leaning toward the Boers is based upon sentimentalism of the rankest variety. Outside of the Irish and Germans, who take sides on grounds which do not concern Americans, the bulk of our Boer sympathizers are such because the Transvaal is a republic, or because they believe it is a weak nation overwhelmed by a strong one. As to the last of these reasons it hardly merits an answer. Might does not make right, but neither does weakness. Because one party to a fight is little and the other one big, it does not follow that the little one is in the right. As for the other consideration, the Transvaal is only technically a republic. It is really as limited and cramped a government as any Caucasian monarchy in the world. Its affairs are administered wholly by an oligarchy of one fourth of the residents, who tax the other three fourths to support the government without giving them a voice in affairs. No Jew or Catholic, no one in fact who does not very closely agree with the religious opinions of the governing few, is eligible for citizenship. The laws are those of a century ago, with a few improvements designed to favor the ruling oligarchy. The members of the governing class are uneducated, narrow, and utterly unprogressive. Their occupation of South Africa has long been the great bar to the opening up of the country. No outsider who has met them, with the exception of one woman, she an enthusiast and visionary, has ever spoken well of the Boers. They fight well, heroically, with the means at their command; so did the American Indians, so did the Sepoys of the East Indian Mutiny, so would a horde of gorrillas. In the talk about Cecil Rhodes' land-grabbing, our sentimentalists have lost sight of the real claims of England. They do not know that the origin of Great Britain's claim lies in the fact that, in the early seventies, she took up the government of these Boers at their own request when they were about to be wiped out by savage tribes without and dissension within, and fought a long war with the Kaffirs on their account. These and other like facts are ignored and unknown by the kind of citizen that does his thinking in mass-meeting.

There are just two countries in the world where the government is such as to assure an approximation to individual freedom. One is Great Britain, the other the United States. This is not saying that either of these governments is perfect, but they approach nearest to the Republican ideal. And what England does at home, she does for her colonies. A few months hence, when the valor of the Boers has yielded to the resource of Great Britain, she will supplant a very poor government by a very good one, which is the consummation against which the pro-Boer agitators are howling.

States Rights vs. Bryan's Trust Antidote.

WILLIAM JENNINGS BRYAN has again delivered himself on the Trust question. The ancient fathers of Democracy, during the sturdy infancy of that party, never dreamed that any spokesman posterity might give to it, would seriously and persistently urge the obliteration of states' rights, and the setting up of new and strange powers in the federal government in the manner advocated by Mr. Bryan as a cure for trusts. It would be astonishing, indeed, if Democracy, founded upon a recognition of state sovereignty, the party that has always jealously guarded the soverign rights of the respective states, as against the "growing evil" of a central federal government, should, at the close of the century, be instrumental in breaking down those rights and clearing the way for further encroachments of the federal government. Mr. Bryan believes that state corporations should be prohibited from doing business outside of the state of their creation, unless they have been first licensed by Congress. The courts have held a corporation to be a "citizen of a state" for certain purposes; they have also held them to be "persons" within the meaning of the Fourteenth Amendment. It is but a step, in law, from the natural person to the artificial. If Congress may, with the sanction of the courts, compel the corporate individual to take out a license before attempting to transact its business in two or more states, it is a little difficult to understand how the individual will be able to dodge a similar law aimed at him.

Mr. Bryan says: "The natural man in Nebraska or Texas cannot complain of competition with the natural man in New York or Massachusetts, but" says he, and we bid you mark well the sheer idiocy of this line of reasoning, "the natural man in any state has a right to expect both from his state legislature and from Congress, protection from a corporation monopoly established anywhere." And again, in the same line: "*It cannot be assumed that the authors of the Constitution intended to leave God's creature—man—defenseless in the presence of man's creation—corporation.*"

Was ever such nonsense seriously advanced by an aspirant for presidential honors? This man is what the boys on the street would term "a dead cheap guy." He conjures with the word "corporation" as though it described a living, moving, artificial thing, that might devour women and children. Stripped of its legal difference, in point of fact, a corporation is merely one form of partnership, for the prosecution of legitimate business ends. A corporation is made up of individuals. Without individuals it is an impossibility. Five of Mr. Bryan's "natural persons" may gather together in any state of the Union and form an association under its corporation laws. These individuals wish to engage in a common enterprise; each determines how much of his capital he will invest; the product is the amount of the capital stock, shares of which are divided among them pro rata; they agree upon a name for their association, and, after otherwise complying with the requirements of the state law, this association is known as a corporation.

What under the canopy is there discreditable or dangerous in such a proceeding? Natural persons in their individual capacity or otherwise legally associated are capable of working as much harm and wrong as the associations known as corporations. Either Mr. Bryan is a shallow reasoner or he is playing upon the prejudices of ignorance. It is a common belief among the ignorant that there is something to be feared from a corporation that does not exist in the individual. No educated man harbors such a delusion. One is forced to conclude that Mr. Bryan's recent bit of oratory was a bit demagogic.

The faults with Mr. Bryan's plan for regulating trusts have been pointed out in the *Wave* before now. He aims his shaft at "artificial persons"—"corporations," as a class—not at the wrongful or illegal practices, which may be instigated and indulged in by individuals and partnerships. The foundation of his theory of control is out of plumb with sound common sense, and cannot stand.

Stable Basis of our Prosperity.

AS A RULE, every financial crisis the world has ever witnessed has followed in the wake of a season of abnormal prosperity. Extremes beget extremes. Accompanying prosperity comes speculation; with the return of confidence, comes a letting down of the bars of conservatism, timidity gives way to roseate optimism, and a crisis and an era of depression follows as a natural sequence.

In 1888 and 1889 Europe witnessed two years of extraordinary speculation. During this period the Panama Canal met failure, the great copper syndicate collapsed and the Comptoir d'Escompte suspended. During these years British capital was engrossed in schemes in South Africa and South America. Syndicates were formed to take up American breweries and the like. One syndicate seriously considered for a time the purchase of all of the hay in America. In London, Argentine securities were absorbed in great quantities, and finally the craze culminated in the failure of the ancient house of Baring Brothers. In America the friends of silver secured the passage of the silver purchase act, "which," says a prominent writer "more than any other thing proved to be the source of our woes in this closing decade of the century." This Legislation failed to sustain the value of the silver, but it did set gold flowing toward Europe; and we permitted Austria, Russia and Europe generally to drain us of the yellow metal, which we replaced with silver and paper. In the latter portion of 1892 the first tremor of the coming crash was felt. Our crops were short while products abroad were unusually good; railroad traffic diminished, manufacturers began to languish and credit was badly disturbed. In 1893 there lived a well-defined dread that a suspension of redemption in gold would be forced upon the country. In 1891 the gold in the United States continued to be drawn out in exchange for the accumulations of idle current. The menace of Free Silver began to appear just above this disturbed horizon; the feeling of doubt and suspense that first made its appearance among men of finance had worked its way out among the people. The hoarding of money and a consequent stringency followed, and depression stalked on every side. The election of President McKinley came as a vote of confidence. It was an assurance of sound money and brought with it a new feeling of security and relief. In 1897 crops were better at home, while they were short abroad, and prices bounded up again. Exports increased, railroads and manufactures began to feel the impetus of an approaching change. The Spanish War of 1898 brought in legislation providing for new revenues and authorizing large disbursements. The treasury was furnished with a surplus; abundant crops favored us. Our products were in great demand abroad, exports increased enormously, and the balance of trade turned back the gold. Railroads and manufactures witnessed, and are now witnessing, a season of prosperity unexampled in our history. The country stands to-day at the threshold of an era most promising. Let us see to it that no act of our own bring it to a sudden close. True, some unforeseen calamity may overtake us, but it is not yet in view. Let Congress fix our monetary system upon a firm basis. Let the threat of Bryanism and Free Silver become so remote as not to breed fear in the hearts of the most timid; let our people avoid the wild speculation that usually accompanies "good times"; let them loosen their purse strings to legitimate development, and tighten them against the seductive speculation. Let them take every advantage of the world's demands for our products. Prosperity will tarry longer with us if we follow these simple rules of conduct.

The Chicago Drainage Canal.

THE new Chicago Drainage Canal is unique among engineering works of the kind in several important particulars. To begin with, it is the largest artificial channel for the disposal of sewage ever constructed in any country. It is twenty-eight miles in length, which makes it nearly as long as the Suez Canal, and wide and deep enough to admit the largest lake-going vessels. Then it is an enterprise unique in the history of American municipalities in that it was done without government aid and by a corporation which, while embracing in its membership most of the city's voters and landholders, had no direct connection with the city government, but exists as a sort of wheel within a wheel. Moreover, this great waterway, through its lock and dam system, is enabled to contradict the law of nature, during part of its course, by running up hill, and finally it restores prehistoric geological conditions by forming a connection between Lake Michigan and the tributaries of the Mississippi.

While the residents of all sections of the country have been knocking at the doors of Congress, petitioning for appropriations to excavate canals, the Chicagoans have gone ahead on their own initiative with this work. Not only this, they have provided a waterway between the lakes and the Mississippi, while keeping to the original plan. For within a year or two, merchant vessels will be using this channel regularly as a means of transit, and the inland connection between New Orleans and the St. Lawrence river will be complete. To accomplish this the city and state have expended at least twenty million dollars more than would have been called for had they built for drainage purposes alone. The total cost has footed thirty-three million dollars; but thirteen millions would have been required had they not put down the stone casings which enable ships to use the route.

The great opposition to the plan has come from the residents of the Illinois valley, who object to having the sewage of the great city carried past their homes and into the Mississippi. This objection was aired and fought in the state legislature from the very beginning, and is still urged, now that the canal is opened. That it is a false contention, all sanitary engineers agree. Most of the sewage of Chicago has been turned in that very direction in past times, and it has been done with an insufficient volume of water. Now a stream that will carry the refuse matter beyond possibility of stagnation flows down the canal and into the Illinois river. Long before it reaches the cities of the lower valley, the purifying action of the water will have rendered it harmless.

Part of the way the excavation work was done by dredgers operating in the Chicago river; the rest of the distance a "dry" cut was made by means of improved hoists. The average flow of water will be about 300,000 cubic feet per minute, and the minimum depth of the earth sections and the regular depth of the rock sections is twenty-two feet. The maximum capacity of the rock sections and of five of the earth sections is 600,000 cubic feet per minute, enough to dispose of the sewage of a city nearly twice as large as Chicago of today. Consequently, when the city grows to those proportions, the only additional work to be done is the deepening of a part of the earthway, about eight miles in all. There are seven lock gates of metal, besides the controlling gates. These are so arranged that in case of an emergency the whole flow may be shut off at a few hours' notice.

A BIT OF HOME LIFE.

PEASANT WOMAN GOING TO MARKET.

A HOME OF THE BETTER CLASS.

IN a recent letter General Joe Wheeler says that the appearance, mode of living, and method of performing work of the inhabitants of the Philippines resembles that described in the Bible. The people dress much as they did 2000 years ago, the means of transportation by carts drawn by Caraboas is is about the same, and their methods of shelling and cleaning rice are as primitive as possible. The illustrations herewith presented bear this out. The picturesque Pensant woman might well be a daughter of Jerusalem. Her short skirt is enveloped in a cotton *tapis*—a rectangular piece of stuff, as a rule, all blue red, or black, tucked in at the waist, drawn very tightly around the loins, and hanging over the skirt a little below the knees. They are erect and stately, these peasants, due to the custom of carrying jars of water and baskets of provisions on their heads. The better class wear the more becoming short skirt with a *tapis* of silk or satin with gold lace embroidered *chinelas*. As to the character of the people our soldiers are engaged in subjugating, authorities differ. A Spanish friar after forty years of life in Luzon, wrote an essay in which he declared the native an incomprehensible phenomenon, the guiding motive of whose conduct had never yet been discovered. A native, he declared, will serve a master satisfactorily for years and then suddenly abscond, or commit some really hideous crime. Our prospective subjects, as General Otis has discovered, are not dependable upon. The average native is refractory to intellectual improvement, fond of gambling, profligate, deceitful, and insincere. He re-

SCENES OF FILIPINO LIFE.

An American Hero

A YOUNG nation, and not an especially warlike one, the United States has had its share of heroes of romance, of that sort of soldier, descendant of Chevalier Bayard, who is remembered rather for a dashing, attractive personality than because of deeds of arms. Light-Horse Harry Lee, Swamp Fox Marion and Ethan Allen did not do over-much to win the Revolutionary War, but they are the heroes of that period of whom we will tell our boys. So with Stonewall Jackson and Phil Sheridan in the Rebellion and Paul Jones in the War of 1812. They were more or less subordinates, but of them, and not of Grant or Lee or Scott do we write ballads and paint pictures. It is our tribute to attractive personality.

The romantic figure of our dual Spanish-Filipino war was shot the other day in Luzon. Com. pared with the others, his was an exceptional case. A subordinate always, he brought out of the war a military reputation far greater than that of his leaders, and when the end came it found him in virtual control, he having taken the campaign out of the hands of an incompetent commander. Had Lawton lived, I do not doubt that history would have done him the credit which official Washington now denies, and called him and not Otis, the conqueror of the Philippines. As it is, he is only another of our heroes of romance, remembered for his personality rather than for his deeds.

No one ever saw that imposing figure of a man and forgot him. He was built like a hero of the Odyessy, tall, broad, with a chest like the hold of a ship and thighs like pillars of marble. Seen alone, his great bulk was hardly appreciated, so well was he proportioned; it was only when he towered above a crowd that one realized that he topped the ordinary man head and shoulders. Admiral Bradford, the tallest man in the navy, says of his first sight of Lawton:

"I went to the White House reception for the first time in 1888, and when I got into the jam of the East Room I could see nothing but a sea of heads until I found myself looking above the crowd at a handsome young man whose head stood out above the general level. He was the hero of the hour, just back from capturing Geronimo, and apparently suffering agonies from the attentions showered upon him."

The man of endurance is not usually a big, stalwart fellow. He is much more likely to be spare and wiry, with little extra flesh and muscle to carry around. Lawton was one of the exceptions. Without this quality, he never could have captured Geronimo. During the whole summer in which he pursued the Apache chief, Lawton shared the hardships of his men and always went them one better. When a worn-out column was replaced by a fresh troop, he disdained to rest, but went on as though he were as fresh as his followers. More than once, in that long chase eastern, he rode twenty-four hours, rolled up in his blanket for a short sleep, and was up and away with the troop at day-break.

But clear beyond his endurance, his soldierly quality and the bravery which brought him to his death, Lawton was a man who understood his business, who knew soldiering in every department. He was one of the best inspector-generals the army ever had; while acting in that capacity, he obtained a marvelous insight into the transportation of troops. Had he lived, Lawton would have transmitted his knowledge of the subject in a book; as it was, his success in Luzon where, more than anywhere else, an army moves on its stomach, was due to the way he handled the transportation problem. For he understood every arm of the service. His restless temperament had kept him moving back and forth, from infantry to artillery to cavalry, and then back to infantry, from inspection and staff service to the line. So it was that, in the rainy season, when other officers could make no progress, he kept his force "hiking" clear across the island. This meant hard work for the army, but it meant harder work for the commander. It is said that he never was known by any one to rest in one of these expeditions. He was the last man of the column in bed and the first one up.

During the journeys as inspector-general, which Lawton was accustomed to make "on the run," he was always accompanied by his secretary, an old, one-armed soldier, a comrade of the Civil War. This man, Kent by name, has related the circumstances of Lawton's enlistment in the war with Spain. They were traveling down a lonely road in New Mexico, on one of those stirring days which followed the *Maine* disaster.

"The Colonel was confident there was going to be no war. I tried to show him that it was bound to come soon, but he declared very positively, 'The politicians will fix it up to avoid actual fighting.' Finally we reached a little relay station called Cedar Springs, where we changed mules. There was a little tent up on the mountain occupied by a signal sergeant, who had little to do but swap gossip with operators down the military telegraph line, and he told us that word had just come that the Spanish fleet was starting across the Atlantic for the West Indies and everybody thought war was certain.

"The Colonel studied a while, weighing the whole matter in his mind, and suddenly declared he had changed his mind about the chances of war, and he did not propose to be left. He decided he would try for a command, and in five minutes he had the sergeant sending this dispatch to Washington:

Cedar Springs, Ariz., March 14.

To Breckinridge, Washington:

Desire to be useful in any capacity and in any place in case of war. Trust you will see that I am not overlooked.

LAWTON.

"Then we went on in the ambulance. He was quiet for a while, but finally broke out with:

"'I don't know about that dispatch. Those who go first will get killed, while those who come in last will get all the honor and glory.'

"At the next station Colonel Lawton sent a telegram to General Corbin begging for the first possible volunteer commission in the line, and followed this a few days later with letters and dispatches beseeching General Shafter to take him to Cuba 'in any capacity.'"

Lawton's service in the capacity in which he was used is a matter of history.

One thing which distinguished Lawton from the West Point officers with whom he was surrounded was the natural democracy of his nature. He had come up from the volunteer army, having won his way from the rank of sergeant. To the end, he kept the spirit of a volunteer. In the ranks, his subordinates must obey; off duty, he found it hard to make distinctions. He knew by name and nickname half the soldiers who had served in his old commands, and he never met one of them off duty without stopping for a chat about old times and old personalities. Time and again, he has left a group of officers to shake hands with a private who passed by chance. It cannot be said that this added to his popularity with the West Point contingent. Indeed, up to the time of his success in the Apache campaign, he shared the social disability which is placed upon officers who have come up from the ranks.

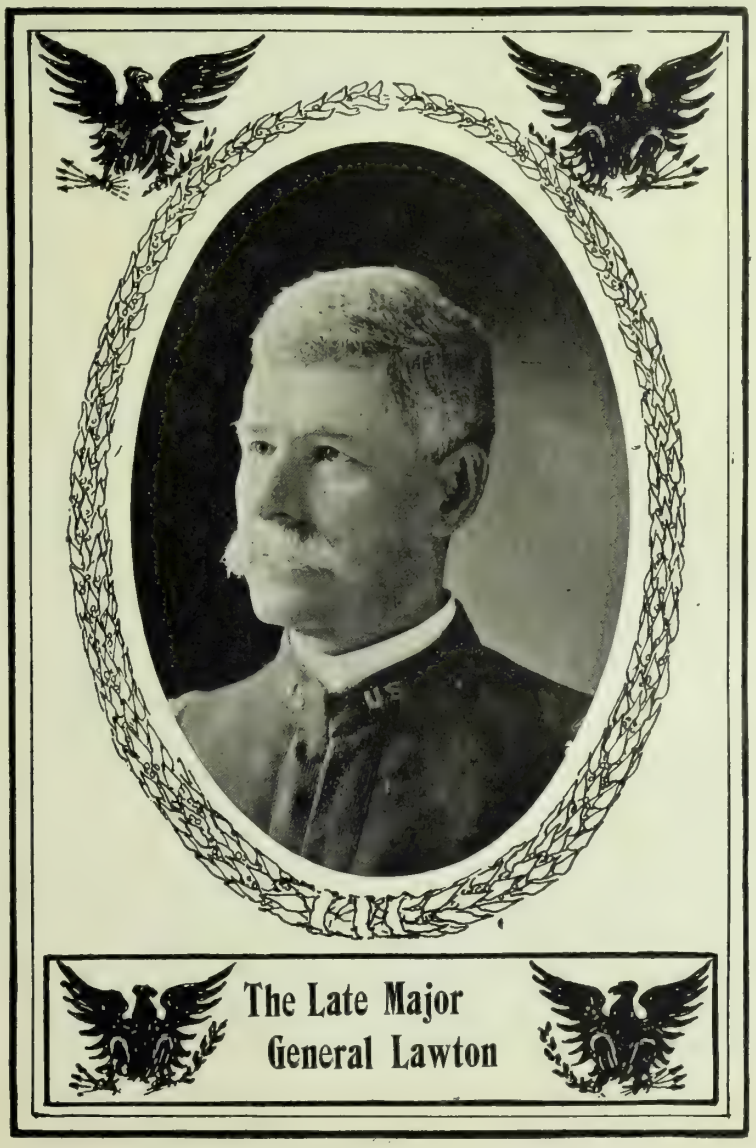
Lawton shared with Washington, Lincoln, Paul Jones and other famous Americans the inability to spell. In his case, this was not from lack of education, for he was three years at Fort Wayne College and twenty months at Harvard Law School. It was a flaw of nature and the bother of his life, until he married a woman who supplemented the deficiency. From the day of their marriage, Mrs. Lawton was virtually his secretary; all his official papers, after that day, were written by her. His own reports are about as dull as could be imagined. The stirring capture of Geronimo reads, in his official account, like a ledger balance.

On public occasions, Lawton was as shy as a school-boy. The adulation which followed the capture of Geronimo "made him tired." He never made but one speech. That was after the Santiago campaign, when he met President McKinley touring through Alabama. The President induced him to jo n the party. At Tuskegee a halt was made for the usual speech-making. McKinley orated, and so did Wheeler; there was an atmosphere of eloquence. Then the Governor of Alabama introduced Lawton as "the hero of Santiago." The crowd called for a speech, and would not let him go without it. This is what he said, after McKinley had fairly dragged him forward:

"I am not a hero, I am just a Regular. I can't make a speech. Thank you."

Then he hid himself for the rest of the tour.

JOHN STOLLARD.



The Late Major General Lawton

CALIFORNIA STATE

FUTURE OF THE HUMAN RACE.

THE threshold of the new century being a time of forecasts, a New York paper has been gathering opinions from noted scientists concerning the future of the human race. It is an unscientific newspaper compilation, done with an eye to popularity. There is no particular attempt to correlate the opinions, but nevertheless they represent very fairly the composite views of those who are competent to speak on this vague subject. One thing noticeable in looking over the results is the frank acceptance by all these *savants* of the doctrine of evolution. It shows a milestone in human thought. Forty, thirty, even twenty-five years ago, the average Christian would have been scandalized had a leading journal come out with an article which implied, as this one does, the full acceptance of the doctrines originated by Darwin. Forty years ago even the average college professor looked askance at the "monkey" theory. Now it is regarded as the basis of the organic sciences, and as one of the most important factors in political science, being accepted so fully that it is taken for granted.

Of course, any look into the future of the human race is largely speculative. We may foresee what forces now at work are likely to accomplish in the slow movement of the ages, but we cannot see with our eyes of flesh what new forces will be set to work. Some element which may enter into the future conduct of our daily lives may operate to change the physical and mental constitution of the race. Let us take a concrete example. It might happen that we shou'd learn, by purely mechanical means, to transmit thought from individual to individual direct. This is only the remotest of remote possibilities and is not worthy of practical consideration, but it will illustrate the theoretical point. Should such a thing come about it would result in important changes of the vocal organs and of the other senses, and in a still more important transformation in the collective mind. No one supposes that this will happen, but other changes just as important and less easily foreseen are possibilities, indeed, probabilities. What Greek of Homer's time could have foreseen, even had he tried to foresee, that something would happen within the next cycle to enlarge the eyes of the human race and to largely change their function? Yet the invention of writing did this very thing.

But to the subject. Man of the future, say the scientists, will lead a more quiet life than we know in the nineteenth century. This has been a busy and strenuous period, and it is probable that there will be a reaction. Never have things moved so fast as in the past hundred years. We have been accustomed to suppose that we would keep the pace. In fact, most of those fanciful books like *Looking Backward* have implied continuous progress at the present rate. But this great activity is rather a spurt of energy than a regular increase; in the life of the race it corresponds to that period in the life of the individual when he is engaged in laying the foundations of his life-work, and strains all his energies at the highest pressure for a short period. As the individual settles down to a steadier and less strenuous existence after that period of storm and stress, so will the race take its ease upon the results of its former activity. It is not likely there will be very many new inventions or discoveries. Life will be made easier and more pleasant in the remote periods to c.me by the improvement and general application of existing processes, rather than by the invention of new ones.

Wars will cease. It is likely that governments and national boundaries will fade away, so that there will be, to all

MILITARY MISMANAGEMENT IN ENGLAND.

NEXT to the way in which they stand prosperity, there is nothing so admirable in the British nature as the manner in which they stand adversity. As an American, dwelling here in exile, I am not a lover but an admirer of the English. There is something in the English assumption of superiority, in their contempt for that which is not British, their unrelieved strength and their lack of humor as we understand humor, which jars upon an American, no matter how much he believes in the Anglo-Saxon mission. Church parade on Sundays, Pall Mall of an afternoon, the business throng in the city of an afternoon are, solemn, heavy, deadening. Pinero in "Trelawny of the Wells" has caught the feeling which comes over me in an English crowd. You remember, if you have seen or read the play, how *Rose Trelawny*, an actress, is set in the midst of a regulation British family, visiting there as a fiancée on trial; how she endures the atmosphere of intense respectability for a whole month, and how, driven beyond herself by the hatred of it, she cuts loose at last and scandalizes them all for the pure joy of jarring on their sensibilities. Now I, as an American, have an intense sympathy for Rose; I always want to do some dreadfully *outre* thing in a London drawing-room of the conventional type; it would be a relief to my feelings.

But now, when the stately homes of England are in mourning, when the best they breed are being poured into the unfilled gulf in Natal, their spirit is sublime. No froth or Chauvinism, no disorder, and no quailing. The French would have a ministerial crisis, our own nation would ring with press denunciations, but these English endure all with a grave determination to go on to the bitter end. Even those who have to face the grim and fatal truths on the bulletins at the War Office take it more calmly than we can imagine. And those stalwart, thoroughbred young fellows who are going out to die, the ones who have embarked since we learned that the Boers are dangerous and shoot for officers—their steadfast acceptance of the situation is sublime.

Nevertheless there is a strong feeling of resentment toward the blunderers, whoever they be, who have spilt British blood for nothing. They are not howling now; the reckoning will come later when accounts are cast up with the War Office. And I promise you that although there will be no such storm of newspaper abuse as was turned on Shafter after our Cuban campaign, full justice will be done.

I was in a London club a few nights after the news of Buller's defeat came to hand, long enough for the first shock to wear away. The men who composed the group in which I was contained were Englishmen of more than ordinary intelligence and more than the ordinary British breadth, men who have traveled and are willing to admit that their island is vulnerable. On one point they were all agreed, that lack of courage in the rank and file could not be held responsible. They all believed most thoroughly in the efficiency and honesty of purpose of the British soldier. A retired officer was the first to offer a heretical opinion on the management of the army.

"The British Navy is ahead of the times," he said, "but the army is far behind. I can't give any very good excuse for this state of things. We've certainly had enough campaigning in the small wars in India and the Afghan border. But our methods of warfare aren't modern, say what you please. I myself think that all this savage warfare accounts for a good deal of it. We have kept the pace of our opponents, who were people without knowledge of the fine points. It takes lots of energy and bravery to fight Paythans, and we've developed energy and bravery accordingly, but it doesn't take any unusual amount of vigilance. When you are against an enemy which doesnt scout or reconnoitre, you don't scout or reconnoitre yourself. Up in the Afghan hills, way back in the eighties, we would let the Ghourkas do what little spying there was to do, and then follow it up by smashing into them wherever we found them. Why, we haven't met any army that knew how to entrench and flank and take advantage of things since the Crimea. The Indian Mutiny was about as tough a proposition as we've ever had on our hands, but it was so because we had a whole, great big crazy country on top of us, and not because they knew how. You know that we English are a blooming conservative lot; we like to do things as we've always done them, and it takes a big jolt to change our ways. Look at Gatacre's defeat. He smashed into those fellows just as he would have smashed into a gang of Paythans, straight in the eye. He didn't scout nor reconnoitre nor find where he stood at all. He just asked a few natives where the enemy were, and went at them. It's just the way he learned to do in India. Don't blame him, blame the system. It's just the same way with Methuen, going straight up against the entrenchments. You Americans made the same mistake at Santiago, but you had Spaniards against you. Methuen went up against the best shots in the world. It must have been awful. My old regiment was there, too."

A journalist of experience took up the tale:

"I blame Lord Lansdowne more than the system. I have to apologize to you, as an American"—this last to me—"for some things I said in criticism of your War Department in the Spanish trouble. We have found the same weakness in our own heads of service. I'm not calling Lansdowne corrupt, nor exactly incompetent. He's just gotten into a place too big for him to fill. What the Colonel says about our way of doing things is true in a sense; the Germans showed that up years ago. But Lansdowne has gone everyone just one better. We will never know until the investigation comes after the war how much Buller was handicapped by the orders from home. He may have made his plan of campaign to fit their orders for all we know. What possessed the War Office to send out the first transports without artillery, I can't explain. He knew, or ought to have known, that there were no modern guns at the Cape and that the Boers had artillery. It is humiliating to say so, but they've sent our men down to be slaughtered. We had a letter from an officer at Ladysmith a month ago. This is about what it said: 'Our position is strong so long as we hold the hills, but if the Boers get their artillery within range, God help us. We have no guns and they won't send us any.'"

The next man to take up the tale was an engineer, a man who has seen service in many countries and who knows the Boer and the South African colonist as he knows the Englishman.

"I am keen against Lansdowne and I endorse all you've had to say about the system, but there's another point you've both missed. Our Military Intelligence Bureau is a regular military stupidity bureau. I was on the ground two years ago and knew well enough that the wool was being pulled over our eyes at every turn. Every South African colonist can tell you that old Kruger has known all about our movements the last five years. He was warned ahead of the Jameson raid; they knew even the route and the make-up of the party. There was a time when pretty nearly every barmaid in Transvaal and Natal was his paid spy. They would listen to the Englishmen talking over their drinks and then turn the whole thing over to old Paul. Then, the more intelligent Kaffirs were in the same business and so were the Boer colonists along the border. They swindled us beautifully by spotting our own spies, and just leading them around by the nose. Take the matter of artillery, the point where we have been made the biggest asses. When one of our spies would go into Pretoria to smell for cannon, they would make a great show of concealing a lot of old-fashioned guns and a modern rifle or two, just to turn away suspicion, and all the time they had parks of Creusot guns in vaults under the city. How did they get there? Some came through Delagoa Bay—bribed Portuguese officials, you understand—and some were smuggled through Cape Town, right under our noses, and sent by train to Pretoria. They came in piecemeal, packed inside of all sorts of goods, but the barrel of a five-inch gun is a pretty heavy affair, and our customs people have no excuse whatever for failing to spot them. I think the Afrikander party at the Cape must have helped, or they couldn't have done it so successfully.

"Why didn't I say something about it? Bless you, I did, and so did others. Once, at Cape Town, I spoke to an official pretty high up about some queer work I'd seen at Pretoria. 'Oh, I think not, our spies would have found it out, don't you know,' he said. Our spies didn't. There are lots of other places where they fooled us, where we can only guess at what happened. How did they learn to handle their artillery? They know how, all right enough, but it takes experience to use a modern cannon, as the colonel here can certify. Well, those assinine spies of ours had never reported up to the time the war broke out a single artillery manœuvre. How they hoodwinked us there is a big mystery. No one ever heard of a bit of artillery work in Transvaal, and yet those fellows know just how to handle the guns. Another thing, we were told that the Boers would have about thirty thousand men. We are now fighting sixty-five thousand, with more coming. These men came from somewhere above earth; they didn't spring out of the ground.

"You can lay all that to stupidity, but there are some things that nothing but criminal carelessness can explain. Do you suppose that France would invade Germany or Russia Turkey without knowing all about the country? And here we've lived next door to these fellows for twenty or thirty years and had one war with them, and we haven't a military map to bless ourselves with. Our generals are going into Transvaal without knowing a thing about the country; they haven't even an excuse for a military map. I want to apologize for anything I said in criticism of American unpreparedness in the Spanish War."

And then the young Oxford man in the corner who had kept respectful silence spoke up:

"While you're talking about causes," he said, "what's the matter with blaming the pluck of the Boers. Seems to me we were laughing at them a few months ago."

There was silence after this rally, until someone spoke up: "Wait till they get there—here's to Kitchener and Bobs!"

London, Dec. 14. AMOS SHELDON.

Future of the Human Race.

Continued from Page 5.

intents and purposes, a universal republic without a head and with justice administered by a set of private tribunals. Such a ground would be an excellent one for the growth of some form of socialism or communism. The thing which makes these forms of social constitution impracticable at the present time is the fact that they would tend to check individual enterprise and industrial advance. But when the nation has settled into the reaction from the stress of the eighteenth, nineteenth, and twentieth centuries, when there are no more new fields to exploit, socialism, and even communism, ought to be practicable.

In physical constitution the people of the future will tend toward one universal type. The dark races are approaching the Caucasian complexion, while the blondes among the Caucasians are growing darker. The time will come when the two movements will work close to one another, and then intermarriage will complete the mixture. The last man to survive the gradual cooling of the earth will be a brunette somewhat resembling in complexion the typical Spaniard. It is not likely that there will be any changes in the senses or their organs. Scientists have shown us how to care for our eyes, and are working reform in book types. There is "nothing in" the idea that the phonograph will be used so extensively for the work now done by printing as to limit the use of the eyes and the range of vision. Such a thing can never be, so long as there is sunlight. Certain useless parts of the human body will, however, pass away in the course of organic evolution. Thus, the vermiform appendix must go. The little toe is a disputed point. A few years ago it was the fashion to contend that this part of the human frame would vanish, but scientists are now of opinion that it helps furnish a pedestal for the body; in other words, that it maintains the balance, and that it can not, therefore, be dispensed with in the economy of nature. Furthermore, no one can say that we will become either a bald or a hairless race. The higher peoples are more hairy than the lower, as any one may see by comparing the negroes or malays with the whites. The hardest of all developments to foresee has regard to the stature of the race. Cessation of hard labor would tend to reduce both stature and muscular development, while athletic sports, expert gymnasium training, and, above all, the improved care for the nutrition of the body which comes with an advanced stage of civilization will tend to increase physical development. This point is more nearly a guess than any other in the entire range of the subject.

Populations will tend to grow to the limit of the earth's possibility for sustenance. To check this, to prevent the earth from becoming over-crowded, it is likely that law or custom, or both, will regulate the increase of population. Under the new conditions, however, the earth's capacity for sustaining life will be immeasurably increased. The sea will be the great providing-ground for future generations; to it our descendants will look for the great bulk of their food. This, together with improved means of tillage and the utilization of areas now barren, will multiply by many times the total food production. It is likely that huddled cities will be abolished; the earth's whole face will resemble for thickness of population a rather wide-spread country village. DALTON.

Democratic and Fusion politics in Washington are just a little tangled on the subject of expansion. Many of the leading men of the parties favor it and others are against it. Robert Bridges, state land commissioner, and ex-Congressman James Hamilton Lewis, are now engaged in a letter-writing contest. Mr. Bridges rebuked Mr. Lewis for having admitted in an interview that he was in favor of expansion. The latter replied diplomatically, whereupon Mr. Bridges sent in a very unkind thrust at him by saying that his letter did not make it plain whether or no he favored expansion. Mr. Lewis is yet to be heard from in reply to this.

Meanwhile, city politics in Seattle are warming up. The Democratic factions are holding secret meetings for the purpose of gaining control of the organization; leading Populists are busy denying that they were the first to favor a fusion ticket and the Republicans are perfecting their organization and wondering how they are to get rid of one or two members, who by their acts have reflected on the party.

Filipino Life.

Continued from Page 4.

spects strength and despises weakness; if paid twenty cents cents for a service performed—that being the proper remuneration—he will say nothing. If a feeling of compassion impels one to pay thirty cents, the recipient will protest that he should be paid more. The best of the Tagalogs neither appreciate nor feel grateful for, nor even seem to undersaand a spontaneous gift. They are imitative, but have no initiative genius; regard lying as legitimate, averse to social order and to be ruled only by the demonstration of force. On the other hand the native is patient and forbearing, remarkably sober, plodding, cleanly in person and dwelling, sociable, and versatile. Under the master's eye he is the most tractable of beings, and so long as he gets food and fair treatment and wages paid in advance, he is contented. If treated with kindness in the European fashion, he is lost

The native has an inherent passion for music. Every village has its orchestra. Girls from six years of age learn to glay the harp almost by instinct, but there are no composers among them. Classical music is not affected, but rather dance pieces and ballad accompaniments. Labor is equally divided among men and women. The half-breed partakes of the organisms of both parents—the tendency is ever towards an assimilation to the native. It has been ascertained that the increase of energy introduced into the Philippine native by European blood mixture lasts only to the second generation, while the effect remains for several generations when a similarity exists in the races crossed. Here the peculiar qualities of a Chinese half-breed are preserved in succeeding generations, whereas the Spanish half-breed is merged into the conditions of his environment.

Philip D. Armour says that George A. Sheldon, a Lake Shore station agent, who died the other day, once did him the great service of his life. "I was for four days a brakeman under him when he was a conductor," says Mr. Armour, "and he told me I was too much of a fool ever to make a good railroader."

Things & People.

A Paradoxical Outrage.

AMONG the colored population of Seattle the deepest indignation prevails over a recent ukase of the Chief of Police. That functionary has actually ordered his officers to arrest on sight colored women whom they had reason to suspect of wrong-doing, and if the prisoner secured release on bail, that she should be taken into custody again and again until she agreed to leave town. It seems that picking pockets has been epidemic in Seattle of late. Not a day passed but some of the Klondike or Cape Nome excursionists had their wallets lightened or their diamonds filched, and all these thefts were coincident with the arrival of five brisk-looking colored ladies from Chicago. To them all the peculation was attributed, and apparently with good reason. No sooner had the ukase been posted than the five damsels were locked up, and suddenly the pilfering ceased. Then the colored excitement began. Prominent gentlemen of African descent arranged a mass-meeting, at which their brethren from all over town attended. Eloquent speakers addressed the multitude, and the unfortunate chief was stigmatized in language which would have sounded harsh if applied to Weyler. The use of "Winchesters" was advocated by one orator, and the consensus of the gathering was that the time had come for the colored citizens of Seattle to "*strike*." Alas! one of the dailies reported the proceedings in the dialect of the speakers, with the result that the community laughed, and the indignation subsided. The Chief of Police has read the denunciatory resolutions regarding himself, but declares he is satisfied, inasmuch as there has not been a robbery in a week.

The Rose Tournament at Pasadena.

SAN FRANCISCO opened the New Year with the blare of tin horns and the shriek of whistles, with a crowd which contained a percentage of people not wholly responsible for their actions, shoving and jamming through the streets, and tickling or whacking one another with branches—a survival of the Volunteers' return, by the way. It was uproarious and doubtless intensely amusing to one who is still near enough to his childhood to appreciate the fun in pure noise, but it was hardly lovely. San Francisco has never risen to the point of making her public spectacles beautiful. Now, down in the Southland they know how to do such things better. In Pasadena, whence came originally the idea of the fiesta, the festival of flowers, they celebrated the New Year by a tournament of roses. With the possible exception of Santa Barbara, this pleasant city of leisure is the one city where they have learned how to do it without overdoing. They have really little excuse for not doing it well. Pasadena is a town of gardens and of splendid distance, where there are no squalid quarters, and one of the few spots on this continent where the people lead the almost ideal life of the English country gentry. To say that this year's tournament was up to former standards is high praise and can be given unstintingly.

***

The New San Francisco.

RECENT events seem to assure a future of some kind or other to San Francisco. At least, it will be beautified. The boulevard from Van Ness avenue to Golden Gate Park should be one of the finest driveways in the world. The possibility for a California Bois de Boulogne is afforded–for its appropriate realization we must depend on the artistic sensibilities of the Park Commissioners. They might do worse than extend the decorative scheme of the Panhandle over the hill, for its approach is one of the best features of the park. It has been suggested that there low reaches be improved in a more formal manner—indeed inthe French style. We have in Superintendent McLaren a landscape gardner of unusual skill, and I imagine he will prove equal to the occasion, The laying out of Golden Gate Park, which has been so frequently complimented by Connoisseurs, is the proof of his talent. At once he will have a chance of dealing with an important problem—the decoration of the city's numerous squares, which, under the new charter, come under the control of the Commission. That there will be a departure from the hackneyed convention of rectangular walks is inevitable. There is opportunity for genius in the elaborating of a beautiful scheme for these breathing places.

* * *

Much formality must be observed before the creation of the new boulevard may begin. To commence with, the bonds must be issued and sold. As Mayor Phelan proposes they shall be exempted from taxation, this entails, unless there be an extra session, a delay of twelve months. Then legal procedure for the seizure of the property, necessarily slow, will consume at least a second year. Then, all conditions having been complied with, the city steps into possession of an extraordinarily miscellaneous collection of shops, barns, flats, residences and mansions, which should be sold for enough to defray the cost of grading. An immediate result of the inauguration of operations will be an enhancement in the value of vacant lots all over San Francisco and a great boom in the business of house moving.

***

The Latest From Seattle's City Council.

MORE queer work in Seattle's City Council, this time over the proposed amendments to the city's charter. The petition of twenty per cent. of the voters was submitted, as required by law, but the Council dodged the issue by refusing to meet in quorum until dragged into court on a writ of mandamus. Then, being forced into the last ditch, they procured a lawyer to discover a flaw in the petition, which was adjudged void by the court. This decision was legal; some of the voters who signed had not registered at the previous election. Neither were the proposed amendments likely to have been carried had they gone before the voters. But this does not justify the action of a City Council which resorts to dodges unworthy of a police court shyster in order to accomplish its ends. The methods are characteristic of a body which saw a good thing for the city in Woodland Park. It is the only way they know.

Oakland's Social Ebullitions.

THE city of Oakland is more prolific of social sensations than any other burgh on the Pacific Coast. 'Tis a poor week that is unmarked by some feminine or ministerial outbreak. Most of these are of no particular significance, but obtain distinction through journalistic exaggeration. Through its multiplication of church circles and social organizations Oaklanders have developed a deep interest in each other's business. The affairs of the new minister are necessarily of importance to his congregation and there are innumerable idle women who are satisfied to excite themselves over whomsoever among them attempts a social innovation. Within a brief period of months Oakland has had two breach of promise cases, the verdicts in which exhibited the inherent sentimentality of the average American juryman. A later ebullition was provoked by the conclusion of an Oakland jurist that undefined absence from the fireside o' nights did not constitute cause for divorce. The revival of the happy custom of New Years' calls was developed in Oakland into an occasion for monumental head lines. And now there is a stir over an unfortunate minister who, after the celebration of his wedding with a Nebraska belle, discovered to his horror that the lady was none other than a long lost cousin. An unimpeachable damsel we are assured, but a cousin—and they separated. The moral of this incident, or tragedy if you will, is that any gentleman about to wed owes it to himself to inquire into the prospective bride's pedigree. Unfortunately, the proper attitude towards matrimony is seldom acquired until after marriage and attempts to pass such experience on, are seldom forgiven. The good man—his name is Smith—is being legally divorced from his cousin and nothing would ever have been heard of the affair, but that his ministerial conscience impelled a confession of the facts to his trustees. Naturally, the confidential communication was the talk of the congregation a night later, and of the community after the papers had it twenty-four hours later.

General Shafter and Escort at the Pasadena Tournament of Roses, January 1.

***

Municipal Politics.

IN the ranks of the Democracy excitement prevails regarding the distribution of patronage. The Republican ascendancy in many of the commissions is regarded as tantamount to Republican control of the appointments in the gift of these subdivisions of the city government. The consequence is, that the Mayor is being overwhelmed with applications from his followers, who declare that it rests with him to see that they are recognized. On the whole, conditions do not make for the comfort of the appointive power. Mr. Phelan is coping with it as best he may, and doubtless the innumerable caravan of suitors will be fitted with places in course of time.

* * *

As a topic, however, the distribution of patronage is generally subsidiary to the Chief of Police controversy. The question of the moment is—Can Lieutenant Esola be appointed? The *Call* declares he is slated for the post and is sure of it. I doubt it, however. No reason has been presented for selecting him and there are excellent reasons opposing it. With all due seriousness it may be said, and said emphatically that the victory of Esola will spell the political death warrant of the men whose votes elect him. It would be regarded in San Francisco as the consummation of a corrupt bargain and would be a sad and sorry thing for all the parties concerned.

***

The Wherefore of Afternoon Concerts.

AN unfortunate music lover whose occupation keeps him poring over a ledger through the daylight hours has been solicitous in his inquiries as to why the pianists and vocalists who have visited us of late have play or sung in the afternoon, rather than in the evening. Sauers' recitals were matinee performances; so were De Pachmann's. Here is Nevada giving two matinees and but one night recital. The reason assigned is that musicians draw an audience almost exclusively feminine. At the last performance of the clever Russian pianist there were not two dozen men in attendance. Women were everywhere. The fair sex goes to concerts, the stern sex does not, at least not on the Pacific Coast.

***

Where Credit is Due.

EX-DIRECTOR-GENERAL DE YOUNG, of the late Mid-Winter Fair, must have felt complimented at the critique of Mr Arthur Altschu, as published in last week's *Wave*. The proper expression of editorial courtesy in San Francisco for many years past has been to fling an epithet at the collection in question. It has been variously described as a refuse heap, a scrap pile, a ravel of shoddy, trash, and debris, and all because Editor De Young himself gathered most of the material it contains, and expended in so doing the surplus earnings of that wonderfully successful exposition. Now cometh an expert who criticises the collection as one of great value and interest. It would be foolish to institute comparisons between it and the Metropolitan Museum in New York, the creation of a generation and representing a vast expenditure. This museum, but a few years old, attests the collecting ability of a single individual, and, moreover, his commercial talent, and is a great achievement. Undoubtedly it contains articles that may be cavilled at—commonplace articles whose value depends on putative association with regal personalities, but the furniture coins and books, ceramics, minerals, etc., are intensely interesting. The unimportant stuff will be disposed of as time goes on and new finds are made. In the meantime the museum should be the recipient of bequests and presents which will enhance its value.

The Building Revival in Seattle.

THE recent activity in Alaska and the Klondike country is just beginning to make a substantial showing in Seattle, which has profited more than any other American town from the boom in the North. The year just passed has witnessed an extension of building to the extent of nearly two million dollars. Seattle is a city of homes, and most of the money went into small or moderate-sized dwellings, but business blocks were not neglected. A year ago, Second street, near the business section of the city, contained a number of unimproved lots. Now these are covered with good, solid buildings, and there are more to follow in 1900.

BOSWELL, JR.

A party is being formed for a six months' tour to the Paris Exposition and Continental Europe under the guidance of a gentleman of undoubted reliability (twenty-five years resident of San Francisco), who is well acquainted with Paris and Continental Europe. Participants will be saved a great deal of expense and annoyance. Membership limited. For particulars address at once

MANAGER PACIFIC TRAVELERS' CLUB,
This office.

The fact that the Secretary of War has recommended that the proposed Pacific cable be laid from Seattle and by way of Alaska has been much commented upon in cities on the Sound and along the Washington coast. They take it to mean that Mr. Root has recognized their claim that this would be the shortest route to Asia. However, the government project to build a new cable is not the only one before the public. Not long ago, a well-known Eastern engineer lectured in Seattle before the Chamber of Commerce on the needs of a cable. He favored the Alaskan route and said that the construction of a cable by private parties was being considered. As a representative of these persons he had looked over the ground, or the water, rather, and he believed that he had drawn plans that would enable the wire rope to be laid at a much lower cost from Seattle than from any other port on the Pacific Coast. So with the government and a private company looking toward the Queen City, the people have grounds to be pleased.

PANAMA CANAL.

AN announcement which has important bearing on the inter oceanic canal problem comes from New York. It is reported that an American company has been organized in New Jersey to buy out the Panama Canal company and push the work to completion. The stock is placed at $30,000 000, soon to be increased to $120,000,000, and the articles of incorporation include all the rights and privileges usually given to such concerns. Behind the nominal incorporators are said to be some of the wealthiest individual firms in New York, including Levi P. Morton, August Belmont, and J.P. Morgan & Co.

When the people of the Pacific Coast discuss the possibility of an interoceanic canal, they are likely to speak of the Nicaragua Canal alone. The public have accepted this as the feasible route, and remember the Panama Canal only as a scheme that failed, the grave of the reputation of unfortunate De Lesseps. Yet the fact is the Panama Canal is still being pushed, though rather slowly, to completion; that it is about to pass into American hands, and that it stands at least an equal chance with the Nicaragua Canal of being the waterway between the oceans.

The history of the interoceanic canal question goes much further back than most people imagine. The early explorers noted the narrowness of the isthmus, and conceived the plan of cutting a channel across it. The first practical move, however, was the building of an inter-oceanic railway in Panama, in 1855. Then followed the obtaining of concessions from Nicaragua and the formation by Commodore Vanderbilt of the "American, Atlantic and Pacific Canal Co." But for the tangled condition of Nicaragua politics and the outbreak of the Civil War this company might have accomplished its purpose.

The Civil War and the reorganization of the country absorbed attention until 1870. Then began a serious attack on the problem. In the five years following, no less than nine explorations and surveys were undertaken, and at least half a dozen routes received careful consideration.

Next came the famous French project which terminated in the Canal Scandal. Volumes have been written upon the Panama failure and De Lesseps' connection therewith, and we are probably no nearer to the truth about this great but misguided man than we were at the beginning. Briefly, the accepted facts are about as follows: In 1878, a band of French speculators organized a wildcat Panama Canal Company. In its inception, the plan differed from other chimerical French bubbles in its general bigness and audacity. But it happened that the project was of the sort to appeal to the popular imagination at that time, when a French engineer had just brought the Suez Canal to triumphant completion. Two of the chief conspirators, Mm. Myse & Reclus, made a pretense of a survey. The character of this work may be judged from the fact that the survey of the Panama route occupied about twenty days. Returning, they proceeded to organize a company and to enlist Ferdinand De Lesseps, the successful engineer of the Suez Canal. The name of de Lessups carried the scheme. Objections faded away before it. Inside the year, an International Congress had met in France and approved plans for a canal by the Panama route, to be built without locks on the tidewater principle. Capital of over a hundred millions of dollars was soon raised, and in 1881 the work was begun. The waste and extravagance which characterized the construction, the unexpected problems which confronted the engineers and contractors, the incompetent management of the whole scheme and its final collapse are matters of history. When the canal bubble broke in 1888, more than $150,000,000 had been expended, and only a few miles of the waterway had been excavated. A receiver was appointed in 1889, and the first Panama Canal Co. came to a disgraceful end, carrying with it the savings of an army of small investors, 16,000 of them women.

The engineering problems which helped to wreck the company had to do mainly with the Chagres river. This is an uncertain tropical torrent which follows the line of the canal for a few miles from the Pacific terminus. In the dry season it has a depth of only two feet, but it rises in a few days to forty feet during the winter freshets. It was found that the detritus brought down would be sufficient to clog the channel in one season; moreover, this great rush of water would have seriously menaced the earth embankment in every recurring flood. Beyond that, the cutting of a tidewater canal without locks would have necessitated in certain places an excavation 250 feet in depth.

A French company with a new project bought the stock of the original concern in 1894 for thirteen millions. For this sum they obtained the entire concession, together with property, franchises and the work already done. The new scheme was a sane one. It involved a system of locks which would do away with much of the deep excavation work. The Chagres river was to feed these locks, and the winter flow was to be provided for by a huge storage reservoir, built with dams in a natural basin above the canal site. Thus, at one stroke, two great problems were solved; the depth of the excavation was materially reduced and the disturbing element of the river was turned to advantage. The new company took up the work at once, being given until 1910 to complete it. They have kept a force of 3,000 men at work since that time, and two-fifths of the canal is now completed—about sixteen miles in all, twelve on the Atlantic side and four on the Pacific.

Meanwhile, the Nicaragua plan was exploited by the American people, and Panama was lost sight of. There was this advantage in the Nicaragua Canal; it gave the control of the waterway to Americans and not to a foreign syndicate. Now, the Panama concern seems about to pass into the hands of a syndicate which, though a private corporation, is yet controlled exclusively by Americans. This disposes of any political objections; the two projects, therefore, oppose one another on their respective merits.

The Panama enthusiasts base their arguments mainly on the fact that their canal, in its present condition, is certain to cost less than an entirely new undertaking. It is not denied that, were the two routes both untouched, the Nicaragua would be preferable. The Panama route is forty-six miles in length, and sixteen miles of excavation are finished. The additional cost is estimated at not over $102,000,000. It has splendid harbors at both ends, whereas such harbors would have to be created artificially for the Nicaragua route at a cost of not less than $10,000,000. The Nicaragua Canal would be 175 miles long, with 125 miles of the course in Lake Nicaragua and the San Juan river, leaving fifty miles of earth excavation. However, much of the course through the river and lake would have to be dredged. The contentionists state further that, while the Panama route is straight and short, the Nicaragua Canal would be a long and difficult course for ships, owing to the twists and turns of the river.

A GANG OF NEGROES AT WORK.

GIANT DREDGE.

CUTTING THE ISTHMUS.

Babblings of a Belle

THIS New Year and century, my dear Diary, seems to be just about like all others. Of course, it has displayed a great ability for pouring with rain, otherwise I find no difference at all. It is quite remarkable how many girls looked forward to nineteen hundred, as though it would bring them, from the very beginning, wonderful good fortune, or something quite unexpected. It has not. We have had any number of luncheons and theatre parties. Still, this winter has had many gayer weeks. It has been rather a shock to me, too, for I hoped the first of the year would transmit to me several invitations to balls or big parties. Of course, they may come after the Christmas bills have been paid. How odious it is to receive bills on New Year's Day! In a way it spoiled one's holidays, for I had never once thought of the necessity of paying my bills, when I was buying presents. Fortunately, mama is not at home, so irrespective of the fact that she told me particularly to send her all letters to Coronado, I quietly consigned the bills to the wastebasket. It will be quite time enough for them to occasion her a moment or two of ill temper, when they return again next month. One is so dead sure of the return of a bill. How I wish men were as certain in their returns.

I never have been able to understand why it is that men admire "variable" women. I think a "variable" mother or sister the most objectionable thing in the world. Yet men go out of their way to seek them. Speaking of variable people reminds me of three new engagements to be announced very shortly. All nice girls—girls, too, who will make adorable chaperones, and whose husbands are the sort of men who will not mind being at their wife's beck and call on all occasions. And apropos of chaperones reminds me that Aunt Sybil is very much shocked at this recent idea of girls and men going to the theatre in parties of threes and fours. I have been compelled to refuse several invitations lately, owing to this impression of hers. I do not like to tell the men lest they think me a prude, but really in my innermost soul I always manage to have more fun when I am chaperoned.

On Tuesday forty-five of us were invited to the Gibbs' house, out on Jackson street, to a luncheon in honor of the Kane girls. How I adore that house! I like to go on the other side of the street and watch the sun shine on the tiles, which are of a most beautiful color. It is charming inside. The wood is of a dark color and the rooms delightfully furnished. We sat at round tables and I, for one, had a good time and certainly did justice to the meal. I was awfully hungry, for being a one o'clock luncheon I did not have a small repast before I left home. When the luncheon is at half past, I always do, for people are so unpunctual in arriving in San Francisco at all entertainments. On Wednesday I luncheoned with Bertha Smith, and again had an enjoyable time. Bertha is an excellent hostess and is another of the girls who has a fascinating house in which to entertain. In the evening I went to Ethel Hager's dinner. It was so queer. You know, when we girls really become grown up, and try to be babies we are the most humorous attempts at being really winsome. I had my hair—you know how fair, short and curly it is—well, Aunt Sybil fixed it in tight little curls, so it just stood like corkscrews about my head, and on the forehead were the tiny ribbon bows, one pink, the other blue. I wore a dear little muslin frock, and showed my delightfully shaped ankles. I thought I was a *chef d'oeuvre* in the baby line until I saw some of the others. Ethel Hager was inimitable, so were Therese Morgan and Virginia Jolliffe. I think, too, they had a better time than any of the rest of us, for I really became tired of being a child very soon. Ed Greenway and Addison Mizner were the two baby men, although Willard Drown was quite in line. I like the real dinner parties best, for it is a great deal of trouble to have to live up or live down to a costume. Mr. Greenway intends giving one to Ethel Hager soon, and so I am to be one of the lucky guests. I do hope it will not be a costume affair.

Thursday, about sixteen of us were at the Scotts at a luncheon. I really believe I prefer the smaller affairs for lunch. One seems to have a better time and gets a better chance of knowing the debutantes. So far, I have not really become chummy with any of them that I did not know before. I like buds, too; I always want to tell them some of my experiences, with a vain hope, perhaps, that some one of them may profit a little by a friend's advice. The Scotts' table had American beauty roses in a big dish. It was in exceedingly good taste and we had a very sociable time, though I do not quite approve of their cook. I am fearfully hard to please in our cuisine, so carry my fastidiousness about with me. Ollie Holbrook had a luncheon that same day, but I was not able to accept it, owing to the Scotts' invitations being out first. That evening several of us went to Irving M. Scott's to dinner and the theatre. I really would have preferred to have spent the evening at the Scotts' house, for it contains so many beautiful things, but that was not the order of the evening. I always wonder how i. would feel to live in an atmosphere of really fine paintings and books and works of art of all sorts. I think I should very much like to try it. Yet Lawrence is not particularly attracted by me, though I always am invited to his affairs. The Reginald Knight Smiths, they are Laurie's sister and brother-in-law, were there. I have taken quite a fancy to Mr. Smith, he is such a man of the world, and so congenial to young girls. Mrs. Smith looks well after her Eastern trip, and seems so happy. I sat near Knox Maddox, to whom I offered my heart and hand several times during the evening. We are extremely fond of each other, Knox and I. I have been to "The Christian" three times now, and am a bit tired of it, so I trust the next theatre party to which I am invited will take me to some other place of amusement. I forgot to tell you I went to the De Pachmann concert after the Scotts' luncheon on Thursday. Music, you know, when it is as good as De Pachmann's, appeals to my soul, so I always buy two seats and go alone. I do not care to have anyone quite next to me at a very good concert. This one was all Chopin, and during the procession out of the hall I heard the most wonderful conversations and comparisons about the player and playing. It was to some like strings of pearls of marvelous worth. To others rubies and diamonds, or miniatures set in pearls. Evidently, to all, a jewelry department. I have been wondering ever since what sort of a mind I have, for though I wore my string of pearls, I never once thought of them throughout the entire concert. I wish we could contrive to support De Pachmann a little longer. His playing could raise me to heaven much more quickly than sermons or any sort of religious training.

Caro Crockett gave a dinner to Helen Hopkins and Gus Taylor this last week, but I went to the Scotts. I was sorry, for I love toasting an engaged couple. Helen and Gus are charming together. I think them both exceedingly good looking. They are the sort of people one would turn around to look at in a hotel dining room anywhere. That to me implies a certain amount of personality. With that, one certainly must be attractive looking. Edna Hopkins is so pretty. She has the dreamiest eyes and is really awfully bright and amusing. The Crocketts have an excellent cook, and their linen, dishes and silver are always perfect. I feel the necessity greater daily to marry a really rich man. All those things have become so essential to my happiness I should be miserable without them. Harry Holbrook gave a theatre party to some of the older girls last week. I think Harry is one of the nicest of brothers. He is so interested in all of Olive's doings, and clothes—in fact, he pays her quite as much attention as though she were his *fiancee*. Arthur is a dear good fellow, but far from being the ideal brother; he often forgets even to mail my letters.

The Fortnightly on Friday night was a jolly dance. I really think these dancing parties, the Fortnighly and "La Jeunesse," have been as much enjoyed, and as successful as any parties we have ever had in San Francisco. Addison Mizner led and amused us all with his "donkey-engine" signals and general good humor and fun. The figures were not too complicated, and we all got on very well indeed. I admired Cora Smedberg very much; she looked awfully pretty. Margaret Salisbury, too, looked well; so did several of the others, but I have seen the girls I really admire looking often so much better that they did not particularly attract me on Friday night. You know, everyone says Walter Scott is the best dancer in town. No matter how tired a girl may happen to be, if Walter approach, she immediately rises to dance with him. The boys who amused me most on Friday night were Percy King, Mr. Stowell, Fred Greenwood, Mr. Raymond, and of course Gerald Rathbone. Jack Baird, I believe, intended taking a trip to Europe, and Norris Davis is going East for a term at some college. I have quite forgotten which. After the Fortnightly, fifty-four of us were invited to Mrs. Maurice Casey's to supper. There were five big, round tables in the dining and billiard rooms, which were decorated in magnolia boughs, huckleberry and pussy-willow. The Worns did it, so you can just imagine how beautiful it was. Each of the tables was decorated with different flowers and colors, and Ludwig served the supper. As we were all seated the Hawaiian band came in, and played and sang the most fetching music, and now and then got in a coon song in their queer, foreign way. It was wonderfully clever of Mrs. Casey to be the first to introduce this music in town, for we all were so captivated we could hardly tear ourselves away. It was a tremendous success and a supper after a dance is one of the most acceptable forms of entertainments. I hope Mrs. Casey will give Katherine Dillon a dance before the season is over. They have a fine house, we all agreed the other night, for such an entertainment. Now I think I have told you all the news of this week, and next, I trust, may tell you of one of my engagements at least. The Taylors give a dinner to Helen Hopkins and Gus this week and Cora Smedbery gives her dance.

MISS CRICKET.

The Indispensable One.

SHE cannot boast a titled name;
To royalty she lays no claim;
Her pedigree is short.
No blue blood courses through her veins;
Ancestry troubles not her brains—
All count to her as naught.

Her wealth commands no lofty place;
Her fortune lies not in her face;
Her features are not fine.
Her disposition is not sweet;
For crankiness she's hard to beat—
This lady-friend of mine.

But still from her I'd fain not part;
She holds the "sesame" to my heart
And to my pocket-book.
She rules me with an iron will;
She knows her place is hard to fill—
She is a splendid cook!

L. P. HEXT.

What character is there in the Bible who possesses no name, who suffered death in different form from any inflicted before or since that time, a portion of whose shroud is in every household, and the cause of whose death has been made famous by a modern author? Lot's wife. She possesses no name; no one else met death through being turned into a pillar of salt; salt is in every household, and Edward Bellamy wrote Looking Backward.

ASK THE TICKET AGENT

to send you from Chicago to New York, Boston, or other Eastcan cities over the **Nickel Plate** (N. Y. C. & St. L. R.R.) Quick time, satisfactory service, and no extra fares charged passengers.

JAY W. ADAMS, Pacific Coast Pass. Agt.
37 Crocker bldg., San Francisco Cal.

A Fire-Proof Hotel.

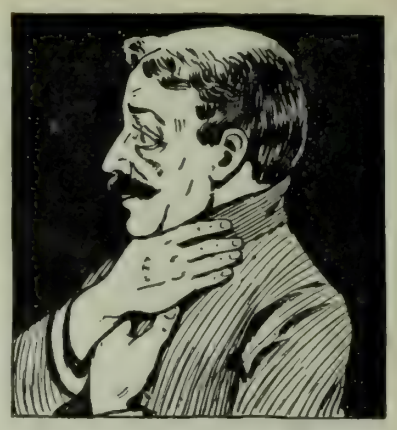
The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

Jesse Moore Whiskey has been the Kentucky standard with which all others have been compared since 1853.

Dr. Parker's Cough Cure.—One dose stops a cough. It never fails. Try it, 25 cents.

DR C. W. DECKER, Dentist, 806 Market street, Phelan Building.

The Orignal Swain's Bakery, 213 Sutter St., stands without a rival and has stood the test for years. The most delicious meals are served by gentlemanly attendants, and the management takes pride in having everything orderly. It is just the place for business men and ladies out shopping to lunch.



If the man does not stop the cough the cough stops the man; stops his appetite, his sleep, his pleasure and his work. So called "cough remedies" sometimes relieve but they don't go deep enough to cure. Dr. Pierce's Golden Medical Discovery cures coughs and diseases of the respiratory organs perfectly and permanently. It stops the cough. It heals the lungs, stops the hemorrhage, if the lungs are bleeding, and by purifying the blood and increasing the action of the blood-making glands enriches every organ with the good blood which alone will make a good body.

"My husband had been coughing for years and people frankly told me that he would go into consumption," writes Mrs. John Shireman, of No. 265 25th Place, Chicago, Ill. "He had such terrible coughing spells, we not only grew much alarmed, but looked for the bursting of a blood vessel or a hemorrhage at almost any time. After three days' coughing he was too weak to cross the room. The doctor did him no good. I stated the case to a druggist, who handed me a bottle of Dr. Pierce's Golden Medical Discovery. My husband's recovery was remarkable. In three days after he began using Dr. Pierce's Golden Medical Discovery he was up and around, and in two more days he went to work. Two bottles cured him."

Dr. Pierce's Pleasant Pellets cure biliousness. They produce permanent benefit and do not re-act on the system. One is a gentle laxative, two a cathartic dose.

In BooKdom

HOWEVER much we may have been disappointed with Rudyard Kipling's latest prose work, judging it by the standards of early promise unfulfilled, at least it has been writing, all of it, his latest in equal degree with his earliest, that was essentially sane and healthful. The cloth that he weaves may often be coarse in texture, and he may not at any time be over-particular about where his fleece comes from. It all goes to the mill together. But his loom is an honest loom. His dyes are honest dyes. His patterns do not need to be looked at cross eyed, nor through a reversing lens, nor behind smoked glass, nor red glass, nor any other kind of optical corrector. He does not see two moons in the water where there should be but one. His lamp-posts never occur in groups of four, and they never have to be held up by a man. His drawings are in correct perspective. His ladies are not sensational dames with finger nails a yard long, and with but two fingers on each hand. He does not deal in blue horses, nor in purple cows, nor in slate-roofed ducks. None of his books have yet been printed upon wall paper. His men and women and horses and cows and landscapes and books are all of them sane and normal. Decidedly, he is not of the decadent school of literature.

But if Mr. Kipling's instincts are the instincts of a sane and healthy human being, if his influence upon literature has been positive and altogether good, if he has controverted sensationalism by precept and practice, whenever and wherever he has worked, it can be said of some of his contemporaries that their instincts, if not altogether unsane and abnormal, at least have been made to appear so in print at divers times, whether by affectation or otherwise. And it may well be that the crop of eccentrics would have been larger had not the antithetical Kipling risen into his great vogue just when he did rise into it. Kipling utterly bankrupted scores of little fellows who were doing very well with their little fads until he came along. Scores of others abandoned the exploitation of the morbid, the freakish, and the sensational, for the legitimate. A few of the bigger ones seem to have hung on, waiting for a change in the tide.

Mr. Richard Le Gallienne cannot love Kipling very sincerely, for he must feel at times that he himself would have made a very good literary king had it not been for the other man. As it is, he is only a sort of eccentric play kaiser. No legitimate for him! His latest book, *The Worshipper of the Image*, just out from John Lane, is strictly abnormal and decadent. It is the kind of book that might have been written by a mad monarch for his mad subjects. It is a book for the asylum. It does violence to every sane instinct and feeling. It appeals to men and women of unsound mental appetites, men and women who love the sensational, the morbid, the unpleasant. It comprises the very antitheses of all that makes Kipling wholesome and sane. It belongs to the literature of decline, and glories in it.

The plot of the thing is simple enough. A madman falls in love with the death-mask of an unknown woman. The mask reciprocates his affection. It talks to him, inspires him in his work, and finally, having become jealous of his wife, demands that he desert her. Then it demands the life of his child, and he makes the sacrifice. A revulsion of feeling takes him back to his wife, but the fascination of the mask is too strong for him, and he again deserts his home to wander in the woods with the image. The wife commits suicide. Apparently the hero then goes stark crazy, for the book ends with him whistling softly to himself before the mask, whose eyes now are wide open, and from whose lips "hung a dark moth with the face of death between his wings." It is, of course, symbolism of the Maetterlinck type, except that it lacks Belgian virtue. The image symbolizes art in the abstract. Wife and daughter are the sacrifices demanded by art of the artist. Which is all tommy-rot, to be sure.

* * *

The short story form is becoming increasingly common upon the book shelves. Last year something over a hundred collections were published, which is rather remarkable when we consider that it is only within three or four years that publishers would consider a manuscript offering of short stories from any but a great name. It is easier now to publish, but it is correspondingly harder to attain distinction. Curiously coincident with this plethora of the published short story is the fact that the magazines are today using fewer fiction manuscripts than for some years past.

Two volumes of interesting short stories lie upon this desk. One of them, *The Goodness of St. Rocque*, has the authorial name of Alice Dunbar upon its title page, and is from the press of Dodd, Mead & Co., New York. The stories in this little volume, fourteen in all, are mostly Creole character-sketches, tales of New Orleans, the bayou districts, and the like. They are neither worse nor better than the average. The other volume is by Eden Phillpotts, and is called *The Human Boy*, for the purpose, no doubt, of distinguishing this kind from any other kind of boy. The title is like Mark Twain's music, which was "really better than it sounded." It is not in the least absurd. Have we not cowboys, and appleboys, to say nothing of inanimate nature, with its carboys, hautboys, and waterboys? The "human boy" is good. Mr. Phillpotts threshes over some of Mr. Kipling's old straw in these his stories of English schoolboy life. Or perhaps he has succeeded to certain unused notes. Barring the saving humor, and the self-conscious dialect, and the dramatic plot-construction—in short, the mannerisms and genius—of *Stalky & Co.*, the stories are very similar to the latest Kipling work. Which means, in this case, that they are not at all admirable as fiction, nor even more than ordinarily entertaining. Published by Harper & Bros.

* * *

Et toujours la guerre! "Captain" George Clark Musgrave, war correspondent, has attempted a very difficult feat in his *Under Three Flags in Cuba*, (Little, Brown & Co.). He has attempted to make Knights of the Round Table of the Cuban insurgents; fiends, cowards, horse-thieves, and other unnamables, of the Spanish, and well meaning but mistaken and oftentimes blundering soldiers of the Americans. Unfortunately for Mr. (or Captain) Musgrave, the American public receded from its attitude of hero-worship, so far as the Cubans were concerned, a year and a half ago. It is pretty hard to give a man the measles when he has just had them. Mr. Musgrave's military advice, however, ought certainly to be very valuable, there is so much of it.

Another book upon the war, but of a different category, is by Captain Alfred T. Mahan, who was on the naval strategy board. In his *Lessons of the War With Spain* he has included the best of his critical papers from *McClure's Magazine*, the *North American Review*, *Engineering Magazine*, *Harper's Monthly*, and other periodicals, the book bearing imprint of Little, Brown & Co., Boston. Captain Mahan speaks with authority, and his discussions of naval strategy are not only intensely interesting but they are instructive as well. The volume is one of the very few of permanent value that have been published upon the war.

* * *

Things as They Are (Small, Maynard & Co., Boston), by Bolton Hall, with an introduction by the Rev. George D. Herron, is a candid recognition that this earth, its natural laws, its attractions, its antipathies, its struggles for existence, its human inhabitants, human nature, and so on, are not as perfect as Mr. Hall would like them to be; but as that cannot now be helped, Mr. Hall having been absent in the beginning, men and women should take good advice while it is to be obtained and do the best they can with things as they are. In fact, Mr. Hall advises people to do as they have to do, not to lie any more than they have to, and if they lie, to lie under protest, as it were; not to assume any more painful experiences than they have to, but not to shrink from them if they cannot be avoided; and in general, since they are undoubtedly in the world, to make the best of a bad bargain and do as the Romans do; but always under protest, be it understood. Mr. Hall preaches the gospel of love, but there are a great many things he has no use for, among them being churches and preachers. Alas, alack!

WILLIAM J. NEIDIG.

Though *The King's Mirror* (D. Appleton & Co.) just misses being a great novel, it is certainly a literary *tour de force*. His Majesty Augustin is the most conceivable monarch in fiction. No straitened lay figure this but a well marked individuality, whose upgrowth from boyhood to manhood is conducted before the eyes of the reader. Perhaps the weakness of the tale—its constraint—is due to Augustin's temperament, which is shy and reserved and intensely self-conscious, yet how admirably throughout are these traits preserved and how consistently is the character developed. The self-analysis and revelation recall Stevenson's *Prince Otto*, but this is a wider, a broader canvas, and the ruler a less subtle creation. It is not the kingship of imagination but rather that of fact the author has striven to delineate, and so it comes that Augustin is a thoroughly realized personality. With all its glories rather a melancholy life his history makes, beset with domestic difficulties such as the average man encounters, and harassed by the conflicting calls of duty and inclination. He is set forth as keen and disillusionized, yet nervously constrained in his relationships. To such an one as he adventures seldom happen, for no saying is truer than "adventures to the adventurous." The duel with Wetter is an exception, and while the most startling episode in the book, it is the least credible.

Almost as admirable, if less detailed, are the studies of Prince von Hammerfeldt, Princess Heinrich, and Victoria, the King's sister. Coralie Mansoni, the fascinating prima donna, and her husband, Struboff, are rendered with a dextrous subtlety worthy in conception of Henry James. However lacking in the breezier virtues of its predecessors of Zenda, *The King's Mirror* is, from a literary standpoint, of much more importance.

A SMART French wedding in high society is anything but exclusive. In fact, it is about as democratic a function as one could well imagine. You don't have to run in the social circle of the contracting parties in order to see one of these ceremonies. You don't have to possess even an invitation. All you need is good clothes, a map showing the principal churches of Paris, and a goodly amount of cheek. Also, you have to remember that there are others as eager as yourself for a good view of the proceedings, and that favored seats go to the first comers, and you must be there passing early. Otherwise it is no trouble at all. Fashionable Parisian weddings are always held at high noon and in church, and any day except Friday and Sunday, which are tabooed by society, it is odds you will find a mating going on in one or another of the big cathedrals.

As everyone knows, there are no pews in a French church. Outside the nave there is a space where he who wishes may stand or kneel; inside, at regular services, one must hire a chair. But on the occasion of a wedding the bride's family pays for the whole church and then leaves it open to the dear public. I went to one of them the other day, just to see. I believe the bridegroom was a scion of the old nobility and the bride was a *bourgeoisie* with the money to balance the account. They were married in the church of St. Philippe du Roule, which was decorated for the occasion. I cannot say that these decorations were elaborate as compared with those for an American or English wedding, but at any rate they were tasteful.

There wasn't an usher or anyone directly connected with the church within hailing distance when we marched in at half past eleven. Without the nave there were a few shabbily-dressed women, who evidently realized that their presence inside would be resented. Within, the aisle seats were nearly all taken. Every now and then a French woman would drop into one of them, ostensibly to say a few prayers, but I noted that she held on to her seat after she had finished. Perhaps she was meditating!

The invited guests came in just before noon. By this time the best seats were taken; there was no room either in the front or in the aisles. The families of the "contracting parties" had to content themselves with places in the middle of the church, and some of those who wore wedding favors were even forced to stand up at the back. The church was packed, suffocating, by the time that two beadles, gorgeous in silver lace, strode down the aisle to open the big doors for the bridal party. This was a long train, composed of all sorts and conditions of people. They were not ushers and bridesmaids, for there were none of the former and only two of the latter; and these came up the aisle in the very center of the throng. Neither were they the immediate relatives of the bride and groom, because these were pointed out to me in the crush in the body of the church. Just what criterion is used in the selection of bridal attendants at a French wedding is a mystery to me. There must have been about twenty, all told—the men middle-aged, the women, except the bridesmaids, in the black velvet time of life. They lined up in the portico, men on one side and women on the other, awaiting the bride and groom. The chief actors in the show appeared presently. By this time street, church, and portico were packed. The women at the back of the sacred edifice crowded forward for a look at the bride as she came into view. At the head of the procession was a very splendid beadle. As the rush of the women smashed into the bridal party, he put his hands against the women in front of the crowd and shoved energetically. While he was still trading shoves and unpleasant remarks with the crowd, the bride came into position. Some one came over and recalled him to his duty. With a last shove he took his place at the head of the pageant and gave the signal to move. The organ struck up; the gilded beadle and his two assistants led the march down the aisle, their staves tapping time on the floor.

The bridal veil was not worn over the face. Instead, it fell behind over the train. A very pretty bridal dress it was, not different in any other respect from those favored with us. She acted in a manner to scandalize an Anglo-Saxon bride, however, for she smiled all the way at such of her acquaintances as she could spy over the alien aisle seats. The two bridesmaids, at a respectful distance behind, were prettily gowned, though with no attempt at matched costumes. Each of them carried a small silk reticule.

The procession halted in front of a row of chairs set before the altar rail. In these they disposed themselves, the young couple taking the two chairs in the middle. On each side of them burned a small candle. I supposed that these were for devotional purposes; not a bit of it. An experienced French friend informed me that these are for the illumination of the priest's fee! With the characteristic mercenary quality which marks a French wedding, they set up the fee in good, red gold, for all the world to see. It appears that the priests insist on this point. Knowing that if the sum is handed over in the envelope customary among us, the allied families will be disposed to niggardly dealing, so they insist that it shall thus be put on public view.

I have them at the altar. The ceremony was the regular one of the Roman Catholic church, with a nuptial mass, beautifully sung, at the end. The conduct of the congregation was naive in the extreme. At periods when there was anything to be seen, those at the back stood on the chairs or on the *prie dieux* before them, exactly as the audience at the baseball game stands up on the seats to view a grandstand play.

But the climax of absurdity came toward the end of the mass. A collection was taken up! The bridesmaids, escorted by the gilded beadles, passed their silk reticules through the crowd! It appears that this is a regular thing at a smart French wedding. Moreover, I am told that there is a sharp rivalry between the two maids as to which shall get the larger sum, and the friends of each one reserve their contributions for the lady of their choice. The sum collected, by the way, goes to the church, not to the young couple. From the general character of French weddings one would suppose that it would be otherwise.

Keep your Youth if you are young;

If you are old why appear so. Keep young inwardly and we will look after the outward appearance. CREME DE LIS entirely eradicates and prevents wrinkles, removes any trace of sallowness and creates a perfect complexion.

IN THE SUPERIOR COURT OF THE CITY AND COUNTY OF SAN FRANCISCO STATE OF CALIFORNIA.

City and County of San Francisco, Plaintiff, *vs.* James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More B. More, and C. More Defendants. No. 67,877.

Action brought in the Superior Court of the City and County of San Francisco, State of California, and the Complaint filed in the office of the Clerk of said City and County of San Francisco.

FRANKLIN K. LANE
City and County Attorney, Attorney for Plaintiff.

The People of the State of California send Greeting to: James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More, B. More and C. More, Defendants.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the City and County of San Francisco, State of California, within ten days after service on you of this summons—if served within this County; or within thirty days if served elsewhere.

The object of said action is to obtain a judgment and decree of said Court adjudging that plaintiff is the owner in fee of all the real estate hereinafter mentioned, and to quiet plaintiff's said title as against each and all said defendants, and to obtain other and further relief and costs, as specified in said complaint, which complaint is hereby specially referred to for further particulars.

The following is a description of the property affected by this action:—

All that certain piece, parcel or tract of land situated in said City and County of San Francisco, State of California, bounded and described, as follows to wit

Commencing at the corner formed by the intersection of the northerly line of Bay street with the westerly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred (200) feet; thence at right angles northerly and parallel with said Fillmore street to a point at which the water of the Bay of San Francisco is twenty-five [25] feet deep at low tide, as the same existed April 27, 1863; thence at right angles easterly four hundred and sixty-eight 9-12 [468 9-12] feet; thence at right angles southerly and parallel with the easterly line of Fillmore street to the said northerly line of Bay street at a point thereon distant two hundred [200] feet easterly from the easterly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred and sixty-eight 9-12 [268 9-12] feet to the point of commencement.

And are hereby notified that, unless you appear and answer as above required, the said plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the City and County of San Francisco, State of California, this 20th day of March, A. D., 1899. [SEAL] WM. A DEANE, Clerk,
By WM. R. A. JOHNSON, Deputy Clerk.

DIVIDEND NOTICES.

OFFICE OF THE HIBERNIA SAVINGS AND Loan Society, corner Market, McAllister and Jones streets, San Francisco, December 29, 1899. At a regular meeting of the board of directors of this society held this day a dividend has been declared at the rate of three and one quarter [3¼] per cent. per annum on all deposits, for the six months ending December 31, 1899, free of taxes, and payable on and after Tuesday, January 1, 1900.
ROBERT J. TOBIN, Secretary.

DIVIDEND NOTICE.—Mutual Savings Bank of San Francisco, 33 Post st.—For the half year ending December 31, 1899, a dividend has been declared at the rate of three [3] per cent. per annum on all deposits, free of taxes, payable on and after Tuesday January 2, 1900. GEORGE A. STORY, Cashier.

THE CONTINENTAL BUILDING AND LOAN Association of California, 222 Sansome St., San Francisco, has declared for the six months ending December 31, 1899, a dividend of 12 per cent per annum to class A stock, 10 per cent per annum to class B stock, 6 per cent per annum on term deposits and 5 per cent per annum on ordinary deposits.
CAPT. OLIVER ELDRIDGE, President.
WILLIAM CORBIN, Secretary.

SAVINGS AND LOAN SOCIETY, 101 Montgomery street. The board of directors declared a dividend for the term ending December 31, 1899 at the rate of three and sixty one hundredths (3.61) per cent per annum on ordinary deposits, free of taxes, and payable on and after January 2, 1900. Dividends not called for are added to and bear the same rate of dividend as the principal from and after January 1, 1900. CYRUS W. CARMANY, Cashier.

A CINCH ON JURYMAN NO. 6.

"SPEAKING of remarkable trials," said Smithers, the con man, to the group in the hospital of the prison, "there was the game a young pal of mine workt onct, and him a defendant, too, bein' tried for burglary, sicond degree. His name was Tommy Devine, and him and me had been side-pardners t'roo many a job. Naterally I was worrit about him, especially as we couldn't figur' out no defence except an alibi, and experence seemed to teach that the more of the boys that came forward and swore that he wasn't there, the more dead cock sure the jury would be that he was.

"Well, Devine's case was called late in the afternoon, and they had jest got a jury when adjornment was had. I set in the front row of the spectators' seats, with me arms on the rail, a chewin' for dear life bot' to keep in the fashings and to hide me emotions. They was a seedy lot, them talesmen, mostly small tradespeople, worn thin thinkin' of their goods a hangin' outside, and who would vote for a law that every poor crook should have a big capital 'T' branded on the tip of his nose. 'Not much chanct for you there, Tommy,' I sighed, when an old feller, with long white hair and a face like the harvest moon, took the end seat nearest to me in the jury box, on the front row, and answered all questions as satisfactorially as a kid in the confirmating class. Thinks I to myself, thinks I, 'Where have I seen that old putty-dob?' and then I remembered.

"It seems, Kunnel, that about t'ree weeks before, when me and Tommy was wanderin' around town, seekin what we might devour, we came acrost a buildin' on a side street, with a sign, "spiritualist meetin' within.'

"'Here's our puddin',' says Tommy. 'There's no easier marks than the folks that can swaller that moss-eaten flim flam. On a platform set a vinegar-faced woman with short hair and a red nose, and a swipe tied acrost her eyes. She was in a tranct; and any one who had paid the price, could ask 'er questions which would be answered from a table near by. Three raps meant yes, and two raps meant no. Now the pint of these ere observations is this, the most enthusiastic of all them people gatherin' around was this same old bat-headed guy, a asting more questions than you'd find in a Methody catechism, and a rollin' up his eyes to heavings in holy hecstasy, when the answers came.

"That evenin', Kunnel, I managed to brace the night watchman, and git a hour's talk in the cooler with Tommy. He was as down in the mouth as a young swell with his fust mustache. 'It ain't the bit I'll surely git,' says he, 'but I'd like to have some kind of a run for me money; and with that jury I'm left at the post, to say nothin' of bein' falled down and rolled over with. Did you ever see sech a colliction of full-extensers?"

"'They're fierce,' says I, 'far wuss than the Inquesiton, with the exception of number sixt on the fust row; and I explained when and where we had seen that ancient believer in modern spells.

"Well, you never in all your life, see sech delight as Tommy exhibited at this intelligence. He shouted, he clapped his hands over his head, he put up a sailor's hornpipe that 'ud have brought down an Old Bowery gallery. 'The old Elijah,' he cried; 'he's returned to eart' in his fiery charrot to save me.'

"'How so?' I ast; 'you can't count on them cranks; sometimes they have a aberation of the mind and go right for a chance.'

"'He wants instructions from the spirruts, don't he?" says Tommy. 'Well, then, he shall have it on every important pint. Listen to this: Smithers, spirruts say yes; spirruts say no.' And blast me, Kunnel, if fust there didn't come three raps and then two, bot' times low but distinct.

"I sprang to my feet and listened at one wall and then at the other. 'Who's in them cells?' I ast.

"There's a drunk in one of them and a dumb d'go in the other,' says Tommy.

"'Then where did them raps come from?' I continood.

"'I do it with my knee,' exclaimed Tommy. 'See? I learned it when I was a kid at the deestrict school, and we druv' one teacher so daffy with the mystery that he resigned. Now don't you see how I'll call the turn on that old poppy-guy? My seat in court is clost to the end of the jury box, and I can stretch my leg right over his cheer; and by the time the case is over I'll rap him so full of assurances of my innocence, that no disagreement will satisfy him; no, indeed, he'll cnowert his associates, see if he don't t'roo the enthusiasm of his fait. So have no fear, Smithers my boy,' he added as the screw came along to sneak me out; but lay in a keg and a box of stogies and we'll blow the gang tomorrer night."

"Well, Kunnel, you can jest bet I was in me seat good and early the next mornin', for it ain't often as one strikes sech a graft as a trile and a seants t'run together. The judge hit a whack with his mallet, the crier got off his bluff, Tommy took his seat to the right of his lawyer, and next to the end of the jury box, and the shindig begun. The Deestrict Attorney went on rehearsin in an orderly way what would be the line of his proof against Tommy, and then concluded with this remark: 'Having due regards to your oat's, gentlemen, arter you have heerd this most conclusive evidence, will it be possible for you to give this defendant the benefit of any reasonable doubt and pronounce him not guilty? I know that your minds and consciences will find the true, the only answer.'

"Down set the Deestrict Attorney and began fumbling with his papers for the name of the fust witness. I leaned for'ard as far as I could, and rap, rap, rap, I heerd distinctly yet faintly the spirruts saying 'yes' to this important question right under the sixt' juror's cheer. The old man gave a jump that made the feller next look ugly at him, and I could see him a pinchin' of his leg to be sure of his own existence. Then I see his lips a movin'; was he astin' the question hisself so as to be sure it weren't no mouse under the floor? Evidently Tommy thought so, for rap, rap, rap, came the answer again.

"That settled the old spiritualist, Kunnel; he casht up his eyes in tanksgivin', and then turned to the defendant and smiled. Thereafter, testimony to have any effect on him had to be ratified from above. And Tommy give him plenty to think about. As each prosecutin' witness was sworn, and bowed his head and kissed the book in sign that he would tell the trut', the hull trut' and nothin' but the trut' s'help him, rap, rap, the 'no' would come, and then it wouldn't have made any difference if the oat' had been taken on a stack of Bibles as high as this room, the sixt' juror wouldn't have believed them.

"When Tommy's lawyer made his openin' address the old man put his hand to his ear and drank in every word as if it was Gospel. And well he might, for whenever there was a particularly strong statement in Tommy's favor, rap, rap, rap, the spirruts would go in hearty assent, that is with one exception, which for a moment I feared had spoiled the hull kit. You see Tommy was allus a loose and careless feller, who would go into spazzums at the idee of anythin' like work, and I do s'pose he thought that he had been givin' the old man pretty good weight. At all events, just when his lawyer turned dramatically to the jury, and said, says he: 'Look on this defendant, gents, scan his brow and features, and ask yourselves this question, isn't he on his wery face a good, honest, honorable lad?' blow me if there weren't only two raps. Whether Tommy was half asleep, or had a touch of R. E. Morse I can't say, but the look of horror that swept over the sixth juror's countenance brought him to his senses, and the third rap followed, so loud, too, that a bailiff jumped up and yelled 'silence in court!' I took the fust chance to shake my fist at the young rascal, and arter that he attended to biz.

"The jury filed out, eleven of them, as they passed Tommy givin' him an evil eye, but the twelft', No. sixt' you know, kinder raised his hand, like a priest draggin down blessins, as much as to say, 'You're all right, my son.' And he was all right, Kunnel, though as I set there and waited, I thought a disagreement was all he could git, but when the door open again, and I saw the jury returnin' with the old spiritualist at the head, I know'd that the verdict must be, as it was, not guilty. And I've heerd court officers tell as how the jurymen said that though they stood eleven to one for a while, they could not resist the almost holy appeals of the sixt' juror for an acquittal, not in the name of mussy, but of justice, which had spoken to him with a secret v'ice. He was a nice old bloke, that he was, even if he was dead ratty, and came and shook hands with Tommy, and ast him to his house, which Tommy was too honorable to do for fear he might be tempted to prig somethin'. And the gang had their spread that night, Kunnel, though the defendant arter all was hardly able to be present. You see his knee was swollen from so much unusual exertion. Pleadin' is hard work, Kunnel, even if it is done by the spirruts themselves."—*N. Y. Sun.*

THE OIL INDUSTRY.

THE big 600-barrel well of the Kern River Oil Company at McKittrick is the centre of interest in that district at present. It has practically demonstrated a fact that was patent to experienced oil men all along, on account of the great seepages at that place, that the McKittrick district must prove a great oil field. When wells are drilled to the second sand from which comes the enormous gas flow to be found in the Kern River Company's well, there will be plenty of 1,000-barrel-per-day producers in this district. The gas pressure is still so strong in the Kern River well, despite the fact that it is over a month since it was drilled into the sand, that she blew out her casing head last Saturday night and a stream of oil ten inches in diameter tumbled up over the top of the 80-foot derrick and flooded the canon below. In the meantime, the Kern River Company is constructing a 10,000-barrel iron tank and will push the construction of its pipe line to McKittrick station as soon as possible.

* *

The following from the Fresno *Democrat*, seems to indicate that the end is not yet in the trouble between the oil and scrip men: "While the members of the Petroleum Miner's Co. operative Association have much to encourage them in defending their titles, all is not as bright as it might be. That which is causing the greatest uneasiness is the fact that the statute does not specifically designate that lieu lands must be agricultural lands. Presumably that was what was intended, but the intention will cut little figure now, it is feared. The question is whether the land office can do anything else than abide by the letter of the statute and make its rulings accordingly. If it pursues this course, then it means a long and hard fight in the courts for the oil men. This fight will be the more difficult to carry through successfully, for the reason that the scrip men, it is claimed, will fence the ground as fast as patented, and thus prevent the boring of wells on it by oil men.

* *

The excitement over the lands in the Kern River district continues to grow. Land values are jumping day by day and what is more, a good deal of real estate in 28-28 is changing hands. More than a dozen wells are being put down in that township, as well as in those adjoining, and oil men are watching the development with much interest. The Thirty-Three Oil Company is putting down its fourth well, having capped the other three when it reached the oil. The other wells in this vicinity, as fast as they reach the oil, are likewise capped, awaiting transportation facilities. The Southern Pacific will begin building its branch line right away to the Kern River field. The line will extend half way through 28-28, so that the oil can be loaded direct on the cars. It will not take long to construct the road as the country is level and the grades easy.

* *

The Colorado and Pacific Oil Co., made up of a number of Colorado mining millionaires, has commenced operations on section 10 in 28-28. Bunk-houses have been built and tanks erected, and a derrick and a first-class standard drilling outfit from R. H. Herron & Co. is on the ground. This company will operate on a very extensive scale. They have bought their outfit without asking the public to buy stock for development purposes. The entrance of these Colorado mining men into the oil business is the forerunner of some big investments of Colorado mining capital in these fields.

* *

As a result of refining the products of the Sunset oil wells, the distillation shows that 30 per cent. of the Crude oil is lubricating oil of the first quality, of which 20 per cent. is cylinder oil, equal to any in the market. The percentage of illuminating oil is very small; the residue after the process of distillation is completed, is the finest quality of asphaltum. The importance of this discovery will be understood, when it is stated that cylinder oil sells at 50 cents per gallon wholesale.

* *

It would seem that American oil is king in the Orient from the following extract from an interview granted the Boston *Evening Transcript* by Mr. Wu, the Chinese minister at Washington: "Everywhere in China you see American kerosene cans. Formerly the Chinese used nut oil as an illuminant chiefly, but kerosene was cheaper and gave a better light. The Yankee oil is the best and is regarded as the standard."

* *

As an evidence of the increase of the oil excitement, the following oil companies filed articles of incorporation at Bakersfield in one day: The Rio Grande Oil Asphalt Company, San Francisco; the Elwood Oil Company, Selma; the Mutual Development & Construction Company, San Francisco; the Bakersfield & Fresno Oil Company, Fresno; the President Oil Company, Bakersfield.

The Santa Fe Railroad, which was the first in the United States to successfully burn oil in engines, has been contemplating the equipping of the Valley division with oil burners. A test was made last week with the Kern Company oil, used on an engine fitted with one of the company's seven-ton combination oil and water tanks, and was a complete success.

* *

The Caspian Oil Company was compelled to suspend operations for lack of casing. They are down a little over 600 feet on section 15-29-28 and expect to strike oil within the next 100 feet. Owners of adjoining property are anxiously watching the outcome of this well, as the result will materially affect their property.

* *

There need be but little fear of an overproduction of oil in California, for the reason that Chanslor and Canfield alone have had inquiries for oil for consumption from prospective customers, who have just begun to realize the economy of oil fuel, that would cover four times the present oil production of the State.

* *

The Caribou Oil Company's well No. 1 is down over 700 feet and has passed through a strata of gas and heavy oil. This well is on the true oil belt extending north and east of Oil City, as indicated by seepages at different points and they will undoubtedly get a fine well, probably at 1,300 feet.

* *

Well informed oil men, claim that the Kern River district, when fully developed, will be continuous for a length of from 40 to 50 miles, with a width of from 6 to 10 miles. This would make it one of the most remarkable districts in the world.

* *

The Kern River Oil & Storage Company will complete its pipe line from its well on section 13, in the McKittrick district, to McKittrick this month, and will go on with its project of building a line that will tap the whole McKittrick district.

* *

The Sacramento Oil Company, on section 9, has begun active operations. W. F. Bryant & Co., the well known expert oil drillers, have an outfit on the ground and are drilling well No. 1 for the company. They will undoubtedly get oil within a week.

* *

Oil seepages have been discovered on the desert at Camp Colorado near Garlock. Claims have already been located there and work will begin at once. Oil locations are being made a mile and a half from Mojave.

The Royal Oil Company in the [illegible] field has its well down 700 feet, w[illegible] indication of soon reaching the sand. [illegible] last 300 feet they have been striking occa[illegible] pockets of oil and gas.

* *

The Southern Pacific intends building a spur to the Kern River oil fields and will likewise build a depot at Coalinga, as the increase of the railroad business at the latter place has rendered such a step necessary.

* *

As an example of the increase of the oil production of the state last year, the first well was sunk in Oil City a year ago last December, on section 20, and now the output is 100,000 barrels a month.

* *

The New York Oil Company's well at Coalinga is down 2,018 feet and they intend to go deeper. The Selma well at 1,700 feet is having bad trouble with its casing.

* *

The Kern River Oil Company has completed arrangements for a lease of 160 acres of oil land in section 18 from the McKittrick Oil Company.

* *

The Imperial Oil Company is preparing to put down five more wells on section 33-28-28, which will make eight wells on the quarter section.

* *

Sixty new oil locations were filed for record in Bakersfield last Thursday and eighteen the day following.

The Continental Oil and Development Co.
[INCORPORATED]

Only 6000 Shares of which 1,000 were put on the market and over half sold the first 10 days. This is a genuine opportunity for an oil investment. The Company owns by United States patent 5 twenty-acre tracts in the

"Oil Basin," Kings County,

the richest oil bearings in the entire belt. We have made arrangements for the latest improved machinery and will shortly be boring for oil, at which time stock cannot be had at any price.

No Assessments.

Wm. CORBIN, Pres. A. E. RUDELL, Secy.

222 Sansome Street, San Francisco, Cal.

The Theatres

THE opening concert of the Emma Nevada season at the California was a most agreeable musical entertainment. To declare the cantatrice a great artist would be a misstatement of the case. Hers is a light, fine, supple voice, with something of the character of a flute in its tones. Her trills and runs are produced with the ease and clarity which distinguishes music rendered on that instrument. She neither excites nor enraptures, but charms by the dexterity and *finesse* of her art. Singing the type of composition that demand rapidity and certainty of execution, she seldom fails in tonal requirement; and after realizing her limitations, one listens with confidence and satisfaction. Perhaps Nevada was heard to best advantage in Tschaikowsky's "Travoushka," which was given with something of real dramatic appreciation. Her skill was best evidenced in the "Bell Song" from Lakme, and the "Shadow Dance." As encores came "Home Sweet Home" and the "Mocking Bird," in both of which the liquid flute tones were infused with a delicate emotion.

Mr. Blumberg the 'cellist, who is assciated with Mme. Nevada, is a first rate artist and one of the best men at the instrument we have. Larger and deeper tones have been heard here, but seldom a braver or better technic. Mastery and style he certainly has. "The Spinning Wheel"—a composition of extraordinary difficulty—was given with an ease and freedom that suggested the execution of a violinist, rather than the restricted, laborious work of a 'cellist. The pianist, Selden Platt, is rather mediocre, but at least has the merit of being inoffensive, really a virtue in an accompanist.

* *

Madelaine Lucette Ryley's plays are like the stories of W. W. Jacobs, trifles, built on trifles and purporting to be nothing else. But there are trifles *and* trifles; one of the tests of a master is his ability to handle of thing of slender moment so naturally that it comes to something. Miss Ryley cannot do this with her plays any more than Jacobs can do it with his stories. You go to see it, you are amused, not uproariously but easily and in good-natured fashion, and go away to forget it. As I sit, next morning, and try to put my impressions on paper, I discover that I haven't any; by tonight I will be unable to tell what it was all about. This is a fairly good test of the play, I think; it proves it what it purports to be, a thing of the hour for amusement solely and not for admiration. The way in which the Alcazar audience received the piece goes to prove the point. It kept them tittering from beginning to end, but I cannot recall that anyone laughed "right out." If "The Man From Mexico" and plays of that sort can be called roaring farces, I should name this a giggling farce.

Irene Everett, a handsome actress with a natural style and very little magnetism, was adequate to the leading part of *Mrs. Bugle*. Opposite her, Ernest Hastings was in highest favor with the audience. He is an actor who adopts, to good purpose, the quiet, easy style of acting, but it is doubtful if it is the style best suited to the portrayal of a jealous lover. Denithorne's enunciation and mannerisms were even worse than usual. Laura Crews handled well the rather difficult character part of *Julia*.

It is encouraging to note that the Alcazar's stage manager has taken a brace and is making his people learn their stage business, a point which has been a weak one in times past. Next in line for him is an ease-up on the prompter. Make your people learn their lines, Mr. Bryant.

* *

At the Orpheum next week the new bill is headed by Welstone and Abbey, grotesque dancers; Hanson and Nilson, sonbrettes, dance and sing; Hodges and Launchmere are colored comedians. There is also Mlle. Emmy, a pretty young woman, with a troupe of trained fox terriers, who do a variety of tricks. This Emmy is said to be the cleverest dog trainer in Europe.

* *

The strong James-Kidder Hanford combination will present a classic repertoire at the Columbia next week. The feature with which they open on Monday night is an elaborate scenic production of "The Winter's Tale."

Miss Mary Scott, whose dramatic debut was made at the California Theatre on Tuesday night

This engagement is one of the half-dozen strongest attractions of the present theatrical season.

* *

The Countess Gucki at the California next week, with Miss Van Buren on the title role. It should be an opportunity for this actress to exhibit her degree of improvement under the direction of Manager Frawley.

* *

The first of the symphony concerts under the direction of Henry Holmes will be given at the Grand Opera House next Thursday afternoon. The program includes the Ruy Blas overtures, Haydn's Symphony in D, Tschaikowsky's Symphony Pahetique, and the Siegfried Idyl.

THE CHOICE OF A NAME.—While taking a stroll in a Washington suburb President McKinley observed a little girl superintending the aquatic movements of a retriever of which she was in charge. To please the child Mr. McKinley threw his stick into the water, and the dog promptly seizing it, brought it to the bank. Then the maiden shouted delightedly, "You are a dear good dog Mac!" "Why is he named Mac?" asked the head of the Republic. The child, unaware of the President's identity, replied, "Why, sir, papa called him 'Mac' after Mr. McKinley, the President, you know, because he can fight our neighbor's dog that's called 'Bryan.'"

That brilliant play "Lady Windermere's Fan," succeeds "Mysterious Mr. Bugle" at the Alcazar next week. It has been rendered here by two different companies, but many years have elapsed since its last performance. To thousands of players it should have all the charm of a fresh play. In construction "Lady Windermere's Fan" is strikingly effective and the dialogue witty and pointed to a degree.

* *

The fascination of Fouguere is undoubtedly in her facial expression. Her voice is the reverse of melodious, nor is her beauty conspicuous. But she is dressed to set forth the character of her mobile face and her songs are full of vivacity and art. Had she been dumb, however, Fouguere would have been at no loss for words. Her languishing eyes, her susceptible lips and her piquant nose are in themselves a vocabulary. There is nothing she cannot say with them; little she does not say. To translate one of those mischievous glances of hers into English would suspend any publication but a Parisian one. Though it may be added here next look may glow with the innocence of childhood, from which it may be taken for granted that Fouguere is versatile.

Love and Science.

We hear of horseless carriages,
Propelled by unseen force;
Also of loveless marriages,
Which generate divorce.
We hear of wireless telegrams,
A wonder of our day;
But 'twixt them armless courtships
Will never come to stay.
—*Automobile Magazine.*

New Stories Re-Told.

x x x

ORATORY UNDER DIFFICULTIES.—During the Bryan campaign Representative Stark, of Nebraska, had been billed to spout in Fairburg, but on arrival found that all the available halls were otherwise engaged. A great barn, the winter quarters of a circus, was hired for the occasion, and on the important evening, crowded to the doors. "Ladies and gentlemen," began the Congressman. "Roar-r-r-r," went the lion. "In this eventful campaign," he continued, "I come to speak to you in advocacy of the great principles represented by our great and glorious leader, the peerless statesman and matchless orator, William J. Bryan—" At that moment the lions roared, the elepheants trumpeted, the hyenas howled, the camels snorted. A shiver of fear ran through the audience. "——at the mention of whose name," remarked Congressman Stark, after the noise had subsided, "even the wild beasts lift their voices in a tumult of appreciative joy."

x

RESPECT WHERE IT IS DUE.—Two naughty boys had been having fun with the advertisements on a bill board. They had given George W. Childs a ragged moustache, Chester A. Arthur a beard; Robert Mantell had galways and John Drew side whiskers. One figure still remained in the center of the board and the smaller boy of the twain had started towards it when his companion shouted: "Hold on! Don't do anything to dat." "Why not?" "Dat's Jeffries, de champeon." Then they put their pencils in their pockets, looked reverentially at the unmutilated face upon the board and trudged along.

x

AN APPROPRIATE CHOICE.—At an evening party in the home of Charles Matthews, the eminent actor, a gathering of distinguished men were being amused with a raffle for penny toys. Each drew a number and if successful drew a toy. Palgrave Simpson, the dramatic author, took a prize, and said, in his finikin way, "Dear, dear me! What shall I choose amongst these?" Byron immediately took up a penny sword, pulled it out of its sheath, and exclaimed, "Take this, Palgrave, you need something that will draw." It seems Palgrave had just perpetrated a new play which had proved a dead failure.

x

A NEW METHOD.—In a Boston public school, in which drawing from the model is taught, a little girl was seated in a chair on the platform and her companions were told to draw what they saw. One tiny maid had a sketch of the chair and a small figure standing in front of it. "Mary," said the discouraged teacher, "didn't I say draw Amelia as you see her, and she's sitting in the chair and not standing in front of it." Tears came into the child's eyes. She was misunderstood. "But I hadn't got to it," she said. "I was just going to bend her down when you rang the bell."

x

A DELICATE DISTINCTION.—In Russia a fine distinction is ever drawn between the cloth and its wearer. Archbishop Benson used to tell a story of seeing in a Russian police court a priest brought in, in undress of purple. The court, magistrates and all, knelt and a police sergeant kissed his hand. Then rising, the magistrate said: "You nasty, drunken beast, so you were drunk again yesterday. I'll make you remember it this time." The priest was led out to an adjoining yard, his clothes torn off, and fifty lashes given him; when he was brought back half fainting all knelt and received his blessing.

x

THE OTHER SIDE OF IT.—A certain English millionairess was applied to for a subscription to the Soldiers' Widows' and Orphans' fund, and was much moved at the necessities of the defenders of their country: "What is it to me to draw a check?" she said. "I will deprive myself of some luxury to prove my sympathy with the wives and children of the killed and wounded—I will sell my jewels!" "But, my dear lady," exclaimed one of the committee—presumably not a bachelor—"your husband would have to replace them!"

x

IDENTIFYING A RARE FOSSIL.—The late Professor Marsh, of Yale College, the eminent paleontologist, had a quiet wit. Once a facetious student brought him a bone scraped and cut in a fantastic fashion. The class knew of the plan to deceive the scientist. "I think, Professor, that this is a very rare fossil." The Doctor looked at the bone, then at the student, finally centering his gaze upon the latter's knee: "It is not rare. It is painfully familiar to me. It is a piece of the leg bone of a calf."

x

SOAP FOR YOUR SAKE.—Admiral Rous was running for Parliament in Bristol, and was addressing a mob in one of its suburbs. "If I vote for you, what taxes will you repeal?" said a dirty fellow in the crowd. "Why," said Rous, "on soap, for your sake."

EVENTS CURRENT.

The British-Boer War. The situation in South Africa is problematical. New movements, little understood by anyone away from the very seat of war, are occurring around Colenso and Ladysmith, now the center of active operations. At Ladysmith, early last week, the assault on the town was renewed and was again unsuccessful, although the English seem to have held their position with more difficulty than they experienced in the fight of Caesar's Camp last week. There are as yet no particulars of this fight; the ceusorship was shut down like a cloud, and not a word concerning losses has come to the public. Succeeding this, was a report that General Warren, commanding a brigade under Buller, before Colenso, had crossed the Tugela river, in an attempt at which Buller suffered a heavy defeat last month. Over this, too, the veil of censorship was dropped and no news came through for several days. In the interval, rumor was busy. Every day, reports in England or the continent had Buller defeated or victorious. The censorship has just been lifted a little and an unexpected change in the situation is revealed. Buller has seized the bridges over the Tugela; Warren, with 11,000 men, is off on a mysterious advance—some sort of a flanking movement. The expected general engagement has not yet occurred, but either that or the relief of Ladysmith is not far off. The Boer tactics, however, are the most surprising feature. They are withdrawing their forces, or pretending to do so, from both Ladysmith and Colenso, and concentrating at some other point—just where, no Englishman seems to know. The most probable explanation is that, being convinced that they cannot take Ladysmith in advance of the relief movement, and that they cannot hold the relief with the force which formerly won at Tugela river, they are combining both forces to face Buller at some strong position between Colenso and Ladysmith. Another possibility is that they are following their characteristic tactics and arranging a trap for the slower British. Proof that the Boers are now preparing for a most desperate resistance is furnished by a dispatch via Delegoa Bay. Every available man in both republics has been ordered into the ranks; even Free State merchants, who were formerly regarded as exempt, are now commandered. President Kruger has, moreover, issued a circular letter calling upon the Boers to put new zeal into their fight. This may have been caused by the discouragement which the Burghers are said to feel over their failure to take Ladysmith by assault. Methuen at Modder River and French on the Orange Free State border are making no move. Interest and energy are centered on the events impending before Ladysmith. Both General Roberts and General Kitchener are in South Africa; just where they are, the censorship prevents us from knowing.

The Filipino War. Although Lawton is dead, the plan of campaign he taught the American troops—rapid raids and forced marches—is still being followed in the Philippines. There have been several of these daring raids of late, all successful. The first was a cavalry rush by Schwan's column from Binang through Silang, and is described as a wonderful performance. The troopers forced their horses over a rough country full of gorges and cut by turbulent streams. They pressed the insurgents so close as to prevent the destruction of the bridges, a thing which would have effectually blocked the advance. After driving on the enemy in several skirmishes, they seized Silang, where they took an arsenal stocked with arms and ammunition. As usual, they failed to capture any prisoners—a result which would be worth many victories of the sort we have been gaining. At about the same time Colonel Bullard swung south in pursuit of the rebels fleeing in that direction and scattered several large forces. In the course of this raid the Americans took the strongly fortified town of Santo Thomaso, where the rebels left thirty-six men dead in the trenches and fifty-four prisoners were made. Taken together, the two advances extend the American line of occupation to a number of towns hitherto insurgent strongholds. The Thirty-Seventh Infantry has captured the retired General Rizal, brother of that Rizal who led the insurrection of 1896 and was executed by the Spanish. It cannot be said that the situation is encouraging. As in the campaigns of last spring, our men win every battle, yet the mobile insurgents escape to confront them again and to advance their lines as soon as ours retire. It was supposed, after the unusual successes which attended the first movements of this winter, that the insurrection would collapse, or, at the worst, degenerate into guerilla warfare, but we are still encountering organized bodies. Moreover, Aguinaldo has slipped through our hands. The pursuit of the insurgent leader through the mountains has been abandoned; it is reported that he is in Cavite Province, now the center of the revolt.

Canal Bill Before the House. THE first move in the Nicaragua Canal fight was made in Congress January 12, when the House Committee on Interstate and Foreign Commerce reported favorably on the Hepburn Canal Bill. This bill is practically the one presented at the last session and then shelved pending the report of the Isthmian Canal Commission. The members of the present commission, deeming that the commission's work would not throw any new light on the situation, decided to act at once. As changed and amended by the committee, the bill authorizes the President to acquire from Costa Rica and Nicaragua control of such territory as will be necessary for the construction and defense of a canal from a point near Greytown on the Carribean Sea to Breto, on the Pacific Ocean, via Lake Nicaragua. Such sums as may be necessary to secure this control are appropriated by the bill. It is provided that, when control has been secured, the Secretary of War shall proceed to the construction of a canal wide and deep enough to accommodate the largest vessels now in use, and provided with the necessary locks and appliances, and shall provide safe and commodious harbors at the termini, with efficient defenses for the same. The President is to order the necessary surveys, with a view to utilizing Lake Nicaragua and the San Juan river as part of the course. The governments of Costa Rica and Nicaragua are to be guaranteed the use of the canal on any terms they may agree upon among themselves. The sum of $140,000,000, or such part thereof as may be necessary, is appropriated for the construction. The bill will probably come up for early action, as Speaker Henderson is favorable to it. The opposition will base its fight against immediate action upon the fact that the Isthmian Commission will not be ready to report until next session.

Contract Labor in Hawaii. The State Department has just published a paper on labor conditions in Hawaii, compiled out of information obtained from Wray Taylor, secretary of the Hawaiian Board of Immigration. Naturally, it deals mainly with that peculiar condition, half free, half slave, known as contract labor. The facts presented go to prove that much said and written on the subject is inspired by sentimentalism. Certainly, if these statements are true, the system is not especially hard on the laborers. The contract men have steady work at a fixed sum, and are furnished with lodging for themselves and families, fuel, water and medical attendance. They are recruited by immigration companies chartered and authorized by law. The government pays not over $130 for each family, to cover recruiting expenses and passage of women and children accompanying the immigrants, other expenses being paid by the planter. On their arrival at Hawaii, the laborers are examined by government physicians and are rejected, if unfit for hard labor, and must then be taken back to their homes at the expense of the recruiting agency. If weak, but still able to work, the laborer is assigned to some light employment. The quarters furnished by the companies are grouped together in camps, unmarried men being placed in large "bunk-houses" and families assigned to separate shanties. Many of the women work, on the free system, around the plantations or the mills, performing light labor or domestic service. Their life is comfortable, although they are strictly confined and under control. Whether or no the work is made hard and disagreeable depends largely upon the overseers. It is hinted that in past time these same overseers have used force, but that now recourse is had to law in the case of refractory laborers. Those who are mistreated have legal recourse. Under the terms of the contract, employers must furnish continuous work, or at least continuous pay, although a laborer need not be paid for a period during which he is incapacitated by sickness or any other cause. The pay for contract labor is $15 a month for Orientals and $18 for Europeans, and the hours are ten in the fields and twelve in the mills and factories. Contracts are signed for three years. At the end of their service, the Chinese and Japanese frequently take away from $100 to $300 savings. It is stated that the laborers, especially the Orientals, "are generally happy and contented."

A Crisis in British Politics. The recent British disasters in South Africa have resulted, as was to be expected, in a loss of prestige for Lord Salisbury's government. Since the breaking out of hostilities the War Office, Secretary Chamberlain and all who had to do with the raising and supplying of the South African force have been obliged to share the criticisms heaped on Methuen, Buller, Gatacre and the other unsuccessful generals. As time went on, and it became evident that the army went into the war unprepared to meet the kind of warfare favored by the Boers, the criticisms have grown more severe, until now it is not beyond the range of possibility that the conservative ministry may be forced out of office. The situation has been rendered still more critical by the position taken by Secretary Balfour, the leader of the House of Commons, who has spoken much and somewhat flippantly of late about the war, defending the government course where it could not be defended successfully, and making light of its errors. With lists of dead piling up daily in the war office, the English people are in no mood to hear the matter treated pleasantly. As a result, even the most solid of the conservative journals show a disposition to desert their colors and join in the criticisms of the opposition. The result of Buller's impending advance on Ladysmith is, of course, a determining factor. If this general, appointed and supported by the powers that be, shall succeed in this movement, it will give the Salisbury cabinet practical ground for argument; if it fails, a change is imminent. The storm of advance criticism is aimed principally at Lord Lansdowne, Secretary of War, who, it is charged, sent out the troops without proper arms and equipment, and with old-fashioned artillery, showed partiality in the selection of officers, and gave preference to showy English regiments unfit for irregular warfare instead of to the colonial troops, who can ride and shoot like the Boers themselves. In addition to this, there is the old charge that the War Office was swindled by the Boers in the matter of military information and the new one that they are hiding their own incompetence by means of the strict censorship. Correspondents' stories from the front are more severe on Methuen than on any of the other generals. He is acquiring a newspaper reputation something like the one enjoyed by Shafter in our own Spanish War. The *Saturday Review*, a staunch Tory organ, puts the whole situation thus: "The administration is face to face, not with the opposition, but with the nation.

The Legal Status of Department Stores. A decision of the Illinois Supreme Court regarding department stores in the city of Chicago has aroused more than a little interest throughout the country. Emporiums of this character are very popular in Chicago, where the tendency toward concentration of industry is carried to its logical conclusion. Under the pressure of demands from small dealers, the city council passed an ordinance forbidding the sale of groceries and provisions in stores where dry goods, clothing, jewelry, etc., were kept for sale, and another prohibiting liquor-selling in such shops. A test case was carried through all the courts and resulted in a defeat for the ordinance all along the line. The measure is clearly unconstitutional and there is no question as to the legality of the decision. The constitution grants an individual the right to use and dispose of his property as he wishes, so long as such disposal does not injure public morals, general health or the safety of individuals. The carrying of "mixed goods" in a large store does none of these things, and there is therefore no legal recourse for the small dealer against the increasing tendency toward large emporiums instead of small shops. If this tendency is an evil, the roots lie too deep in the social structure to be reached by laws.

Our Commercial Relations With England. The fact of Great Britain's dependence upon the United States for food supplies, and incidentally the injudicion of the recent seizure of American flour-ships, is emphasized by the latest report of the Agricultural Department dealing with our export trade. In the period between 1894 and 1898, the British Islands took fifty-five per cent. of our agricultural exports. The colonies of the United Kingdom brought the figures up to sixty per cent. In one year the sum paid by British merchants for American farm products—principally flour, grain and meat—reached a total of $403,953,854. Germany, the next on the list, receives a little less than one-fourth the amount credited to the United Kingdom, while France is third with six per cent. of the total. The Netherlands, Belgium, Italy and Spain are next on the list, none of them receiving more than five per cent. each. In contrast to the figures quoted for Great Britain, our export agricultural trade with the South American and Asiatic nations, to which we are looking for an increase of trade relations, is insignificant. South America took only one and three-fourths per cent. of the total. In considering this, however, it must not be forgotten that the Latin countries of the Western continent are agricultural and that our exports to them are mainly in the line of manufactured products. Nevertheless, this does not detract from the force of the argument furnished by the figures. We are essentially a farming nation, and the bulk of our output goes to England. In time of war or trouble she must look to America for provisions; in time of peace, we must look to England for our chief market, at least until there comes some material change in the character of our industries or a shift in the world's markets. This is a basis for the Anglo-American understanding which will appeal to those who take no stock in blood or in the Anglo-Saxon mission.

The Philippine Hemp Ports. A corner in hemp and a fight between two sets of concerns manufacturing this staple has mixed itself in our Philippine situation. These islands furnish the principal source of the world's supply. Since the beginning of the American blockade, the supply has been checked. It is now claimed that two or three firms, headed by the McCormack Binder Company, have cornered the supply in the United States and will force prices extremely high during the summer. This is a matter of some importance to the farmers of the country, because hemp is the staple material for binding twine, a necessity in the harvesting of our western grain fields. These facts were placed before the Secretary of Agriculture and the Secretary of War, and seem to have been adjudged valid; at any rate, Secretary Root has twice within the last month cabled instructions to General Otis to open the ports in order to give free passage to hemp. Otis promised to have certain ports open by January 1, but since that time nothing has been heard from him about the matter. The persons who called attention to the condition of affairs were members of firms opposed to those which cornered the market, and the cornering firms have entered a sort of counter-complaint, in which they allege that the ports cannot be opened in time to relieve the situation this summer, as the hemp must be brought from the

field to the ports, baled, and loaded for transmission before it can even be started for this country. Moreover, they hold that the opening of the ports will be injurious to the American cause in the islands, permitting the insurgents to import arms and men. There has been some criticism of the Secretary of War for his action in turning the course of the war for a purely commercial reason, but there seems little doubt that he did it at the request of the Agricultural Department and in the interest of the farming element.

American Trade With China. The great barrier to the extension of American trade in China has always been the fact that American exporters do not understand the conditions prevailing in that country. American goods have not kept pace with those of German, English and even Russian manufacture; American imports form only a very small fraction of the total import trade of China. A correspondent writing to an Eastern newspaper explains some of the causes. In the first place, he says, we need an American bank at some of the principal seaport towns, preferably Hongkong. Bills of exchange have now to be made through German, English, or French banks. An American bank would be a profitable investment as, in addition to our imports, there is a large export trade from China to the United States. Then, our system of exchange is a great drawback. The European merchants sell goods on thirty or sixty days' time, with privilege of renewal. We grant, customarily, only fifteen days. As the mails are quicker than the freight-steamers, this means that the Chinese buyer must pay for his goods some time before they are delivered. Indeed, the entire system of doing business is different from our own. The Europeans have learned this and made changes in their methods to suit; only the Americans hang to their own ways. Again, the Germans and English have learned to pack their goods so as to suit the Chinese, whose ideas on the subject are peculiar. The whole situation resolves itself to this. The other commercial peoples have studied the problem and solved it; we have not.

Growth of Our Coal Industry. Last year was a notable one in our industrial history in that it saw the United States take its place at the head of the coal-producing countries of the world. The output of Great Britain, Germany, France and the United States has been steadily increasing since 1870, but our percentage of increase has been by far the largest. Between 1870 and 1895 we trebled our production, and now we have surpassed even Great Britain, which used to head the list. In the four years following, the increase came up with a great bound. Our output in 1899, was 244,000,000 tons, an increase of 49,000,000 tons over the best previous record. The increase alone is greater than the total yearly output of any other country outside of Great Britain, in the year 1870. The big increase for 1899 places us well in the lead. The cause of the spurt lies in our growing iron industry and the consequent large demand for coal and coke. Thriving iron and steel industries make a thriving coal trade. We are in the fortunate position of having both coal and iron beds and of having them near together. Sweden, for example, has never utilized her immense supplies of iron ore because there is no fuel near at hand to work it. While it is profitable for the Swedes to import coal for the manufacture of "fancy" steel, such as that used in bicycle parts and watch-springs, the larger uses of the metal cannot be developed with imported fuel, and such iron ore as she mines is generally sent abroad. In our case and in that of Great Britain the two materials lie close together; the commercial supremacy of the Anglo-Saxon nations is largely due to this fact. The extent of our resources in coal and iron, particularly the latter, is unfathomable; no one has yet attempted to estimate it. We know, however, that coal beds occur in thirty-one of the states and territories, that they underlie at least one-sixth of the country's surface, and that we are now working only the most accessible deposits, with great areas still untouched.

The Plague in Honolulu. Since the last report, nine more deaths from the plague have occurred in Honolulu, making twenty-two in all. Nearly all the cases reported have resulted in death, the exceptions being a few Chinese and Japanese, who are lying between life and death in the plague hospital. Fumigation and burning infected district have been resumed. All houses where cases have developed are now to be burned to the ground. This policy was inaugurated soon after New Years, and a section in the city's most disreputable quarter was totally destroyed. The special Chinatown quarantine has been raised, and a general quarantine of the judicial district of Honolulu substituted. Under this rule, no one may leave or enter the city, and all houses where the disease has occurred are closed at once, the residents being shut in until they can be examined for symptoms. Vessels consigned to the port are receiving and discharging cargo by means of lighters. The landing of passengers from ocean-going ships is also forbidden. At first, tourists were not permitted to leave the port, but a later ruling has given those who have not been under suspicion of the plague a right to take passage on sailing-vessels. Most masters of such ships are averse to having any dealings with the port, but a few have consented and are taking on passengers through boats. Nevertheless, many tourists are still shut in the quarantined town. The Council of State has appropriated $250,000 to fight the plague and $20,000 for a garbage crematory. The Island of Kauai has established a shot-gun quarantine against Honolulu. Nothing, not even mail, is permitted to land from the infected port. Vessels consigned to the ports of that Island are met in the harbor by armed men, who order their crews back upon pain of death. Some time ago, the officers of the Pacific steamship *Australia* agreed, with the consent of their superiors, to take passengers if the government would keep them in separate observation stations for ten days before sailing. This was impossible, owing to lack of facilities, and the ocean liners will take no tourists from the port until such facilites are provided or until the disease is stamped out. So far, only one European has taken the disease. The other twenty-one fatal cases are divided as follows: Chinese, 15; Hawaiians, 3; Japanese, 2; South Sea Islanders, 1.

In 1883 three men, now well known, were friends together at the University of Strasburg—Rontgen, Paderewski and Tesla.

EDITORIAL COMMENT

The Examiner and Russian Colonists.

UNSPEAKABLE astonishment must have been written on the faces of the three Russian gentlemen who are traveling through California on a tour of observation when last Thursday's *Examiner* was laid before them. These visitors are, it is stated, the representatives of a colony of Russian farmers who wish to settle somewhere on the Pacific slope, where they expect to till the soil, rear their families, and become respected and self-respecting citizens. In all there are reported to be some seven thousand colonists, and these gentlemen, their representatives, are carefully examining the country for a favorable permanent location. Naturally, the San Francisco *Examiner* does not approve of the movement. It is too sane for one thing, and besides it is a step forward which it, by no amount of prevarication, can claim credit for inaugurating. The *Examiner* charges that the railroad company is responsible for bringing these thrifty settlers to the State. This is a crime in itself. That a corporation which is more interested in state development than any one factor in it, should publicly display its interest, is to the *Examiner* terifying. The last time this port was favored by Russian visitors made prominent by the *Examiner* they came in the shape of a number of escaped convicts from Siberia. These wretches dovetailed nicely with *Examiner* principles. They were welcomed with open arms by that journal, treated as heroes and distinguished guests. Their pictures were printed in double column cuts, and sloppy, sympathetic slush, columns in length, described their sufferings, their escape, and their manly bearing. We do not recall whether a "popular" subscription was raised by this journal for these wretches, or whether they were presented with a loving cup as a token of that journal's esteem, but we do know that they landed in jail eventually; we do know that one of the most brutal and horrifying of murders was laid at their door; we do know that an old couple was brutally murdered in Sacramento by these *Examiner* heroes, and for a long time the word "Russian" was tabooed in that journal of progress and indecency. The Russian gentlemen now visiting here need not take alarm at the *Examiner's* attitude. If it is decided that the seven thousand Russians shall settle in this State, this same daily will soon have an agent on the ground to ascertain the sentiment of these seven thousand colonists on various subjects. If the press agent ascertains that the colonists hate Russia, despise its Czar, and loath the government, then the *Examiner* will riot in mad attacks upon all three. If the agent reports that the Russian colonists love the Czar, regard Siberia a paradise and oppose Nihilists and Nihilism then the *Examiner* will sing loud its praises for all these things, regardless of everything but the greasy nickel.

This colony will represent seven thousand individuals! Seven thousand all in a bunch! and if they read English at all, they represent possible subscribers. If they don't read English then you may look for a column or two of items in the Russian language. Seven thousand newspaper-subscribing Russians, all of one mind, are quite sufficient to turn the policy of a yellow journal to a cause directly opposite to all its former utterances. Flattering and catering to these seven thousand Russians will not lose subscribers in any other direction, hence such a policy would be perfectly "safe," from the yellow journal's point of view.

Mayor Phelan's Message.

MAYOR PHELAN'S address or message as delivered to the new Board of Supervisors on the 8th inst, constitutes what may be termed a muuicipal state paper of large interest. It is the official announcement, by the head of the new government, of the inauguration of the new regime which, under the New Charter of corporate existence, is to produce an era of progress and reform that will result in the creation of a new San Francisco and the abolition of a thousand and one abuses that have heretofore made a good and faithful administration of civic affairs an impossibility. Mayor Phelan stands so distinctly in the foreground as the leading figure in the agitation that has produced the New Charter, and as the dominating influence in the administration that is about to put it in force, that it seems regretable his message did not more distinctly outline the policy which he proposes to pursue in the stimulation of progress, the cultivation of reform and the creation of that new San Francisco for which we all hope. In the matter of policy, however, the message, though voluminous, is conspicuously silent. It is a plain and business-like statement of facts relating to the municipality over which the Supervisors will exercise jurisdiction during the next two years, rather than an elaborate discussion of ideas and theories in regard to the administration of civic affairs.

The mayor opens with the assertion that "the inauguration of the new government under the charter is the most noteworthy event in the history of San Francisco." This is a very bold statement. Many people will incline to think that it is extravagant. In San Francisco's short but picturesque career she has passed through many incidents and episodes that will rank as being of equal historical value to that formed by the inauguration of the present municipal administration. Continuing along the same line, he states that "we have at last home rule." This is a misconception of the legal status of the city. To-day San Francisco is no more free from Federal and State control than she was six months or two years ago. All that has been accomplished is that the New Charter gives, and properly gives, to the mayor some appointive power that old legislation amendatory of the Consolidation Act had placed in the hands of the governor of the State. Apart from that, all that we have secured in the way of home rule is that the people can amend and patch the charter, whereas the old Consolidation Act could not be touched, either by the people or the legislature, save in the imperfect way of general legislation that had to apply all over the State.

The mayor admonishes the Board of Supervisors that its most important functions will be the fixing of the tax rate and the apportionment of the city's funds among the various departments of the government. In the appropriation of money, he points out, the Board is brought into touch, or, as he phrased it, "closely associated" with the various departments of the government. This is one of the really good features of the New Charter. It brings the supervisors into touch with the various departments of the government without imposing upon them (the supervisors) any of those executive duties which used to so demoralize the old Boards—in fact, under the new regime they are made literal supervisors of the municipal affairs. The mayor further directs the attention of the majority of the Board to the pledge which they in common with himself subscribed to when they accepted the Democratic nomination in connection with the tax limit. He points out difficulties that stand in the way of fulfilling that pledge, but the natural inference to be drawn from his remarks is that he intends to keep his own pledge and to make his associates keep their's if "it is possible."

The message points out that it is elementary in city finances that no department of the government shall exceed in its expenses the appropriation made for its support, and in this connection the mayor directs attention to the incongruous facts that the Boards of Health and of Public Works seem to have been endowed with an appointive power irrespective of their appropriation. Taking this as his text, he asks all public officers to co-operate in conducting the public business economically and within the amount appropriated by the supervisors. It may be added that if either the Board of Health or the Board of Public Works shall act improperly in this matter the New Charter has placed in the mayor's hands an official ax with which wonderful execution may be done.

The most important matter referred by Mr. Phelan's message is the passage alluding to the supervisorial duty of fixing gas and water rates. Upon this point the tenor of his remarks are very non-committal, and there is room to hope that his radical attitude of two years ago will not be repeated. He recommends the Supervisors to examine into the facts and to fix fair rates that will produce a reasonable return upon the investment. If this policy is followed there will surely be no trouble. The gas and water companies have never asked for anything more.

The mayor recommends the supervisors to take up and give a careful consideration to District Attorney Byington's defeated street car ordinances. If the gentlemen are wise they will do nothing of the kind. They can find plenty of troubles of their own without picking up those belonging to other people. The ordinance in question has been thoroughly threshed out. The employees of every street-car line in San Francisco, except those of the Market street system, (the octopus, as Sutro used to call it), have protested against it and there is no demand for it anywhere outside of the office of a foiled boodler, who is engaged in what he terms "the new journalism."

THE time is rapidly approaching when Seattle will have to meet the problem of paving the hills in the city's residence section. The recent building activity has been exhibited mainly in the outside districts; while new business blocks are going up in the commercial center, it is in the outlying portions that the greatest energy is being expended. This has increased the traffic on the hill streets until the results of slackness in paving are pitifully apparent. This winter the rains and the consequent mud have made more than one thoroughfare impassible for teams, and unpleasant, to say the very least, for foot-passengers. Residences on these streets must be reached by teams on a roundabout route, and even then the horses must wallow in a foot of mud. After a heavy rain, those who dwell at the top of the city's hills are almost in a state of siege. No ordinary vehicle can reach them without undue strain and discomfort.

There is much talk now of paving the more exclusive residence streets. This is advisable, and must be done in time, but the pressing need is in another direction. The hill-streets should be in process of paving before another winter, now that the new prosperity of the Northwest gives assurance that the city will be able to stand the expense.

Highbinders & Tong Wars

AS far as the East is from the West, so far is that silent, obstinate Chinese sub-civilization we cherish in our midst from our Caucasian civilization. We have met many peoples on our spread eastward and westward, and rubbed up against many ideals, but of them all, the Chinese is the one farthest removed from our ideas. We have had Chinatown in our midst some fifty years. We have policed it and missionaried it; we have tried, by every endeavor, to extend to it the "blessings" of Occidental ideas. A good thirdeof our Chinese have never seen China, being born in California, and most of the rest have their sole business connection in San Francisco, and yet hardly one of them has accepted what we have to give. They go their own way, live in their own fashion, are governed by their own laws and laugh ours to scorn. Pass one of them on the street, and he turns out for you without a glance, as he would turn out for a post.

Now, under perfectly ideal conditions, and given that we were actuated by the same lofty contempt for the Chinese which they hold for us, the system would work well. You go your way, we go ours. You administer your laws, we take care of our own. Let us meet on a frankly commercial basis, to "do" one another or to be done. But Anglo-Saxons are meddlesome people with a missionary spirit and a way of forcing their notions down the throat of the other fellow. Moreover, the peculiar Chinese method of administering corrective justice spills over and endangers the lives of their Caucasian neighbors. That is why we have Chinatown police, a Chinatown Salvation Army and Chinese missions, and that is why we concern ourselves with highbinder wars.

A Chinese Slave Girl.

Some three years ago the Chinese Consul sought the aid of the home government and organized a police force of his own to clear out the highbinder headquarters. The meeting places of the various tongs were broken open and stripped bare, and the relatives of the principal offenders were seized in China and killed or tortured. It was believed then that highbinder wars were at an end. It was a hasty conclusion. A year later there was the usual series of mysterious and unpunishable murders which mark a highbinder "ruction;" this month we have had a series of three, with possibly more to follow.

The difficulties which lead up to highbinder wars are infinitely complex and not easily understood by the occidental mind. China is a fabric of close associations, for there the club idea is carried to the farthest possible extent. The poorest coolie in the empire belongs to a labor union, a social club, a political club—all these not merely easy associations, as among us, but close fraternities bound by the strongest oaths. So mighty is their power, that Chinese political control consists mainly in maintaining the balance between their innumerable close associations. It is a fact that at one time Li Hung Chang had to give up some of his most extensive reforms because the union of wheel-barrow men objected.

The Chinese brought their associations to this country, but the new conditions prevailing here have wrought a great change in their relative power. Certain fraternities have lost their hold in California, while certain others, being out of control of the Emperor, have grown to an importance out of all proportion to that which they had in China. To this class belong the highbinder "tongs" or companies.

The original highbinder tong and the one which has the greatest hold over all the celestial world, is the Sam Hop or Triad League. It dates back some two hundred and fifty years and was patriotic in character at first, it having been created to overthrow the Tartar dynasty. Tradition has it that the foundation came through a divine revelation. One could write volumes about the history of its numerous revolutions. The Tai-Ping rebellion, which would have succeeded but for the assistance given the Emperor by the English under Chinese Gordon, was only the climax of a hundred years of war carried on by this powerful and sinister body. So, too, the more recent Ko Lo revolution, and some of the missionary outrages were the work of the Sam Hops. The Chinese government has hunted them down with unrelenting severity, executing them by the wholesale after each and every revolution. Driven from the Celestial Kingdom by this persecution, its members made their home in the straits settlements, Australia, the Philippines, California, in all places along the Pacific where the Chinese have wandered. Two centuries of persecution have changed their character, and from rebels against a foreign dynasty they have become thugs, blackmailers and murderers of the darkest stripe. The Californian branch is known as the Chee Kung Tong.

The delegation which came to the Pacific Coast was very large, and proceeded to organize immediately. For a long time they flourished in California under the name and title of Chinese Masons. Before many years, they became absolutely dominant in Chinatown. It has been supposed that the Six Companies were the ruling influence amongst the oriental population. On the contrary, their power is nothing beside that of this sinister association and the others which followed in its wake. Removed from the rigid supervision of the merciless Chinese laws, these thugs pursued their work unmolested by our justice. No Chinaman, however wronged, ever appeals to our tribunals. It is the old law of private vengeance with them. Consequently, a number of opposition societies arose in San Francisco. Chinese who had suffered at the hands of the Chee Kungs would bind themselves into a rival tong for mutual protection and for vengeance. This in turn, would give rise to other societies with the same ends. In 1893, it was said that there were nineteen highbinder societies in the metropolis, with the number still growing. All masked as merchants' clubs or social clubs, and all worked by combination and re-combination to keep the balance of power. If the Chee Kungs murdered say two men of a rival tong, then the offended society must take two Chee King lives to balance the account. If the wronged party was not strong enough, then it made a deal with another society; perhaps, then, the Chee Kungs would also combine and thus continue the contest. This state of affairs resulted in the breaking of the power of the Chee Kungs. To-day, although the original tong from which all the others sprung, they are not at all superior to a half a dozen of their rivals. Outside of San Francisco, however, they keep their formal hold, numbering ninety per cent. of the rural Chinese in their ranks.

The first intimation that the "Chinese Freemasons" were not what they purported to be came in a series of mysterious murders on the streets of Chinatown. Early in the game it seems that these thugs had done their killing in secret and had spirited away the bodies. Becoming bolder and learning the use of the American revolver, they ventured into the open and shot their victims in the theatres or on the street. Our justice seemed inadequate to deal with the problem. As soon as a shooting occurred, every Celestial in Chinatown became an accomplice bent on concealing the criminal. If he were caught red-handed, his compatriots refused to testify; if there were white witnesses to the deed, the intelligent jury would be confused into a disagreement by conflicting testimony from Chinese. The very family of the murdered man would strive to shield the criminal, partly, it is to be supposed, through their love of their own customs and their hatred of ours, but mostly because they were reserving for him a crude justice of their own. A few, a very few, convictions were obtained in cases where the assassin was caught at once and the crime was witnessed only by whites. This proved no break in this system, but only that the murderer had been incautious.

This easy treatment of our laws brought about contempt and then open defiance. No longer did the murders occur in sets, by twos and fours. The tongs held pitched battles on the streets. They levied blackmail on the wealthier Chinese, they assumed control of the traffic in slave girls, they reduced Chinatown to such a condition that peaceful merchants and coolies were forced to enter the ranks and take part in their operations for protection. Later, another turn of events further complicated the situation. Societies organized on an entirely different basis, like the Six Companies, began to hire them to wreak private vengeance. When the See Yups boycotted the Sam Yups a few years ago, the reign of terror which followed was kept up by highbinder hatchetmen in the pay or under the influence of the See Yups, many of whose members were also influential in the highbinder tongs. That memorable fight called the attention of the Chinese Consul to the situation, and he made the famous complaint to his government. The correction was made in a characteristically Chinese way. The relatives of the leading members were caught in China and made to pay the penalty with their lives.

When the police learned that conviction could not be obtained in the courts, they were confronted by a serious problem which has not yet been solved. Arrests of the principal hatchetmen for vagrancy was tried and proved a failure. They thrived on prison fare and were useless as laborers on the chain gang. It was not until Lieutenant Price's big raid in 1891 that the root of the evil was found to lie in the so-called Chinese Freemasons. Quite by accident, the police discovered a book in which was written the barbaric ritual and horrible principles of the order. Since then, the authorities have held to a "move on" policy, breaking up the headquarters whenever found and keeping strict watch for outbreaks. This does not stop the trouble, it only allays it; in fact, no remedy known to our laws has ever proved effective. The action of the Chinese Consul had the best result of any remedy yet tried, but even that, as late events have proved, was only a temporary check. However let us wait and see what the new regime may accomplish.

CO-EDUCATION

I.

ONE whose shoe I am unworthy to unlatch has compared a callow boy to a callow puppy. Pet the puppy and keep him away frow shoe blacking and big dogs until he approaches the age when he ought to have discretion, and his plunge into the world is going to be a hard one. Turn him out to rustle,and he will learn early and gradually the difference between those things which are good for the dog stomach and the dog psychology, and those which are not, and he can be trusted to steer for himself. The same rule, Mr. Kipling says, holds true of the boy. Universal as is this principle, it holds true in the greatest degree when the boy runs up against his most serious problem—the Girl Question.

When John Sterritt came to college he had large, coarse hands and a pair of fine eyes and wore the black cutaway which had done duty when he delivered the valedictory at the High School graduation in June. He came up with a record as the prize debater of his school, and with huge, if uncertain, ambitions. He told the minister at home that he was going to college to study, and to avoid the pitfalls which Life sets for the feet of Youth. This last was a phrase from his graduating oration; he was particularly proud of it, and used to repeat it evenings when the sound of singing and untrammeled whoops came across the campus to lure him away from his calculus,or when he watched the couples strolling two by two up to first-hour recitations. There were no girls in his modest boarding-house; only sober and serious freshmen like himself. With his intellect, he thanked heaven for that fact; with his inclinations—well, John Sterritt had to to stifle them once in a while, and put his overflowing soul into the home letters. He had never had time for girls since one occasion, years before, when he had dared to take one home from a church social. After one of these outreachings, he used to frown on himself most seriously and rearrange his schedule of studies so as to fill a vacant half-hour which gave him time to dream. Had not President Eliot of Harvard said that a student should give ten hours a day to his studies? That meant an ordinary student. Himself, he was going to make it twelve, because he had ambitions. This left him time for sleep, for meals and for a long run by way of exercise just before bed-time. During this rambling dog-trot under the trees through the dark lanes, he used to build for himself pictures of the time when he would be a great lawyer and get into the Senate,or be a great teacher and form the minds of men. He had not yet decided which it was to be.

Miss Annette Reiter came to college for a variety of reasons. It was partly because she wanted to, which ought to be reason enough for any American girl, and partly because her father had decided that it was the very thing to correct the frivolity of her nature. She was just past eighteen and kept her little-girl prettiness and plenty of her little-girl ways. The loafers in front of the Political Science building "sized her up" along with the rest of the infant class, and named her the Dresden Shepherdess. The bubbling, backwater society of the place took her in with enthusiasm, and before the end of her first year she was a member of the Eta Sorority and had been through six flirtations. When she entered her second year, she was convinced in her small soul of the hollowness of easy conquest and was longing for something really difficult. That, and the fact that he had fine eyes and curly hair and was Different may account for the fact that she noticed John Sterritt in the class in English Essayists, which they had both elected for a sophomore course.

To think, with Annette Reiter, was to act, or rather to dispose herself to be acted upon. The annual distribution of seats came at the end of the second week, and she called to use certain airs and graces she had spent upon the instructor in charge in the days when she was a freshman. The place he had assigned to her was very bad, she pointed out, for her eyes, which had been giving her much trouble of late. Could he?——Oh, certainly, number six, eight row, was open. But it was so hard to see the black-board from there, and here eyes—and she turned those eyes on him in a way which should have disproved the idea that there was anything wrong with them. The instructor was young. She took the vacant seat just across from John Sterritt, with the big, calloused hands and the slow way and the fine eyes.

It was three weeks until she got him to the point of speaking. She had dropped pencils and note-books and all but made the first advances herself before a warm discussion on sentence-structure dragged them both in, and he found himself arguing to her instead of to the instructor. The next afternoon he got up the courage to bow. After that he went home and tried to get out his Latin. It took him an hour and all his will-power to construe ten lines. Then, he gave it up, and paralyzed the man in the next room by coming in for the rest of the evening to talk about home and the good times they had on the ranch.

Two weeks later, John—no one ever called him Jack—had met the girl from the next seat and walked with her as far as the corner. Two weeks after that the college had become acquainted with Sterritt, shining in the light reflected from the Dresden Shepherdess. The upper-classmen who followed in the trail of the Eta Sorority used to rally her about it, and one of them, a Senior who attempted to assume social dictatorship, tried to talk with her very seriously about making close acquaintances outside of "her set." He gave it up on the first trial; it is hard to make a Dresden Shepherdess take you seriously. In her own house she had an ally. Grace Francis, a sober and matronly Senior, who ruled the counsels of the Eta house and did not entirely approve of all the ways of the frivoloue Anne, had decided that this friendship was the thing shs needed. Had Miss Francis advocated it openly it is odds-on that she would have wrecked the whole thing; as it was, she wisely furthered an open-door policy and let it go its way.

It was about this time that Sterritt began to wonder if there wasn't something the matter with his clothes. He studied the question for a week, and made his decision. His allowance had been calculated to an exact point; so much for board, so much for his room, so much for books and fees, so much for washing. But there happened to be a heifer or two in his name down on the ranch, kept for the time when he would have to go East to study law. Parents are indulgent things, and John had never asked much. The day after he came out in his new clothes She—he was capitalizing her by this time—permitted him to take her over to football practice. Another week, and he was writing her French exercises for her on a rustic bench away back from the campus.

In one of these afternoons, he learned that the Etas were going to give a dance just after Christmas. She told him about it one afternoon under the tree, and added:

"You dance, don't you?" He turned the subject, but he was taking private lessons the next week. The last heifer was sold down on the ranch to pay for these and help out on the dress suit he was buying on the installment plan. A college education is an expensive thing. Before she left for Christmas vacation she told him that he might be her partner at the dance, and that night his calculus ran in dactylic tetrameters. He went to work down the country during the three week's vacation, and brought back his earnings for the spring campaign.

Winter passed, and spring. His new spring clothes had to come on the installment plan,and the accessories brought him into debt. To keep up, he moved into a cheaper boarding-house. It didn't matter; nothing mattered, only one thing. That one thing was treating him very graciously, and the song in his young blood ran high. She let him get out her French exersises and write her English papers; she graciously permitted him to construe her Latin. She was so sweetly, deliciously dense about such things,and she looked so bewitching when she was trying to understand! It was very easy for him to do her work—it was a pleasant task. Somehow, it came harder to get along with his own; she was not in that. One or two of his professors had spoken to him about it, but the reproof did not sink very deep, because there was no room for it. When an official warning came from the committee which watches over such cases,he drew out his books and went at it again, but that night it was clear and pleasant,they were singing across the campus, and he made up his mind that he would wait until tomorrow. That confident tomorrow never came.

The climax was at commencement time, the proper beginning of endings. Work was done, trunks were being packed, she must go tomorrow. He had been living toward that day. He had decided that then was the time for a modified avowal. Not everything, oh, no, but just to suggest as they did in novels, that "if she would only wait." He had calmly decided on his method; he would lead the talk through a discussion of her year's work in Horace up to what he thought of all those matters, and would suggest, only just suggest, what he felt and what he meant. He got her aside, on the wide veranda of the Eta house, and stumbled into it,blundering and hesitating as he went along, but gaining courage as he talked.

"And if anyone could care for you like that"—he said—"do you think that you——"

She stopped him there and laid her hand on his arm.

"I am so glad you feel that way," she said; "it's perfectly lovely, because I think you can sympathize with me. I—I haven't wanted to tell you before, because I was afraid you wouldn't understand,but—it happened up home last Christmas. See." She held up her left hand; there was a diamond on the third finger. "I don't always wear it here, because people wouldn't understand,but you do,don't you?"

When John Sterritt reached his room,there was an official envelope, bearing the seal of the University, on the table. After a time he opened it.

"Dear sir," it read, "we regret to inform you that, owing to serious deficiencies in scholarship, you are requested to withdraw from the University."

THE JANUARY MAGAZINES AND WHAT THEY CONTAIN

TO KEEP pace with the magazines is becoming an occupation of itself. 'Tis a poor season that does not add to their number. Nowadays no publishing house is properly equipped without its monthly, which, if it be not a source of revenue, is a basis for exchange advertising. In the relative rank of the important magazines the year has made no alteration of great moment. The *Century*, while exacting its old charge of thirty-five cents, compensates by improvements in its illustrations. The introduction of color effects is decidedly a change for the better,and,though the innovation must prove expensive, necessitating three pressings of certain forms, the results are conspicuously attractive. Witness the charming pictures that go with "New Antarctic Discoveries." How infinitely beyond the average black and white they are! The December *Harper's* had some charming colored half-tones, but the precedent is not followed in the January number save in the tints that relieve Stearner's graceful sketch of "Eleanor" in the frontispiece. Neither publication has reached the perfection of the *Studio*, however,whose three-colored extant half-tones are quite the highest achievements of typographical art. Really nothing could be finer than the rendering of Henner's "Levite D. Ephraim," in the December issue or the delightful water color by Pinwell.

Otherwise both these magazines keep to their familiar lines—the *Century*, monotonous in tone, without striking features, *Harper's* fairly well varied as to contents, its stories readable if not original, and its travel material of broad, general interest. Both have articles specially appealing to Pacific Coast readers—Charles F. Lummis writes of California as "The Right Hand of the Continent," a brisk, vigorous exploitation of the superiorities of the Golden State. The *Century* presents its prize story, "Only the Master Shall Praise," written by a graduate of Stanford University, John M. Oskison. Like so many other prize stories this suggests the inferiority of its competitors rather than specific virtues or promise. A fairly readable tale, but to my mind not indicative of particular literary promise. The "Autobiography of a Quack" is a series of "Medical Don'ts." No trace of the skill or art of the author of *Hugh Wynne* is here apparent. In the first installment of *Eleanor*, Mrs. Humphrey Ward introduces a set of people who promise the type of intellectual and religious complication which she rejoices to promote and develop. Another important serial begins in *Scribner's*—J. M. Barrie's "Tommy and Grizel," the opening chapters of which demonstrate that the pen of the author of *The Little Minister* has not lost its cunning. The tale is a sequel to *Sentimental Tommy* and is full of the refreshing charm of feeling characteristic of Barrie. Here, too, we have Oliver Cromwell—*Scribner's* version, by Theodore Roosevelt. It is interesting to compare the drawings of E. C. Peixotto and F. C. Yohn with Joseph Pennell's, in the *Century*, on this subject. The younger man has decidedly the better of it, though Pennell has seldom done poorer work than this Cromwell series, in which it is evident his heart is not.

The *Atlantic* keeps up the pace set for it by Editor Page, who is now himself embarked in the publishing business associated with Mr. Doubleday. The leading article is the autobiography of W. J. Stillman, whose highly checkered career should yield reminiscences of striking interest. 'Twill be long, however, ere this magazine or any other finds an autobiography such as that of Prince Kropotkin. Mr. Stillman has been a painter, a participant in the rebellion, and for 20 years correspondent of the London *Times* in Rome. The "Future of China" and "Disarming the Trusts" are reliable articles, but John Jay Chapman's "Between Elections" is important and cannot fail to impress even the careless reader with the value and importance of individual protest. Whoever protests against a wrong or a dishonest condition of affairs to some degree promotes the cause of honesty and aids the final triumph of reform, according to Mr.Chapman.

Among the ten-cent magazines *McClure's*, as usual, leads. It is rather amusing to examine the colored illstrations to the "Life of the Master," which were produced in Vienna because the editor declared America incapable of achieving such admirable effects. They are garish—jay even—and certainly represent no advance on results commonly attained in both Chicago and New York. Otherwise the stories this month are brisk and good, especially Booth Takkington's "Monsieur Beaucaire." The "Electrical Furnaces" and "Peary's Latest Work in the Arctic," are timely and informative. The Boutwell series of political articles are not sufficiently entertaining. The January *Cosmopolitan* is not specially important. The characteristic system of pictures accompanied by reading matter is followed. The fiction is especially poor. *Ainslee's* has some fairly entertaining stories and an elaborate article on George Q. Cannon, which is an excellent example of how not to write a biographical article. *Everybody's Magazine* presents an interesting programme of varied reading.

THINGS & PEOPLE

A Deadly Insult.

HOYT, the author of "A Temperance Town" and other satires on American tendencies, ought to make a flying visit to the Northwest. The rivalry between Seattle and Tacoma would furnish him material for one of the broadest farces that even he ever staged. This for a situation: The revenue cutter *Corwin* was ordered to Tacoma the other day, and great was the rejoicing amongst the rulers and populace of that burg. The port wardens and the city officials chartered a tug and started out to meet her; the Mayor had a speech of welcome all prepared, and it was a day of splendid rejoicing in Tacoma. But the commander of the *Corwin*, with that naval promptness which is always two hours ahead of time, came before the tug party was ready. One of his objects in dropping into port was to take on coal, and he found to his consternation that all the bunkers were occupied. In a business-like manner, he got up steam and headed for Seattle. The tug was approaching with the brains and talent of Tacoma and a majestic mien, when the *Corwin* was observed to turn about and head for the rival town across the Sound. The tug blew whistles, waved flags and got up steam for a stern chase, but in vain; the cutter paid no attention, and distanced her small rival. Tacoma's rejoicing was turned to gloom. The local papers waxed warmer than ever before since the name of the mountain was changed; the Mayor, his undelivered speech festering in his bosom, sat down to prepare a memorial to Congress; excited citizens met on the corners and planned revolution against our discriminating government. Then, the telegraph brought in the true story of the *Corwin's* departure, and next day the cutter came back. But she met no welcome this time. The officials of the port entered her with the air of men who deal with a hated alien, and the loyal craft in the port made a detour to avoid her as though she were a plague ship. The guard of marines has been doubled, and the trembling captain, fearful of what fate might bring should he venture into that land of dread, has announced that he is too ill to go ashore. For no man insults Tacoma and lives.

***

Beef For the Klondike.

A MINER came down from the North recently, with the boast that he had ridden nearly all the way from Dawson "out" on a bicycle and had made it in time which distanced all dog-train records. He is going in later to establish a record for the journey up-country. Another miner is staking his all on a venture just as unusual and much more practical. He is taking thirty-seven head of cattle and a train of horses into the Klondike metropolis. If the cattle cannot stand the journey over the ice, he proposes to slaughter them and carry the carcases into Dawson on sleds, trusting to the atmospheric freezing process to preserve the meat. Should the cattle live or the flesh be fresh on delivery, he will make good profit out of the venture, on which he has staked his all. It is a venturesome enterprise, but any business in the Klondike country, from steamboating to mining, is a gamble, as conditions are at present.

***

The Chief of Police Controversy.

THE single subject engaging public attention at the moment is the Chief of Police controversy. The impression has become general that one Lieutenant Esola is to be appointed to the head of the department by the Commissioners of Mayor Phelan's appointment. Just why the distinction should be conferred on Esola rather than on one of a dozen other good men no one has yet risen to explain. The sole cause of such prominence as he may possess rests on the friendship of the *Examiner* and the support that W. R. Hearst, its proprietor, has given his aspiration. Personally, Esola seems to have many friends and is pleasantly regarded by those who have met him in a professional capacity. Yet if the choice falls on him, despite the determined antagonism of the *Bulletin*, *Call* and *Chronicle*, Esola will owe his place directly to the *Examiner*. To it, rather than to the Mayor or to any other factor, his allegiance will be due, and the majority of my readers will admit that that is a contingency to be avoided. The Chief of Police should have no newspaper connections. His position affords him a knowledge of affairs that is better out of journalistic ken, and while he might prove a veritable Brutus, knowing neither friends nor enemies in the discharge of his duties, he might also play favorites, which would be bad. Considering there is ample material available, under the conditions, I don't imagine the Commissioners will nominate Esola. Mayor Phelan's appointees are men of social and political prominence and wise in the ways of the world. They will probably take the view that most men would under the circumstances and refuse to interfere as between the newspapers. The selection of Esola would earn each and all of them the undying enmity of the other dailies and would seem to prove the assertion that they had been pledged in advance. That these gentlemen, as the price of a questionable dignity, should consent to enter into an agreement bartering their judgment and discretion no one who knows them will believe. Why should they? It is their bounden duty to place in this important post a man in whom public confidence may rest, and we may be sure they will do nothing less.

A Preposterous Assumption

EQUALLY incredible is the story that Mayor Phelan entered into an engagement with the *Examiner* to ensure the appointment of its Lieutenant Esola as Chief of Police. Imagine the situation—here is James D. Phelan, who has been three times elected Mayor of San Francisco, and is as well versed as any one in the political game as it is played, depicted as entering into a compact which everyone knows could not fail to win him the bitter antagonism of every other journal in San Francisco, and cost him the esteem of all the friends of reform and decent government, And for what price? He knows that while he has had the support of the *Examiner* that it was given not to James D. Phelan but to the candidate of the Democratic party. As the leader of that party that support could not be withheld from him, and if it were, the loss would be to the organ rather than to him. No one has ever denied political acumen to Mayor Phelan, and it is preposterous to suggest, morals apart, that he would not realize the advantage of being right with his constituents and the press in general than being wrong with the *Examiner*. Anyone accustomed to weighing the values of a situation must see the point of this, and why suggest that a man whom his enemies admit is a clever tactician, would let himself be tangled up in so fatuous and one-sided an engagement. No one wants a Chief of Police who would be an *Examiner* chattel; every one realizes the danger of it and the possibilities it opens for unscrupulous journalists. Why think James D. Phelan less intelligent than the average man? At least there is nothing in Mayor Phelan's career that will justify the charges made against him, and I am satisfied results will show him to be above reproach.

* * *

Growth of the Call.

THE *Call* is decidedly an active factor in the affairs of San Francisco nowadays and speaks in no uncertain tones as regards policies and politics. I am told the paper is continually gaining in circulation much to the satisfaction of John D. Spreckels, who cares a good deal more for this journalistic venture of his than for his vastly more extensive interests in beet sugar and steamboats. Whoever has had to do with the manipulation of a great daily will readily agree that it is a fascinating undertaking. While one may not have the same direct power that is implied in the ownership of a Chief of Police, one's general influence is much greater, and one is a factor entitled at least to interfere in any of the municipality's affairs. In politics the owner of a big daily is an integral of great weight, always providing that the circulation of his paper is large and that it is conducted on legitimate lines. Nothing is so obvious as journalistic veniality, or so futile after the first crop. Mr. Spreckels is an attentive as well as a generous employer and is quick to reward the members of his staff who do good service. The Sunday editor of the *Call*, A. J. Moore—he who is responsible for the brilliant "effects" which garnish the Sabbath supplement—was presented with a tidy rig and an excellent steed just about Christmas time by way of recognition of his work. I am told the Home Study scheme, which, to the average reader, seems a shallow enough device, is really a great circulation winner and has already obtained thousands of new subscribers for the *Call*. In another department of Mr. Spreckels' journal, that of dramatic criticism, valuable service is being rendered by Porter Garnett, whose scholarly and intelligent estimates of current theatrical performances in San Francisco have attracted considerable attention. His critiques are admirably phrased and his judgments thoroughly well founded. Mr. Garnett is well fitted to undertake the charge of a critical department, for he has long been an earnest student of musical and dramatic subjects, and is deeply interested in his work.

***

A Chinese View of Highbinders.

ARE the white people, through the officers of their laws, responsible for tong wars and highbinder outrages? A Chinese of position, who has given his opinion on the matter in the San Jose *Sketch* and later in the San Francisco *Examiner*, thinks that they are. Interpreted in terms of our understanding, his assertion amounts to the charge that we have treated his countrymen with contempt and refused them the protection of our laws. Therefore, they resort to their own courts of justice, the tongs. The view of the learned author on the highbinder hatchet-men is illuminated as by a lightning flash through the name he gives them—"executioners." They are not assassins, in this version of the case, but the instruments of outraged justice. I confess this has prepared me to take a new impression on the Chinese question. When you consider it, the old sand-lot spirit prevails in our private attitude toward the Chinese. It is not merely contempt, such as is felt for the negroes in the South; it is open, manifest hostility. In the East, small boys work off their innate brutality by tin-canning dogs; here they indulge their youthful spirits in Chinaman-baiting. The San Francisco or Portland hoodlum makes the yellow people the butt of his wrath. The humorous stories about western judges who have commended the shooting of a Chinaman as an act of merit rest on a surer foundation of fact than most newspaper jokes. Under these circumstances, it is not strange—it is only natural— that our givers and enforcers of the laws should deny equal justice to the Chinese. Officials are no better than the people they represent. There is no doubt that, as the Chinese author of the article states, Chinese murderers of their own people are never hunted down with anything like the energy employed when the victim is a white man. Such being the case, does anyone wonder that the yellow people resort to their own "courts."

Chinese Dear Labor.

While we are dwelling on the survivals of the sand-lot days, let me remind a forgetful people that the question of Chinese cheap labor is solved. It is now rather Chinese dear labor. Man for man, Chinese are better paid than whites for the same grade of work. The figures I here present come from Labor Commissioner Fitzgerald, and from two wealthy and respected Chinese, native sons, both of them, and can be relied on. The ordinary laborer, generally a packer or porter in a Chinese store, receive eighteen dollars per month and "found." This is the lowest wage paid in Chinatown or out to Chinese "help," and comparatively few work at that price. The clerks in the stores along Dupont street, the Market street of Chinatown, have not less than forty dollars a month and board. This is the price given clerks who are new at the business and have not mastered the language; one who speaks good English and has some experience is good for sixty or seventy dollars. In this case and in every other, board is included, and generally lodging. It is a universal custom, to which they cling with racial tenacity. Domestic servants, as good housekeepers of San Francisco know, never come cheaper than twenty-two dollars a month. This price will tempt only a very indifferent servant; good cooks earn much more. The average is thirty dollars, and many are paid as high as seventy-five dollars a month. In short, their range of capability is not high, but in that range they are better paid than their white competitors, simply because they do the work they attempt and are more reliable, since commercial honesty and faithfulness to contracts are Chinese virtues. The demand is strong. Commissioner Fitzgerald has said to me: No Chinaman need ever be out of work in San Francisco. People want 'em."

* * *

While I doubt if the Chinese will ever become citizens in the American sense of the word, I note that those who are permanent and not transitory residents are increasing in San Francisco and along the Coast generally. Time was when no Celestial ever came to the United States with the intention of remaining. He expected to go in for the hardest kind of labor for a few years, until he had amassed a few hundred dollars, a competence for China, and then retire to his native land to end his days in peace and plenty as a landed proprietor. Now there is a little China here where one may live very well within the rules of his old life, and more and more the Chinese are taking root there, with no thought of return. Religion, or at least that part of it which has to do with ancestor-worship, is the great force now drawing them back, but even that is loosening its hold.

* * *

The Pro-Boer Boom.

THE Boer boom in San Francisco has subsided, as was to be expected, and as it has done everywhere. The truth is, the American people, speaking the same language as the British, ruled by the same common law, holding to nearly the same ideals, and sprung, as concerns the ruling class, from the same stock, finds it hard to get up more than a passing hatred for the English. Intellectually they may develop a sympathy for the Boer cause and a dislike for English occupation, but when correspondents send in their own tongue the lists of the killed and wounded, they wince. The true Anglo-Saxon alliance lies deeper than any formal treaty. Tradition, language, common commercial interests, above all, common enemies, are drawing us together, in spite of the *Saturday Review* on one side and Anglophobia on the other.

* * *

Concerning St. Mary's Park.

NOW that the Panhandle bonds are voted, and New San San Francisco is in the mouths of every one, the powers that be, wrapped up in huge projects, seem to be forgetting the plan to convert the old, notorious St. Mary's district into a park. I pointed out not long ago the fact that the regeneration of that rotten district depended upon the opening of a breathing-place in its midst. The experience of other American cities has shown this to be a fact. It is the method which cleaned out the notorious Five Points of New York, and equally squalid and vicious sections of Boston and Philadelphia. There is every reason to believe that the thing would work just as well in San Francisco. Yet the City Fathers, with whom the decision lies, have shelved the project, and the two alleys of saintly name and devilish fame stand deserted—kept from their old use by police regulations and from legitimate use by a natural prejudice against such a location. There are means of fighting vice besides Hotel Nymphia raids.

* * *

Cramming vs. Common Sense.

COMMON sense has won a victory over pedantry in the Seattle schools. The *Times* of that city recently called attention to the excessive prevalence of the "cramming" process in the city educational institutions. Investigation showed that little tots just out of the kindergarten were not only pushed to the limit as regarded their regular school work, but were going home at night loaded with books and with an extravagant amount of work laid out for home study. Public agitation caused the Board of Education to look into the matter and the result was an order that the younger pupils should be kept in school only three hours a day and should be given little or no night work. The order has already worked a great reform and teachers and preants alike are pleased.

BOSWELL, JR.

STANFORD UNIVERSITY FROM TE HILLS.

THE NEW LIBRARY AND ASSEMBLY HALL.

THE NEW LIBRARY AT STANFORD UNIVERSITY

THE extraordinary possibilities which present themselves today to the possessor of large means are in few cases so well illustrated as in the history of the great educational institution which has within the last decade reared its head in the northern part of the county of Santa Clara. Where little more than ten years ago there existed only the rolling area of a huge ranch, inhabited mainly by horses of select breed, there stands today a series of buildings wellnigh unrivaled in the history of architecture, resorted to day by day by a thousand young men and women drawn from every quarter of the civilized world. Such an achievement ranks with the foundation of the Alexandrian Museum as an event of historic importance. It is significant, moreover, that this later temple of the muses is the creation of no Eastern conqueror, but is simply the act of two citizens of a Western Republic in memory of a youth otherwise absolutely unknown to fame.

It must be a subject of congratulation to all Californians that the clouds which have for the last six years overhung the future of Stanford University have been permanently cleared away, and that the resources of the institution are now such as to guarantee its uninterrupted progress. The university has paseed through an ordeal during these late years which has more than once threatened it with destruction, and it is no secret that its continuance has been due to the heroic efforts of a woman, and she a widow.

As a reflex of the new, or rather renewed, order of things at Stanford, comes the opening of two new buildings. The formal exercises attending this event took place on Thursday last at the university. The additions consist of a library building and an assembly hall capable of seating seventeen hundred people.

The new structures, which form a part of the so-called "outer quadrangle," are two stories in height, and conform in material and architectural style to the buildings of the original or "inner quadrangle." The library occupies the center of a block of three buildings, of which the assembly hall is the second, and the third, to be devoted to the use of the departments of history and English, will be erected during the present year. At the outset this is an unfortunate position for a building which in reality is the very heart of the entire university. In addition to that, it is considered undesirable by the best library architects to erect a library in connection with any other building, because of the risk of fire and the difficulty of lighting such a building from two sides only. From the point of view of an architect and a university man, it is to be deplored that the library building was not allotted to some such open and isolated position as that to be occupied by the chapel.

The problem which Mr. Percy, the architect of the structure, was called upon to solve was thus rendered needlessly difficult at the very beginning. The result, while in every way creditable to the architect, emphasizes the impossibility of conforming a large series of buildings to a preconceived general plan, if the buildings are to be individually satisfactorily adjusted to the demands to be made upon them.

According to the practice of the day, the necessary and essential features of a college library building are a general reading-room, ample "stack" accommodation, and a sufficient number of "seminary rooms." These have been supplied—adequately, no doubt—in the new building at Stanford. To the main reading-room access is gained directly from the arcade. Here the seating capacity of about two hundred and fifty individual reading desks will probably serve the needs of the students at large for some years to come. On either side of the main room are two generous apartments which will be used as newspaper and periodical rooms and to accommodate the administration. It has resulted, however, from the position of the building that two of these buildings are seriously deficient in light, and can scarcely be considered an available adjunct.

The "stack"—despite a single slip in construction—is throughly satisfactory, and up to the best standards of modern library requirements. The shelving is fireproof, being of metal, and will accommodate a quarter of a million volumes before any architectural changes become necessary. On the second floor provision has been made for six "seminary rooms." These are designed to receive collections of books withdrawn from the main library for the special use of the advanced students of each of the literary departments. The students are debarred from the main stack, but in the seminary room have entirely free access to those books that directly concern the work of their specialty. Thus separate provision has been made for the departments of English, Romance and Germanic languages, Latin and Greek, Economics and History. Here again the arbitrary location of the building has rendered it impossible to get the best results, for of the six rooms two are very imperfectly lighted by skylights, two are totally excluded from any sun—making them dark and damp—and two are over-lit, receiving the sun all day.

The fittings are throughout in good taste, and convey, as they should, an immediate impression of the importance of the building.

As the first modern library building in California it was to be hoped that this at Stanford University would set a good example for other places to follow; the main impression left, after a careful study of it, is that too great a sacrifice has been made in securing conformity to the general plan of the university buildings, but that under the circumstances as good a building has been obtained as could have been expected.

T. C. D.

THE LIBRARY THROUGH THE TREES.

A remarkable fact about Washington is, that it is unable to raise enough eggs and poultry to supply the home demand. Before the Klondike rush this was not the case, but now Missouri, Kansas and other central western states are called upon to help furnish the necessary supply. The explanation for this is, that the farmers have found more profit in fruit and grain than in poultry. Hops and prunes and other larger products have also occupied their attention. Even pork brings higher prices in Washington than beef. It would seem from this that the farmers will soon have to give more attention to poultry and hogs, for if the Eastern dealers can gain a profit by shipping their product thousands of miles, surely the home people could make a snug margin clear.

Professor Mantegazza, in the *Humanitarian*, presents some curious statistics opposed to the view that women are the equals of men in the matter of criminality. These are some of them: Man bears false witness one hundred times to a woman's seventeen. Man for forgery and counterfeit coining was convicted one hundred times to a woman's eleven. In France women are summoned before the tribunals four times less than men. In France, in 1880, women delinquents were fourteen to one hundred men. In Italy, in the same year, they were only nine per cent. In Algeria we have ninety-six male delinquents and only four women. In England and Wales, between 1834 and 1842, there were twenty-four women to one hundred men, all for the more serious offenses. In 1871 Dr. Nicholson found in the prisons in England eight thousand two hundred and eighteen men and one thousand two hundred and seventeen women. In Bavaria, from 1862 to 1866, in a population consisting solely of peasants, the women who were condemned were in proportion twenty-nine to one hundred men. In the prisons of Turin, from 1871 to 1884, the women in respect to men are represented by a figure of thirteen to sixty-seven per cent. Taking the whole of Europe, women are, according to Prof. Mantegazza, five times less guilty than men.

Of all the chocolate beans imported into the United States two-thirds go to one firm in Boston. The chocolates sold are of various grades. The Caracas chocolate is supposed to be the best. Take pieces of the various grades, technically known as the Caracas, the French, the German and so on, and allow them to dissolve in a pan of water. You will find that the best grades will leave no sediment. The others will. This is explained by the fact that in the cheaper grades the shell is ground up and used as a "filler." The lighter the chocolate the better the grade. The cheaper grades are dark, owing to the ground up shell. There are chocolate fiends, just as there are opium fiends, tobacco slaves and liquor slaves. Persons who are nervous and irritable find it a food that in a way calms and soothes and satisfies them. The consumption of chocolate is increasing enormously in the United States.

The celebration of the centenary of the poet Heine, which was to have been an imposing literary ceremony, was a very melancholy affair. A dozen or so journalists, chiefly German and English, met in the Montmartre Cemetery in bitterly cold weather. The poet's tomb was sparsely decorated with flowers. A few visiting cards were pinned to the wreaths, and, after a little subdued conversation the company departed.

DELALGOA BAY.

THE KEY OF THE TRANSVAAL.

DELAGOA BAY has become the key of the South African situation. From the British point of view, the possession of that bit of land means the difference between a long, hard and uncertain war and an easy walk into the heart of the enemy's country.

More than this, the present state of affairs at Delagoa Bay gives the Boers a constant source of supplies. No one who is acquainted with the run of affairs in South Africa doubts that the immense supplies of arms, ammunition and the forces of volunteers held by the Boers to "spring" on their opponents came through Delagoa Bay. The Portuguese officials at that point are not active Boer sympathizers, but they are like any other officeholders of their race in that they are out for "what is in it." Kruger has spent his secret service money lavishly in bribing them, with the result that his reinforcements and munitions have passed as freely through Delagoa Bay as though it were one of their own ports. For that matter, this is going on still in spite of the blockade. The recent seizure of the *Bundsrath* was one attempt to check it. While the port remains open, as it practically is at present, the Republic's resources are augmented about sixty per cent. The officers and men being recruited in Europe, the ammunition and supplies necessary to keep up the war may continue to pass as freely as they have been passing. If Britain continues to make seizures, she perpetuates the international troubles which have arisen between her government and those of Germany and the United States; with the Delagoa Bay region in her possession, she could check the thing at once.

Great Britain's legal justification for such an act is stronger than most uninformed people would imagine. Should she take and hold the port now, any international court of arbitration would probably exonerate her for the act. There are obscure treaties existing between England and Portugal whereby the stronger nation agrees to protect the weaker from foreign invasion and internal aggression. In return, England receives the right to occupy any of the Portuguese ports, the African ones being specifically mentioned. The first time that these treaties came into prominence was in 1873, when Great Britain formally protested to the Spanish against invasion of Portugal and showed her willingness to back the protest by force. Thus, one party to the agreement has kept faith and cannot be blamed for holding the other to terms. There is another justification equally valid. Portugal has violated the law of neutrality by admitting Boer supplies. There is abundant precedent for seizing territory on these grounds. The offence is proved; the only excuse the Portuguese could possibly offer is the fear of Boer aggression. To this, Great Britain could answer that with her forces in possession she could end such aggression.

It is easy to see what would happen in South Africa should England seize the port at once. The road to Pretoria is clear. There is a level country with easy roads all the way to the Boer capital. Since the war opened, this country has been almost unoccupied. Winston Churchill crossed it in his escape from imprisonment and saw hardly one inhabited farm. Great Britain could land her reinforcements at the port and make a demonstration toward Pretoria. Immediately, the Boers would withdraw their armies from before Ladysmith and Colenso and probably from Mafeking and Kimberly, and turn to defend the capital. It would put the Boers on the defensive and so change conditions that the British could continue the fight in a region suited to their own particular methods.

Why, it may be asked, does not England take the port at once? Why did she not do so at the opening of the war? Her reason for not acting in the beginning lies in the contempt for the Boers which has marked her conduct from the beginning. The generals and diplomats who engineered the campaign believed in proceeding through Natal direct without taking chances on international trouble. Perhaps, also, the fear of an invasion of Natal had something to do with the case. The reason for holding back at this point, when possession is all ten points of the law, is harder to guess. It must be that the talk of a European coalition is founded upon a more substantial basis than has been supposed, and that the statesmen at London know it. Germany's action in the *Bundsrath* matter may be only a sample of what would happen in such a contingency.

It is not likely that the Transvaal will be the party to seize Delagoa Bay. The enterprising republic has almost nothing to fear from international complications. Paradoxical as it may seem, England would have to stand responsible for such an action. The treaties now existing between the two belligerents are so framed that England is the sponsor for her enemies' foreign relations. Moreover, the sympathies of Europe are with Kruger's people. But at this stage in the game the Boers must draw off their forces from before the besieged towns or from Pretoria in order to accomplish the seizure. The one course would involve the loss of all the advantages gained in the campaign, the other would mean the abandonment of a base of operations. Besides, the two republics have no navy, and the English warships could drive them from the position in a day.

Last summer, in Cape Colony, a hundred locusts, inoculated by the Government Bacteriological Institute, were distributed amongst a swarm, and on the next morning and the following days large numbers of dead ones were found in the sand dunes, being killed by the fungus, as microscopical examination proved. In another case the fungus was mixed with lukewarm water, and young locusts were released after immersion in the liquid. After three days rain fell, and on the afternoon of the fourth day, locusts were found in heaps in the bush about three miles from where they were immersed. The Bacteriological Institute at Grahamstown supplied the fungus that was used.

CHAPLAIN CHADWICK OF THE MAINE OFFICIATING.

The two great transcontinental railroads which have their terminus on Puget Sound are preparing for a great movement of wheat to the East. They have ordered all their empty cars to Seattle and Tacoma and other points in Washington in order to handle the traffic without delay. The farmers are a little shy in parting with their holdings, for prices are not so high as they had hoped for, and, as they are not pressed for money, some of them will hold out until a higher figure is reached. The wheat crop in Washington was far above the average this year.

THE U. S. HARTFORD.

OFF ON A TRAINING CRUISE.

DURING the last week of December, 1886, Farragut's historic flagship, the *Hartford*, entered the harbor of San Francisco and proceeded to Mare Island, there going out of commission after what was supposed to be her last cruise. But the will of the people over-rode the decision of Congress, which had practically condemned all wooden ships of her class, and upward of a half million dollars was appropriated for her reconstruction. On Sunday evening last, San Francisco was given the first opportunity of seeing the result of the *Hartford's* rejuvenation, for just before night closed over the bay, the historic ship, transformed into a modern, composite cruiser, steamed into the bay from Mare Island, and dropped her anchor off Folsom street. So thoroughly unannounced was her coming that she was not given the reception which she deserved.

A glance over the rejuvenated *Hartford* shows very little of the old ship, save the beautiful model of her hull, which a generation ago rendered her "the queen of the American Navy." Above decks, her rig has been changed from that of a ship to a bark without royals, which somewhat decreased her spread of canvas, but it is estimated that owing to the difference in weight between her old ordnance and the lighter guns of to-day, she will be able to nearly, if not quite, equal the speed which gave her a phenomenal record under sail in the days agone. Her spar deck has been extended flush fore and aft, and on this is mounted all but two of her secondary battery and one gun of her principal battery. This secondary battery consists of six six-pounder rapid-fire guns, two one-pounder rapid fire, and one three-pounder rapid fire, besides two Maxim-Nordenfeldt automatic one-pounders, these two latter guns being the very latest invention in marine ordnance, each being capable of firing upward of one hundred one-pound projectiles per minute. Two of the six-pounders mentioned are mounted on the gun deck below, underneath the forecastle. Her main battery consists of thirteen five-inch quick-firing rifles, six in each broadside mounted on her gun deck, and one on the forecastle. Her engines are brand new, being of the most powerful pattern that could be used in the space allowed, and are capable of giving to the ship at least twelve knots per hour under forced draft. The cruiser has also been supplied with a most complete electric plant, which includes every possible appliance in use aboard the latest types of fighting craft.

A distinctive change has been made in her officers' quarters. The new ward-room, occupying the entire breadth of the ship, abaft the main-mast, opens out into an extension running aft the remaining length of the ship. From this extension opens, on port and starboard, the rooms of the officers, with the exception of the executive and chief engineer, whose quarters are located forward of the ward-room. These entire officers' quarters are ornamented in oak, and furnished in a most elaborate fashion.

Aft on the gun deck is the cabin of her commander, from which opens out an after cabin, both being exceptionally large and occupying the entire stern of the ship. From the cabin, a suite of apartments open out on either hand, that on the starboard side occupied by the *Hartford's* commander being fitted with speaking tubes, telephone, electric bells, and every possible means of communication with all parts of the ship. The *Hartford* is in reality one of the handsomest cruisers in her class now afloat.

Her present cruise is given over to the training of three hundred landsmen, whom the department expects, will be transformed into competent seamen by the time the cruiser touches Hampton Roads in the early summer. Her course will take her around South America, through the Straits of Magellan, with calls at all the principal ports en route. She will proceed principally by sail, steaming only when she meets with adverse winds. Her first port out of San Francisco, will be Valparaiso, Chili, which means a run of more than seven thousand miles before her anchor is again let go. It is expected that her arrival at Valparaiso will be reported about the first week in March.

The *Hartford* is in command of Commander John M. Hawley, who for three months past has spent his time at Mare Island superintending the re-construction of the cruiser. During this enforced stay, however, he has convinced himself of the practicability of his plan to equip the navy with first-class men. Besides the apprentices, there are 100 first class seamen who will serve as a backbone in operating the ship during the preliminary education of the younger men. Officers and all, the *Hartford* carries a complement equal to any battleship. If the cruise proves successful it should prove an easy matter to follow this plan and not only thoroughly Americanize the navy, but at the same time, raise its moral and physical personality. The navy department thoroughly believes in Captain Hawley's ideas, and has given him the most complete training ship in the world with which to test them. DOUGLAS WHITE

Babblings of a Belle

THIS week, my dear Diary, has been the very quietest since the winter commenced. In fact, it was so painfully quiet I did not know what to do with myself, so determined to return as many of my calls as I could. Returning calls is a dismal failure if one wishes to have a really exciting time, so I consider this has been a tiresome week. It seems curious that right in the midst of the season everyone should have stopped entertaining. So many of the girls say they are tired of it all, but I feel just as fresh and anxious to keep it up as I was six weeks ago. I often wonder what girls who do not go out do with themselves. They are always supposed to be the happiest. Still, time must often hang very heavily on their hands. Aunt Sibyl says they have their household duties to look after, but I doubt that they can take up more than a little while every morning. Of course, some join classes. Then again that takes only a morning or two a week. Perhaps they spend the rest of the time preparing for the classes, or writing letters to their crushes. Some of us girls were discussing letters the other evening. When I said I had never in my life written a letter to a man, all the girls shrieked with laughter. It never occurred to me before that it was funny, but I suppose it is. Mama is so strict and conventional, and I suppose old-fashioned, that she does not approve of it, so this littte cherub has simply conformed to her wishes. When I (a question mark is not put here, for it is an understood thing) receive flowers from the very generous youth with whom I dance, mama always sends him a card of thanks. Owing to this eccentricity in the young man of the present day, mama still has a large package of cards. So far as I can see there is no other reason for writing. Some girls I know keep up correspondence with young ellows when they take trips to Europe, or to Manila, or even to New York, but I should not know what to say to the average young man. Fancy writing to a fellow one has been crushed on, and telling him about the parties and dinners and little affairs of which it is easy to talk. I really believe the youth would be bored to extinction. Arthur receives lots of letters from girls, but he never shows them to me. After reading each one he tears it up and throws it in the fire. Mama always says when she sees Arthur fold one up and carefully put it into his pocket, or go into another room to read it, then she will begin to think he is really very devoted to some girl. I often think the girl he likes may not be allowed to write letters. Mama will never find out anything about him until he will come some day and say, "Well, I am going to be married." Then papa will say, "A good idea, boy"; and mama will gently inquire as to the name of the girl who is to be so deeply honored. Then Arthur will pour forth into unwilling ears, for the most part, all sorts of praise for some girl without whom he could never be happy.

Speaking of engagements reminds me that I have a rich steady at last who seems to be taking me seriously. As he lives in San Francisco, and is sufficiently well off to build me a big house, perhaps I may yet be able to give all next year's debutantes a fine lot of entertainments. Of course I shall not forget the belles of other years.

I went to Gertie Forman's wedding the other day. It was a very quiet one, but she looked awfully handsome. Grace Spreckels was maid of honor, and Mr. Redington best man. Mr. Brander is an awfully entertaining man and I took quite a shine to him. They received stunning presents, and in a short while are going for a trip to Australia. The next two weddings to which I am invited will be out of town. On Monday Miriam Moore and Edward Pringle are to be married at their place in Tulare county. It will be quite a small wedding, but as Miriam has asked some of us to go up there, I expect there will be a good deal of fun. The Moore girls were always great favorites in San Francisco. I can well remember when Leila was going out, she used to say the Moores had more men callers on Sunday afternoon than any other girls. Frances is to be maid of honor. Sidney Pringle, whom I consider the flower of the Pringle boys, the best man. At the end of the month we are to have an Oakland wedding, Martha Alexander is to marry Dr. Waterhouse of Honolulu. Martha is a splendid girl. She is very well read and has traveled extensively in the most interesting manner possible, her father and she having bicycled all over England and the continent, going to places quite unknown to the general tourist. I have never met Dr. Waterhouse, but Martha has generally evinced pretty good judgment in her men friends, so I think he must be pretty nice. Mamie McMullen has also announced her engagement to Jesse Godley. Leila has always said Mamie is one of the finest girls she knows. She is clever and sympathetic and has any amount of tact and judgment, and Mr. Godley is to be very deeply congratulated. He is an awfully nice fellow, and I am quite sure they will be an ideal couple. I do not know when they are to be married, but I suppose early in the year. This is to be a dreadfully expensive year for me. So many of my friends are to be married. Of course I shall take a great deal of pleasure in giving each of them a present. Presents come to a great deal in a life time, and really, unless I like a girl very much, I do not get much pleasure in expending money on her. It happens to be customary, so we all do it, and try to do it with good grace. In England only the very best friends and relatives give expensive presents. In reading over the list in English papers, I have noticed gifts such as pen-wipers, handkerchief cases, work-bags, and other similar things being given by most prominent people. Fancy here in San Francisco one of us girls sending a pen-wiper to one of our friends. I don't believe she would ever remember she had received it.

MISS MAUD B. FISK,
whose engagement to Dr. Clinton Catherwood has ceen announced.

The engagement dinner given by the Taylors to Helen Hopkins and Gus Taylor was a glorious affair. Helen looked beautiful. She wore a most becoming gown and was radiantly happy. We all had a good time. The other girls I really thought looked well were Sara Collier—I always admire her, she is so distinctly aristocratic looking. Celia Tobin looked well; so did Miss Nichols and Helen Smith. Linda Cadwalader looked very nice, and had on a most becoming gown. Color effects mean so much to her beauty, more than to almost any other girl I know. I like her best in pink or cream. I was so glad to be near Mr. O'Rourke and Harry Stetson, for they are both exceedingly entertaining. Then Gerald Rathbone was opposite me, so I had quite one of the best times of the year. Cora Smedberg had a dance, which was a great success. She makes a splendid hostess, and was careful not to have too many, so we really enjoyed a good dance and an excellent supper afterwards. The Hopkins girls looked pretty, so did Caro Crockett. Carrie Taylor looked better than I have seen her this year. Cora looked cute, too; I like her so much in white. We had good music and a good time.

This coming week I have Edith Stubbs' luncheon and Bernie Drown's dinner that same evening. Then Ed Greenway's to Ethel Hager, and the Stanford reception on Saturday afternoon. Friday night is the next Fortnightly. I do look forward to dances with real pleasure. Great preparations are on hand for the next La Jeunesse. It is to be held in the Native Sons' Hall and will be an army and navy affair. There are to be two leaders, an army and a navy man. Unfortunately, the three boats, the *Philadelphia*, *Marblehead*, and *Iowa*, have gone down to Magdalena Bay, and will not return in time for this great event. All of us girls are regretting this fact dreadfully; so many of the navy men are really more interesting than any other men in town. The figures will be very elaborate, and it is really the *chef d' oeuvre* of the parties of the season. I am so sorry it can not be postponed until the return of the ships. I have been trying to use my influence with the patronesses, but they do not seem to think the date can be altered.

People have already begun to discuss the Mardi Gras Ball. I have never yet been to one, because papa does not approve, but he is away this year, and Aunt Sybil thinks I would look fine to go as a Cricket. It would be rather a queer costume, but I could have a great deal of fun. Aunt Sibyl thinks it is absurd to have any feeling about a Mardi Gras ball, so I think I shall christen mine this year. It is to be very difficult to get tickets and will be kept very select. All the girls are endeavoring to get unique costumes. This, of course, is not a very easy thing to do, and takes quite an original mind.

Now, Diary deary, I shall leave you for a week.

An engagement of considerabe interest to Californians, though the parties thereto are now New Yorkers, is that of Miss Maud B. Fiske and Dr. Clinton Catherwood. Miss Fiske is a beauty and a member of the "smart set" in New York society. Dr. Catherwood is the son of Mrs. Major Darling and the grandson of the late Judge Hastings. Since his location in New York, Dr. Catherwood has made substantial progress in the practice of his profession. He is a member of the surgical staffs of both the French and Hudson River Hospitals and is pathologist at the French Hospital. He is also assistant surgeon of the 12th Regt. N. G. N. Y.

The Oakland cotillion on Thursday night was a great success. The hall was beautifully decorated and some of the gowns exceedingly handsome. Mrs. Harry Miller, Mrs. Will Henshaw and Mrs. Edson Adams were the young matrons who looked their best. The girls who seemed to be most admired were Ethel Valentine, Carmen Moore, Ethel Kittridge, Laura Crellin, Jean Hush, Elizabeth Huntington, Della Mills and Helene Wagner, were among the representatives from San Francisco. The Knowles gave a luncheon to Mrs. Fred Bixby on Monday and Miss Carmen Moore a tea on Tuesday. Mrs. Bixby will soon return to Southern California. The Berkeley cotillion will take place on Wednesday and is to be led by Leslie Green and Bob Baird. The Oakland Golf Club will have an informal cotillion Saturday next. Mrs. Driscoll will give a tea in the near future. MISS CRICKET.

Champagne Imports in 1899.

As shown by Customs statistics the imports in 1899 of G. H. Mumm's Extra Dry reached the enormous figure of 109 303 cases, being 72,495 cases more than of any other brand—a record unprecedented in the history of champagne. Its 1895 vintage now imported has no equal.

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

ROYAL BAKING POWDER
ABSOLUTELY PURE
Makes the food more delicious and wholesome
ROYAL BAKING POWDER CO., NEW YORK.

Three Meals a Day.

How many years of her life does a woman spend over the hot cook stove getting those three meals a day? Back aching, head throbbing, nerves twitching, it's all the same, there are three meals a day to be prepared. Dr. Pierce's Favorite Prescription cannot lighten woman's labor, but it can and does increase her strength. It cures those diseases of the womanly organs which undermine woman's vitality.

"I cannot praise Dr. Pierce's Favorite Prescription too highly as a tonic for tired, worn-out women who are afflicted with female weakness," writes Mrs. Ira W. Holmes, of Cedar Rapids, Iowa. "It has helped me very much and a skillful physician once said to me in answer to my question as to its efficacy, 'I know of cases where it has really worked wonders.'"

Dr. Pierce's Pleasant Pellets do not re-act upon the system. They are a good thing to keep in the house. One 'Pellet' is a laxative, two a cathartic dose. The medicine for every woman.

The Penny Magazine Brain Tests, No. 8.

What is Love?

$400.00 in Prizes.

Here is a brain contest for everybody between the ages of seven and one hundred and seven, WHAT IS LOVE? The prize will be awarded not for learned answers and for long answers, not for answers with big words in them, but for answers that are original and clever. The answers may be weird, or they may be witty. They may be cynical or silly. They may be expressed in the simplest language and in the fewest words. Even spelling will not count. A CHILD WITH THE RIGHT IDEA MAY BE THE WINNER. No answer should contain more than fifty words.

There will be prizes aggregating $400 in all—$200 for the best answer, $50 for the next best answer and $25 each for the two next best, and then one hundred prizes of $1.00 each for other people with clever answers. This contest closes May 1st, 1900. The answers may may be in poetry or in prose, and on any kind of paper. Nothing counts but cleverness and originality in the answer of this question. People may sign their own names or fictitious names to their answers, but in the latter case they must send their real names and addresses, in confidence in order that the prizes shall not go astray. As in all brain contests, competitors must send a year's subscription, 25 cents with their answers. THE PENNY MAGAZINE costs but 25 cents a year, and for this small sum it is edited, illustrated, printed, bound, and delivered every month for twelve successive months. No one can win a prize who has not sent with his answer 25 cents and the name and address of a subscriber, his own or some other.

Address, Love Editor,

THE PENNY MAGAZINE,
Depew Building, New York City.

No. 11,194.

IN THE DISTRICT COURT OF THE UNITED STATES, NINTH CIRCUIT, NORTHERN DISTRICT OF CALIFORNIA.

In the matter of the Insolvent, the California National Bank of San Francisco.

T. K. STATELER, the Agent of the California National Bank of San Francisco, which bank was duly adjudged insolvent by the Comptroller of the Currency of the United States on the 14th day of January, 1889, pursuant to the provisions of an act of Congress entitled "An Act authorizing the appointment of receivers of National Banks and for other purposes," approved June 30th, 1876, having filed herein a petition praying for an order of sale of the choses in action and the unsold personal property belonging to said bank, now in his possession as said Agent, and which said choses in action and unsold personal property are fully set forth and described in said petition;

IT IS HEREBY ORDERED, that said petition be heard before this Court in its court-room in the appraiser's building at the corner of Washington and Sansome streets, San Francisco, on Saturday the 10th day of February, 1900, at eleven o'clock a. m.

IT IS FURTHER ORDERED, that a copy of this order be served by said Agent upon all the stockholders of the bank, standing as such upon the books of the bank at the date of its adjudication as insolvent, either by personal delivering a copy hereof to each of said stockholders or by sending a copy hereof through the mail addressed to his last known place of residence, postage prepaid, at least ten days prior to February 10, 1900.

IT IS FURTHER ORDERED, that a copy of this order be published in *The Wave*, a newspaper printed and published weekly at San Francisco, aforesaid, at least once a week for three weeks prior to the hearing of said petition,

Dated, January 10, 1900.

JOHN J. DE HAVEN, Judge.

ROBERT BRENT MITCHELL, Mills Building, San Francisco, Attorney for Petitioner.

TWENTIETH CENTURY POSIBILITIES

BY JOHN DALTON.

NOW that the earth is whirling giddily along into a new century, it is time for the cheerful prophet, who is first cousin to the cheerful liar, to unlimber his pen and get to work. Before the year 1900 is over, we shall be deluged with novels, essays, stories, forecasting the conditions which will prevail in the year of grace 2000. To head off the rest of the tribe, I purpose to make a few prophecies myself concerning that greatest commercial development of the nineteenth century—electricity.

To dwell on present conditions for a moment, electricity is fast supplanting steam as a motive power. It is probable that a great proportion of this country's railroads would be running to-day on electric currents, were it not that the immense sums of money at present invested in locomotives and rolling stock of the existing models makes any such change, involving, as it does, an entire abandonment of the old plant, entirely too expensive. But rolling-stock is less than mortal and wears out fast, and the chances are that before long some of the big railroads will begin to install electric engines in place of iron locomotives now in use. Once the fashion is set, the increased traffic on such roads will bring the other lines to the change as a matter of self-interest.

The electric railroad, as distinguished from the electric tramway, is no mere theory. Cars have been run, already, at a rate exceeding sixty miles an hour, and electric locomotives have proved themselves cheaper than those operated by steam-power. Besides this, the electric road is nearly noiseless, and there is nearly noiseless, and there is no smoke and consequently no cinders. It has to carry no fuel; the water-power of any near-by river operates it. As for common electric tramways, their names and uses are legion. One can ride from one end to the other of Massachusetts by continuous electric lines, and do it almost as quickly and cheaply as by the steam roads. In fact, it has already supplanted many local steam lines in that region. At present, nearly a billion dollars is involved in these steam tramways.

Electricity is invading nearly all the arts and industries. The manusacturer finds it more economical to attach a motor to each of his machines, distributing power through his factory by the means of wires. Coal is now cut in the mines by means of electric power, carried to the cars by the same agency, and loaded upon electric cars for transportation. Equally wide is its use in such industries as demand chemical changes. The welding together of various refractory metals, such as nickel with steel—a task that was formerly thought to be impossible—the manufacture of carbon and even of gems from graphite, the production of substances requiring high pressure, such as liquid air, are all accomplished in the electric furnace.

Now, for the future. By the end of the twentieth century, overland trains will be operated on the electric plan. It is not likely that any continuous wire can be stretched from New York to San Francisco; the lines will be mainly local; the through trains will transfer connections from line to line, just as an overland train of the present day changes locomotives at the various divisions. Smoke, dust and noise will be eliminated. There is no telling just how fast these trains will run. It may be said that at present electricity can operate trains as fast as steam. But the limit of speed by steam locomotive seems to have been reached, while the possible speed of electric railways is as yet unestimated. Such trains will be heated and lighted by the prevailing power.

But in domestic usages will come the greatest change. The dwelling of the future will have not only electric light and electric bells, but kitchen and laundry ranges, heat radiators, even sad-irons and curling-tongs will be heated on the same principle. In the morning, Biddy will arouse from her dewy slumbers and turn on a number of switches in the kitchen. One will heat the house, another will warm the water for your morning shave; on still another, she will get breakfast. The electric oven bakes bread and pastry perfectly. The heat is evenly distributed and can be regulated to a degree. So, too, it broils and frys in an even way which is ideal. If it is Monday, Biddy will descend and do the family washing with water heated by incandescent wires. She will dry the clothes in a room heated in the same fashion, and when ironing-day comes, she will hitch a wire to the handle of her instrument to polish the shirt-bosoms.

In telegraphy, the possibilities are unlimited. If I continue as correspondent of the *Wave* in the year 1950, I will send no photographs by mail. Almost beyond doubt, line pictures will by that time be transmitted as easily as ordinary dash-and-dot messages. It has been done already in a slow and expensive way; when the process is rendered quicker and cheaper by improved instruments, the newspapers of all regions of the earth will be up to date in their illustrations as well as their news. Imagine a war correspondent at the front—if wars continue in the year 1950. He will take his drawings of the action, and send them on along with his dispatches. In the same way, legal documents requiring signatures will be transmitted almost instantaneously. The Pacific cable will be down by that time, and a message may then be sent around the world in three minutes

The farmer of the future will get along pretty well without horses, Plowing, harrowing and planting will be done by machinery operated on the storage system. His weeds weeds will be electrocuted painlessly by a machine already in use on the market-gardens of Europe. When his "truck" is gathered and sacked, he will take it to market on an electric automobile.

There is only one thought to trouble the pleasant dream. This forecast presupposes the existence of enough copper to transmit all the electric fluid in use. No other conductor save aluminum, which has much less conductivity, has been discovered to answer the purpose. In the past two years, the red metal has jumped in value to double its former price and still the demand increases. Unless some satisfactory substitute is discovered, or unless the production increases very materially, the electrical activity of the twentieth century will be greatly retarded. To the solution of this problem, the scientists of the world are bending all their energy not already devoted to reaching out for another thing seemingly as far out of their grasp—the transmission of heat into electricity direct.

ANNOUNCEMENT!

At One Dollar per sharestock in either the California Standard Oil Company or Giant Oil Company can now be secured. Controlling, as they do, 1300 acres patented land in the heart of the McKittrick district, and their first well producing 150 barrels per day, with a record of over 250 barrels under increased pumping pressure without apparent diminishment of the supply, the directors will now offer a limited number of shares at the above price, the money thus received to be expended in further development. The California Standard and Giant Companies are fully equipped with all necessary machinery, having three Standard rigs of their own, oil and water pipes, and immense storage tanks directly at the depot. Twenty-two men are employed on the three new wells, which are now down close to the Oil Sand, and with others being drilled, it is safe to say the production will soon rival that of the largest companies in the State. WE MEAN WHAT WE SAY—only a limited amount of stock will be sold at $1.00 per share. Permits to inspect the wells and property of the company can be had at any time. Daily trains commence Monday, January 15.

SPECIAL CORRESPONDENCE FROM THE TWO CAPITALS

ANOTHER wedding in high society. Truth to tell, weddings are the only social events to relate this season, now that the lists of the dead at the War Office are bringing out the sables. There are no elaborate social functions, no big balls, no receptions, but people are still marrying and giving in marriage. This time, the young Countess of Cromartie was wedded to Major Blunt. I cannot say that there was anything especially new or unique about the affair. Weddings of ceremony resemble each other more nearly than anything else which occurs in this world of variety. They are all as like as peas. So I will not weary you with the oft-told tale of how She was gowned, or what the bridesmaids wore, or what He gave to Her, or how she took the pleasant ordeal.

For at that stately function I made an observation, a discovery. A suspicion I have long entertained was confirmed as a fact by my observation of the assembled company "here gathered to witness." Society women are using paint! Let me put it more delicately. They are learning to "make-up." It goes without saying that the rule under which you and I were brought up, my sisters, decreed that the smallest touch from the rouge-pot was vulgar. It did not matter that some of those who laid down that law for us had complexions in which art assisted nature. They did it very secretly and concealed the fact of its use as solicitously as they concealed their advancing age. And now! Well, it is getting to be different. In my innocence, I remarked during the past season the wonderful improvement in the complexions of some of the grandest of England's dames, and marveled at it. The truth never dawned upon me until I observed at this wedding that a certain lady whose dress and reputation together are faultless, had just a *little* deeper bloom on the left cheek than on the right. I paused, and considered the others in the light of this revelation, and was amazed. I waited by the door, consoling myself for my bad manners by the thought that my curiosity was in the interest of knowledge, and took notes. Of the women there who are in that zone of age between debutante freshness and the time of life when one makes a frank surrender to wrinkles and gray hair, few, very few, were not wearing artificial complexions. These few may only be doing it more artistically than the rest. It was all well done, and showed the handiwork of French maids who know the art of enhancing nature. Full of my discovery, I circulated and found, after judicious search, that making-up is now a trade, practiced by experts who visit at the houses of their clients to do the work themselves or to instruct their maids. Something of a jar to our preconceived notions of propriety, isn't it?

If you are going to follow the fashion, which I would advise you not to do, be guided by those who make it a business—actresses—and keep the underlying complexion for the time when the circle has swung full-course and rouge is vulgar again. In the course of their profession, actresses, even those who keep to the natural off the stage, have to learn how to guard their skins. One of the loveliest of our stage beauties has said on this point: "I keep a silver Etna on my dressing-table, with which I heat a little rose water night and morning. That is all the secret. I use rose water twice a day, and always go to bed with a clean face. I never keep on my make-up a moment longer than necessary." In fact, the better the complexion of the actress, the more she seems to cling to simple means. I have heard it said that Madame Patti, whose smooth, clear skin is famous, does not use water to wash her face. This is a mistake. She uses the purest of distilled rain water, and liberally, but she supplements with cold rose cream, in the efficacy of which she is a firm believer. Nothing else, no artificial lotions or creams. The Princess of Wales follows this rule, using mild massage in addition, while the Empress Frederick pins her faith to eau-de-cologne, of which a bottle is poured daily into her bath. And finally, another great lady has said: "Wash your face with hot water and a very mild soap just before going to bed, and wash it with cold rain water and no soap when you rise."

It would be unnecessary to say that, with the present rage for lace and furs, the cost of fashionable frocks is very, very high. One result of this is a rise in the traffic in cast-off clothes. The smartest ladies add to their clothing allowances by selling frocks they have worn a few times; these, in turn, are resold by the dealer at a substantial advance on the price paid, but still very much lower than the first cost. If you are not in circles which might cause you to meet the first owners of such toilettes, you may wear Worth gowns at an easy figure. Indeed, to many women of moderate and high pretentions the system resolves itself into one of exchanges. As thus: a woman buys two or three expensive dresses from a *modiste* of renown at the beginning of the season. These she wears until the situation approaches the point where her feline rival says: "Such a lovely frock you are wearing, dear. You looked so sweet in it at Lady Smarte's reception last month." Then she takes it to one of the making-over establishments and makes exchange for another one there, taking care to find who was the original owner so that their paths may not cross. If she has a clever maid, a few deft touches may change the whole effect, so that no one can say that it is anything more than a resemblance. The first bloom is off such a costume, but this is noticed by no one except the wearer. A private emporium, which originated the plan, has fairly coined money this year; here, for a third to a quarter of the original price one may obtain gowns marked Worth, Doucet, Fenwick, Jay or Redfern. The proprietress has her regular clients and knows their measures and styles, and when a suitable dress finds its way to her shelves she notifies the patrons for whom it is suited. Incidentally, I may mention that this is a great opportunity for my countrywomen to bring back real Worth frocks, *real* ones, from a trip abroad.

Make-up and second-hand clothes! Dear me, this brings one close to a reflection on the hollowness of life! KATRIONA.

NEW YORK.

MRS. JOHN DREXEL has broken into the inner circle at last. This season witnesses her crowned with the elect after a long uphill fight. It is not very often that a woman, which always means a family, "makes it" in New York. A single man and unattached, with money and manners enough to carry him, has a good chance of slipping unostentatiously past the guard, but with a matron, the attack has to be open, and she must bring in all her forces with her. To shift the simile, one Jonah among her connections will wreck the ship. But Mrs. Drexel has come out of Philadelphia and made it at last. If one is disposed to doubt this, I quote the fact that she is patroness of a series of cotillions for which Everyone is enlisted.

And having arrived, she has not contented herself with remaining in the ranks, but is making a bid for social leadership. Already she has taken a step in that direction by doing two unusual things. The first is a mere trifle, but it has been made a mighty deal of in the society columns. It appears that Mrs. Drexel's private secretary is one William Hude Neilson, being what Colonel Carter would call "a gentleman of the fust families, sir," a scion of a Philadelphia family. There is no bar to his eligibility, unless it be the fact that he has chosen to earn his living honestly—being not over-rich—by acting as a private secretary in a comfortable family instead of going on the street. He had added to his other duties, however, that of being social sponsor for the Drexels, since his position, at the beginning of the fight, was infinitely superior to theirs. And now that Mrs. Drexel has reached the top, she has rewarded his services by making him the leader of the first cotillion. I repeat, there is nothing about it in the least odd, but it made good copy; it sounded well, and the society reporters worked it for all there was in it. The incident has had no effect upon Mrs. Drexel's plans or upon the attitude of the smart set toward her newly acquired position.

Her other daring deed, however, is of more consequence, and proves that she is aiming at leadership. For it is said that she contemplates a salon, a thing which has never been successfully carried out in New York, although it has been tried often and often. If so, she is headed off by Mrs. Stuyvesant Fish, who has taken time by the forelock and arranged for a series of entertainments with that end in view. At the first, music is to be the feature, while the second and third are to be devoted to dramatics and vaudeville. There has been this sort of a flutter every time that John Drew has consented to attend a pink tea, but this is a more serious affair, I assure you. How Mrs. Drexel is going to oppose this start I do not know, but the rumor is that she aims to be the Madame de Stael of New York.

An awful thing has happened in the Metropolitan Opera House. It all came about through the folly of the management in letting the place out for a dog show just before Emma Eames opened the opera season. The first night there was a lack of ease and Vere de Vere repose about the society audience. They were restless, mobile and perturbed. It seemed to be in the air. Some thrill in the atmosphere seemed to be keeping the grand dames from assuming one position for more than a few moments at a time. Strange to say, this condition existed on the second night and the third, although the weather had changed in the meantime. The thing might have remained a mystery had not the causes, grown bold by the fattening gained by pasturing on blue blood, ventured into the open, presumably to assist in the function. In plain words, the ordinary flea of dogdom was the cause of it all. Grau & Co. had neglected to fumigate after the dog show, and the tiny but energetic parasites grew and increased in the interval. More penetrating than the voice of the peerless Eames, they threaten—and I say this in dead seriousness — to ruin the opera season this year. In fact, just such a cause ruined the business of the old Astor Place Opera House in the fifties. This is not the only complaint against the Grau Company, however. They are not keeping up to standard this season. The stage direction is poor, the standard of the costumes, the chorus and the accessories have been allowed to decline, and too little care is taken to vary the programmes. These things are likely to conspire to the downfall of Grau, but after all, the gay flea will be the main cause of his ruin, if ruined he is.

A social problem confronts us just now, when actors and singers, with Maud Adams in the lead, are knocking at the doors of society. What is to be the status of an artist who helps entertain one's guests? Is he to be regarded as a guest or as a paid hireling? Is he to be ranked as a waiter a shade removed or as an equal while under the roof of his entertainers? The story of Jean de Rezke and Baron Rothschild is still in the public mind. It has been refuted, by the way, but it illustrates the point. It is said that the singer and the money king nearly came to a duel over an affront offered in this connection. De Rezke, the story goes, sang for the billionaire at a private entertainment, and Rothschild offered him a blank check for his services. This the singer refused, whereupon the baron insisted, claiming that if De Rezke did not accept pay, he himself would be in the position of receiving a singer as an equal. In New York good taste and good sense have shown the way, and all but the parvenus accept their entertainers, paid or unpaid, as guests, and manage the money transaction outside.

In spite of the large sums often paid for these services, artists dislike to appear in private houses, possibly because of the false position in which they are placed by this usage. Last year, Mme. Sembrich was in great demand for this purpose. Hoping that the price would be prohibitive, she set her services at $1,500. It did not have that effect at all; the price was paid several times, and once $2,500 tempted her to Chicago. Mme. Nordica sings in musicales at about the same figure. Across the water, $1,200 paid last year to Madame Melba is the highest price on record. Jean de Rezke has appeared several times in concerts there, but always for love, not money, and no one in New York has ever had enough of his love to tempt him into a drawing-room. Outside of the *cachet* given by the name and prestige of the singer, it is a fact that those choir and concert singers who generally serve at musicales are better suited than the great voices of opera; a stage voice is always too big and loud for a drawing-room, and cannot be modified without marring the artistic effect very materially, as the singer cannot "throw himself" into his song while under check. IN THE SUPERIOR COURT OF THE CITY AND COUNTY OF SAN FRANCISCO STATE OF CALIFORNIA.

City and County of San Francisco, Plaintiff, *vs.* James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More B. More, and C. More Defendants. No. 67,877.

Action brought in the Superior Court of the City and County of San Francisco, State of California, and the Complaint filed in the office of the Clerk of said City and County of San Francisco.

FRANKLIN K. LANE
City and County Attorney, Attorney for Plaintiff.

The People of the State of California send Greeting to: James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More, B. More and C. More, Defendants.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the City and County of San Francisco, State of California, within ten days after service on you of this summons—if served within this County; or within thirty days if served elsewhere.

The object of said action is to obtain a judgment and decree of said Court adjudging that plaintiff is the owner in fee of all the real estate hereinafter mentioned, and to quiet plaintiff's said title as against each and all said defendants and to obtain other and further relief and costs, as specified in said complaint, which complaint is hereby specially referred to for further particulars.

The following is a description of the property affected by this action:—

All that certain piece, parcel or tract of land situated in said City and County of San Francisco, State of California, bounded and described, as follows to wit

Commencing at the corner formed by the intersection of the northerly line of Bay street with the westerly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred (200) feet; thence at right angles northerly and parallel with said Fillmore street to a point at which the water of the Bay of San Francisco is twenty-five [25] feet deep at low tide, as the same existed April 27, 1863; thence at right angles easterly four hundred and sixty-eight 9-12 [468 9-12] feet; thence at right angles southerly and parallel with the easterly line of Fillmore street to the said northerly line of Bay street at a point thereon distant two hundred [200] feet easterly from the easterly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred and sixty-eight 9-12 [268 9-12] feet to the point of commencement.

And are hereby notified that, unless you appear and answer as above required, the said plaintiff will take judgment for any money or damages demanded in the Complaint as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the City and County of San Francisco, State of California, this 20th day of March, A. D., 1899. [SEAL] WM. A DRANE, Clerk,
By WM. R. A. JOHNSON, Deputy Clerk.

DIVIDEND NOTICES.

OFFICE OF THE HIBERNIA SAVINGS AND Loan Society, corner Market, McAllister and Jones streets, San Francisco, December 29, 1899. At a regular meeting of the board of directors of this society held this day a dividend has been declared at the rate of three and one quarter [3¼] per cent. per annum on all deposits, free of taxes payable on and after Tuesday, January 1, 1900.
ROBERT J. TOBIN, Secretary.

DIVIDEND NOTICE.—Mutual Savings Bank of San Francisco, 33 Post st.—For the half year ending December 31, 1899, a dividend has been declared at the rate of three [3] per cent. per annum on all deposits, free of taxes payable on and after Tuesday, January 2, 1900. GEORGE A. STORY, Cashier.

THE CONTINENTAL BUILDING AND LOAN Association of California, 222 Sansome St., San Francisco, has declared for the six months ending December 31, 1899, a dividend of 12 per cent per annum to class A stock 10 per cent per annum to class F stock, 6 per cent per annum on term deposits and 5 per cent per annum on ordinary deposits.
CAPT. OLIVER ELDRIDGE, President.
WILLIAM CORBIN, Secretary.

SAVINGS AND LOAN SOCIETY, 101 Montgomery street. The board of directors declared a dividend for the term ending December 31, 1899 at the rate of three and sixty one-hundredths [3.61] per cent per annum on ordinary deposits, free of taxes, and payable on and after January 2 1900. Dividends not called for are added to and bear the same rate of dividend as the principal from and after January 1, 1900. CYRUS W. CARMANY, Cashier.

THE OIL INDUSTRY.

IT is stated that the oil men are perfecting an organization for the purpose of bringing charges of perjury against scrip filings, for the reason that under the form of the affidavit the scrip locator deposes and says: "That he is well acquainted with the character of certain parcels of land and every legal subdivision thereof, having frequently passed over the same; that his personal knowledge of said lands is such as to enable him to testify understandingly with regard thereto; that there is not to his knowledge within the limits thereof any vein or lode of quartz or other rock in place, bearing gold, silver, cinnibar, lead, tin or copper, or any deposit of coal; that no portion of said land is claimed for mining purposes under the local rules and customs of miners and otherwise; that no portion of said land is worked for mineral during any part of the year by any person or persons; that said land is essentially non-mineral land, and that his application therefor is not made for the purpose of fraudulently obtaining title to mineral land, but with the object of securing said land for agricultural purposes." The penalty for perjury in such an affidavit is placed at $2000 and imprisonment at hard labor for five years. The Kern River oil men are determined to resist any attack upon their titles, and serious trouble is apprehended in the near future.

* *

The following is quoted from an interview with a visitor to the Kern River oil fields: "The first thing that impressed me upon my arrival in Bakersfield, was the quiet, methodical, business-like manner in which those interested in oil, conduct their business. The prevailing impression that there is intense excitement, is erroneous. The men doing business on the exchange, are ready to talk business to you, but they want cash down on every proposition, as the value changes so rapidly that one has no chance to talk over a deal and then think about it, unless he think quickly. The ground value of this land for agricultural purposes is nothing. The values change constantly as oil is struck, and then become fixed and increase as the strikes come nearer to it. To illustrate this, they struck oil in section 24, township 28, while I was there on New Year's day. The quotation on Saturday for this land was $50 an acre. On Monday, the owners refused $125 an acre because of the discovery of oil."

* *

Much interest is being manifested in the outcome of the trouble between Chanslor and Canfield and D. E. Alexander, the San Francisco land scripper. Last week the latter got out an injunction against Chanslor and Canfield, which compelled them to stop work on the derrick they were putting up on section 4, township 29, range 28. If Alexander makes any further attempt to gain control of the land the defense will be conducted by the Petroleum Miners' Co-operative Association, and the strength and importance of the association will be fully shown in the case, which is what is much desired. Chanslor and Canfield leased the land from the Fresno Oil Company. Both of the companies are members of the association.

* *

Some idea may be gained of the magnitude of the oil development operations in the Kern river field from the fact that last week five carloads of oil-development machinery was received by R. H. Herron & Co. Among other things, the invoice shows six engines, nine sets of jars and stacks of tubing sucker-rods and casing, of 5⅝, 7⅝ and 11⅝ inches in diameter. The engines came from Oil City and the other material from Pittsburgh. In addition to the above four more carloads of boring tools and oil well supplied have since been received by the same firm.

* *

Despite many contradictory reports, it is positively asserted that the famous Brea Canon gusher is actually flowing 1,000 barrels a day, though not steadily. It has weak days and then gushes for a few days, when its output mounts to the 1,000-barrel point, and sometimes goes over. No. 1 well in the canon is pumping 100 barrels a day steadily.

* *

Word comes from the South that the Union Oil Company has bought the entire production of the Graham-Loftus wells in the Fullerton field, and is now laying a pipe line to connect the wells with the Brea Canon tanks. From thence the oil will be pumped to Norfolk, for the use of the Southern Pacific Railroad.

* *

The Petroleum Development Company intend putting down 50 wells on the Means ranch before ceasing development work. The wells already finished have been pumped for sixty days now and have each yielded about forty barrels per day.

* *

The Bakersfield Oil Company have a standard rig at work on their property on section 12-29-20. They are down 250 feet and are meeting with every indication of success.

The Thirty-Three Oil Company has another success in its well No. 4, which has just been finished on section 33—28-28. Boring was begun on well No. 5 last Saturday. This company is pushing on the work of development as rapidly as possible and has five more derricks up and two more in the course of construction which will be completed in a few days.

* *

The El Dorado Oil Company, operating in the McKittrick field, struck what is estimated to be a 500 barrel well the other day. It was baled for several hours at the rate of 40 barrels per hour, and instead of the level being lowered, it rose 150 feet.

* *

This from the Bakersfield *Echo*: "Those who think that drilling outfits can be had for a song should cast an eye over the waybills of cars with oil-well supplies from Pennsylvania. The rate per car averages $600 for freight alone."

* *

The Kern County machine shops have the contract for building fifteen tanks for use on wagons in transporting oil from the fields to shipping stations. These tanks have capacities ranging from 1,000 to 3,000 gallons each.

* *

The Imperial Oil Co., which recently sold a half interest in 320 acres in section 33, township 28, range 28 for $250,000, has four wells already down to the oil and six more are being sunk.

* *

A little over three months ago the first standard rig was put in operation in the Kern River field and now there are fully 100 at work day and night.

Deafness Cannot be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

The Theatres

IT is pleasant to see the Frawleys coming into their own and playing up to the old Baldwin standards, and not down to the old Morosco grade. By the way, this statement is a confession of weakness. Condemned for the time to theatrical "jayness," San Francisco has no existing standards by which to measure plays and players. Our glory is all in the past. But to return to the Frawleys. They have been rattling around in ill-fitting British melodrama all the season. Now they have taken up a line of work that suits them infinitely better. Last week it was the clever Pinsero comedy, "The Princess and the Butterfly." This week it is the less clever but more satisfying Daly piece, "The Countess Gucki."

The sort of newspaper readers who like to peep behind the scenes have been enjoying an alleged tea-pot tempest over the first appearance as a professional of Miss Mary Scott, in private life Mrs. Neville Castle. First it was the story of a male valet or dresser who was superintending her costuming and make-up. This press agent dodge is not a new one; it has been worked with success in New York and London, but this was its first appearance in San Francisco, and it made an immediate hit. As soon as the tale had ceased to be a three days' wonder, the clever press agent managed to drag up another about professional jealousy between the Misses Mary Van Buren and Mary Hampton on one side and the debutante on the other. This was old, even for San Francisco, but coming on top of the valet story, it kept the newspapers going until the end of the week. I do not know who works the press for Mrs. Castle, but whoever he is he deserves to have his pay raised.

The actress herself has created a decidedly favorable impression. She is pretty, with that irregular sort of prettiness which, for stage purposes, goes ahead of cold, regular, classic beauty, and she has undeniable talent. Just now she is in that stage between the amateur and the professional when the style is forming and the forecasts are uncertain. She betrays the amateur in over-gesturing and in a lack of repose and ease. That ought to come later, and meanwhile she has lightness, charm, and the emotional quality to a high degree.

* *

Come to think of it, we are not so badly off this week, after all you may say of the theatrical slump in San Francisco. There is a Daly comedy at the California, one of the very best end-of-the-century dramas at the Alcazar, and Shakespeare—our first for many a month—at the Columbia. They are all well acted. The Alcazar fairly excels itself, the Frawleys have hit their place, and the James-Kidder-Hanford Company comes nearest to the real thing of any players we have had yet in these jay and fallen days.

With gallantry for the sex of the one and veneration for the age of the other, the critics have commented on Miss Kidder and Mr. Hanford, rather than on the old reliable Louis James. Yet James is the actor of the combination. But for a curious, cynical, insincere cog in him, he might have been one of the greatest. The fault with his work is that he acts it and pretends it, but does not consistently feel it. Any of you, my readers, who have "suped" for pleasure or profit in the Warde-James productions, will remember how he comes off the stage after the most affecting scenes, and does a cake-walk down the wings. Not that he does not feel at all when he is on the stage; he does, in much greater degree than the exact and scholarly Warde, for example, but the real reverence for his art which should render him great and sincere is not there. It is a little rift, but the lute jangles, nevertheless. And increasing age has not softened any of the hardness of this cynical disposition.

* *

At the Alcazar next week "Lord Chumley," by Belasco and DeMille, with Mr. Hastings and Miss Blaney in the important roles, the production should be well worth seeing.

ETHEL BARRIMORE AND MAY BUCKLEY, who are now appearing in New York.

"In Paradise" is the next production of the Frawley Company. This play is a farcical comedy adopted from the French. It run two years in Paris, fourteen months in London and seven months in New York. Certainly it should go in San Francisco.

* *

Emma Nevada makes a final appearance at the California on Monday night next. Popular prices will then prevail. A new programme will be given.

* *

Paderewski seems to be repeating the sensation of his former visits and is heading coastwards. He will play at the California Theatre in March.

* *

The second of the symphony concerts under Henry Holmes will be given at the Grand Opera House Thursday afternoon, Feb. 1st.

For more than half a century the famous Jesse Moore whiskey has been the standad brand of the world.

The Orpheum changes its bill almost entirely next week. Papinta returns with new spectacular dances. James A. Barrows, with a clever company, brings a repertoire of short plays, including "Tactics," a new thing. Edna Bassett Marshall and company have a novelty singing act, "Sunshine and Sorrow." Joseph Newman, a song writer with an eastern reputation, makes his first appearance with a batch of quaint, clever ditties.

* *

Judging from May Blayney, the English actress differs from our own mainly in quiet refinement of method. Her work in "Lady Windemere's Fan" is excellent. In fact, this week's performance of Oscar Wilde's almost classic play is the top notch of the season's performance at the Alcazar. Companies of much greater pretension have rendered the play an infinite deal worse. Juliet Crosby, in the "fat" part of *Mrs. Erlynne*, does work away beyond anything she has shown heretofore, and the rest give a performance which is at least intelligent. The whole thing is well worth seeing.

* *

The star attraction at the Orpheum this week is Mlle. Emmy, who with her terriers does marvels. The dogs are admirably trained, and the act is the best on an interesting programme.

The Orignal Swain's Bakery, 213 Sutter St., stands without a rival and has stood the test for years. The most delicious meals are served by gentlemanly attendants, and the management takes pride in having everything orderly. It is just the place for business men and ladies out shopping to lunch.

Six high-class running races every week day rain or shine, beginning at 1:30 P. M.
The ideal winter race track of America. Patrons step directly from the railroad cars into a superb Grand Stand, glass-enclosed, where comfortably housed in bad weather they can enjoy an unobstructed view of the races.
Trains leave Third and Townsend streets at 9:00, 10:40 and 11:30 A. M., and 12:15, 12:35, 12:50 and 1:25 P. M., returning immediately after the last race and at 4:45 P. M. Last cars of all trains reserved for women and their escorts. No Smoking. Valencia street ten minutes later.
San Jose and Way Stations. Arrive at San Bruno at 12:45 P. M. Leave San Bruno at 4:00 and 4:45 P. M.
Rates. San Francisco to Tanforan and return, including admission to Grounds, $1.25.

Racing! Racing! Racing!
CALIFORNIA JOCKEY CLUB.
Winter meeting, 1899-1900, beginning MONDAY, Jan, 22 to Feb. 3, 1900.
OAKLAND RACE TRACK.
Racing Monday, Tuesday, Wednesday, Thursday, Friday and Saturday. Rain or shine.
Five or more races each day.
Races start at 2:15 P. M. sharp.
Ferry-boats leave San Francisco at 12 M. and 12:30, 1, 1:30, 2, 2:30 and 3 P. M., connecting with trains stopping at the entrance to the track. Buy your ferry tickets to Shell Mound.
Returning—Trains leave the track at 4:15 and 4:45 P. M., and immediately after the last race.
THOMAS H. WILLIAMS JR., President.
R. B. MILROY, Secretary.

New Stories Re-Told.

x x x

FOREWARNED IS FOREARMED.—In a Canadian town in which the contracting business is quite largely in the hands of Scotchmen there has long existed fierce competition between the several firms engaged therein, the result being that the municipality has had its work done below cost. Owing to protracted losses several of the competitors were retired and the two surviving concerns decided that the time had come for an agreement. The best settlement seemed to be on a fair division of the work and both contracted to bid only on certain portions of a big job for which contracts had just been called. The last day for sending in bids had gone by when the rival managers met in the street. One of them began to apologize. Owing to some unfortunate misunderstanding, his junior partner had prepared and sent in estimates for the whole of the work to be bid upon. He was very, very—— "Aa, weel," interrupted the other, "ye need no' trouble yer heed aboot that; for, to mack sure they'd be nae mistake, we did the same oorsels!"

x

CHANGED THE SEX.—Before Wilberforce became a bishop he had been Archdeacon of Surrey, and his old archdeaconary became a part of his later Bishopric of Winchester. At a meeting of the clergy at Clapham his chaplain told him that an old Dr.——, who had been many years in the diocese, was vexed at having been forgotten. "Yes," said the bishop, "I have not the smallest recollection of him, but I will make it all right, and will go out and speak to him. Which is he?" He was pointed out, and the bishop made his way to him. "My dear Dr. ——, I have not had a moment for a real conversation with you. I need not ask how you are after all these years. Do you still ride your gray mare?" "Yes, my lord, how good of you to remember her," etc. The chaplain, who was within earshot, said, when he again came near the bishop: "Then you did remember Dr. —— after all?" "Not a bit of it," said the bishop: "I saw the gray hairs on his coat and I chanced the sex."

x

VALUE OF A BARONETCY.—A group of artists were discussing with Millais, soon after the Queen had made him a baronet, the rarity of such artificial distinctions. "You fellows don't think a title's worth while, eh?" laughed Millais. "You are mistaken. See here. I stopped at a hotel in Manchester the other night, and I said to a beautiful young person in the office, 'I want a bed-room with a fire in it.' Off she went to a pipe, and said, 'Whist! No. 238 and a fire.' She then asked me to write my name, which I did. Looking at me, she said, 'Are you Sir John?' Upon my answering 'Yes,' back to the same pipe she went, and said, 'Whist! Not 238—No. 23, and a good fire in it.' Now you see the use of being a baronet, my boys!"

x

A SHREWD REBUKE.—Mr. Clerk was pleading in a Scotch appeal before the House of Lords. The question at issue was in regard to a right of water. Mr. Clerk, in Scottish fashion, pronounced the word watter. "Pray, Mr. Clerk," said one of the law peers, "do you spell water with two t's in Scotland?" "No, my Lord," was the dignified and scorching answer of the great lawyer, "but we spell manners with two n's."

x

A RECRUIT'S PRECAUTION.—A favorite story of the unfortunate Scotch General Wauchope, who was killed in the charge at Maggersfontein, was of two soldiers in the Gordon Highlanders, one of whom was going into battle for the first time. The crack of rifle fire was heard in front and the balls began to fly. The recruit shouted to his mate in the first line, "Dinna bob, Geordie, I'm ahint ye."

x

WHAT'S IN A NAME.—The head instructress at a Pasadena Sunday-school was solicitously preparing a roll of her new pupils. Among them was a youngster who gave his name as "Nebuchadnezzar Ishmael Jones." "Who gave you that name?" blandly asked the teacher. "Dunno, ma'am," replied the boy with the battle-gleam in his eye, "but if ever I find aht Lawd 'elp 'im!"

x

THE MISCHIEF OF SOCIABILITY.—A Scotch weaver was suffering the reproaches of his minister for having indulged too ardently in the cup that cheers. "Why, oh why," exhorted the good man, "should you allow the better part of your nature to be overcome by alcohol?" The weaver shook his head. "Ah, meenister, it's no' the whisky, it's the 'Here's t'ye!' that dis a' the mischief!"

x

"WHY HE LEFT.—Sothern the comedian was extremely sensitive to interruption of any sort. Seeing a man in the act of leaving his box during the delivery of one of the actor's best speeches, he shouted out, "Hi, you, sir—do you know there is another act? The offender was equal to the occasion however; he turned to the actor and answered cheerfully, "Oh, yes—that's why I'm going!"

PALACE HOTEL SUPPER ROOM

The moderate charges, delightful orchestral concerts, and the undoubted luxury are the attributes that make the new Supper Room at the Palace Hotel the favorite place for after-theatre parties. Open every evening (Sunday excepted) from 9:30 to 12 o'clock. Entrance from main office and grand court.

EVENTS CURRENT.

South African

General Buller's fight for the passage to Ladysmith is on, and may be over and settled by the time this paper is circulated, although it is rather more likely it will be fought in a series of small battles extending r a week or two. If the fight is decided within the next days, the censorship will be lifted so we may judge the ning of these hidden movements and counter-movents which have been puzzling us this week. The crossof the Tugela river was accomplished several days ago without opposition. Then it sifted through the censorp that General Warren's mysterious advance was a flankmovement on the Boer right wing. So far as can be ned, he gained a position commanding the main Dutch e in that direction after some fighting, the extent of ch cannot now be learned. He has since been advancslowly, taking position after position as he was opposed the characteristic involved trenches. Even now, after days of fighting, the outcome is doubtful. Just how far has gone or how many positions his force has taken, is known; we only know that the British, while not cked, have had to fight hard for every inch of ground that their loss has been about 600 men for the entire ance. The Boers are strongly intrenched and Joubert is orted to be with them, directing operations. Meanle, General Buller, directly in front of the main body of ghers, is awaiting a favorable movement to strike the sive blow. He has risked his army and his military tation on the event of this battle. He is going up nst a strongly entrenched enemy with an army so small he has no men to spare for reserves. His force numonly 30,000 men; to accomplish the task, he ought to e 50,000. If he succeeds, he will gain military renown nd only to that of Wellington; if he fails, the disaster be the heaviest of the war. It is encouraging to note, ever, that in this advance the British are, for the first , adapting their tactics to circumstances. There is no e "straight in the eye" fighting. Buller is advancing ly and cautiously, shelling the Boers in their isolated ches and clearing the country ahead of each advance in r to prevent surprise. Lord Dundonald, with a cavalry sion, was sent out on a raid of some sort a week ago. objective subsequent operations have not come through close censorship. It is now reported that he has cut his into Ladysmith. This is doubtless untrue, and may be down with the other floating rumors by which we have Ladysmith relieved every day for over a week. The eged town was shelled without much damage on the of Warren's first attack. Mafeking and Kimberley just reported all safe. The former town has provisions only three months more, and Colonel Baden-Powell, in mand, is becoming anxious. At home, the British ple are in a curious state of mind. As one American spaper puts it, "The nation has become a great stock change." Panic is succeeded by confidence, pro-adminstion feeling by popular opposition. The most conative journals seem to change their policy from week to week. As near as can be learned, while this state of affairs lasts, the popular feeling is still for the government and the prosecution of the war to its bitter end. Around the Boer capital there is a veil closer than any British censorship. Only occasionally does news come from there; then it is brought out by refugees or comes via Dr. Leyds on the continent—both unreliable sources. Most of the reports from the former quarter this week have it that Kruger snd his advisers are disappointed at the apathy of Europe toward their cause.

Chanees Bright For the Canal.

So far as can be ascertained, the chances for the passage of the Nicaragua Canal measure at the present session of Congress are very good. The Hepburn Bill, reported favorably to the House last week, was so amended at the time that it would fit the ideas of the Senate committee. This precludes the possibility of a hitch through disagreement over details. Chairman Morgan of the House Interoceanic Canal Committee has submitted a report in which he presents the case of the Nicaragua route as against that of the Panama route. The latter, he says, is beset with difficulties and uncertainties of construction. Moreover, even if these are all solved, the passage will be dangerous, owing to the shifting tides and currents at that point of the coast. The Nicaragua route is safe and an easy engineering problem. The maximum cost of a canal there is $140,000,000, the minimum, $70,000,000. On figures based on the Suez Canal receipts, he asserts that it would pay twelve per cent. in tolls on the maximum cost. He adds a plea for neutrality of the waterway on the Suez plan. Friends of the canal confidently predict that the bill will pass. At any rate, it seems certain that it will go before Congress this session, and that the Republican majority will favor it. The main objections likely to be waged are the fact that the Walker Commission appointed by the President to investigate the scheme, cannot report before the session ends, and the possible opposition of Great Britain on the basis of the Clayton-Bulwer treaty. By this agreement, England and the United States mutually bind themselves to keep the canal neutral. In spite of that, the Hepburn Bill provides for fortifications at either end, a violation of neutrality. England has not signified any intention of protesting, but this one point is the great flaw in the bill and may result in its failure.

The Philippines in Congress.

The Philippine question, which is bound to occupy the attention of Congress at the present session more than any one other subject, came up last week and was the occasion of spirited debate. Senator Pettigrew introduced a resolution in the upper house, asking the President for information concerning the tangle. This he withdrew in favor of one by Senator Lodge to practically the same purport, which was finally laid upon the table, and one by Hoar, still waiting for action, was substituted. Unimportant as this resolution was, it brought the subject before the Senate, and showed how wide and diversified are the views entertained. The opinions varied from that of Hoar, the arch "anti" to Vest's, that control should be held until we have restored order, on to the Imperialistic views of Beveridge. Nothing could be determined from the debate as to the Senate's eventual action; the state of opinion in that body is absolutely chaotic. The report of the Philippine Commission is nearly ready to be submitted. It recommends such a form of administration as will "secure on the one hand good government and, on the other hand, satisfy the aspirations of the inhabitants as to a form of government." By inference, the report recommends holding the islands. The plan provides for an American Governor appointed by the President, an advisory council of Americans and natives, a legislative body partly appointive and partly elective, its acts to be subject to the veto of Congress, and the division of the islands into districts ruled by appointed sub-governors, either Americans or educated natives. It is further recommended that natives shall hold, as far as possible, the positions of trust.

Commerce Commission on Railroads.

Last year, the Interstate Commerce Commission devoted the major part of their annual report to a complaint that flaws in the existing statutes permitted the railroads to evade the law in the matter of setting rates. This year, the report is only a repetition of the demand that Congress amend the statute. The law is so faulty that the roads have been able to make rates about as they choose. The companies can do this without any power in this commission or in the courts to check them, and nine-tenths of the people know it. Shippers are practically unanimous in favor of a single classification of freights, uniform for all roads and all sections of the country and, when established, reasonably stable. This dissatisfaction has been frequently expressed in all sections of the country, particularly at a conference of merchants and manufacturers held in Chicago last summer, which outlined a bill along lines proposed by the commission. Senator Cullom has introduced this measure at the present session. The report urges Congress to act, since, if the tendency is not soon checked, the railroads will combine to force up rates while the government is powerless to act. The increase in railroad business has been so great this year that many carriers found their equipment inadequate for the service required. Revenues increased greatly, and failures fell off. At the same time, many of the railroads have combined to raise charges. In spite of the increased traffic, there has been a falling off in the number of accidents. This is due to the adoption of safety appliances.

The Roberts' Case Before Congress.

Congressman Roberts' expulsion from the House of Representatives seems assured. The only point on which there is any doubt is the method of procedure. The special committee of nine appointed to handle the case reported last week. The majority, seven in all, submitted a document arraigning the polygamous member in unnecessarily severe terms and recommending that he be refused a seat. The constitutional warrant for declaring the seat vacant is defended in this document, although without detailed citation of causes. The minority report, signed by two members, takes the stand that the constitution gives no authority for such a procedure, and that to act in the manner recommended would be to establish a dangerous precedent. This report, which is as viterperative as the other, recommends that Roberts be seated and afterwards expelled—an action which Congress has every right to perform. Thus, the decision is all against the member from Utah, whichever method is followed. The case comes up this week. Almost without doubt, the majority report will be accepted, although the other view will have some strong supporters on both sides of the House.

Earthquakes on the Pacific Coast.

This has been a year of siesmic disturbances along the eastern coast of the Pacific. First, there was the eruption of Mauna Loa in Hawaii. Then came the Alaskan earthquake, which shook up Skaguay and the surrounding towns and changed the coast line in some places. About a month ago there was a heavy though narrowly localized shock in Southern California. Now, comes news of a shaking-up in Mexico. The earthquake seems to have been felt in the whole central portion of the country, being heaviest near the coast. Tue region about Guadalajara suffered most severely. There, the churches and municipal buildings were damaged, and many houses fell. In the town of Tenemata, seven people were killed and sixty hurt, and many buildings are in ruins. The shock, which was of short duration, appeared to come from the Pacific and travel inland. The City of Mexico felt it only slightly. A tidal wave followed on the Pacific Coast. How much damage was done by this is not known, as news from the isolated coast towns comes in slowly. There is no sign of eruption in the volcanoes of the interior, showing that the disturbance was not local, but is probably connected with the other earthquakes of the past year.

The Hanna-Payne Subsidy Bill.

The Hanna-Payne Bill for the encouragement of American shipping through subsidizing the merchant marine has come up against a rather unexpected opposition. Before the opening of Congress it was thought that this measure, one of the most important introduced this session, would be passed with comparative ease. The Senators and representatives from the interior states, however, are arrayed against it in its present form, almost irrespective of party lines, claiming that it is unfair discrimination in favor of the Atlantic and Pacific states, the former in particular, as compared with their own section. Neither are the Pacific States warm in its favor. This is due to a clause which provides that only those vessels exceeding fourteen knots in speed shall receive benefit. As but few vessels in the Pacific trade come within that limit, there is a feeling on the coast that only the Atlantic seacoast will gain. It is now stated on good authority that several Congressmen of the Central States are on the point of drafting amendments embodying their views, and that they will oppose the bill and presumably defeat it if these amendments are not incorporated. The nature of the proposed changes is not definitely known, but they are said to provide in some manner for a more even distribution of favors. It is probable that the speed-limit of fourteen knots will be a point of attack. If both sides agree on the amendments, the measure is almost sure to pass.

John Ruskin and R. D, Blackmore.

The last two survivors of the golden age of Victorian letters died this week within a few hours of one another. The first was John Ruskin, the great essayist and critic, the second and lesser, R. D. Blackmore, a novelist whose fame rests on one book, but that a work which is almost a classic. Ruskin stood for nearly half a century as "the conscience of England." He was more a preacher and teacher than a pure man of letters, although his style was a model of classic purity. His fame rests mainly on his works on art and economics, but his books, nearly a hundred in all, range over every field of the essay, embracing works on morals, science, literary criticism, and nature. John Ruskin was born in London in 1819, was a precocious child, and early showed signs of genius. He was educated under private tutors and finished at Oxford in 1841. Soon afterward, he made his first success with "Modern Painters," a book famous in the history of criticism. He followed this with other books on a vast range of subjects and was with the immortals while still a young man. His first work is still held to be his masterpiece, but *Sesame and Lilies*, *Crown of Wild Olive*, *Fors Clavigera*, and *Unto This Last* hold rank with it. He preferred to regard himself as a teacher of ethics and culture, and had almost as much influence through his lectures and his professorship at Oxford as through his writings. His style was impetuous and ornate, and distinguished by the suppressed passion which seems to underlie the calm course of the sentences. In his works on morals, ethics, and art, he had much the same message as Arnold—"Sweetness and Light." In the economic and sociological works, he betrayed a leaning toward socialism. He discarded the existing system of political economy because, he said, it took no note of the affections, and put his theories into practice by giving away his large private fortune in relieving social distress. It is likely that Ruskin will live in letters as the foremost essayist of this century. He survived the generation upon which he had the greatest influence; he was the last of the great Victorians. Blackmore's fame rests on his charming novel, *Lorna Doone*. His few other works were not nearly its equal. This story was written while he was still a young man and soon after he left Oxford. It was offered to nineteen publishers before it came to be accepted, and appeared in 1869 only to fall flat. An accident brought it to notice. In 1872, the Princess Louise married the Marquis of Lorne. The public, thinking from the title that this tale had something to do with the bridegroom, took the first edition from the book-stalls, and a steady success followed. Blackmore never reached this early height again, although *Springhaven*, which came out several years later, was a passing good novel. *Lorna Doone* is a story of adventure in the Devon forest, and is notable for its pure English, its romantic quality, and for the unique character of the hero, *John Ridd*. Blackmore was a market-gardener by vocation and a novelist only by avocation. He amassed a fortune in his business, and devoted only his spare time to literature.

Rev. Arthur Divine, a Passionist father and a recognized authority of orthodox Catholic theology, in his book entitled *The Sacraments Explained According to the Teaching and Doctrine of the Catholic Church*, advances the opinion that the telephone may be used in confession, though he says that the matter has not yet been officially decided by the pope. His opinion is that "a priest might give absolution by telephone, under condition, to a person taken suddenly ill, so as to be in imminent danger of death."

EDITORIAL COMMENT

The Justification of Wealth.

THE New York *Times*, and others of the metropolitan dailies have been discussing the "Justification of Wealth," the "Dangers and Advantages of the Concentration of Wealth," with much fervor but to little purpose, as one may readily imagine. The toilers who built the pyramids no doubt, discussed this selfsame subject during the pause for noon-day meals. But the world is no nearer solving the problem of poverty or restricting the acquisition of wealth. To make every man in the world rich would not solve the difficulty. Universal wealth would beget a condition quite as uncomfortable as universal poverty. All being rich, no man would care to labor, and menial work would fall to the lot of the millionaire. Even under this scheme of things, poverty would soon put in an appearance. Some men have a genius for making money, others a strongly developed faculty in a different direction.

There are but comparatively few healthy men in this world who are approaching the evening of life with poverty for a companion, who can't look back over their career and discover wasted opportunities, money ill-spent in luxuries and idleness, which, if husbanded, would have insured at least a competence. You can no more eliminate waste, shiftlessness, and consequent poverty from human nature by legal enactment than you can smother ambition, thrift, and resulting wealth. All men are equal before the law, in the sense that each is entitled to the same protection of life, liberty, and property, but they are not born equal. The puny infant whose shrunken frame holds the ineradicable seed of disease, is not, in the struggle of life, on an equality with the lusty offspring of health. Set the extreme of imbecility beside the other extreme, the quick-brained, well-balanced head of the most successful man of the day, they are not equal. Between these two extremes are manifold modifications of each, the innumerable and varying degrees of human intelligence from a business point of view. Between the imbecile and the scientist or the man of learning are other and different degrees of intelligence. The world and mankind will always exhibit their mental inequalities. Men do not all measure up alike in natural intelligence, or in any other human attribute. It is scarcely wise to attempt to pull mankind down to a common mental or financial level, nor is it possible to build it up to the highest. In the nature of things inequality must and will exist.

The mere possession of great wealth in the hands of a given individual cannot *ipso facto* work harm to the man of poverty. A division of the wealth of fifty of America's greatest millionaires among the citizens of America would only afford temporary relief to the very poor. Such a useless distribution would throw thousands of men out of employment and bring unmerited poverty to deserving men. The citizen who gives the beggar at his door something for nothing commits a crime against society. He has taught the recipient that he may live without work when he might better have shown him a way to work that he might live. The discussion of this subject in New York grew out of an editorial in the *Times*, referring to Mr. Carnegie's splendid gift to the Cooper Union. The article contained this paragraph:

"Riches justify themselves against all accusers when they are wisely employed by their possessor for the raising up of his fellowmen."

Among the criticisms of the very rich came the following, and it offers a fair sample of the tenor of the expressions from that side of the controversy:

"Now, I admire with all my heart the noble benefaction on the part of Mr. Carnegie to the Cooper Union. No institution in this city, the result of charity, has, so far as I have been able to observe, accomplished so much for the deserving poor, and no gift could be made more wisely than this one made by Mr. Carnegie. But when you attempt to proclaim the doctrine that 'riches justify themselves against all accusers when they are wisely employed by their possessor for the raising up of his fellowmen,' you announce a doctrine which cannot be sustained and ought not to be sustained for one moment.

"The pirate Admirals of Elizabeth ravaged Peruvian cities and returned with their ill-gotten spoils, to gain fame which you would seem to afford to riches, by using a portion of them to found monasteries and religious institutions. The Baron robbers of the Rhine, two centuries ago, robbed the wayfarers along that river, and then consecrated their plunder to establishing monasteries with a portion of it. The footpads on Houndslow Heath, two hundred years ago, robbed the traveler of his watch and pocketbook and trinkets, and then curried favor with the poor by their generosity; but our modern highwaymen put Dick Turpin to the blush, for they bribe a board of aldermen and steal the very highway itself, and then, having attained great riches, a portion of which they wisely employ in charity, they justify themselves in your language, 'against all accusers.'

"Mr. Carnegie, you say, 'justifies his wealth by this disposition of it.' No man can justify his wealth by the disposition of it, if he has obtained it through wrong or injustice, and, though Mr. Carnegie, more than any man of great wealth in this country, probably, has achieved a considerable proportion of his wealth through great energy, intelligence, and business enterprise, still, you know, and every man who is acquainted with the facts knows, that a great proportion of that wealth is the result of special legislation, obtained through high protective tariffs. How has such legislation been obtained? The process is known to all men. Its possessors contribute enormous sums of money to campaign disbursements, and many of them do not scruple, if necessary, to buy legislators."

That this campaign is eminently unfair must be apparent on its face. The "special legislation" of which the writer complains benefitted not only Mr. Carnegie but every American engaged in the iron trade as employer or employe. It built up cities and states, it developed coal and iron mines besides manufactures, it represented the doctrine of the greatest political party in America. It was not special legislation in the sense that it gave a monopoly to Mr. Carnegie, for any and every American citizen might take advantage of the benefits which it conferred on American manufactures.

Henry George, Jr., in his contribution on this subject says:

"What then is the cause that so augments the few fortunes on the one side and deepens general need on the other? For obviously that which produces the multiplying result also produces the counter result."

Is this deduction true? Does the fact that "A" is thrifty, increase the poverty of "B." The fact that Mr. Huntington is rated at thirty millions of dollars has not subtracted a dollar from the savings of thrift, or a penny from the purse of poverty. Take the example of Mr. Huntington. He left school at the age of 14 and commenced to battle with the world a poor boy. His wealth today is not represented by money stacked up in guarded vaults and withdrawn from general circulation—no man is poorer because this ambitious boy developed into a millionaire. His wealth is represented in real property and the products of labor. His enterprise has given employment to tens of thousands of men. Cities, towns, and states have been developed through the instrumentality of his enterprises, and such development has enriched others. That men have been made comfortably rich through the enterprise of his wealth is capable of demonstration, that the poor have been made poorer thereby is not true. Of course, if one proceeds upon the assumption that the millions of money credited to our multi-millionaires is represented by coin locked up, secreted and withdrawn from circulation, it is not difficult to discover harm that must follow. But it is patent that such money, turned into the field of labor and production, works more good to mankind than will all of the socialistic doctrines devised by well-meaning but misled mankind. If the advocates of restricting wealth were to come together tomorrow, and be vested with power to act, they could never agree as to the maximum amount a man should be permitted to acquire. To one man a hundred thousand dollars would seem the desirable limit, to another a million. The ten thousand dollar limit would have its advocates and the individual advocating the smallest sum would be just as wise as he who advocated the largest sum. It is not likely, however, that the time will ever come when this question will be seriously discussed in America. It belongs to a people of mediocre talents, who confess their inability to succeed through their own exertions and wish to cure their natural defects by artificial laws.

The Roberts Case.

THE case of Roberts, the polygamous Congressman from Utah, forms an episode which serves to illustrate the danger and evils that may and generally do flow from our unfortunate habit of allowing the thoughtless, emotional, and sensational elements of organized society to exercise too potent a voice in the direction of grave public affairs. The agitation against Roberts was, from the start, designed and conducted along sensational lines and largely by people whose unclean lives demonstrate that they care nothing for the principle of public morals in behalf of which they professed to be acting. Neither the cause of good social order, nor of pure morals, nor of any other public interest would have been in anyway menaced by the unchallenged admission of Roberts to the seat to which he was elected. Polygamy, like slavery, is a dead issue—except in our new possessions in the Orient. The battle over those twin evils has long since been fought and won. Both, however, left marks behind that only time can efface. Slavery left social, racial and political conditions that give great trouble even now, nearly forty years after the abolition of the "peculiar institution." But, from a point of time placed—say—five years after the civil war closed, there never was room for an intelligent doubt but that even the people of the South, if left to themselves, would have refused to restore the evil that had been destroyed in blood and hardship. In the same way, while a belief in the righteousness of polygamous marriages has not been destroyed in the Mormon mind, there has been a general acceptation of that new order of things which recognizes monogamy as the keystone in the social structure. There are, doubtless, and will continue to be for years to come, many isolated cases of the evasion of the law, more particularly in regard to old marriage relations. But, little by little, the old system and its memories and habits will die away and the new moral standard be woven into the warp and woof of the Mormon life. There was, therefore, no need for the hysterical outcry that has been made against Congressman Roberts. It was not an intelligent outcry that voiced a reasonable alarm. The Congressman's election was not a test case or the *avant courier* in a movement looking toward the restoration of polygamy. Nor was it an outcry that has been made in good faith. One of its leaders is a man who has violated even moral law in a short life of lecherous profligacy that has been Oriental in its sensual extravagancies. Outcries against the comparatively clean institution of plural marriages cannot come in good faith from dirty throats like that.

But, no matter what its motive or inspiration, the outcry has been made and heeded. It has been taken up and re-echoed across the continent by a crowd of cackling geese, who make up in volume of voice what they lack in brain power. And Congress in an evil moment has regarded it to the extent of refusing to allow a member who, upon the face of the returns was legally and undisputedly elected, and is fully qualified, to take his seat until a Special Com-Committee had examined into the case. That committee has just submitted two reports—a majority and minority—one of which recommends that the member be refused his seat, while the other advises that he be given his seat and then expelled. And now, as Boss Tweed once remarked: "What are you going to do about it? If the Congressional leaders had acted wisely, they would have made an unofficial investigation into the case before the House met and then seen to it that they seated the member in the most unostentatious manner possible. In that way they would have avoided the dilemma they are now compelled to face. But that course is no longer feasible. Evidence has been taken and it seems to be conclusively established that Roberts, while he has respected the Edmunds' law in so far as further marriages is concerned, is still living in the polygamous relations he had already assumed when that law was passed. The issue having been raised, however, to admit the man to his seat now and take no further action would be equivalent to a recognition of polygamy. Upon the other hand, the man has been elected, and as he possesses all the qualifications prescribed by the Constitution for Congressmen, he can only be excluded by establishing some qualification that is not in the Constitution. Congress has no right to do that, and if it does it for one purpose it may do it for another. Thus the wearing of some particular style of dress that is objectionable to a large number of people might be arbitrarily made a qualification for Congressmen; religious test might be established and a thousand and one other objectionable things done without the consent of the people. No member of Congress can vote for a proposition of this kind without violating his oath of office, and, in addition to becoming a perjured scoundrel, making himself a traitor to the institutions of his country. Clearly, therefore, the only course that can now be pursued is to let the Congressman take his seat and then expel him because of his immoral and unclean manner of life.

Lessons of the Boer War.

It is perhaps just as well for Great Britain that the Boer war came on just when it did. It is a severe struggle, a much harder one than any observer on the Anglo-Saxon side anticipated at the beginning, but after all it is not a war which need unduly tax the resources of the Empire. A serious European conflict would have proved the weakness of the British army under conditions infinitely more serious; as it is, the reorganization to follow the conclusion of the Transvaal war ought, in all conscience, to bring the British army up to the standard modern strength. Certain of its weak points have already been shown in the disastrous campaigns on the Modder and Tugela rivers and in the Ladysmith affair, others will doubtless be revealed in that decisive battle for which Buller is now preparing his division.

The chief fault manifested is in the weakness of the English artillery. The soldiers under Methuen and Buller have been sent up against quick firing guns such as the French and German armies are equipped with, and have had to reply with ordnance ten years behind the times. The holding out of Ladysmith is due to the use of five naval guns brought from a battleship before the investment of the town had been completed. The other cannon of the defenses are over a thousand yards short of the Boer range. This is not the only surprise in connection with the artillery, however. The Boers have proved themselves competent to handle modern ordnance. Their marksmanship, their estimation of ranges, and the smartness with which they serve and move their guns has evoked the admiration of the critics, who, however, ascribe their facility, perhaps correctly, to German and French artillerymen.

No less obvious than this is the inferior mobility of the British commands as compared with that of their opponents. With the marksmanship and discipline of civilized troops, the Boers shift and cover ground with the ease of savages. They need no baggage-trains When a corps gets ready to move, the soldiers pull up stakes and travel as swiftly as independent horsemen, living on the country or on supplies carried by individual soldiers. On the other hand, the British, unused to giving up the comforts of civilization for campaigning purposes, advance "on their stomachs," encumbered by huge commissary-trains, which hold the army back from any quick movement. It was this inferior mobility that held back our own troops in the Filipino campaign, until the late General Lawton showed the men how to live off the country. In short, soldiering being now a trade and including the knowledge of living well in the field, as well as of drill and tactics, the Boers have proved themselves the superior craftsmen. Of course, the comparison is not entirely a fair one. The Dutch are fighting under conditions which suit the peculiar conditions of this warfare. Nevertheless, transported to Europe, their mobility, combined with their marksmanship, would still render them dangerous antagonists to any European army. And, by the same token, put British soldiers in a European war and their bravery and *esprit de corps* would avail them nothing against the ease of movement and practical campaigning taught to the German and Russian armies.

The fault does not lie with Landsown or Woolesley or any one of half a dozen men. It lies in the system which has been built up by successive generations of ministries and generals. Secure in the protection afforded by a mighty and excellent navy, and under no strain from an unfriendly nation close to their borders, they have let the army fall behind the pace cut out by the other European nations. The equipment is behind the times; rapid movement, accurate and efficient artillery practice, and smart campaigning have been made subservient to mere drill. It is the military ideal cherished in the sixties, before the results of the Franco-Prussian and Russo-Turkish wars taught Europe the modern method of extended warfare.

THINGS & PEOPLE

Juggled Statistics.

THE publication of recent statistics on the comparative physical development of girls in the eastern and western colleges has attracted a rather undue amount of attention throughout the country. The figures, such as they are, go to show that the western girl has greater strength and vitality, as shown by a bigger neck, deeper chest, and broader shoulders, and that her eastern sister is taller, more slender, and more graceful. The "story" growtng therefrom makes excellent copy for the Sunday supplements, but to one familiar with statistics and the manner in which they can be juggled, it is only an example of the fact that figures do lie. In the first place, the college girl, recruited as she is from a special class, is a very unfair standard by which to judge the young women of the entire country. A second consideration wrecks the whole "story," pen-decorations, outlines, half-tones, tables, and all. In this western country nearly as many college girls go east as stay at home. As is the case with their sons, people of the wealthy class prefer to educate them in expensive eastern institutions rather than in the cheaper ones nearer home. Beyond this, people of wealth and culture have a feeling—call it prejudice if you will—against placing their daughters in co-educational institutions, preferring, if the choice has to be made, to school their boys near home and their girls in the East. In short, the college women of the East are composed of average young women of the section, plus a large body of girls from the wealthier and more cultivated class of the West. The college women of the West, on the other hand, are made up of average young women of that section, minus the same body of girls from the aforesaid wealthier and more cultivated class. No one doubts that, as people mount in the social scale, the men and women both become taller, less strong, and more refined in physique—which is all that these so-called statistics go to prove. They serve only as an example of the process by which Bryan builds silver arguments.

University Athletics.

NOW that the football season is over, the enthusiasm of the undergraduate turns to the lighter forms of athletics which prevail in early spring. At this distance, it seems as though the chances for baseball are about even, while in track, California is likely to retain the championship. Although Berkeley won in the national game last season and although she has lost fewer men by graduation than Stanford, she will miss Joe Corbett, whose coaching was responsible for the victory in 1899. Corbett is one of the best coaches in the country, while Borchers who handled Stanford, is notoriously weak in "head-work." This year conditions are reversed. It is not known who will have control at Berkeley, but it will not be Corbett. At Palo Alto, "Doc" Murphy, a coach and trainer of long professional and amateur experience, will have control. His ability ought to offset the longer experience of the U. C. men, and make it anybody's series.

* * *

In track, California, with nearly all the old tape-crackers who walked away last spring, has an initial lead which nothing but a phenomenal team from Palo Alto can touch. Wisely for herself and fortunately for the Coast, Berkeley has gone in to encourage the athletic talent of the preparatory schools. In the past three or four years this policy has worked wonders. A few seasons since, only Oakland High School, the San Francisco High Schools, and one or two academies on the bay region ever thought of track athletics. Now all the secondary schools of Northern California are enthusiastic supporters of this branch of sport, and the Interscholastic Field Day is only second in importance to the Intercollegiate. All this, or most of it, has been due to missionary work from the University of California, and the students and graduates who did it have had their reward in the supremacy of their college on the track. And inasmuch as this goes to the encouragement of amateur athletics, which are better in nearly every way than professional sport, the Pacific Coast is the gainer. Everyone concerned is benefited—except Stanford, which is too far away from the center to take much part in the movement, and has had to permit the rival college to capture the pick of the young athletes developed under the new regime.

***

Clubs for Working Girls.

CURIOUS that among the innumerable devices of California charity there should be so little effort towards the assistance or protection of the better class of girls. There must be in San Francisco thousands of young women—typewriters, saleswomen, milliners, dressmakers, and clerks of varying degree who, subsisting on their own earnings, and denied the comforts and restraints of home life, lodge in the rooming-houses, eat in the restaurants and in their houses of leisure, and are thrown on their own resources for entertainment. It is but natural that a day of labor should give rise to a desire for relaxation, and, left to their own initiative, what wonder is it that many fall by the wayside? In other cities the welfare and amusement of this type of young womanhood is the favorite undertaking of fashionable society. There are hotels and lodging-houses to which women alone are admitted, and clubrooms comfortably fitted up for them in which entertainments are given several times a week. Sitting rooms with pianos and musical instruments, reading-rooms equipped with the best current literature, and educational facilities—all tend to engage and improve the leisure of the workingwoman. Whoever knows aught of the temptations that beset the paths of girls, homeless and unprotected in a large city, will agree as to the wisdom of organizing on a broad scale institutions of this character. They should not be undertaken in any narrow, sectarian spirit, but with the defined purpose of supplying certain material and intellectual necessities, such as, in a different way, the Young Men's Christian Association does. For the education and entertainment of young men there are in all the Coast cities ample facilities; for the young women—none. I am firmly persuaded that a well constructed rooming-house for women only, close to the business quarters, equipped with some facilities for amusement in the shape of general reading and sitting rooms, would prove a satisfactory investment, besides subserving an admirable purpose. The California Club, which is composed of women of character and energy, could hardly do better than engage in so admirable a cause, and I commend it to their attention.

***

The Municipal Election in Seattle.

SEATTLE will soon be in the throes of a municipal campaign. The election occurs early in march, and Republicans, Democrats, and Populists have called meetings of their city central committees, preparatory to entering upon the contest. This time it is difficult to predict the outlines of the engagement, because there are two reform parties in the field, and the feeling is general that regeneration is badly needed. The Democrats declare they will enter the field on a straight ticket, but they are not strong enough to meet the Republican majority without the assistance of the Populists and Silver Republicans, so that coalition is probable. Among the Republicans proper there exists considerable confidence of success, though the question is, what figure will the reform party, which proposes to nominate a citizens' ticket, cut? The second reform party is composed of single taxers, whose natural affiliations are populistic. However, it is the purpose of all concerned to confine the fight to issues purely municipal, though this laudable intention may be defeated, not by the imminence of the national campaign, strange to say, but by the Boer war. Seattle is close to the British Columbian line, and among its population are many naturalized Englishmen, whose sympathies are, naturally enough, with the mother country. But opposing them are Scandinavians and Irish, together with many Americans, whose partiality is for the Boer side of the controversy. Between these elements, feeling runs high. Nowhere in the country are the war bulletins scanned with greater eagerness than in Seattle, and throughout the day little groups are gathered round the newspaper offices, eagerly arguing the merits of the issue. Time and again the physical test has been resorted to, with such satisfaction as usually follows a resort to nature's weapons.

***

Seattle and the China Trade.

WHEN President Hill of the Great Northern road speaks his mind, he generally means what he says, being a man not given to wild or extravagant statements. Therefore, his program for the Northwest, as outlined in a recent speech at St. Paul, has attracted more attention in Seattle than anything since the discovery of Cape Nome. A line of freighting steamers whose individual capacity exceeds the greatest ever attempted in ship-building, a through connection with the Atlantic ports, an outlet to the Orient for the farms of the northern prairie region—all this brings the vision of Eastern trade very close to us. It is a fact that these great and sudden periods of expansion in a section of the United States have always been the result of the labors of some industrial leader. Astor opened the Northwest originally; Carnegie was the founder of the Pittsburg steel industry; Huuntington and his associates, by building a railroad, made possible the agricultural development of California. Immense riches in the hands of one man may be—sometimes is—a public calamity, but much more frequently the interests of a section become coincident with the advancement of one wealthy individual in the section, and both develop together. This is the case with the city of Seattle and the empire to which that city is the port of entry. They will advance together.

* * *

As for the statement that Seattle is nearer to China by eight hundred miles than San Francisco, and is therefore bound to take the overland trade, this need not be a question at issue between the Queen City and the City of the Golden Gate. This is a big country and China is no hamlet. The great wheat yields of the prairie states will probably go to the Orient through Seattle, but the products of the South, the Southwest, and much of the East will go to China by way of the docks of San Francisco. The Interoceanic canal is coming in the next twenty years, to change the whole aspect of affairs, to alter the situation, no one knows just now. Meanwhile, I think the two ports will ship from different fields and will cross one another very little. There is enough for both.

BOSWELL, JR.

3rd D. STEPHENSON — 1st H. A. RAWLINS — 2d ALEXANDER SMITH

WINNETS OF THE PROFESSIONAL GOLF TOURNAMENT AT THE OAKLAND CLUB LINKS.

FIGHTING THE PLAGUE IN HONOLULU.

THE NATIONAL GUARD ENFORCING THE QUARANTINE.

BURNING INFECTED HOUSES IN THE CHINESE QUARTER.

In spite of all the precautions in the way of quarantine, burning of infected buildings, and fumigation, the bubonic plague continues to spread in Honolulu. It is a terribly insiduous disease, this Oriental scourge, being slow but persistent. The germ seems to possess great vitality, and the almost absolute failure of scientists to discover either a preventative or a cure forces them into dealing with it in a fashion almost medieval in its crudity. The infected town is now closed almost completely from the outside world; shut in alone, they are fighting with the disease.

The situation is not so alarming as might be thought from a pure statement of facts. To begin with, the attacks have been confined, with one exception, to the Oriental part of Honolulu's population. While from a theoretically philanthropic point of view a Caucasian may consider one human life as good as another, in practice it is quite different. We are selfish enough, all of us, to restrict our wishes to the hope that it may not get beyond Chinatown.

The troops, regular and volunteer, who have braved the dangers of contagion in enforcing the quarantine and burning diseased districts, are the heroes of this plague-scare. If the disease spreads to the whites it must take them first; they know this, and it is to their credit that they go on regardless of the fact. Whenever a suspect is discovered, the patient is removed to the detention hospital at once. The house is closed and a strong guard placed around it until it can be destroyed. Then, the torch is applied, and the fire department, always brought out for such an emergency, watches to keep the fire from spreading. Where the building is one of a series, as is the case with many Chinese rookeries, the whole district is burned. Already, some of the closest sections of Chinatown are in ashes.

M. Benard, winner of the University of California architectural competition, has returned to Paris and in his studio will re-create his design for a university plan. It is explained now that the original *concours* was rather a trial of strength intended to disengage a man sufficiently able to undertake the great task of fittingly housing the university rather than what it was commonly regarded, a device to obtain a satisfactory and practical design. M. Benard is now to formulate a practical scheme within certain distinct limits, but is at liberty to change the original as his judgment dictates. We shall await with interest the reconstructed plan. It seems a pity the creation of the University is not to be entrusted to an American architect, but as that is out of the question we must hope that M. Benard will give us his best.

* * *

The most important modification the life of the university town of Berkeley has ever known is due to the presence there of Mrs. Phœbe Hearst. Hitherto the social life of this beautiful burg has been amazingly formal, stilted and angular. There is a university set and a society set, the one presided over by the celebrities of the faculty, the other of residents engaging itself in all the average diversions. The great events were receptions at the president's mansion, minor dinners at professoial villas forming the incidents. With Mrs. Hearst on the scene a change has come over all the components. In her home they have met on a common ground; the learned have been lured out of their shells; and the students have been gathered in as guests irrespective of fraternity affiliations. Altogether the gracious hospitality of this lady has done more to infuse interest and charm into the life of Berkeley than all the influences combined of Regents and Faculty have achieved in the past. To have accomplished this, to have created this atmosphere of urbanity, culture and kindliness in Berkeley is an end Mrs. Hearst could never have attained with her millions, and is a tribute to her womanhood that she must be grateful to receive. The new era in the University is to owe more to her than mere material aid. The virtue and value of such an influence as she wields in the development of that homogenitry and *esprit de corps* which Berkeley has ever lacked is hardly to be computed.

A French naturalist asserts that, "if the world should become birdless, man could not inhabit it after nine year's time, in spite of all the sprays and poisons that could be manufactured for the destruction of insects. The bugs and slugs would simply eat up all the orchards and crops in that time."

CAPE NOME GOLD FIELDS

KING SOLOMON'S mines were rich beyond description, but it is doubtful if they were richer than the Cape Nome diggings. Less than a year old, these fields in far away Alaska have produced nearly three million dollars in gold, and when it is taken into consideration that the climate permits of only three months' work, this is a pretty good showing. Nearly all this gold was taken from the sand on the beach. The placers on the various streams near by were scarcely touched and the quartz mines, which undoubtedly will be found in the mountain range which runs along the coast, have not even been prospected.

It is truly a wonderful country, and the ground is literally paved with the precious metal. Whether the gold came from the mountains in Alaska and was washed down by the rains, or whether the vein is a continuation of that which has been so long worked in Siberia on the other side of Behring Straits, will probably never be known. At any rate, there is gold there and plenty of it. It is in the sand and on the beach; it is in the beds of the various creeks and rivers, and even the mud just under the moss which covers the tundra beyond the beach produces the yellow metal.

The country, thus far, is a dream. Its possibilities cannot be estimated. Even the most sanguine are appalled at the vast amount of wealth that indications show is in the ground there. In a few months the three thousand people who have spent the winter there will see a vast army of gold-seekers come in. They will come by steamer from Seattle, San Francisco, and Portland, and by dog-trains from Dawson down the Yukon. Several hundred men have already left for the new gold fields by way of Dawson. Thousands have engaged passage on the steamers which will sail for Nome early in the spring, and berths are at a premium, too. To those who do not know, it might be well to say here that the waters surrounding Cape Nome for miles and miles are frozen solid in winter, and it is only in the spring and summer that a ship can get within landing distance of the beach. So now the only means of ingress and egress are over the ice to St. Michaels, and along the frozen Yukon to Dawson. The ground freezes in winter and very little work can be done. In fact, there are only three months during the year when work can be carried on in these extraordinary diggings. These months are the latter part of May, June, July, and a part of August. However, the ground is so rich that it is not an uncommon thing for a fortune to be realized in this brief space of time. So much for the richness of the country. Now for a little about the history of these wonderful discoveries.

The first news that there was gold at Cape Nome was received at Seattle and San Francisco almost simultaneously last July. Charles D. Lane brought to Seattle $10,000 in gold dust. On the same steamer which carried him down were any number of returning prospectors who had failed in their search for the precious metal. Lane said that he gathered his dust from a claim on Anvil creek, which runs into the ocean near Nome. Every other one of his companion passengers denied that there was any gold there. They insisted that he was in the employ of the transportation companies, and that he and these concerns had plotted to bring a lot of men to an inhospitable and barren country for the purpose of profiting by carrying them north from the states and back again.

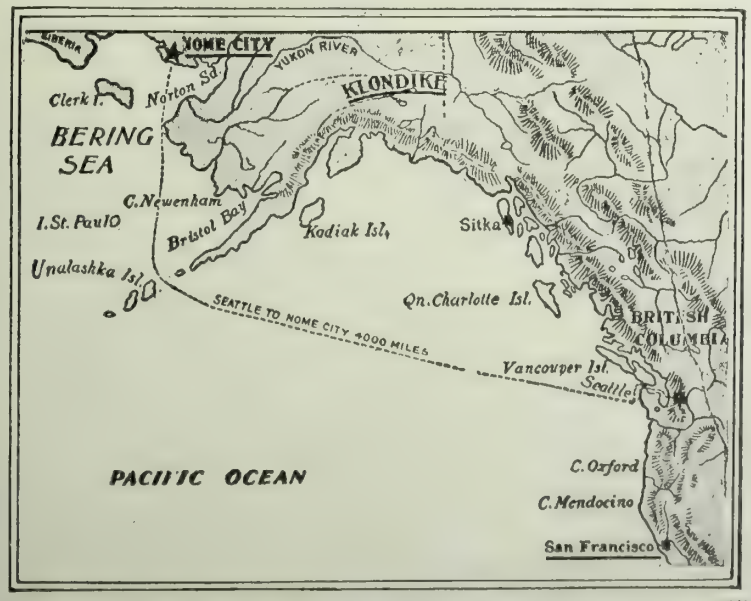
This was before gold had been discovered on the beach. Almost the very next ship that came down brought the news that hundreds of unfortunate miners who had failed in the Klondike and had come down the river were taking out from twenty to a thousand dollars a day from the sands of the Nome beach. Each ship that followed brought down reports corroborating the wonderful richness of the beach. In a month the fame of the camp was established. It is estimated that at least 30,000 people will go in this spring. Seattle, San Francisco, and other Pacific Coast points will be the embarking places.

The richness of the district was first made known to the world by N. O. Hultberg, a Golovin bay missionary. He found gold on Anvil creek, and not long afterward locations on the same creek were made by E. O. Lindbloom, Jafat Lindeberg, and John Brynteson. They were the pioneers and were followed by W. H. Price, Dr. Gregory, William Kjellman, and two Laplanders. Mr. Lane came later. The news spread to St. Michaels and there was a rush to the camp, with the result that every favorable location was pre-empted.

While the gentlemen mentioned captured the first fruits of the diggings, there are others who are really responsible for opening them to the world. They are: D. B. Libby, H. L. Blake, A. P. Mordant, and Lewis Melsing. They provisioned a ship at San Francisco and left for Golovin Bay on September 17, 1897. Cold weather prevented them from doing any prospecting that year, but during the following season they found colors on Ophir creek in the Nome district, and all made good locations. On April 25, 1898, a miners' meeting was held and the Eldorado district was organized. It covers an area of thirty square miles. Since then, however, it has been discovered that the beach as far north as Cape York is lined with gold, and the possibilities of the district cannot be estimated.

Cape Nome is situated on the eastern shore of Behring Sea, or the west coast of Alaska, about one hundred miles northwest of St. Michaels Island, which itself is sixty miles north of the mouth of the Yukon river. The center of the mining camp was originally called Anvil City, but Nome being better known than Anvil, it was selected as the name for the town, and now it is known as Nome City. As already announced, very little work has been done on the placers. Nearly all the gold taken out has come from the beach diggings. The placers along the streams, however, are so rich that they are beyond estimation. These streams are named Snow, Anvil, Glacier, Dexter, and Buster. Nuggets averaging in value $150 each have been taken out of claims on these streams. The claims are 1320 feet long, and very few of them cover an entire stream.

But the beach is free to all. No locations can be made upon it, and anybody is at liberty to dig where he pleases. During the past year only the most crude appliances have been used to extract the dust. At the present time any number of schemes have been floated to send north machinery to force the earth to give up its wealth. A company to put in a water plant has been organized; another concern will dredge the ocean near the beach, and other companies will put in hydraulic machinery. At least fifty steamers and sailing vessels will leave Seattle for Nome during May, and there will be regular lines running from the Pacific Coast ports during the rest of the season.



In Switzerland's six universities there are 937 women students, of whom 555 are matriculated regularly. The greatest number, 353, comes from Russia; 65 are Swiss, 53 Germans, 25 Bulgarians, and 7 from the United States.

WE are told on unimpeachable authority that "Heaven is paved with gold." Cape Nome, on the Behring Sea, Alaska, is not heavenly, from an atmospheric or climatic point of view, all the year round, but for nature's gold paving it is a heaven on earth. The very sands on the seashore are yellow with the precious metal and the under stratum is dotted with nuggets of more than ordinary size.

I have seen most of the gold-mining regions on this mundane sphere and can truthfully say that none compares with Nome. It is the most remarkable gold-mining region at present in the world, if not in the entire history of gold-mining. It is about 225 miles north and west of the mouth of the Yukon River, or 133 miles from Healy, St. Michael's Island.

Regarding the description of the Cape Nome mining country, I have no hesitation in saying that as far as discovered the sands of the seashore carry more or less gold from a point 250 feet out to sea and beyond low tide, thence inland to the tundra, a distance of about 500 feet. I have prospected these sands, at intervals, on the beach for thirty-five miles; the values, I found, were singularly uniform. The tundra, or Siberian marsh, will probably average about eight feet higher than the beach, that is, above high tide. The tundra is a mossy, tufty morass, containing water on the surface in summer, and ice to an indefinite depth. It has not been prospected to any great extent, but a quantity of thawing machines were sent up there on the last boat, and undoubtedly before this time they have gone deep into the frozen depths of the tundra. My theory is that the tundra contains more or less gold, which will be gotten at when the sand is reached, and will probably be from eight to ten feet below the surface of the tundra. This, when found, will be in places on the ancient beach of Behring Sea, where gold was deposited in vast quantities previous to the receding of the sea. This tundra runs from high tide back to the foothills with a very gradual slope; reaching the foothills I found the undoubted evidences that once the tides reached this point. Again, regarding the tundra, I found evidences of the creek and river beds of ancient days. These creeks are now named Penny, Snake, Nome, and there are numberless unnamed swales and gullies, now dry, whose waters have been diverted into other channels. The gold in the tundra unquestionably came from the various gulches, which are now being worked for placer in the foothills and mountains, from seven to fourteen miles from the beach.

Now, again, regarding the beach, I might add that all the gold taken from it up to date has been extracted from the sand by means of the rocking process. In no place have the lower grade sands been worked, miners preferring to work nothing that paid less than twenty-five dollars a day. As the work of a rocker and two men does not, in ten hours, exceed the washing of over two good-sized wash-tubs of sand, it is easy to imagine how little of the country has been disturbed. I panned many times the tailings of the rockers, and in no instance were the results less than about $20 to the ton. I made these deductions by weighing the gold and allowing thirty pounds of sand to the miner's span. By the rocking process I am certain it is impossible to extract over fifty per cent of the gold values.

Perhaps the following record and memorandums, which I made in my travels through the placer mines near Nome and up and down the beach, here and there, for thirty-five miles, would be about as interesting a description of the country as any. Apropos the beach deposits the New York *Sun*, October 1, 1899, says:

"This beach deposit of gold is as yet an unsolved problem. By some it is claimed that the gold in the sand, which is entirely dust, has been washed out from the tundra by the waves at high tide and deposited through hundreds of years in the sand. It is found here now from two to five feet below the surface in the drifts, and so plentiful that the miner who does not find it in paying quantities is the exception. On the other hand, there are some who claim that the gold is washed in from the sea, and that the real field, or mother lode, so to speak, is to be reached and developed by dredging."

"The following are my personal experiences, jotted down in my own book as I traveled through the country on the

beach and in the gulches every day for more than a month: "Aug. 10th.—Earl Hyde, Tough Nut Jack, C. Briggs and Lon Chapell, on beach seven miles from Anvil City, rocked out 150 ounces in four days. Aug. 10.—J. H. Wilson, two miles below Anvil, on beach, showed me a sack containing $912, out of about seven days. He afterward took $130 out of four pans of sand. Aug. 11th—Macomber and Levy, about a mile and a half from Anvil City. Here I got a nugget weighing $4. The nugget was found in the sand about 250 feet from low tide. Jim Dunsmuir and William Bates told me that they had averaged about $40 per day rocking. They were about eleven miles south of Anvil. Price, on No. 8 Anvil, Sunday, 20th of August, sluiced out $6,400 in seven hours with six men. Lindblom took out $18,000 in eighteen hours with six men, August 14th.

"Aug. 10th.—Snow Gulch Claim, No. 3, took out $12,000. They now clean up twice daily. Man named Loss, Aug. 15, rocked out $240 in two hours on Dexter Creek. Billy Walton rocked out $80 in less than an hour on Dexter. Man named Leo, crossing on No. 9 Dexter, took out 19 ounces in one day. E. M. Walters panned $120 off No. 5, on Dexter. He also took $54 out of one pan on Anvil. A man on Bangor Creek told me that he had got as high as ten dollars to the shovel in bed rock.

"Aug. 24th.—Two men on beach cleaned up $600.

"Aug. 29th.—Leidey made a wooden caisson and sunk it about 250 feet beyond low tide and got from fifteen cents to fifty per shovel. I did not see this experiment, but I believe firmly that the richest part of the beach is beyond low tide."

"A new district called Cripple Creek has been found. It starts in about fifteen miles from Anvil, on Penny Creek. The beach is wide and pays good."

There will be more money come out from Nome next year than from the Klondike. I estimate over $1,000,000 from the beach alone this year.

First discovery of the Golden Beach was made May 22, 1899 by William C. Slade and J. F. Thornwait, at mouth of Jess Creek, about six miles west of Anvil. These men have been in the country three years, and report October as a beautiful month. The beach can be worked about eight months. It rained up there January 27th.

Benjamin J. Becker, of 38 Montrose avenue, Brooklyn, has a high opinion of the riches of Cape Nome fields. He is enthusiastic over the place. He has staked eight claims. He returned East this month, but is going back when the season opens. In describing the place he said in an interview:

"When we reached Cape Nome, you could see the gold glittering along the beach, which is covered with thick moss. If you walked along the beach you could wash gold from your boots when you returned to your hut. Two partners near us, a Laplander and a man from San Francisco, had the best paying claims. They never took out less than $7,000 worth of gold a day, and I have seen $10,000 worth taken from a single claim in one day."

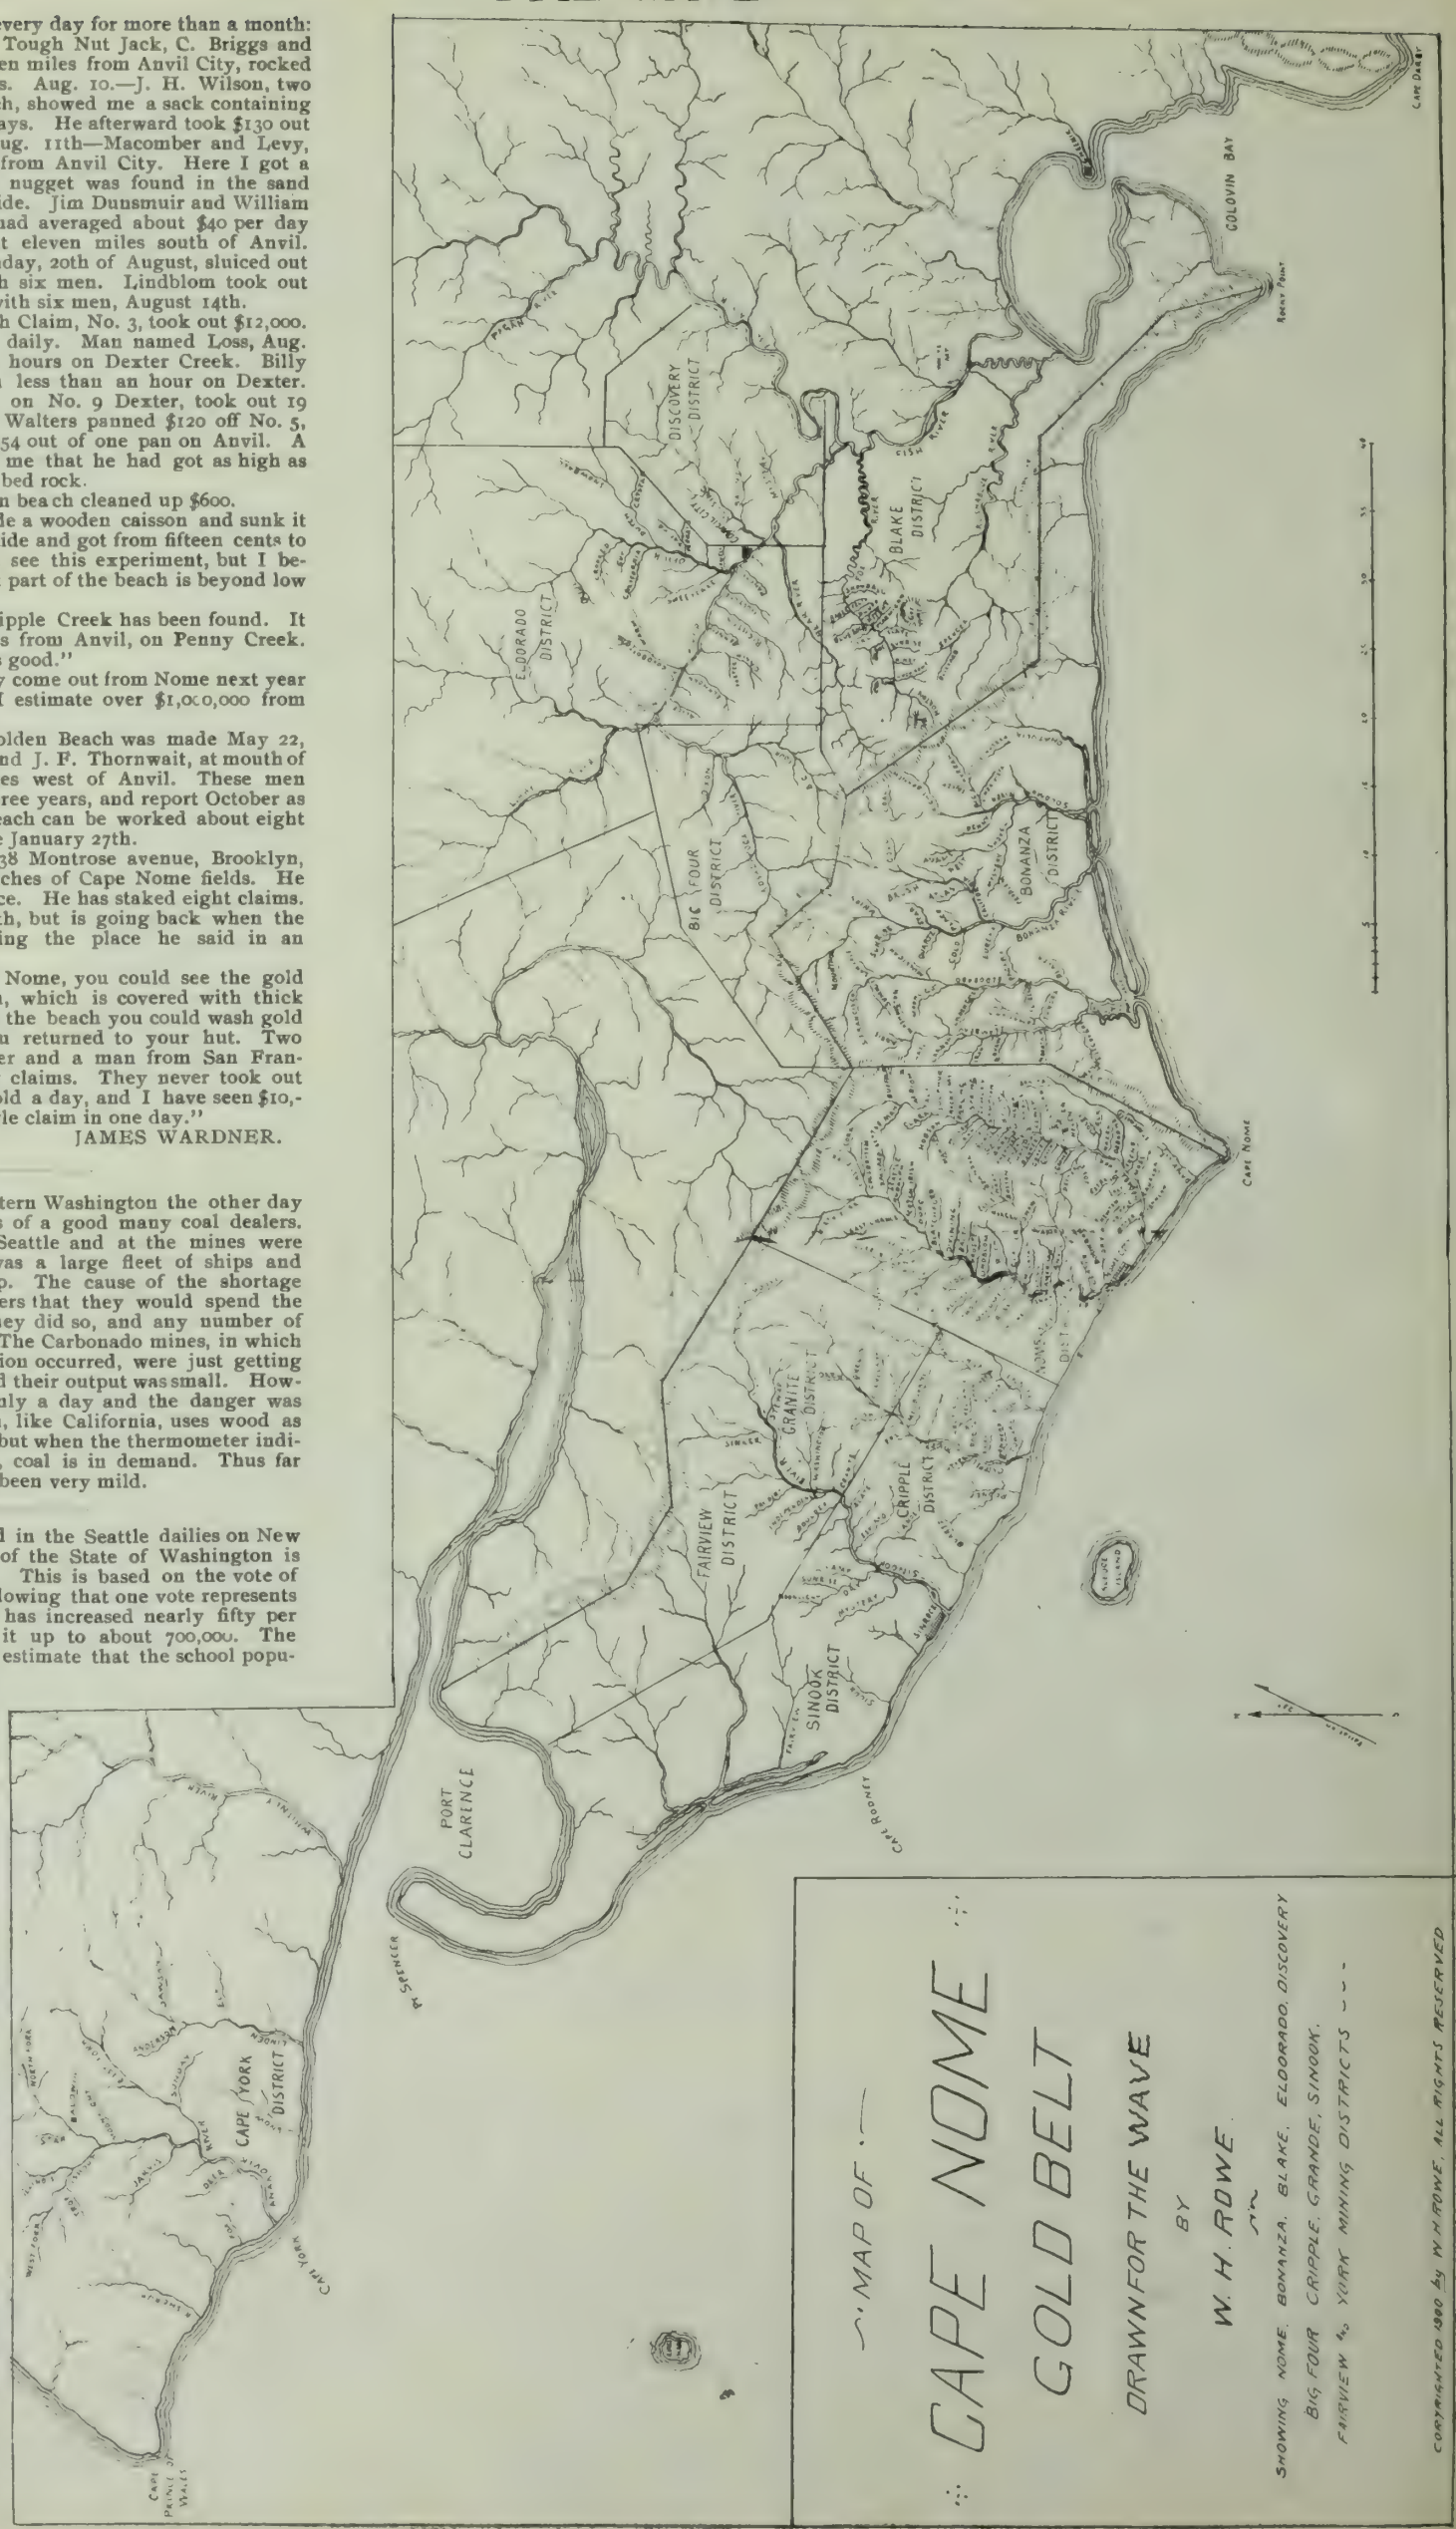
JAMES WARDNER.

A slight cold snap in Western Washington the other day sent a chill down the backs of a good many coal dealers. It seems that bunkers in Seattle and at the mines were nearly empty and there was a large fleet of ships and steamers waiting to coal-up. The cause of the shortage was the decision of the miners that they would spend the holidays above ground. They did so, and any number of collieries were shut down. The Carbonado mines, in which the recent disastrous explosion occurred, were just getting into working order again and their output was small. However, the cold snap lasted only a day and the danger was over. Western Washington, like California, uses wood as fuel whenever it is possible, but when the thermometer indicates something near zero, coal is in demand. Thus far this season the weather has been very mild.

In the statistics published in the Seattle dailies on New Year's day the population of the State of Washington is estimated at about 700,000. This is based on the vote of 1896, which was 93,500. Allowing that one vote represents five persons the population has increased nearly fifty per cent., which would bring it up to about 700,000. The school authorities of Seattle estimate that the school population of the state is 127,366. This would give the state a population of 1,146,294. This is undoubtedly too large; 700,000 is nearer the figure.

The revenue cutters in the waters about Puget Sound have been kept busy since the great storm that caused so much havoc along the coast, hunting up missing vessels and ships in distress, provisioning them, and caring for helpless crews. A good many people who had an idea that these craft were simply for ornament have learned a lesson, and their crews have received much deserved praise. They have gone out in the face of the most severe storms when other vessels hunted sheltered bays.

The quantity of lumber required to supply the demands of the Cape Nome trade can hardly be appreciated at the moment. Houses are constructed with two to five thicknesses of lumber, with double windows and storm doors. In the building of Dawson twenty million feet of sawn timber was used though half the buildings were made of logs. At Nome there is not a stick of lumber.



Along The Beach At Cape Nome

THOMAS D. CASHEL, MAYOR OF NOME.

TENTS OF THE GOLD SEEKERS.

WILLARD EDDY, NOME'S CHIEF OF POLICE.

NOME'S FUTURE.

BY HERBERT MURRAY.

BEFORE twenty-four months from the date of discovery of the Cape Nome mining district, Nome will have a population of 30,000 souls and be the greatest commercial center north of Seattle; within three years Cape Nome will be the greatest mining center in the world. Why? Because Nome has all the features that go to make a great mining camp.

To become great a gold field must be easy to reach; there must be a large extent of ground rich in gold; the claims must be shallow; there must be water to work them and the gold must be in such a condition that a large per cent. of it can be saved.

Nome possesses all these advantages and will become great because she has immense stores of gold that can be extracted without much of a loss, quickly and cheaply, consequently the gold will be divided among a large number of men, and the result will be prosperity to all.

It is not alone how much gold a claim contains that determines its value, it is how much of the gold that the claim contains can be saved, and how much it is going to cost to save it. What is left after paying the expenses of working the claim is profit. Nome gold has been pronounced by all mining men as exceptionally pure. It is bright, very clean and amalgamates perfectly on plates.

Nome being on the coast can be reached easily and directly by large vessels; consequently men, supplies and machinery can be shipped here speedily, cheaply, and safely. There will be no tedious transfers and costly freighting overland on men's backs at $400 a ton, as has occurred at other places.

Nome is under our own government, which imposes no unjust royalties, and our officials have been free from the corrupt practices which have characterized the Canadian officials in the Klondike.

The most valuable feature the Nome placer possesses is its similarity to the early California placer. They are shallow, hardly ever exceeding five feet to bedrock. This means that the ground can be easily and rapidly prospected; and that the gold can be extracted quickly and at small expense, there being very little non-paying dirt to remove and to get rid of before reaching the pay-streak.

Nome's beach diggings alone have produced about $2,000,000 already and will produce many millions more before they are exhausted. This beach, which runs from 75 to 200 feet wide, has been prospected for over sixty miles and every mile of it will pay.

Every one of the hundreds of men who rocked has averaged an ounce of gold a day. Numbers of expert old timers have made from $50 to $300 a day, and occasionally a clean-up of from $1,000 to $1,500 has been reported. The pay streak runs down to the water's edge and how much further no one has been able to work to find out.

These beach diggings, a small part only of which have been worked, make Nome the superior of any mining camp in the world, because between high and low water mark no title can be had to any claims, consequently anyone at any time can work anywhere on the beach; and, if everything else fails, the Nome miner can always go to the beach and make a grub stake.

The resources of the beach are so vast, that, notwithstanding that the camp is a year old and has contained more than 3,000 people, neither the tundra, creek nor quartz claims have been given any attention save in isolated cases, and these few cases have proved bonanzas.

The tundra diggings, which prospect as rich as the beach diggings, extend from the beach three or four miles to the foot-hills; but so far no work has been done save to prospect, owing to the richness and to the proximity of the beach diggings to water, rendering them the easier to work.

Three or four miles from the beach lie the foot-hills, containing many rocks and streams. That many of these streams are immensely rich has been proved beyond a doubt by the little work already done on them. Of the few claims already worked, numbers have paid over $100 a day to the man, and one claim has a record of two hundred and fifty thousand dollars for two months' work. On these, as on the tundra claims, work has been postponed, everyone turning his attention to the beach, where only a rocker was needed with which to work. Besides the placer diggings, numerous ledges of high grade quartz have been located, but as yet no one has prospected systematically for lode claims.

Next year, with the big inrush of people which is bound to occur, there will be enough men to work not only the beach but tundra and creek claims. Hundreds of men who left at the end of the season have gone out for the purpose of purchasing mining machinery with which to return and work their claims next summer, and in 1900 Nome will produce more gold than has ever come out of any camp in a year since '49.

Besides the Nome district there are other districts which have been discovered recently in adjoining territory which promise as well as Nome. This winter, when the ground gets hard enough to enable traveling, there will be hundreds of men out exploring new regions with the result that, undoubtedly, other rich districts will be discovered.

HERBERT MURRAY.

Nome, Oct. 28, 1899.

A BEACH CLAIM.

A PROOF of the assertion that you cannot, in a republic, force upon the people at large any law which they are not minded to obey was furnished by the recent trials in Seattle of violators of the Sunday saloon law. Rightly or wrongly, the concensus of public opinion in the State of Washington is against Sunday closing, the anti-saloon league and the reform people generally being its only supporters. The late trial in the Queen City was a test case; a saloon-keeper was arraigned for violating the State statute. Although any number of reputable witnesses swore to the violation of the law, the jury returned a prompt verdict of "not guilty." It would seem that the best method for the reform people to use in dealing with these cases is the education of public opinion. Until the people of the section really want Sunday closing, no statute against it will operate as a preventive.

BEACH MINING.

BY T. D. CASHEL, MAYOR OE NOME.

WHEN I first came to Nome on June 27, from Dawson, some men were working on the beach to see what they could get out of it. They worked quietly at first, but pretty soon the richness got out. Business men quit their business in town and went to the beach to work. The whole shore became an attraction.

As regards the gold, there are two, and sometimes three pay streaks. In the first the gold is almost always found in a stratum of ruby sand, especially when found above bed-rock. This bed-rock is really a false rock, for it consists of a stratum of clay or sand. It varies. I think that below it is another bed-rock.

When gold is found on this so-called bed-rock, it is sometimes deposited with a sediment of the character of ruby sand, and sometimes otherwise. This ruby sand is nothing more than iron.

The water that runs over the tailings is the color of blood. The redder it is the richer the deposit.

I don't like to theorize as to where the gold comes from, but the gold is nearly always coarser near the shore than at the edge of the tundra, giving the impression that it comes out of the sea, because the finest particles are found deposited at the furthest point from the present surf action. Within a radius of two miles on the beach—from the spit to the northwest—I counted, personally, about August 15,280 rockers. There were at least two men to each, and away beyond these rockers, below the Indian village for seven or eight miles, was an almost continuous line of men.

Taking it as a conservative average I should think 2,500 men were working on the beach between the mouth of the Snake river and Cripple river. I judge very few men made less than $10 a day and the average was at least an ounce a day, or $16. I know, personally, two men who took out $13,000 between July 15, and October 1. These were Cummings and Missouri Bill, and there were others that I know in a short space of time took out lots of gold. J. W. Logan, a San Francisco newspaper man, and three associates, took out $7,000 in thirty days and left the country. They just worked one little draw. This is conservative.

I made, myself, under unfavorable circumstances, $100 a day for a time. Any man who went on the beach and would work ten hours a day made big money. Most men didn't work hard and in a great many instances they rocked overand lost more than they saved. The appliances were crude and the men were inexperienced.

But after the introduction of copper and silver plates better results were obtained. I estimate that an average of 1,000 men were working on the beach and that they made $1,500 each. I believe that at the least the product was from $1,500,000 to $2,000,000. They worked nearly thirteen miles of this beach.

There will be a good deal of prospecting along the beach this winter, to determine the distance of the gold towards the sea, and to determine whether there is another gravel deposit below this false bed-rock. The work depends altogether on what is found. They are very likely to find the same deposit in the tundra.

The Bering sea is a shallow sea, and in consequence the tidal action is greater than in deeper seas. Because of this there is greater erosion, or segregation of mineral from ledges that may be exposed at the bottom of the sea. This gold is very much worn. There is no instance where it has been found adhering to quartz, although pieces of the value of eighty cents have been found.

Nowhere else in the world has there been discovered such a beach as this. Where the facilities for saving the gold have been at hand the beach mines have outranked the

richest placers of Gold hill, Adams hill and other celebrated benches in the Klondike.

Nome owes its prosperity to the beach. Before its richness was discovered wages on the creeks were $4 a day. Afterward they jumped to $12 a day and board. If the miners were not allowed to go on the beach the town would not be anywhere near so prosperous as it is. The beach mines assure to every man who desires it work and pay beyond anything heretofore known.

EXPERIENCES OF PIONEERS.

PROBABLY as remarkable a discovery as has ever been made in the history of the world was the finding of gold in the sands of Cape Nome beach. When the first reports were brought down from the north, people were skeptical, andit was not until the actual gold dust was deposited in the assay office at Seattle that he reports were believed. W. G. McHardy of Chicago has the honor of being one o the discoverers of this strange and extraordinary deposit. He left for Nome on the first boat that sailed north last season. Hundreds of disappointed prospectors had come down, bringing with them the reports that there was no gold at Nome or in its vicinity. McHardy, however, firmly believed that he would find the precious metal there. He experimented on the beach and was gratified to find rich results. Afterward he prospected on the tundra, and he now owns some of the richest claims in the vicinity of the treasure camp.

In his first experiment he sunk a hole nine feet and took out one hundred pans from the surface to the bottom, and ascertained that it ran in pay dirt from $2.68 to $3.00 a cubic yard. At that time he was able to use only the most crude appliances,but he is sure now that with proper machinery the ground will yield good returns.

Later he sluiced on the tundra and excavated to a depth of eight feet. Four hours' work resulted in twenty ounces of gold being taken out. Mr. McHardy said he had seen as high as twenty-six ounces taken out in four hours by one man. He considers the camp unusually rich, but owing to the difficulties met with in prospecting, it will be hard to determine for some time just how valuable the ground is. He believes that there will be room for a large number of people to mine, but advises that all who go to the North should be prepared to sustain all the hardships of a miner's life.

MR. O'HARA has written a very interesting sketch of the gold diggings at Nome and in the vicinity of that great camp. It is full of valuable information for the prospector, and gives some details of the things that one is likely to encounter in the search for gold in the bleak north. Mr. O'Hara started on his search for the precious metal from St. Michaels some twenty months ago. With a number of others he made a voyage on a sloop to Norton Sound, and afterward visited nearly all the rivers and creeks in that part of Alaska. He was on the Teeductoolik river Fish river, and Golovin bay, and there is probably not a stream between St. Michaels and Port Clarence which he did not explore. He prospected everywhere, and in nearly every place with good results. The country below Cape Darby, he said, is gold-bearing, full of quartz and schist slates, which is a good indication that there is gold there. He was enthusiastic over the Bonanza and the Big Sandy Solomon river districts. Very little prospecting, however had been done on any of the streams. He was in Nome for three weeks, and in nine days of that time took out $860 with an old-fashioned rocker.

Afterward he visited Dexter, Buster, and Anvil creeks' Snow gulch, and Glacier, and was suprised to find that the ground had been thoroughly prospected. He would not say, however, that these prospects were any better than those he saw on the Bonanza and in the Fish river districts. The surface indications on the Cripple river were the best he had seen anywhere in the North. He also visited Smook, journeying along the coast to Port Clarence. The formation of the ground was the same as in the well known paying districts, and Mr. O'Hara believes that it is the richest placer ground in the world. The beach extends about forty-five miles from Nome, and everywhere men were making good returns. About fiften miles above Smook there is a remarkably rich piece of ground, probably as well lined with gold as the land between Cape Nome and Penny river.

A valuable hint to those going north is given by Mr. O'Hara. He advises that proper machinery be brought with which the ground can be worked to much better purose than with rockers. He met prospectors from Cape York who showed him three and one-half ounces of gold they had panned from the different creeks. Personally, however, he did not know anything about the district, but he had reason to believe the men he spoke with were perfectly reliable. He also conversed with four miners who had been working on the Siberian coast. They declared that the ground was just as rich there as it was in the Nome.

Mr. O'Hara expresses surprise over the richness of the quartz found in the Nome district. Assays have shown that it is richer than anything ever found in Southeastern Alaska. He believes that after the country is properly prospected and developed, it will prove to be the richest district in Alaska.

A STREET SCENE AT NOME.

BETTER THAN KLONDIKE.

The following will give an idea of the value of gold dust taken from Nome sand:

J. M. DAWLEY & CO., Assayers.
Seattle, Washington.
December 27th, 1899.

To JAS. WARDNER, Esq.,
Seattle, Washington.

Dear Sir:—I have treated the sample marked "Nome Sand," left by you for analysis, with the following results:

Treated for free gold by amalgamation showing the amount and value of gold that will save on plates or in sluice boxes—

shows ounces of Fine Metal 30 oz. per ton
" " " Gold 26.8 " " "
" " " Silver 3.2 " " "
Total value of Gold and Silver $555.87 per ton
" " " " " " $830.00 " cubic yard.

The residue (or tailings) after all the free gold has been extracted

shows Gold $95.08; Silver 2-10 oz. per ton.

Calculations—18 cubic feet of dry sand per ton.

Nome Gold Bars *av.* Mint Value per oz. of Gold and Silver—$18.50.

J. M. DAWLEY & CO.,
Assayers.

EXPECTS GREAT THINGS.

An extract from a letter of F. A. Wing, assayer, in charge of Seattle U. S. Assay Office:

"The comparative average values per ounce of Klondike and Cape Nome gold are as follows: Klondike, $16.50 per ounce; Cape Nome, $18.50 per ounce.

"In my judgment the output for 1900 will easily double that of 1899. In my preparations for next season I am anticipating at least twenty millions for this office alone, on a basis of thirty millions as the entire output of Alaska and the Northwest Territory. All indications lead me to believe that Cape Nome and its immediate vicinity will equal the Klondike in amount of production."

WHAT TO TAKE WITH YOU IN GOING TO CAPE NOME

Equip yourselves with substantial wearing apparel; the best is none too good. The following detail will be found to be about the correct thing to take:

2 suits clothes; 3 suits underwear; 2 pairs hip boots, rubber best; 1 sou'wester; 2 overshirts, cloth, dark color; 2 pairs blankets; 1 mackintosh or rubber coat; 1 tent; 1 medicine case; 2 mosquito head nets; few yards cheesecloth for protection from mosquitos in your tent and some canvas for bunk; 1 small pillow.

In matter of grubstake, cooking outfit, and mining tools, they can be purchased at Nome or at a small freight cost may be taken with you.

The diamond trade in Amsterdam shows the effect of the war in its inactivity. Prices of rough diamonds, which for some time have been noted as rising at intervals of two months, have been marked up twice within the last eight days. The main reason for the great scarcity and high prices is the unusual demand from the United States and continental buyers. The whole output of the De Beers mines is sold in March of each year; this year, the syndicate had to consent to an advance of 35 per cent. There is great difficulty in obtaining supplies, scarcely any parcels of less value than £5,000,or $25,000,being sold.

The conviction of the Nationalist conspirators marked the end of the disturbances arising in France from the Dreyfus trial. Now, the Chamber of Deputies has shown that the crisis is over by passing, rather unexpectedly, a vote of confidence in the Waldeck-Rousseau. ministry. This cabinet, it will be remembered, was a compromise. Ministry after ministry had fallen on account of the Dreyfus disturbance, when President Loubet commissioned Waldeck-Rousseau to choose a cabinet for the public safety. The latter put aside party considerations and selected men of every shade of opinion, such radically different parties as the Socialist Democrats, the Conservative Republicans and the Royalists being represented. It was not supposed that this body would hold together after the Dreyfus case was settled. On the contrary, the Waldeck-Rousseau ministry has worked in harmony, and gives promise of being permanent, while the vote of confidence, passed by a good majority, affirms their hold on the people. A severer test may come after next month, when 110 new members will be elected to the Chamber of Deputies, and when their proposal for extension of the Navy will come before that body. The most important contest in the new elections occurs in the district of Loire, where General Mercier, the merciless enemy of Dreyfus, comes up against a Radical candidate.

A proof of the general prosperity the country is now enjoying is furnished by the recent increase in wages. The Carnegie Steel Company at Pittsburg has increased the pay of common laborers to $1.50 per day, and that of its skilled laborers proportionately, an average of seven per cent. all around. In New England, 150,000 operatives in the cotton mills have had their pay advanced ten per cent., a yearly gain for this class of operatives of about ten million dollars. Not since 1892, when the cotton industry was at its highest point, have such wages been paid, and there are indications that the figures of that year will be passed by the end of 1900. The South has followed suit, notwithstanding the fact that by keeping down salaries they might injure the business of the New England mills, running at the increased rate, by holding expenses down for a time. The first move was made on Jan. 1 in Atlanta by an agreement of the manufacturers, and is to be followed in other places. In the woolen industry, the 26,000 employees of the American Woolen Company are enjoying a ten per cent. raise. Last spring, woolen goods reached the lowest point known under the protective tariff, but general prosperity, high prices and strong demand have offset this, so that the woolen industry is at the highest point known for years. There has been a notable rise in charges, both for raw material and cloth. The jump in prices in other branches of industry cannot be accurately reported as figures are not so exactly kept as in the case of iron, steel, cotton and woolen manufacture, but it is a well-known fact that the scale of wages paid in these industries is a sort of economic barometer, indicating the condition of laboring men in other employments.

The latest statistics from Franch show that the number of deaths last year in that country exceeded by 50,054 that of the previous report, and the number of births has decreased by 15,174, showing a net loss of 65,228. The population of France is 38,517,975, so at the rate given above it will be some years before the last Frenchman will disappear; but the figures given show that France needs new blood in some form, either by immigration or intermarriage.

It is reported from Indianapolis that a rigid enforcement of the curfew law in that city has caused a decrease of eighty per cent. in the commitment of the young to reform schools.

MRS. FRANCES HODGSON BURNETT, whose Little Lord Fauntleroy turned out to be a football player after all, has just added another very interesting story to her list of titles. She calls it *In Connection With the De Willoughby Claim*, and it is published by the Scribners. The De Willoughby Claim, it must be understood, was a war claim against the United States government for damage done by Grant's army, De Willoughby having been a Federal sympathizer. He had two sons, one a drunken wretch, but outwardly a gentleman; the other outwardly awkward and uncouth, but sound at heart. This latter was Tom De Willoughby. Tom is driven from home when a young man and settles in the heart of the Tennessee mountains. There, fate throws into his arms a baby girl of unknown parentage. He adopts the child and raises her as his own daughter. In the end her parentage is straightened out, she falls in love with Rupert De Willoughby, Tom's nephew; they win the war claim, and the wedding follows.

Tom De Willoughby is one of Mrs. Burnett's most successful characters. He is a man worth speaking to on the street, a man fit to be the hero of a book. Physically he is a giant. The troubles he has with his baby, his imperturbable good humor, the effect of his new interest upon his generous character, the new and sweet companionship as the child grows older, the blossoming into womanhood from girlhood—all this is well told by the author. Other chapters of the story may lag a little. Let them lag. Tom and Sheba alone would hold the tale together. The New England crowd, with its rather overdone mystery of relationships, may go plumb to Coventry. For not even Mrs. Burnett can hope to hold the attention of the reader upon the heroine's mysterious ancestors until within twenty pages of the end of the book. That is suspended interest with a vengeance. The heroine's mysterious ancestors are not so very mysterious after all. And they have nothing essential to do with the story. So let them slide. Only, as they are thrown in gratis, without extra expense, it is too bad to waste them.

Eckermann, who was Goethe's private secretary, tells how, one day in 1828, the stately old man took him aside into the privacy of a deep bay-window and began talking with him. "Dear boy," he said, "I will confide something to you, which will at once give you a lift over many puzzles, and which may be an assistance to you throughout your whole life. My writings cannot become popular; anyone who thinks they can, and strives to make them so, is in error. They are not written for the masses, but only for individual men who themselves desire and seek something analogous, and who are pursuing similar lines of thought." One can imagine Matthew Arnold, fifty years later, making a similar confidence to one of his young friends. And with infinitely more justice; for Goethe's songs at least were essentially popular, whatever may be said of his *Tasso*, of his *Sphigenia*, of his *Faust*. A vast deal of Goethe's writings did appeal directly to the people, and appeals to them yet. He did write for the masses, and did not write "only for individual men" who thought. In that sense he was and is a popular poet.

But neither in that nor in any sense is Matthew Arnold a popular poet. There is scarcely one of his songs that strikes the note of popular grief or joy. His poems, drawing their ife entirely from the "proud self-conscious zone of modern experience," as one of his critics has it, are austere and aloof from the life of the people. Hazlitt once wrote of Wordsworth's "Laodamia" as having "the sweetness, the gravity, the strength, the beauty, and the languor of death—calm contemplation and majestic pains." The criticism will apply supremely to Arnold's poems. He feels continually that he, the poet, stands aloof from the created world and sees that it is good. His art is a magical mirror that reflects unwaveringly all that is flashed upon it. Here, for example, is a picture of nature from "Thrysis," written in memory of the poet Clough.

So, some tempestuous morn in early June,
When the year's primal burst of bloom is o'er,
Before the roses and the longest day—
When garden walks and all the grassy floor
With blossoms, red and white, of fallen May
And chestnut flowers are strewn—
So have I heard the cuckoo's parting cry
From the wet field, through the next garden trees,
Come, with the volleying rain and tossing breeze—
"The bloom is gone and with the bloom go I!"

Too quick despairer, wherefore wilt thou go?
Soon will the high Midsummer pomps come on,
Soon will the musk carnations break and swell,
Soon shall we have gold-dusted snapdragon,
Sweet-William with his homely cottage-smell,
And stocks in fragrant blow;
Roses that down the alleys shine afar,
And open, jasmine-muffled lattices,
And groups under the dreaming garden trees,
And the full moon and the white evening star.

Unfortunately "Thrysis" is not included in the recent *Poems by Matthew Arnold* (John Lane, New York), the subject of these remarks. It is unfortunate, because there is nothing about the volume to indicate that it is an abridgement. The book is beautifully illustrated by Henry Ospovat, and contains an introduction by A. C. Benson.

The old problem, what are we to do with our cowards, is answered once more to our dissatisfaction by "Zack," who tells us to put them in our books in lieu of heroes. The hero of *On Trial* (Charles Scribner's Sons) was placed there by this "Zack." He is frankly a coward. The book is definitely a study of cowardice, and cowardice in low life, at that. The story is of a young Devonshire infantryman, who, when ordered to India, writes a letter to his sweetheart informing her that he will probably be killed. She, in terror for his safety, steals the money to buy his release. The theft is discovered and the girl disgraced; but it is not known what she did with the banknotes. The yokel, her lover, returns in due season. Instead of proving to be a man, he lies about his relations with the girl, and once he gets the devil behind him with his cat-o'-nine tails he finds it impossible to be honest any more. One lie leads to another, one cowardly act to another. The reader will be pardoned if he throws the book at the cat along toward the last, when he discovers that in the whole *dramatis personæ* there is not one lovable character—not one. From first to last they are a lot of despicable louts, dizzards, oafs, lowns, sawneys, clot-polls, dunderpates, joltheads, nizys, loobys, gawks and jobbernowls—a good list. The question is, has "Zack" or anyone else the right to create a bookful of jibbering muffs, such as are these. The characters are exasperatingly well drawn. No doubt psychologically they are perfect. But a novel is not a textbook of anthropology. All humankind hates a coward, in or out of a book; the more perfectly drawn, the more hated. And the mere accident that "Zack's" coward dies at the end, thus bringing the action to naught, while it may be a graceful concession to human nature, is at its best inadequate compensation for having the acquaintance of such a picaroon forced upon one in the beginning.

From such a book it may be a relief to pass into an atmosphere of culture and refinement, such as lingers round Dr. Edward Robeson Taylor's *Moods and Other Verses*. Elder & Shepard, San Francisco, are the publishers. It is hardly too much to say that this book is the most beautifully printed volume ever gotten up on the Coast. Its retail price cannot represent its cost. Dr. Taylor would seem to be a poet of equitble moods and of perfect technique. His poetry is the poetry of repose and calm. Almost all of it betrays the sincere personal note. In this book no one poem rises mountain-high above its fellows. Rather, the book as a whole is a plateau, from which there is no falling-off. Serenity, calmness, the thin blue air of the veldt; little of life's passion; nothing whatever of poetical abandon; an inspiration drawn chiefly from books: these are not popular qualities in a poet. Dr. Taylor will be content to please his friends and let the world go its way. I quote at hazard the sonnet "Now":

Oh, do not wait until in earth I lie,
Before thou givest me my rightful meed;
Oh, do not now in coldness pass me by,
And then cry praises which I cannot heed.
If I have helped thee on thy weary way,
Or lightened in the least thy burden's weight,
Haste wi h love's tokens ere another day
Shall pierce thee with the fatal words, "Too Late,"
The present moment is thy time to live;
The Past is gone, the Future may not be;
If thou has treasure of thy heart to give
To hungry souls, bestow it speedily;—
For sweet Love's sake, let not tomo row's sun
Tempt thee to wait before thou see it done.

We have had negro stories and white stories, Chinese stories and again white stories. Strangely enough, the dramatic possibilities of the line where race clashes against race, interest against interest, civilization (in many cases) against civilization, have been exploited hardly at all. In the case of the life of India, the South Sea Islands, and other parts of the globe where white meets brown, the novelist has been quick to seize upon contradiction and contrast. America has plenty of frontier stories, but not a great many stories dealing with her racial frontiers. At least, not a great many good ones.

Charles W. Chestnut, in his latest book of short stories, *The Wife of His Youth* (Houghton, Mifflin & Co.) has attempted, and with considerable success, to seize upon the dramatic possibilities of that life which is neither white nor black, the life of the mulatto in America. The dramatic possibilities are very great, of this life. Commonly the mulatto is almost white, so far as color goes, and of intelligence much greater than that of the pure-blooded Basuto negro. He is precluded both by pride and by attainments from associating with his blacker brothers. In many cases he would regard his marriage with a black woman as a backward step. On the other hand, between him and the white man there is an impassable gulf. No matter how slightly he may be tinged with colored blood, the taint is an effectual bar to any social intercourse with whites. Mr. Chestnut has used this dramatic situation of the mulatto as a foundation for his stories. Take the title story. A mulatto gentleman of culture and wealth is about to marry the woman he loves, a woman his equal in every respect, when his black slave-wife appears on the scene. Although she does not recognize him, and although she is very ignorant, and although many years older than he, he nevertheless acknowledges her to be his wife. Another story is of a girl ignorant of her birth, but who has a dash of colored blood in her veins. Her white lover discovers the fact, but keeps it from her and marries her notwithstanding. And so on.

A sea-story of considerable interest, though none too carefully written, is a late romance of the war of 1812, by Cyrus Townsend Brady. It is entitled *For the Freedom of the Sea* (Charles Scribner's Sons). There are two half-brothers, one British, the other American, both of them being naval officers. There are also some fair ladies to be won, both British and American. It is only necessary to say that the American half-brother proves to be a red wonder at fighting, and that in the end he defeats his brother's ship with his own. Mr. Brady's Englishmen, for all that they cannot fight for sour apples, are bad, cruel men. The Americans, fortunately, are just the reverse of that. They are good men. And when bad men fight with good men in story books, everyone knows what happens to them. The good men kill them off. Patriotism is all very well, and we are glad that we whipped the British once more (bad cess to 'em), but it looks as if Mr. Brady may have been a bit too strenuous. A milder partisanship might have carried more conviction with it.

And now comes Stephen Crane, of England, who will prove that Americans can be well treated abroad, however they treat foreigners at home. *The Monster: and Other Stories*, is the way the title lies, and the Harpers are the publishers. Mr. Crane happily now is in a position where he doesn't have to write poetry for a living. "The Monster," of course, will be remembered in this country from its having had previous magazine publication and discussion. "The Blue Hotel" and "His New Mittens" are not so well known. They are both of their author's best work. "The Blue Hotel" is the story of a Swede who became overfrightened in a frontier town, then drank a little and became overbold. When he asked a gentleman to drink with him, and began to choke and beat him when he refused, he was killed. The analysis is keen and unfaltering. The book is well illustrated.

For more than half a century the famous Jesse Moore whiskey has been the standad brand of the world.

The Orignal Swain's Bakery, 213 Sutter St., stands without a rival and has stood the test for years. The most delicious meals are served by gentlemanly attendants, and the management takes pride in having everything orderly. It is just the place for business men and ladies out shopping to lunch.

ROYAL BAKING POWDER
ABSOLUTELY PURE
Makes the food more delicious and wholesome
ROYAL BAKING POWDER CO., NEW YORK.

"Ouch!"

That is about the mildest form of outcry a man makes when rheumatism suddenly tweaks him. In its worst forms rheumatism is a living death. The victim, incapable of moving hand or foot, has no part in the great procession of life, on which he gazes with hopeless eyes. A great many sufferers from rheumatism, who had given up hope, have been cured by the use of Dr. Pierce's Golden Medical Discovery. A medicine which will cleanse the blood from uric acid and other poisons, will cure rheumatism. "Golden Medical Discovery" has no equal in its power to cleanse the blood and to enrich it. "Discovery" contains neither alcohol nor narcotics.

"I had been troubled with rheumatism for twelve years," writes Mr. R. J. McKnight, of Cades, Williamsburg County, S. C., "so bad at times I could not leave my bed. I was badly crippled. Tried many doctors and two of them gave me up to die. None of them did me much good. The pains in my back, hips, and legs (and at times in my head), would nearly kill me. My appetite was very bad. Everybody who saw me said I must die. I took five bottles of 'Golden Medical Discovery,' and four vials of 'Pellets,' and to-day my health is good after suffering twelve years with rheumatism."

Dr. Pierce's Medical Adviser, in paper binding, *free* on receipt of 21 one-cent stamps to pay expense of mailing *only*. Address Dr. R. V. Pierce, Buffalo, N. Y.

Babblings of a Belle

I HAVE just succeeded, my dear Diary, in breaking my last good resolution for the new year. I feel so much better for it. You see, after twenty-six days, the constant curbing of one's tongue, temper, or feelings becomes very annoying, so with a great bound I decided to give it all up. I am once more just what I was a year ago. I do like myself so much better too.

Of course you are very much interested in the progress of my little love affair. It is really delightful. I am getting so much more careful of making engagements, for my well-to-do suitor likes to drop in several times a week. I've told most of my really "good friend steadies" about it. They are awfully anxious to help me along. One offered the other day to "rush" me hard if it were desirable, in other words, were my suitor not as prompt as I should like. I do not think that such measures will be at all necessary, for he is exceedingly earnest, and I am beginning just in a small way to take myself seriously. I wrote to mama, telling her in as vague a manner as possible of the affair. I was so afraid papa might see the letter and disapprove of my actions. Leila says it is very quiet now down at Coronado, as the great part of the amusement consisted in having so many nice navy men around, and as you know the *Philapelphia* and *Iowa* have been at Magdalena Bay. They are expected back very shortly and the guests at the hotel will begin to live again.

We girls are all very much interested in the new engagements. Two of the sisters of girls who have recently announced their's are talking of the charm of double weddings. Both have used a great deal of judgment in their choice, and should two families have double weddings I think every one connected would be very pleased. There is also a good deal said about one of our prettiest debutantes marrying a young man who has made himself quite prominent in Chicago in business circles. Then there is the engagement of Mrs. Berthe Welsh Russell to Mr. Eugene Lent. There are several others at which I should like to hint, but I must be discreet a little while longer. I believe we have sixteen weddings to look forward to right after Lent. It seems almost too good to be true. I do not wish to be married until I have had one more summer free, for there are lots of things I'd like to do before I settle down to a life of dire monotony, and, after all is said and done, that is what marriage really is.

I've had a pretty good deal of fun this week. Ed Greenway's dinner on Tuesday night to Ethel Hager was awfully nice. The red room is beautiful. It was charmingly decorated, and the light effects were wonderful for the complexion. I think Mr. Greenway might write a book on "How to Give a Dinner." His never drag; they are well cooked, well served and not too long. Most people have not the executive ability for entertaining. So few realize, too, the value of knowing how to do things. But, first, I must tell you how nice some of the girls looked. Ethel was guest of honor and Mr. and Mrs. Russell Wilson were the chaperones. Edith Stubbs looked winsome and Mamie Thomas looked beautiful. It was not one of Helen's best days; she is as variable in her appearance as the weather. Edith McBean looked very nice, so did Virginia Jolliffe, but I really think Virginia looked prettier as a baby at the Hagers than I have ever seen her before. Edna Hopkins looked charming, but the other girls and Therese Morgan all looked tired. Knox Maddox is an awfully nice fellow at a dinner. I really got to know him. Bert Cadwalader I am very fond of, and, of course, my old flame, Nat Wilson, knows just where he stands. After the dinner was over we danced a bit and then a few of us girls went home together and talked of life in general and particular and all agreed we really went out because we had nothing else to do.

Edith Stubbs' luncheon was much larger than I anticipated and was awfully well cooked. I was so glad, for I really enjoyed myself. There were stunning American Beauty roses on the table, which made it look very beautiful. All the girls I know had a good time. I like Beulah Stubbs particularly well; she is my favorite in the family. Ethel Cooper is a nice girl whom I am beginning to know better, and Mamie Josselyn, I believe, receives more invitations than any other debutante. She is a fluent talker and one is quite sure that she has no enemies amongst either girls or men, so it does not matter in the least by whom she sits. That evening we went to Bernie Drown's dinner. I think Leila Voorhies was the best looking girl there. Bernie is a good hostess, and I found myself in a very jolly, bright crowd at dinner. The Drowns have an excellent house for dinners; I think they could canvas the entire first floor and give a very jolly dance there. I wish I could induce some of the girls to give a lot of things before Lent. Elizabeth Huntington will give an informal dance in the near future; there are to be two out at the Golf Club, one on Monday night and one on the following Wednesday. I am having a hard time to get Aunt Sybil to let me attend both of them, but I think I shall succeed. Charlotte Ellinwood is talking of a "Tissue Paper" dance, and then with two more Fortnightlys and "La Jeunesse" we shall have some sport for the next few weeks.

This week's Fortnightly was led by Mamie Joselyn and Mr. Duperu. The figures were nothing wildly exciting, but I had a very fine time. I do like the Fortnightlys, though I am generally ravenously hungry when I get home. Still I never crave *oyster poulette*. How I do wish that the "La Jeunesse" patrons would change their menu. One gets so mortally tired of one sort of food. A long way the stunningest looking girl in the room was Miss Jeanette Duperu. She is Mr. Duperu's niece and has the loveliest eyes possible. I did not meet her but Arthur is simply wild about her. He thinks she is just as interesting as she is good looking. The other girls I admired were Margaret Salisbury, Alma McClung, Katherine Dillon, Alice Hager, and Daisy Van Ness. Caro Crockett too looked very well; so did Mrs. Keyes. Mamie Josselyn and Mr. Duperu made excellent leaders, but I do hope the next ones will introduce entirely new figures.

The Stanford reception, Saturday afternoon, was most interesting. The flowers were beautiful, so was the music by the Hawaiian band. The house is fine and big and contains numerous works of art, beautiful and hideous. I'd like to learn a lot of the things in it, so that one could really spend all one's time with those of really great artistic worth. I met so many nice men, mostly professors and instructors. I really had a great deal of fun, for they showed so plainly they were not accustomed to so flippant a person as myself. One man told me he thought that co-education would really make a girl like me quite worth while. When I asked him what he meant, he introduced me to his wife. I found her the most demure, unsophisticated person I had ever met. Another fellow told me she led him a life. I have very little regard for David Starr Jordan, owing to his absurd speeches about the Boers, so declined to meet him; I also treated Benjamin Ide Wheeler very cooly for the same reason. Those men cannot be friends of this young maiden's until they see the Boer question through her spectacles.

This coming week Julia Buckbee will have twelve of us to her baby dinner. Some of the girls are to come in baby-carriages. Mrs. Maurice Casey gives a dinner before "La Jeunesse," so does Mrs. Homer King. This "La Jeunesse" is to be a beautiful affair; the preparations are really as great as for a private ball. I shall tell you all about it next week—until then I am your

MISS CRICKET.

An engagement recently announced is that of Miss Florence Sharon, daughter of Mr. and Mrs. W. E. Sharon, one of the prettiest and most charming of Oakland's constellation of belles, and Mr. Peter C. Allen. The betrothal is of more than passing interest as it unites two young people who are bound to be heard from in the future. Thus far, Miss Sharon's prominence has been in society, but she possesses a very fine voice, which, under the direction of her husband-to-be should make her notable in a musical way. Mr. Allen is really one of the most thorough musicians in the West. He is a talented conductor and has written a number of compositions of real merit and value. As a teacher he has been very successful, but beyond all this he is a man of strong character and principle and has won his place by earnest and intelligent work. Among other organizations he is director of the Young Ladies' Orchestra, in which the cleverest amateur musicians in the ranks of San Francisco and Oakland society are enlisted. The engagement of Mr. Allen and Miss Sharon was announced at a dinner given in honor of Madame Emma Nevada at the Sharon residence in Piedmont.

A Champagne Triumph.

Unsurpassed quality and unprecedented importations—109,303 cases in 1899, or 72,495 cases more than any other brand, are the features of G. H. Mumm's Extra Dry, whose vintage of 1895 now imported is unusually fine.

For Seattle Sailings apply to CAPT. J. CARROLL, Mutual Life Building, Seattle, Wash.

ANNOUNCEMENT!

At One Dollar per share stock in either the California Standard Oil Company or Giant Oil Company can now be secured. Controlling, as they do, 1300 acres patented land in the heart of the McKittrick district, and their first well producing 150 barrels per day, with a record of over 250 barrels under increased pumping pressure without apparent diminishment of the supply, the directors will now offer a limited number of shares at the above price, the money thus received to be expended in further development. The California Standard and Giant Companies are fully equipped with all necessary machinery, having three Standard rigs of their own, oil and water pipes, and immense storage tanks directly at the depot. Twenty-two men are employed on the three new wells, which are now down close to the Oil Sand, and with others being drilled, it is safe to say the production will soon rival that of the largest companies in the State. WE MEAN WHAT WE SAY—only a limited amount of stock will be sold at $1.00 per share. Permits to inspect the wells and property of the company can be had at any time. Daily trains commence Monday, January 15.

CO-EDUCATION

II.

THE young professor sat in his library with two examination papers spread out before him on the table. One was in a raw, unformed masculine hand, and bore at the head the name of James V. Wheeler; the other was written in that high, vertical style taught to young ladies of the present generation, and was ascribed, as plainly as could be, to Eleanor Curtis. This was the main point of difference between the two. Taken alone, each was up to passing grade, barring the fact that the masculine one was sometimes expressed in shockingly bad grammar, though with considerable taking force, and was punctuated most vilely. But their resemblance, both in merit and in small errors, was beautifully consistent. Where Miss Curtis' paper stated that the chief characteristic of Shakespeare's art was in his knowledge of humanity, Mr. Wheeler said that "Shakespeare's main hold was his eye for people." Where the masculine paper held that the first folio was issued in 1630 and the second in 1642, the feminine paper also stated the dates at 1630 and 1642. The resembance, strong at the beginning, grew more pronounced toward the end, until at the finish the one was a verbal copy of the other. With a practiced but not utterly indifferent eye, the professor noted that it was the better style that prevailed. Plainly, the man had been the copyist, and in the hurry to finish inside the hour had grown careless about changing the language. It was very awkward work. The duty of the instructor was plain. No man could copy so closely as that unless the other party had handed over the paper. It meant expulsion for both of them.

Yes, his duty was clear; he should give his information to the proper authorities and wash his hands of the matter. They would act, and the university would be rid of a very idle, if popular, young man, and a very promising young woman, on whom his regard had been wasted—utterly wasted and thrown away. He had hoped so much, and now she was cheating like a common thief, and with that young ass of whom he had been jealous.

He went over by the window presently, and looked across the campus. It was a broad, clear afternoon; the thwack of bats and the sounds of applause broke through the trees. A half a dozen white-clad runners off for an afternoon trot, came loping over the fields, and a party of girls in summer clothes strolled up the path behind them. One of these, taller than the rest, turned up the board walk in his direction. He knew her, even at that distance, and turned away. She would ask for him, and he would not come. But, even as he said that to himself, he knew that he would come when she summoned him, in spite of everything.

There was a knock at the door. "A lady in the study to see Professor Gray." In his instant of hesitation between disgust and conscience, he picked up the two papers and crammed them into his pocket. Then he followed the maid down stairs. The girl was sitting in the corner when he entered. She did not rise. She had been crying, he thought. So she was trying to work the sympathetic. Very well. Man fights tears with brutality. He waited for her to speak.

"I came—I wanted—to tell you about something which has happened," she began. "I think—perhaps if you have looked over the last examination papers, you have noticed—that there was something wrong about mine."

He could not very well keep silence.

"I have noticed it," he said.

"You see, I didn't really intend to do it," she went on, after a time, "but I wasn't prepared, and when someone else——"

"Mr. Wheeler."

She nodded. "When he left his paper where I could see it, I—I cribbed——"

He stopped her there. "I suppose you understand what this confession means?"

"I think I do. I am preparing to leave."

"Go on."

"He didn't notice, because he was through, but I ran over his paper—I have a good memory, you know—and took it all down. That is all. He never knew."

The professor took the two papers from his pocket and laid them down, the one beside the other. He would have no mercy, now. She had not only been partner to a cheat, but she was lying to save her accomplice and his rival. He pointed to the last page.

"The expressions are identical, Miss Curtis, and they are yours. What is your object in shielding Mr. Wheeler?"

She went white at that, and huddled more closely in the corner.

"I don't understand you."

"Pardon me, but you do. It was not you that copied, but Mr. Wheeler. This is your language, and this, and this. I think I know it; I have had reason to study it this year."

She was the accuser now. "None of that, if you please," she said very quietly,

He laughed sarcastically. "You need not be afraid. You and Wheeler will be able to continue the affair—outside of college,"

She turned on him again. "You coward! When I am down!"

"Will you please forget me and continue your defense of Wheeler?"

"Thank you, but you seem to know so much more about the case yourself that there is no necessity of my going on."

There was silence for a time, then he spoke again.

"There is only one thing for me to do."

"That is what I am here for. There is another thing to do. You can report me alone and ruin one instead of two."

"Instead of three."

"Can you stop that? Have I not said that it was cowardly?"

He stood watching her with the papers crumpled up in his hands, and his conscience withered to a rag. "If you ask me," he said finally, "I will tear up these papers and hand in my resignation.'

"Give them to me," she answered.

Then she held them before him. "If you do not promise me that you will not, I will hand them both to the president and tell him what I have told you."

"Very well. I leave them in your hands."

"Oh," she said, "I hate you!" and was gone.

Two minutes more, the bell rang again, and James V. Wheeler, known to his associates as Jimmy, was shown into the study. Professor Gray did not rise to meet him.

"What is it?" he said.

"Did you see anything off about my ex. in English Nineteen?"

"Well, rather."

Jimmy swallowed once or twice.

"I suppose it's all off with me."

"Your two papers have gone before the president of the university. It is out of my hands, and I really see no use in your appealing to me."

"Our two papers——"

"Yours and Miss Curtis'."

"My God! you didn't send hers in, too?"

"Your work, Mr. Wheeler, was just a *little* too complete to have been done without her assistance."

"And she'll get fired, too?"

The professor, his back turned, only shrugged his shoulders.

"I don't give a—a damn, Prof., about myself, you know—I'm going to chirp for my walking-papers tomorrow—but she didn't do it, you know."

Still the man in the corner kept his back turned and made no sign. The other squared his shoulders and began talking in broken, stumbling sentences, as one talks of hard things when his listener gives no help.

"She was helping me, you know—she said I wasn't serious and didn't go in for anything—and she made me elect her courses so she could keep her eye on me. And—well, I didn't cram for this ex., and when I ran up against the questions I was paralyzed. And—well, you told me yourself that this was my last chance—I wanted to crib off of Nell's paper. And she wouldn't let me. That's the sort of girl she is, don't you know. Then it got near the end of the hour and I got rattled. I don't know why I did it, but I picked up her paper, and began to copy it. 'Give it to me,' she says, but I was scared, I guess, and I wouldn't. And then she talked to me pretty hard, said she wasn't going to hand hers in—just whispering, you know, so that you couldn't hear it—and I got mad and walked up and gave them both to you. You remember, I guess. That's all, only—can't you report on me and keep those papers away from Prexie?"

The professor turned on him.

"Miss Curtis has been here to see me. Either she is lying or you are. Which am I to believe?"

"Nell *hasn't*—what the deuce did she say?"

Then the professor told, not all, but enough. And standing with his face turned away, so that the other might not see his soul, the younger man swore to it, simply and quietly, as one swears to the truth.

The professor looked at his watch. A quarter to four. In fifteen minutes, punctual to the hour, the president would be in his office. Students, loafing in and out of afternoon classes beheld the unusual spectacle of a professor scorching on a bicycle as though his life depended upon it, down the road to the executive building and the president's office.

She was already there, waiting in the anteroom, when he was shown in. She looked up as he entered, and then turned away without speaking. The two papers, smoothed out and neatly folded, were in her hands. It was a long time before he could commence.

"I know the truth," he said.

"Oh, do you!" This with the finest sarcasm.

"Mr. Wheeler has been to see me."

"He didn't dare!"

"If I had entertained any idea that the affair between you had gone as far as it has, I might have been as dishonorable as you two wished me to be."

"What did he say to you—what did he dare say to you?"

"What did he need to say? When he comes to me and tells the truth to save you, and you come and lie to save him, what am I to expect? What else can I think?"

"Yes," she said, "I lied."

"To keep him in because you l——"

"Stop! It is you who are lying now."

Another pause, while she watched the low sunlight streaming through the trees outside.

"I don't know why I say this to you. I think it is to punish myself. I was trying to make a man out of him. I wanted to do something for someone, and I thought that he had it in him to—to be worth while."

"He apparently hasn't."

"No," she said, "he apparently hasn't."

"Then I fail to see why you tried to save him unless you care."

"If I cared for him, do you think that I would be telling you all this?"

He opened his watch. "The president will be here in just six minutes. Suppose I tear up those papers and forget that it happened."

"That would be a conscientious way of doing, wouldn't it?"

He went over and laid his hand, ever so gently, on her shoulder.

"I have already lost my conscience to find my heart. They are both yours. Do you understand?"

No more than that, but she looked up at him, and both understood. She half rose, then faded into his arms, as he leaned over her.

"Tell me," he asked, after a time, "why did you do it?"

"Do what?"

"Try to shield Wheeler?"

"Do you suppose that I could let you—*you* think that I would let anyone else suffer for me?"

Remembering, suddenly, the cause of it all, he reached down and was about to tear the papers.

"Don't, she said, "I want to keep them——always."

JOHN STOLLARD.

To Cure a Cold in One Day.

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c

$100 Reward $100

The reader of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

Hall's Family Pills are the best

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

The Frenchman likes his native wines,
The German likes his beer,
The Irishman likes his whisky straight,
Because it brings good cheer.
The Englishman likes his 'alf and 'alf,
Because it makes him frisky.
But they all go back on their favorite drink
For Jesse Moore "AA" Whiskey.

AT THE THEATERS

One of the dictators of San Francisco's dramatic opinion has it that Katherine Kidder is a failure as *Hermione* in the dual role of "A Winter's Tale," while she shines as *Perdita*. Another declares on his newspaper honor that she is a huge success in *Hermione* and falls flat as *Perdita*. Where doctors disagree, I will venture to decide. Miss Kidder is only a partial success in either role. The clear, cold classic is not her forte. The modern drama, Sardou's by preference, where personality is the great requisite is her particular hold. But her rendering is intelligent, and in her new field of endeavor she does not entirely sink that charm which won her the early success of "Madame Sans Gene."

The whole performance would be a charming one if Hanford could be eliminated. He belongs to an older school, and he has carried over into this generation its faults and not its excellencies. Those were the days of McCollough, when strength and physique and an impressive strut were the requisites. If an actor had that, he was forgiven for ranting a bit, and tearing a passion to tatters. Times change. The matinee girl reigns nowadays and we are softer and try to be more subtle. I make no doubt that Hanford's unmitigated bellow was tolerated once upon a time, because of his strength and his impressive size, but it is intolerable today. There is a good example in the last act of "A Winter's Tale," the famous statue scene. *Hermione*, in the flesh, has just come down from the pedestal. It is a pretty scene, well arranged, and, up to a certain point, well acted. Miss Kidder carries the part of the aged and wronged wife with a sweetly pathetic dignity. She steps down, advances slowly; the audience is moved, but breathless, and then—Hanford as *Leontes*, having been blessedly still for a few minutes, breaks out and in the language of Mark Twain "makes like a calf dat ees unwell." I cannot describe the sound in any other way. It is not a groan or a scream or an exclamation; it is simply an intoned bellow. Three performances of the play I saw, and each time this passage brought the audience not to tears but to laughter.

Let no man dream but that the performance at the Columbia is worth seeing. It is a very very pretty and tasteful rendering of a rarely-played Shakespearian drama. The rest are good, and even Hanford is subdued at times.

* *

The teachers of our dramatic schools, in imparting the art of make-up, should recommend their pupils to a study of Mary Van Buren. Her reputation is that of the beauty of the Frawley Company, and she more than justifies it—on the stage. Off the stage, it is a different matter. Not that I would be so ungallant as to assume for one moment that Miss Van Buren is not beautiful—always. But between her private self and her stage self there is a vast deal of difference. Get a front opera chair some time and study her with your glasses, and you will have an idea of how artistically she does it. The attraction of her stage face is its dimpled piquancy. The piquancy is put there, and so are the dimples. She has, naturally the faintest suspicion of a dent in her chin; a little rouge, applied with a master-hand, makes the dent a dimple and puts two to match it on her cheeks. A prominence of that little projection on the face, for which there is no English name—the little trench running from the nostril to the upper lip—goes with such a face. Miss Van Buren puts it there with some more rouge. Hairlines and a suspicion of grease-paint give the bewitching eyes which match the rest, and nature tip-tilted her nose—and there you are. Try it yourself, and you would fail, because this is more than make-up—it is Art. The form which goes with it came by nature, and would be better for just a *wee* bit less lacing, this being the one place where she permits vanity to overstep art.

It is obviously unfair to judge one actress by the favorite part of another. From Bernnardt down, each one has one role which comes nearest to herself, not always her own favorite, but that of the public. Such a combination was Ada Rehan and the title-role of "The Countess Gucki." Besides, Ada Rehan created that part, her very best, when she was a veteran and at the height of her powers, while Miss Van Buren, who has been trying it after her, is little more than a beginner. Therefore, it is unfair to make any comparison. Let me only say that in this, her first real chance of the season, the young actress proved that she will bear watching. There was none of the suggestion of suppressed passion and the bounding joy of living and loving with which Ada Rehan used to instil the role, but there was a lightness and warmth in the comedy parts which give promise for her future. Quite possibly Mr. Frawley has caught another prize.

* *

Joe Newman, who is singing his "crap-game" song and others of his own at the Orpheum, is a living witness of the fact that we are drifting back to the parlor type of monologue artist who appears in a dress suit and gets his effects from the face nature gave him Such was the original monologue entertainer whom we abandoned some years ago for stage tramps and impossibly dressed coons and painted Irishmen. Golden led us back to the blessed ways of old, and now this young man with a face like Bill Nye's and an engaging way comes along to demonstrate that simplicity and taste have a value, even in vaudeville.

Newman hails from the wilds of Colorado, where he was an enthusiastic amateur actor and began to write his songs. He had a local vogue only, and his published melodies never had, never have had since, any special success with anyone else singing them. It needs the personality of the author to make them go. He tried acting for awhile, and was then persuaded to go to London. Here he made a hit as a parlor entertainer, and continued his foreign success in his own country.

* *

To see Papinta whirling her yards of skirt in the fairy light showered upon her by her husband and his corps of expert electricians, one would suppose that she might enjoy the poetry of motion she puts into the fire-dance. But in very truth it is as hard as anything else in the exacting dramatic business. Those seemingly light and easy motions require the muscle of a skilled acrobat, for forty odd yards of skirts are heavy, even when they are made of diaphanous gauze. Hours are not long in Papinta's business, but while she is at it her work outdoes a coal-heaver's. In private life, the dancer is a modest, easy-going sort of person, who set no undue value on her talents, and hates publicity. She has only one ambition; that is to retire to a village and do housework the rest of her days and never, *never* see an audience again, which goes to prove that while some of the home girls are stage struck many of the stage girls are home-struck.

* *

Quite the cleverest of advance agent devices was the defense organization of the chorus girls at Morosco's, San Francisco. The truth is, the sensation was an advertising scheme from one end to the other and one of the most successful ever originated. The story went that the members of the chorus, angered and irritated at the attention of young gentlemen who are popularly supposed to haunt the stage doors of theatres, determined to discourage their alleged admirers with revolvers. Certain ladies of the company bought pistols and were interviewed by the dailies, denouncing persistent masculine adoration, of which they declared themselves the victims, as a nuisance. Then they were photographed, and obtained altogether page after page of valuable space. The majority of people not "in the know" took the affair seriously, as it was intended they should, but it was only "press-work" after all.

* *

After the second symphony concert last week all misgivings as to the success of the season were resigned. The director, Henry Holmes, had demonstrated his capacity and the immense audience was thoroughly satisfied. What it costs to have symphony concerts in San Francisco under present conditions is not appreciated by the public. The Musicians' Union, at the beginning of the winter, decided if those entertainments were to be had, they must be liberally paid for. The greed and arrogance which seems inseparable from organizations of this character was manifested when the old committee undertook to arrange for the new series. Last year the orchestra had cost about $520 per concert. This year the charge is $1036 per concert and $100 additional for a rehearsal. Now, at least five rehearsals are essential before each performance, so that a cost of $500 is incurred before the event. The idea of reorganization was at once dismissed and there would have been no concerts but for the generosity of Mrs. Phœbe Hearst. However, there are over 800 subscribers to the season and on last Thursday afternoon the Grand Opera was crowded.

* *

For the third and last week of their engagement at the Columbia Theatre the James-Kidder-Hanford Combination will present the following repertoire: Monday and Friday nights, "The Rivals"; Tuesday, "Othello"; Wednesday night and Saturday matinee, "The School For Scandal"; Thursday and Saturday nights, "The Winter's Tale"; Sunday night, "Macbeth"; and a special Wednesday matinee of "The Winter's Tale". The Bostonians presenting "The Smugglers of Bayadez"; "The Viceroy"; "Robin Hood" and "The Serenade" will follow.

* *

"The Cuckoo," a Frohman adaptation from the French, never before seen in this city will be the Frawley, next bill at the California. R. A. Stockwell has been specially engaged for this production.

An extraordinary attraction is billed for the California in March. Mme. Gadski, Walter Damrosch, and David Bispham will give a series of song recitals will be supplemented morning lectures on music and composers, delivered by Mr. Damrosch.

* *

The second of this winter's series of symphony concerts occurs Feb. 1, at 3.15 sharp at the Grand Opera. The programme includes selections by Tschaikowsky, Beethoven, Schubert and Cherubini.

* *

"Peaceful Valley" is next week's bill at the Alcazar.

Don't drink the first thing the bartender offers — call for Jesse Moore Whiskey and see that you get it.

IN THE SUPERIOR COURT OF THE CITY AND COUNTY OF SAN FRANCISCO STATE OF CALIFORNIA.

City and County of San Francisco, Plaintiff, *vs.* James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More B. More, and C. More Defendants. No. 67,877.

Action brought in the Superior Court of the City and County of San Francisco, State of California, and the Complaint filed in the office of the Clerk of said City and County of San Francisco.

FRANKLIN K. LANE
City and County Attorney, Attorney for Plaintiff.

The People of the State of California send Greeting to: James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More, B. More and C. More, Defendants.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the City and County of San Francisco, State of California, within ten days after service on you of this summons—if served within this County; or within thirty days if served elsewhere.

The object of said action is to obtain a judgment and decree of said Court adjudging that plaintiff is the owner in fee of all the real estate hereinafter mentioned, and to quiet plaintiff's said title as against each and all said defendants and to obtain other and further relief and costs, as specified in said complaint, which complaint is hereby specially referred to for further particulars.

The following is a description of the property affected by this action:—

All that certain piece, parcel or tract of land situated in said City and County of San Francisco, State of California, bounded and described as follows to wit

Commencing at the corner formed by the intersection of the northerly line of Bay street with the westerly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred (200) feet; thence at right angles northerly and parallel with said Fillmore street to a point at which the water of the Bay of San Francisco is twenty-five [25] feet deep at low tide, as the same existed April 27, 1863; thence at right angles easterly four hundred and sixty-eight 9-12 [468 9-12] feet; thence at right angles southerly and parallel with the easterly line of Fillmore street to the said northerly line of Bay street at a point thereon distant two hundred [200] feet easterly from the easterly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred and sixty-eight 9-12 [268 9-12] feet to the point of commencement.

And are hereby notified that, unless you appear and answer as above required, the said plaintiff will take judgment for any money or damages demanded in the Complaint as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the City and County of San Francisco, State of California, this 20th day of March, A. D., 1899. [SEAL] WM. A. DRANE, Clerk,
By WM. R. A. JOHNSON, Deputy Clerk.

NEW YORK.

THERE is a real movement in New York society this season. It is drifting apart, segregating into separate sets. I trace five of these, all becoming more and more exclusive. There is the "natural" school, noted for its spontaneity and general cleverness in conversation. Mrs. Stuyvesant Fish is the leader here, with Mrs. O. H. P. Belmont as her adjutant, and Mrs. Herman Oelrichs, Mrs. Sally Elliott, Miss Hewitt, Mrs. Stanford White, and others on her staff. This is probably the leading set, and is the most distinct and easily defined of all. Then there comes the school which goes in for breeding and repose. This is led by Mrs. John Jacob Astor, Mrs. Oliver Harriman, and Mrs. Drexel, with their ranks strengthened by the titled English who happen to come our way. The third set is splendid and gilded and numbers the Vanderbilts, the younger generation of Astors, Mrs. Morton, and Mrs. Whitelaw Ried. The fourth group is literary, with a leadership divided between Mrs. Edward Wharton and her sister-in-law, Mrs. Cadwalader Jones. The fifth set is just drifting away and grouping, but has not yet assumed definite form. Mrs. Ogden Mills is the nucleus. I fancy that this group will come to be famous for its gaiety.

Mrs. John R. Drexel has given her first ball and done it well. As a Quakeress from Philadelphia, she made expensive simplicity the standard, and gave an effectual rebuke to some of our gilded show of this and the past season. There were no gold and silver favors, only flowers, but these orchids of priceless quality. I hear that this new star caused some heartburning and jealousy by limiting the invitations to a hundred and fifty, thereby slighting some who believed they had claims. It is hard to do everything, and if you would be exclusive you cannot be popular.

Women stopped bleaching their hair a year or more ago, or at least the fashion reporters said so. But it is hard, I fear, for a woman to keep from doctoring the charms with which nature endowed her. So it happens that, when the peroxide blondes had been given just sufficient time to let the natural tresses grow out and obliterate the dull yellow of art, fashion took a sudden fondness for red hair. That was easy, for they who make their complections conform to the fashion, and the coiffeurs who had been having but poor pickings after blonde hair went out, are prosperous again. Artistically done, Titian red is not so aggressive as golden blonde; it doesn't quarrel with skins never intended to be framed in gold. Of course, it is inconvenient for those who have already made themselves golden blondes, but it is really easier on them than on the unchanged brunettes, for Titian hair must first be bleached yellow and then reddened. I have the word of a prosperous hairdresser to the effect that the product is smooth and glossy, without the "dead" quality which used to point the difference between bleached and natural golden hair. Of course, the work must be renewed often, once every month, at least, to keep the new growth underneath uniform.

When this fashion passes, as it will, the services of the hairdresser will still be needed to accomplish the transformation back to natural color. This is done by dyeing the transformed tresses natural color until the present growth comes out long again and the old can be clipped away. So that the hairdresser profits however you take it.

Maxine Elliott's way of wearing a riding-habit and taking to a horse is causing New York to say she must be a western girl. New York is wrong, she isn't, but a New Englander of the purest dye. Nevertheless, her full, animal beauty, which set us a-talking when we first discovered her, was never disposed to such advantage as in "The Lady and the Cowboy," her latest success. Nothing of the *spirituelle* New England type belongs to her there; her beauty seems all of the woods and plains and out-of-doors and all western. Ay de me! what a complexion she does exhibit! One would say that she, the night-blooming play-actress, never went to bed later than ten o'clock in her life. And what a form!

Her dresses for this engagement are quite simple and interesting because of the quiet tone of the colors. They are of those dull, uncertain shades which try any but the best complexions. Miss Elliott's comes through the ordeal glorified. There is no need to set it off by the conventional tones and colors; it shines by itself. The riding-habit is of a dull tan shade; the ball-gown is of a neutral tint, for which no one but a modiste can have a name. And her last appearance is as a not specially mourning widow in plain black tailor-made.

To look at her, one would suppose that Miss Elliott (pardon me, Mrs. Goodwin) is an athletic sort of a party. Quite the contrary, they tell me that she is not. On the Goodwins' English place, there are all thiings which conduce to sport, but she neither rides to hounds nor golfs. Her only exercise is an occasional walk with her dogs, of which she has an infinite number. Bull terriers are her favorites, with collies for second choice. The truth is, I fear that she is rather an inert person. It's sad, but it is so. The Goodwins have rented their English country-place, during their American engagement, to a bride—none other than the Countess Cromartie, who was recently married to Major Blunt.

BANKRUPT NOTICES.

IN THE DISTRICT COURT OF THE UNITED STATES in and for the Northern District of California

IN THE MATTER OF JAMES A. MAGUIRE, Bankrupt

Take notice, that James A. Maguire, bankrupt, above named, has been duly adjudicated bankrupt under the Act of Congress of July 1, 1898, and that the first meeting of the creditors has been called to meet at the office of the undersigned at room 94, Chronicle building, San Francisco, California, on Saturday the 3rd day of February, 1900, at the hour of 11 o'clock a. m., for the purpose of proving their claims against the estate of said bankrupt; and that at the same time and place the creditors whose claims have been duly proven and allowed shall appoint one or three trustees of said estate.

Dated San Francisco, January 20th, 1900.

MILTON J. GREEN,
Referee in Bankruptcy,
In and for the City and County of San Francisc

No. 11,194.

IN THE DISTRICT COURT OF THE UNITED STATES, NINTH CIRCUIT, NORTHERN DISTRICT OF CALIFORNIA.

In the matter of the Insolvent, the California National Bank of San Francisco.

T. K. STATELER the Agent of the California National Bank of San Francisco, which bank was duly adjudged insolvent by the Comptroller of the Currency of the United States on the 14th day of January, 1889, pursuant to the provisions of an act of Congress entitled "An Act authorizing the appointment of receivers of National Banks and for other purposes," approved June 30th, 1876, having filed herein a petition praying for an order of sale of the choses in action and the unsold personal property belonging to said bank, now in his possession as said Agent, and which said choses in action and unsold personal property are fully set forth and described in said petition;

IT IS HEREBY ORDERED, that said petition be heard before this Court in its court-room in the appraiser's building at the corner of Washington and Sansome streets, San Francisco, on Saturday the 10th day of February, 1900, at eleven o'clock a. m.

IT IS FURTHER ORDERED, that a copy of this order be served by said Agent upon all the stockholders of the bank, standing as such upon the books of the bank at the date of its adjudication as insolvent, either by personal delivering a copy hereof to each of said stockholders or by sending a copy hereof through the mail addressed to his last known place of residence, postage prepaid, at least ten days prior to February 10, 1900.

IT IS FURTHER ORDERED, that a copy of this order be published in *The Wave* a newspaper printed and published weekly at San Francisco, aforesaid, at least once a week for three weeks prior to the hearing of said petition,

Dated, January 10, 1900.

New Stories Re-Told.

x x x

AN OUTRAGE INDEED.—Trelawney, the sailor immortalized by Shelby, was a superbly picturesque figure and Millais, the English painter, was anxious to have him sit as the model for the seaman in his great painting, "The Northwest Passage." Trelawney agreed, after some demur, and all went well until the picture was finished and exhibited. The night after the private view, Trelawney rushed into the room of a friend of his who lived in London. "I want you to be my second," he shouted. "That fellow Millais has insulted me." "How's that?" asked the friend; "what did he say?" "You know I'm a teetotaler," shouted the excited sailor—"well, that scoundrel Millais has handed me down to posterity with a glass of rum and water in one hand and a lemon in the other."

x

THE PRINCE IS RE-ASSURED.—In spite of the immense dignity of his position, the Prince of Wales, in his tours through London, is almost invariably chaffed by his male subjects, particularly of the bus-driving and dinner-pail persuasion, to whom he is "Teddy" and nothing else. Recently, Mrs. Brown-Potter gave a tea at Claridges' Hotel, in aid of the wounded British soldiers and there was a large attendance of prominent American women. When the Prince of Wales drove up, the usual crowd of loiterers greeted him with a generous cheer and then came a voice from a lusty-lunged humorist of the pavement: "For 'Eaven's sake, Teddy, don't go in there, or one of them Yankee girls'll marry yer." But another lifted his voice in encouragement: "Don't you be afeared, Teddy. Walk right in. We all knows as you 'ave a missis, and we'll stand by yer, even if she's the sister of Jim Jeffries."

x

WHEN'S A MAN MARRIED?—The first thing that strikes an Englishman as strange on entering New York is the appalling list of questions which he has to fill up before landing. A prominent English lawyer, reaching New York, was confronted by the list, sighed and sat him down to fill it up, being in a way a law-abiding man. On the journey across the page of questions he struck the poser, "Are you married or single?" Now it happened he had left London for the sole purpose of being out of England during the days his wife prosecuted her divorce case. So he was compelled to write on the form, "Sorry, but I can't tell till I reach a cable office."

x

AN INAPT SIMILE.—The late Archbishop Benson, father of the author or *Dodo*, was not proud of the distinction. In fact, it was a subject that he carefully avoided and his associates were fully aware of the prejudice. Just after *Dodo* had taken London by story, the Archbishop had to make a speech at an intellectual gathering, his subject being the bygone customs of English public school life—"many of which," he said "are now as extinct as the———." The traditional simile was on his tongue. A smile went round the room, spreading until it burst into a laugh, which the Archbishop joined. He did not finish the sentence.

x

SO MUCH FOR HISTORY.—The battle between the *Chesapeake* and the *Shannon* took place just off the Massachusetts coast, and a sailor in some way got ashore and hurried to Boston with the news. It was in the night, and he went straight to *The Sentinel* office, where he found the editor, Major Russell, to whom he told the story, including the death of Lawrence. "What were his last words?" asked the Major. "Don't know," said the man. "Didn't he say 'Don't give up the ship?'" "Don't know," said the man. "Oh, he did," said the Major, "I'll make him say it." And he did—so much for history.

x

NOT A PERFECT LADY.—At the New Year german in Baltimore, Harry Lehr the favorite german leader of New York was prattling in his gentle, girlish way to Mrs. Drayton, a rather substantial matron noted for her strength of character. She listened with some show of patience and then, tiring of the gentle youth, she snapped out: "Now, trot along, Mr. Lehr, you are entirely too ladylike for me." Whereupon Mr. Lehr replied: "I am sorry I can't say the same for you, Mrs. Drayton."

x

THE SILVER LINING.—One of the officers captured at Nickolson's Nek was Major W. R. P. Wallace, of the Gloucestershires. He has a little nephew at Borlose School, Marlow. When the account of the reverse of the British arms reached England one of the masters secured a newspaper and began reading the news out to the scholars. When the name of Major Wallace was reached, a sharp, clear voice rang out in high glee: "Then my old uncle is bagged, too. Hurrah!"

x

THE INROADS OF SCIENCE.—At a school commencement in Georgia the Superintendent of Public Instruction had explained the powers of the X ray to a gathering of darkies. After the meeting was over a negro called him aside. "Boss, I wants ter ax you ef er nigger et chicken, kin you look in him an' see chicken?" "Why, yes, Ephraim," said the superintendnet." Well, boss, I wants ter ax you one mo' question. Kin you look in dat nigge anr' tell whar dat chicken cum from?"

PALACE HOTEL SUPPER ROOM

The moderate charges, delightful orchestral concerts, and the undoubted luxury are the attributes that make the new Supper Room at the Palace Hotel the favorite place for after-theatre parties. Open every evening (Sunday excepted) from 9:30 to 12 o'clock. Entrance from main office and grand court.

A Popular Establishment.

THE misuse of the word *cafe* has been so general during the past few years that the word now, instead of meaning coffee house, conveys to the mind the fact that anything under it is a place where superior liquors are sold or lunches served. It is a better word than saloon, for there are any number of people who prefer to patronize a cafe to a place which is designated by the more common sense name of saloon. The California Cafe on Second avenue south, just below Yesler Way, was for many years the leading resort of its kind in the city. It gradually lost prominence however, until only old timers recollected its past record. Recently the place changed hands and now it is probable that it will not only regain its old reputation, but will surpass it. The new proprietor is J. J. Haggerty, formerly of Butte, Montana. Mr. Haggerty has studied the tastes of the public for many years. He has been one of the leading hotel men of the West, has operated the finest cafes in Butte and in other cities, and his places have always been the headquarters for politicians, business men, and others who like a little companionship during their leisure. Mr. Haggerty is a man possessed of much executive ability. One with such a gift, no matter in what business he may be engaged, is likely to make a success of it, and there is no doubt but that Mr. Haggerty will soon have one of the most popular places in the city. He knows how to cater to patrons and his stock consists of only the best goods. Jolly and pleasant, he is an ideal boniface.

His cafe has only been open a short time, but it has already attracted a large patronage, which is bound to increase as the public grows better acquainted with the genial proprietor. The store has been entirely refitted. First, there is a large room filled with cases of the best goods tastefully arranged, then comes a fine bar and buffet in light woods with an immense mirror. In the rear are a few handsomely furnished card rooms. There are a large number of rooms upstairs for men lodgers. The place has a very inviting appearance. It is well lighted; there is everything about it that will induce patronage.

BANKRUPT NOTICES.

IN THE DISTRICT COURT OF THE UNITED STATES in and for the Northern District of California.
IN THE MATTER OF
MILTON GALE, Bankrupt.

Take notice, that Milton Gale, Bankrupt, above named, has been duly adjudicated a bankrupt under the Act of Congress of July 1, 1898, and that the first meeting of the creditors has been called to meet at the office of the undersigned at room 94, Chronicle Building, San Francisco, California on Saturday, the 3rd day of February, 1900, at the hour of 11 o'clock a. m., for the purpose of proving their claims against the estate of said bankrupt; and that at the same time and place all creditors whose claims have been duly proven and allowed shall appoint one or three trustees of said estate.

Dated San Francisco, January 23rd, 1900.

It will not be long before the Florence Oil Co. will be producing, for it is a certainty that the Kettleman hills are full of petroleum. On Thursday of last week the officers of the company, accompanied by F. de Miranda, the well-known oil expert, visited the property and located the sites for the well, on which boring operations begin at once. Next to the Florence property is the Espiranza, whose well is down over 600 feet. Indeed, the country round is being developed in rapid shape.

* *

San Francisco capitalists are taking a great interest in developing the commercial resources of Nome City, the metropolis of the new mining district at Cape Nome. The Cape Nome Electric Light & Telephone Co. has recently incorporated under the laws of California to construct and operate at Nome a modern electric plant and telephone system. The company is capitalized at one hundred and fifty thousand dollars, divided into fifty thousand shares, at the par value of three dollars each. The Directory consists of the well known San Francisco business and professional men, viz.: David Rich, C. S. Benedict, Edward Holland, Eugene Folger and Charles S. Rossner.

The company is operating under franchises granted by the Municipality of Nome conferring exclusive privileges for selling light, heat and power, and operating a telephone service for the term of twenty years. It intends to install a thoroughly modern up-to-date plant calculated to meet the growing demands of the town and district, the development of which is now commanding the attention of the mining world.

Prior to the opening of books for subscription, applications for a limited number of shares at par will be received at the office of the company, No. 112 Montgomery street, San Francisco.

Two Women.

SHE crept into the vacant church
Through empty aisles and bare;
A faint perfume hung o'er the gloom.
Vague as an unprayed prayer;
In robe and crown each saint looked down
And frowned to see her there.

Each gazed upon her from his place—
Peter and John and Paul;
She found nor peace nor pain's surcease,
So coldly looked they all,
As she faltered lone to the altar stone,
Where shone the candles tall.

And there enthroned, immaculate,
Tender and pure and wise,
She saw the grace of a woman's face,
The love of a woman's eyes;
And Mary's smile bent down the while,
Above her mute surprise.

Not hers to know the mite that lies
In throned majesty;
She could but guess the tenderness,
The sister sympathy;
She made her prayer to Mary there
With lowly heart and knee.

The tall saints watched her as she went,
Each in his gold and blue,
Aloof from her, a trespasser,
Stern men they stood, and true.
But Mary smiled, and the clasped Child
He understood and knew.

—Theodosia Garrison in *Lippincott's.*

When Clouds Hang Low.

WHEN clouds hang deep,
Dense, thick and fog-like o'er the sun,
We do not weep,
But say that when the day is done,
The clouds will vanish and the sad earth borrow
Fresh splendor from the sunshine of to-morrow.

When clouds hang deep,
Dense, thick and fog like o'er thy soul,
Thou shalt not weep,
But say that soon the sullen clouds will roll,
Forth and away, and thy sad heart its sorrow
Forget in the bright sunshine of to-morrow.

—*Bismark Tribune.*

In the Cathedral.

THE city's burning heart beats far outside
The dim cathedral, where the mystic air
Vibrates with voices of impassioned prayer
From generations that have lived and died.
Calm saints, despairing sinners, here have cried
To heaven for mercy; myriad lives laid bare
Their secret places, yielding to Christ's care
The burden, where his sacraments abide,
Soft from the jeweled windows falls the light,
Touching the incense-laden atmosphere
To glory, while a deep antiphony
Rolls from the organ to the arches' height.
To soul and sense a Presence liveth here,
Instinct with power of immortality.

—Katharine Coolidge in *Atlantic.*

Behind the Scenes.

BEHIND the scenes the kings and queens
Are merely mortals; Juliet leans,
A tired girl, against the screens,
Behind the scenes.

The final act is on, and lo!
The loving heart of Romeo
Must crack with misery and woe;
The noble Paris, too, shall die,
And tears spring up in every eye;
Then exit all, while rogue and saint
Are scrubbing off the mask of paint,
Behind the scenes.

—Robert Loveman in *Saturday Evening Post.*

Mater Severa.

WHERE the Lady Atlantic [illegible] heavy water eastward,
Ireland, square to meet it, shoulders off the seas;
Wild are all her coasts with stress of cliff and billow,
On her northern moorland is little sheltered ease.

Well is with the salmon, ranger of her rivers;
Well is with the mackerel shoaling in each bay,
Dear is all the land to the lonely snipe and curlew;
Ay, but for its manfolk—a bitter lot have they.

Thankless is the soil; men trench, and delve, and labor,
Black and spongy peat amid barren knowes of stone;
Then to win a living overseas they travel,
And their women gather, if God pleases, what was sown.

Harvesters, a-homing from the golden tilth of England,
Where they sweat to cope with increase of teeming years,
Find too oft returning, sick with others' plenty,
Sunless autumn dank upon green and spindling ears.

Or a tainted south wind brings upon the root-crop
Stench of rotting fibre and green leaf turning black;
Famine, never distant, stalks nearer now and nearer,
Bids them rake like crows amid mussel-beds and wrack.

Bleak and gray to man is the countenance of Nature;
Bleak her soil below him, bleak her sky above;
Wherefore, then, by man is her rare smile so cherished?
Paid her niggard bounty with so lavish love?

Not the slopes of Rhine with such yearning are remembered;
Not your Kentish orchards, not your Devon lanes.
'Tis as though her sons for that ungentle mother
Knew a mother's tenderness, felt a mother's pains.

Many an outward-bound, as the ship heads under Tory,
Clings with anguished eyes to the barren Fanad shore.
Many a homeward-bound, as they lift the frowning Foreland,
Pants to leap the league to his desolate Gweedore.

There about the ways God's air is free and spacious;
Warm are chimney corners there, warm the kindly heart;
There the soul of man takes root, and through its travail
Grips the rocky anchorage till life-strings part.

The *Review of Reviews* is as ever up-to-date, compassing the subjects of the hour, together with excursions into Co-operative Insurance, the question of pure food, etc. The *International Magazine* is a new publication published by the Macmillan Company, the object of which is to present in literary form more accessible to the general reader the progress of the several departments of knowledge. "The Theatrical Syndicate," by Norman Hapgood, is a noteworthy contribution to the initial number. Appleton's *Popular Science Monthly* has been reduced in price. Its January number offers a readable set of articles, including a review by Sir Robert Ball of the "Advance of Astronomy in the Nineteenth Century."

If you have never tasted Jesse Moore "AA whiskey, try it and be convinced that it is the best whiskey in the world.

MADAM EMMY

AN INTERVIEW.

MADAME EMMY and her terriers are easily the star attraction at the Orpheum this week. She is a pretty little woman, of German extraction, with fine eyes and a vivacious manner—quite a French type, by the way—and those dogs of hers do everything but speak. There are eight of them, admirably bred canines—gymnasts, dancers, and tricksters—whose docility and obedience makes you wonder what manner of woman Madame Emmy is. Such an energetic, high-strung little person it is, you may at first be incredulous when she tells you the secret of her method is patience. She is not of those who believe in the whip, but rather trusts to constant reiteration of a lesson, invariable gentleness, and unvarying attention. The dogs are really her pets, her children. They are lodged and housed in a fashion that approximates real luxury, have an attendant feed, wash, and care for them, and actually are treated as if born to the purple of caninedom.

"That is why," said Madame Emmy, "they are never ill."

"Because you are so kind to them?" I suggested.

"No, just because they are sensibly cared for, properly and regularly fed, thoroughly cleansed, even their teeth washed every day. No, sir, I have never lost a dog." This with much emphasis.

One's first impression of the lady dog trainer is not that patience is her crowning virtue. On the contrary, she is vital, decisive, active, and exceedingly business-like. Things must be done quickly for Madame Emmy, but she never dreams of hurrying her dogs. That is not the way to win them. Every morning at 9 o'clock she arrives at the Orpheum, and out come the canines, gamboling and jumping and capering. Over and over again they perform their old tasks and then undertake new ones. No, they are not whipped, nor kicked—not even cuffed, but Madame takes each and every one of them through the motions, she would have them do, and by constant reiteration they learn. An infinite capacity for taking pains is the secret of her success. There is no royal road to a dog's brain. Just hard work. At noon they go back to their boxes, after the usual allowance of biscuit—dog biscuit, mind; or ale no cakes for these canines.

My original theory that Madame Emmy must possess some extraordinary magnetism enabling her to control dogs she ruthlessly dispelled.

"Nonsense. I never attempted training dogs until about five years ago. I've always liked them, but not until I took up the business did I dream I could teach them tricks."

However, she has been in shows most of her life, this brisk little woman, first in a circus, where she met her husband, who is known as Kara, the juggler. She was quite a brilliant equestrienne, leaped through hoops, dashed round the ring on a fiery bare-backed steed. An accident retired her from that pursuit and she became Kara's assistant in magic. Then her dog days set in. She started out on her own behest and, lo, she is to-day a celebrity of vaudeville. She has bowed to the applause of London and Paris and New York. The Prince of Wales has listened while she explained her system. She has engagements extending until the summer of 1903. She is wealthy, and all because Madame Emmey has concentrated her mind on dogs.

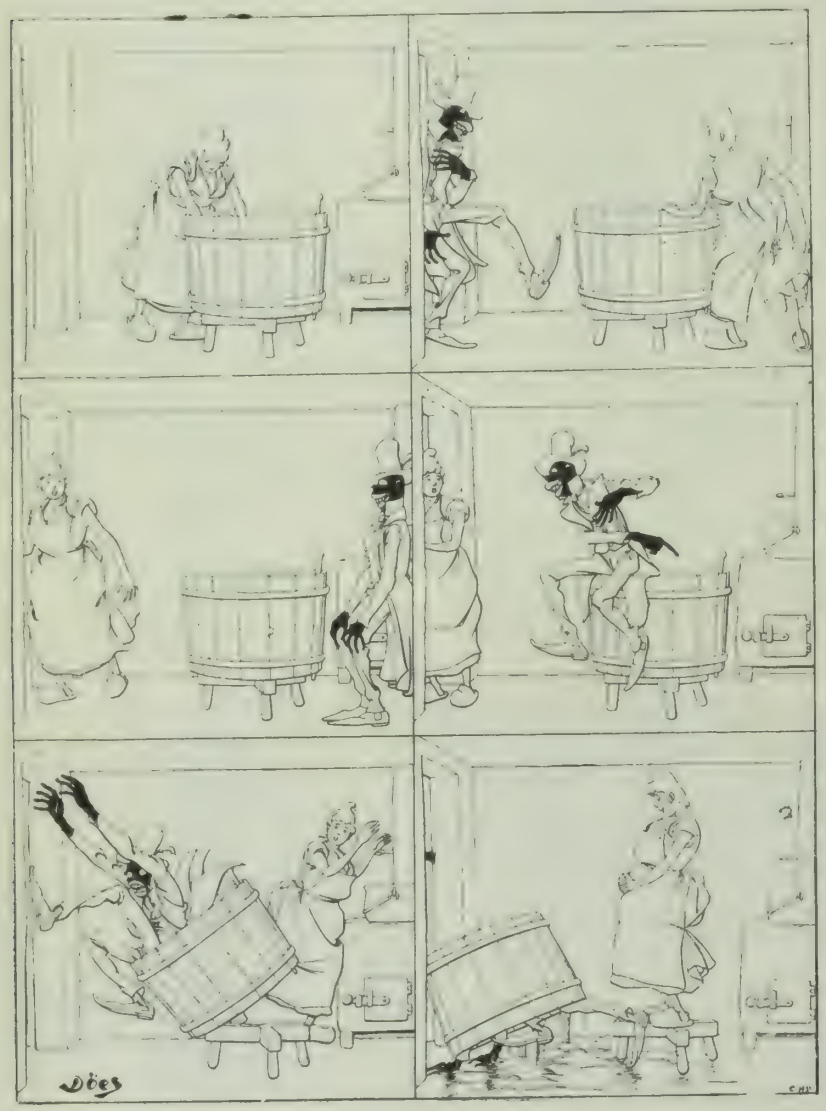
"I think of my act all the time," she exclaimed eagerly. "I wake up at night and I try to work out some new trick they can be taught. It was great when the idea to have those colored lights came into my head. That was on a wet night in London and I was eating some supper all by myself. I was quite lonely. Then the thought came. I said, 'Madame Emmy, that will double your salary.' And it has and I forgot to be lonely any more."

That is how a success is made, and absorption is the price of it. I suggested as much to the madame.

She nodded.

"When I first joined the circus there was a girl who turned what you call flip flaps, over and over like lightning. My! I thought. I'd just like to be able to do that. I soon found out how. Her mother got her up early in the morning and they'd go to work—tumbling hour after hour, just as I teach my terriers. It's the way we all must do; it's the price."

ROMEO AND JULIET UP TO DATE



1. This is a nice job they've given me.
2. Miss Molly, I [illegible]
3. 'Ow d'you think I'd 'ave a blackie like you?
4. Gahn, silly
5. Drat the man. Whatever is he up to?
6. Well, you 'ave made a fine mess.

Dr. Parker's Cough Cure.—One dose stops a cough. It never fails. Try it, 25 cents.

NOTICE OF ASSESSMENT — BEST & BELCHER MINING CO.—Location of principal place of business, San Francisco, California; location of works, Virginia District, Storey County, Nevada.

Notice is hereby given, that at a meeting of the Board of Directors, held on the fifth (5th) day of January, 1900, an assessment (No. 69) of fifteen (15) cents per share was levied upon the capital stock of the corporation, payable immediately, in United States gold coin, to the Secretary, at the office of the company, room 33, Nevada Block, No. 309 Montgomery street, San Francisco, California. Any stock upon which this assessment shall remain unpaid on the ninth (9th) day of February, 1900 will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on Friday the sebond (2nd) day of March, 1900, to pay the delinquent assessment, together with the costs of advertising and expenses o sale. By order of the Board of Directors

M. JAFFE, Secretary.

Office: Room 33, Nevada Block, No. 309 Montgomery street, San Francisco, California.

Seattle-Wash.

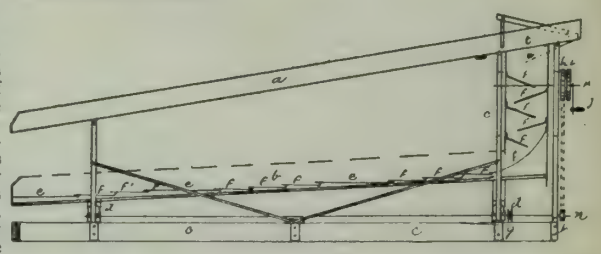
487 BROADWAY, NEW YORK

A GOLD SAVING MACHINE THAT SAVES THE GOLD.

SWAINS IMPROVED GOLD AMALGAMATOR. [PATENTED.]

HAND MACHINE WITH PUMP ATTACHED.

The lower sluice box B, containing silvered plates F and matting E, rests on ball-bearings D; and a side shake is imparted from one end to the other, thus breaking up and presenting all sides of the material to be amalgamated to the plates F. The machine is operated by a hand crank J which also operates an endless belt pump; thus one man furnishes the motion to the plates and water for amalgamation. The material is shoveled into a hopper and runs over a perforated iron plate, the gravel going over riffles in upper sluice box A, the fine sand passing through and over the plates F. Upper sluice box A is only used in power machines, or when water is obtained by sluice.



A PUBLIC TEST.

On January 5th, 1900, a public test of the machine was given. There were present many prominent mining men from Washington and Alaska and at the conclusion of the test, all united in saying that it was the best and most practical method of saving the gold in the peculiar sands found on the Alaskan Coast.

Two of the foremost assayers of the Northwest were also present and they both stated that the test was as thorough and complete as they could devise. The following is their official reports, which is characterised by mining men as marvelous.

ASSAYERS REPORTS.

C. E. BOGARDUS, Assayer and Chemist, City Chemist, 60 Columbia street.

Seattle, Wash., Jan. 5, 1900.

THE NOME MINING AND DEVELOPMENT CO., Mutual Life Building, City.

Gentlemen:—The results of my tests on samples of sand taken by me at the trial of your Swain's Amalgamator, made January 3, 1900, are as follows:

The material used was the gray sand and gravel of Cape Nome. The gold was the fine placer gold of Golovin Bay, quite similar to the beach gold of Nome. I sprinkled the gold in myself and had the sand thoroughly mixed by shovelling and reshovelling. Three samples were then taken by me, each sample representing an average, the sand being remixed between the taking of each sample. The sand measured about a quarter of a ton, which took 15 minutes to run through the machine, one man shovelling in and one man running the machine. The tailings were shovelled into a box, mixed and sampled in the same manner as the sand was before the test, three samples were taken.

The results below are not of an ordinary fire assay, but the three samples of each sampling were mixed, making one sample before it went through the machine and one sample of tailings. On these large samples middling tests were made. The sample of the original being twenty pounds while that of the tailings was twelve and one-half pounds.

In the calculations the gold was valued at $18.50. Results, Original, 1.53 oz. per ton, value $28.30 per ton. Tailings, .013 oz. per ton, value $00.24 per ton.

This shows a loss of .85 of one per cent which indicates a very high efficiency. Respectfully, (signed) A. BOGARDUS.

J. M. DAWLEY & CO., Assayers, Mining and Milling Engineers, 1517 Third ave. Tel. Buff, 241.

Seattle, Wash., Jan. 4, 1900.

I have made an analysis of the sands left with me for treatment (said samples of sand being taken by F. A. Hill, Esq., at my request, and represent the sand before and after passing through the gold saving machine owned and operated by the NOME GOLD MINING AND DEVELOPMENT CO.) by H. E. Pratt, secretary.

The sand before treatment contained 2 and one-tenth oz. of gold and silver to the cubic yard of wet sand. This metal is worth by assay $18 50 per oz. equal to $38.85 per cubic yard of wet sand.

The sand after treatment contained but 9 cents to the cubic yard of wet sand showing a saving of 98.08 per cent of the precious metals in the sand by this machine.

Yours respectfully, (signed) J. M. DAWLEY & CO., Assayers.

A review of the assayers, figures shows an almost incredible result. In the report of J. M. Dawley & Co. the amount of gold lost only amounted to 20 cents in $100.. And in the assay made by C. E. Bogardus the loss was 85 cents in $100. Both assays proving that under the most unfavorable conditions that could be devised, that SWAINS IMPROVED GOLD AMALGAMATOR is truly the Gold Saving Machine that SAVES the Gold with the smallest precentage of loss of any device yet manufactured. On January 6th, a like test was made, of two tons of the real ruby sands taken near the warehouse of J. S. Kimball & Co. at Cape Nome beach, and was witnessed by 30 or 40 prominent miners and capitalists. The consensus of opinion was freely given by all, that the machine had fully justified the claims made for it. The plates were kept clean all through the operation and a careful panning of the tailings failed to show a single color of gold while the plates were well coated with amalgam not a particle being lost.

METHOD OF WORKING.

There are various plans by which the Amalgamators may be supplied with sand or gravel, commencing with the ordinary method of shovelling by hand labor—for the small machines this would naturally be the proper way; with larger or power machines the material to be worked may be supplied by horse scrapers, dump carts, centrifugal pumps, sluicing, dredgers or any plan that the conditions may suggest. No matter what plan of working is adopted, some method of saving the gold will be required and none give better results than this Amalgamator, whose merits have been fully tested.

We are prepared to equip plants of all sizes with a capacity of one to ten tons per hour, or by connecting several machines together, the capacity would only depend upon the quantity of material obtained. A machine is now on exhibition working Nome sand and will be shown to anyone interested. We make the above machines in all sizes either to run by hand, water or steam power. EVENTS CURRENT.

The Plague Continues in Honolulu. More and more alarming grows the plague situation in Honolulu. The record is now forty deaths, an average of about one a day. Worse still, one of the late victims was a white, a well-known business woman of the city. When the news of her death was circulated, there was almost a panic, and the quarantine lines were drawn closer. Now, no freight is taken from the port or received there, and the same rule is kept regarding passengers. Even the other towns of the archipelago bar their ports against the capital. The inter-island mail is opened and fumigated before it is allowed to go ashore. The only exception to the rule against carrying out passengers is a concession from a small line running to San Francisco, which books tourists on condition that they will undergo two weeks' quarantine on arrival. On the 12th, the citizens of Honolulu decided to divide the city into sanitary districts patrolled by volunteer inspectors. Ten blocks of Chinatown have now been burned, and the whole district is to be destroyed. It goes without saying that trade is greatly injured. Sugar is piling up in the ports, and some of the island towns are suffering from a scarcity of the supplies generally sent from Honolulu. To remedy this, it is proposed to establish a temporary port just across the harbor from the city. About three thousand contract laborers have arrived since the port was closed. They are encamped in quarantine outside the walls. There seems to be a plague disturbance all around the shores of the Pacific. Australian advices state that it has appeared at New Caledonia, while the army authorities report several cases in Manila. Melbourne and Sydney have passed special quarantine regulations.

The War in the Philippines. We have heard so many times this winter that the organized Philippine insurrection is over, that the statement is likely to be received skeptically. Nevertheless, it is given out this week again, and there seems to be some ground for believing it. Early this month, the only organized insurgent bands known to be in existence were in Laguna de Bay, Cavite and Batangas provinces. These, the force under General Schwan has attacked and scattered, after a feeble resistance. The history of this campaign has been peculiar. The Americans would strike and disperse all the organized commands in sight. Then would follow a period of guerilla warfare wherein the insurgents would appear only in small bands. This would be followed by another outbreak of organized resistance at some unexpected point. But each burst has been weaker than the previous, and this last one was so feeble as to give hope that the insurrection is finished except for a little guerilla warfare. On the strength of this encouraging state of affairs, the President and the War Department are considering the advisability of issuing an amnesty proclamation, declaring the war over, and pronouncing all natives found in arms after a certain period bandits and outlaws. The advisability of taking such a course before Congress adopts a Philippine policy is seriously questioned. The more intelligent natives want a guarantee of good government before they abandon resistance; the rabble will continue to believe Aguinaldo's statement that the Democrats intend to free the islands, until Congress takes a firm stand. Meanwhile, an excess of murder and lawlessness and desultory guerilla warfare are to be expected.

Another British Reverse. Buller's advance across the Tugela River has been consummated and has resulted in another reverse for the British. The army gathered to relieve Ladysmith is resting South of the river, less over a thousand men killed, wounded and captured. The main body under Buller was never engaged at all, the enterprise being given up upon the defeat of Warren's flanking movement. This was commenced on Jan. 23 by a dash at Spion Kop, a hill which was supposed to be the key to the Boer position. General Woodgate and command seized it by a night attack and entrenched themselves. The following morning, a heavy fire from cannon, machine guns and small arms was opened upon the position. The point of attack had been ill-advised. Several small summits commanded it, and from these the Dutch poured in a heavy cross-fire. All day, the British held the trenches. There was no water on the summit; the sides were too steep for the passage of artillery. Warren tried to send in reinforcements, but the fire on the approaching road was too hot to admit of passage. Moreover, by some inconceivably foolish piece of mismanagement, the supply of ammunition gave out. The British fired their last cartridges toward night, and repelled the latest attack with bayonets. General Woodgate had been fatally wounded early in the day, and the officer who succeeded him withdrew during the night. Upon this, Buller drew off his forces to their old position back of the Tugela. The British loss is not fully known. The Boers say 1500, including 150 captured. Partial reports say that 912 men were lost in the two days' fighting before the Spion Kop affair. Buller says that in the latter fight 48 officers were lost, which, on "proportions" would make the total mortality in that fight about 500. Buller is now slated in London as a failure, and hope centers on Roberts and Kitchener, whose movements are not known, having been obscured through the interest taken in the Tugela advance. It is likely that Ladysmith will be left to its fate. The British abandoned the early plan of campaign—a dash at Pretoria—in order to relieve these places for wholly sentimental reasons. Now, good judgment would urge that they give up the attempt, concentrate their forces, and go straight on to the heart of Transvaal. So far, the whole number of British killed, wounded and captured comes to 10,000, of whom about two-thirds were lost in these relief expeditions. The feeling at London is again one of determination. The Yoemanry is off to the front. Whether any more troops will be sent is doubtful; it is felt that victory will lie in intelligent management rather than in numbers.

Guatemala in Financial Difficulties. Once again the Republic of Guatemala is in financial difficulties, being obliged to repudiate the payment of interest on her External Debt, held mostly in England. The treasury of this state is in a terribly involved condition, owing to bad financiering and to to short-sighted methods of meeting emergencies. The history of the present stringency goes back to such a crisis. In 1895, the outstanding debts, Internal and External, were consolidated into a new Four Per Cent. debt of $8,000,000. It was arranged that a sinking-fund of $45,000 per year was to be provided to meet the debt and, moreover, the bonds were secured by a special tax of $1.45 on every quintal of coffee exported, the rate to be fixed for the next ten years and to be paid regularly to the Guatemalan agent of the bondholders. But before the close of the year the government had made another change. A Hamburg house granted a loan for the construction of a railroad. In payment, they were given the revenue from the coffee tax, they agreeing to pay the interest on the Four Per Cent. loan for three years. This they did, but when the contract expired in June, 1898, and payment rested with the government once more the Guatemala treasury was unable to meet its obligations. As a temporary subterfuge, it was agreed to pay half the interest in cash, and the other half in certificates. One of the semi-annual payments fell due Dec. 31, 1899, but the treasury could not meet even that strain and the coupons were returned to the bondholders unpaid. The government has been promising to make an arrangement, like that of 1895, with another German firm, but up to date this has not materialized. The condition above all others which has gone to reduce Guatemala to this state is the low price of coffee. The exports of that staple are 95 per cent. of Guatemala's total exportation and, when hard times came upon the industry it paralyzed business throughout the whole republic. Morerver, a majority of the national legislature are coffee planters and they are naturally opposed to a heavy tax on that staple, notwithstanding the fact that the government looks to that tax for the bulk of its revenue. A rise in the price of coffee would go far toward solving the problem.

The Commercial Treaty with France. It is understood that, owing to the great number of agrarian members in the French Chamber of Deputies this year, the proposed reciprocity treaty between that country and the United States is not likely to meet with opposition on the other side of the water. Similarly, the measure encounters great objection in the United States. As provided by the law of 1896, it must be ratified by the Senate and approved by Congress before becoming valid. Lately, Mr. Kasson, the commissioner who first negotiated the agreement, appeared before the Senate Committee on Foreign Relations in defense of the measure. He explained that the French tariff ranges from a minimum of 15 per cent. to a maximum of 75, and that while most of the countries of Europe, including Germany, generally receive a minimum rate for their products, we pay, with few exceptions, the maximum rate. France imports about $100,000,000 worth of manufactured products a year, taking $40,000,000 worth from the United Kingdom, $30,000,000 from Germany and only $3,000,000 from the United States. And it is in this item of manufactured goods that there will be the greatest reduction under the new arrangement. One thing which carries weight with the committee in charge, especially the Republican members, is the statement put forward by the sponsors of the treaty to the effect that certain rates in the McKinley Bill were purposely set high in order to allow for reductions under just such a treaty. This side issue has had all too much weight in making enemies for the measure. The Finance Committee and the Committee on Foreign Relations, within both whose provinces the measure falls, are conferring with a view to harmonious action.

The Emperor of China Deposed. Chinese politics are in a curious and tangled state. Just what has happened it is impossible to tell, since the Imperial Palace at Pekin is so shut off from the outside world that almost nothing filters through. All that is certain is that the young Emperor who has so long been held a prisoner is declared deposed and that Pu Chun, son of Prince Tuan, has been appointed his heir. The new incumbent is a boy of fourteen. His exact relationship with the ruling family is not known, but he is said to be a grandson of the old Emperor, who ruled before Kwang Su, the one just removed, though by another mother than the Empress Dowager. There is a persistent report that Kwang Su has committed suicide, and another that he has been murdered. The whole affair has to do with the Dowager Empress. She is a Celestial Catherine de Medici, and exerted supreme control over the former Emperor, her husband. Her own son died, and she had her nephew, Kwang Su, a weakling, placed on the throne. A few years ago, he came under the power of progressive advisors, and began to further their plans for the advancement of China. This was contrary to the will of the Dowager Empress, who plotted until, early last year, she accomplished the downfall of these ministers and, making the Emperor a prisoner, began an era of reaction. Now, she has disposed of the Emperor himself, and placed upon the throne a boy, in whose minority she may keep control of affairs. Europeans believe that conditions are nearing a crisis. She has disposed, temporarily, of the progressive element and has caused a return to the old system of government by literary examinations, but she has no hold with the masses, who hate her. At the very opening of the new regime she must show whether she favors Russia or Japan, the two powers most hungry for a slice of China. This decision may hasten the crisis, or it may be delayed until clamor from within and pressure of European powers without forces the control from her party. Whether the change will mean a reorganization of China on enlightened lines or a dismemberment of the Empire cannot even be guessed.

Roberts Excluded From Congress. The Roberts case in Congress was closed January 25, by the exclusion of the polygamous member. It was known after the special committee reported that there was no hope of his keeping his seat, the only question being whether the House of Representatives would follow the majority report and exclude him or would adopt the more justifiable course recommended by the minority in seating and then expelling him. The debate was a hot one and gave the Congressional orators an opportunity to display their love of virtue on the floor. The minority report was put and lost by a vote of 81 to 244. The majority report carried, 268 to 50, the votes in favor of the accused being cast mainly by Democrats. Roberts left for Utah at once. He is reported as saying that he has changed his previous intention and will not run for the House again. The other members of the Irreproachable House will continue to preserve their morals and those of the country.

Report of the Civil Service Commission. The annual report of the Civil Service Commission shows that there are employed in that branch of the government service 182,000 persons, 75,000 of them falling into the classified list, and the remainder into the unclassified. About 20,000 positions are permanently located in the District of Columbia. Of the classified positions, 72 per cent. are entered by an examination on the branches of knowledge embraced in an ordinary common-school education. Such is the qualification for clerks in the departments and in the post office and customs service. A registration test is required for 22 per cent. This includes no educational examination, only the satisfaction of tests as to experience, age, physical soundness and recommendations as to efficiency and honesty. Such is the test for firemen, watchmen, janitors, etc. Only 6 per cent. are filled by technical examination requiring special or technical knowledge. During the year, 47,956 persons were examined for all branches of the service. Of these, 35,682 passed, and 11,274 failed. During the year, 9,056 appointments were made, the largest number in the history of the commission. One striking fact noted in the report is the small number of removals in the classified service as compared with the unclassified. On the face of it, this speaks well for the classified system, and it calls out this comment from the commissioners: "If the removals from the unclassified positions were made because the occupants were incompetent, it was a condemnation of the system under which they were appointed. On the other hand, if the removals were made for other reasons than unfitness the welfare of the service could not have been the basis for such action." From the figures the conclusion must be drawn that either the persons brought in through examination are far more efficient than the others or the removals from the unclassified positions have been made for other cause than the good of the service.

Railroads Combining to Cut Expenses. The report of the Interstate Commerce Commission concerning the evasions of the law regarding charges by the railroads of this country came almost simultaneously with an announcement to the effect that the main lines of the country were planning a combination to reduce operating expenses, consolidate ticket-offices and harmonize passenger and freight charges. This was taken up by the sensational anti-trust papers, as usual, and was made much of. In reality, the extent of the movement and its importance were greatly exaggerated. Never-the-less, there was some truth in them. Never was there such perfect agreement between the various lines as now. Roads which were formerly persistent freight-cutters have been taken in hand by the big trunk lines. Some have been purchased, in some a controlling interest has been secured, others have been reached through pressure brought to bear on individual directors, but in every case the result has been the same; the management has fallen into the hands of persons in sympathy with the great systems. It has been stated that the big roads in the East were contemplating a combination of ticket-offices, all the ticket-selling in any one city to be in

the hands of one large, central bureau. This is not true, but it is true that several roads have agreed to combine their offices at smaller points and to abolish competition in certain lines of traffic, thus doing away with considerable expense for offices, employees, and advertising. Co-incident with this, is a disposition to consolidate. For instance, the New York Central has just bought over several smaller lines operating in the state.

A Banner Year For Commerce.

If this department has printed, ever to weariness, the statistics turned in by the government experts concerning this most remarkable year, it has done so through a conviction that they prove an unusual movement toward commercial expansion. There is little use in saying that the nation has been immensely prosperous, that we are reaching out, commercially as well as politically, unless the results are shown in plain dollar-and-cent figures. Such figures are given in the statistics lately furnished by the Treasury Department concerning exports and imports of manufacturing concerns for the year ending Jan. 1. To say that it was the record year for manufacturing is to put it mildly. The importation of raw materials for manufacturing increased 33 per cent. and the total exportation in the same class to 25 per cent. The fact that the importation of raw materials has increased faster since the return of prosperity than the exportation of finished products does not mean that our own producers are unable to meet the demand. There has not been time, since the return of industrial prosperity, to work over the raw material brought in and get it out of the country as finished product; that is all. In 1898, exports of manufactures averaged $25,000,000 a month; in 1899, they came to $31,000,000 a month, or just about $1,000,000 a day. Beginning with $25,806,870 for January, the figures rose to $35,652,053 in December. The grand total for the year is $280,000,000, and that for the fiscal year ending June, 1900, is almost certain to be $400,000,000. As might be expected, the chief increase was in the Oriental trade, which has nearly doubled in the past ten years. The total for Japan and China comes to over $87,000,000. Our imports from the two countries, while they have increased since 1889, have fallen off in the period since 1896, which has shown the greatest increase in exports. Cotton, refined petroleum, wheat, flour, and manufactured iron and steel are our great staples for the Oriental trade, while we receive from them mostly teas and silks. It is interesting to note in this connection that we are rapidly overhauling Great Britain in the race for commercial supremacy. The United Kingdom leads the world with an export record of $1,287,971,000 for 1899; the United States exported in that year $1,253,486,000, making a difference of 34 millions in favor of Great Britain. Since 1875, however, the British trade in domestic exports has increased only 19 per cent. while ours has increased 150 per cent. We are easily second and, if the increase continues at even a moderate rate, we will take the lead by 1910.

EDITORIAL COMMENT

The Extra Session.

TIME, and time alone, will enable the unprejudiced observer of passing events to form an accurate judgment opon the moot question of whether Governor Gage has acted wisely or unwisely in convening the Legislature of California in the extra session, which began on last Monday. Modern politics constitutes a game, rather than a science—and a game, at that, in which there are no fixed rules, and in which nothing succeeds like success. In this connection, however, it may profitably be borne in mind by those who are inclined to allow themselves the privilege of a speculative train of thought, that, since the present Constitution (which was drawn with the purpose of discouraging special sessions and limiting regular sessions) went into operation, there have been but two special sessions of the Legislature. Both were afterwards regretted by the executives who called them, and were followed by political disaster to the parties which were responsible for them. Since the days of Robert, the Bruce, however, there has been an adage to the effect that the third attempt generally carries with it the talisman of success; and that may prove true in this case.

The Governor's proclamation concerning the Legislature sets out sixteen subjects, which he desires the legislative branch to deal with at this time. The first, and, from the standpoint of the politician's politics, most important of these is the election of a United States Senator. This is simply a revival of the struggle of one year ago, which was one of the bitterest controversies that can be found in the history of this state; and since our commonwealth was first organized it has been prolific of personal politics and all the harsh antagonisms which naturally grow out of that kind of controversy.

The second and fourth stipulations relate to the Harbor Commission and its management. In this matter, as in others, the Governor has outlined in his proclamation the nature of the legislation he desires with a degree of detail that has presented his critics with grounds upon which to base the charge that he desires to usurp the functions of the legislative branch of the government. This phase of the matter, however, need scarcely be seriously considered. If Governor Gage has erred at all, his error has undoubtedly been occasioned by an over-anxiety to accomplish ends which he believes will produce good and redound to the public interest. The merits of the proposed legislation in regard to the Harbor Commission do not appeal to many of those who are deeply interested in harbor affairs as being worthy of support. Some of the suggestions are very radical—notably, that relating to the construction of new wharves at the cost of persons who have agreed to bear that burden in return for the privilege of occupying the structures for a specified term of years. This, obviously, would be a clumsy way of financiering state undertakings. California is surely rich enough to conduct the public business without a resort to pawnbroking expedients of that kind. Jobs have, before now, been concealed behind far less clumsy arrangements, and the Harbor Commission is a ticklish subject to even hint at the word "job" in connection with. The proposal to create a Commissioner of Public Works and an Auditing Board to keep tab on his doings is also one that raises a decided conflict of opinion. Yet, under the new charter, we have a Board of Public Works which promises to be an effective and valuable adjunct of the city government.

The Governor's proclamation suggests legislative action in regard to wagon-wheel tires, the location of mineral lands, the sale of school lands, and the suspension of the sale of public lands. Then he comes to the more important matter of amending the law relating to the State Lunacy Commission, the removal of asylum employes, and the government of state asylums. Comparatively recent events have projected the last mentioned matter into the front line of public importance, and the Governor's recommendations seem to be in touch with the general desire for a needed reform.

Those points in Governor Gage's recommendations in regard to legislation relate to the removal of public appointive officers and the suspension of appointive officers. In these directions, his ambitions seem to run in the direction of absolutism. Apparently he desires to concentrate in the hands of the Chief Executive of the state a degree of power that most people will regard as dangerous and as tending to lay the basis for building up a great gubernatorial machine. Yet, it must be remembered that the new charter vests just such capactiy in the hands of the Mayor of San Francisco, and the same process of reasoning that justifies confidence in the discretion and virtues of this functionary surely applies as well to the gubernatorial office. Governor Gage, then, asks only for the authority that the people have already given Mayor Phelan. It will be granted or withheld, according to the construction by the Legislature of the Governor's purposes.

The Woman's Kingdom.

IN a recent issue of a New York daily newspaper of the new, or, as it is generally termed, yellow type of journalism, there appears a page of printed matter consisting of some very short articles by a number of ladies, some of whom have gained distinction and others notoriety in various fields of activity. The page is captioned "What the century has done for women and what women have done for the century." The purpose of the page and the short, signed interviews or articles of which it is composed may readily be gathered from the following extract taken from its introduction:

> This century is essentially a woman's paean of victory. In the hundred years which will end December 31, 1900, woman will have become emancipated, felt her strength, asserted her rights and taken a place in the stirring events of the world which was looked upon as not only impossible but unwomanly a hundred years ago.

In that statement, and more particularly in the implications and insinuations which it conveys, and is designed to convey, there is as much misleading and fat-witted balderdash and buncombe as could very well be crowded into the short space it occupies. The woman of to-day is no more "emancipated" and has no more "felt her strength" than her sister of a century ago. She has advanced with the progress of the world, keeping step with her brother, the male tyrant, to the music of events and developments, just as she has through all the centuries since mankind, scantily clad in the skins of the beasts which it slew for sustenance, emerged from the caves of the primeval forest to clear away and cultivate the open field and build a hovel for shelter and storage and work a slow and burdensome way from the squalor and privation of abject savagery into the luxury and refinement and opulence of the great world with which we all find ourselves confronted to-day. In this long and wearing struggle the woman of the past bore her part just as thoroughly as the woman of to-day bears her part, and in every achievement of expanding and developing civilization woman has exerted a no less conspicuous and useful influence than man, for throughout the ages, as now, the hand that rocked the cradle ruled the world and fashioned its steady tendency upward and onward.

The assertion that the century, which is just closing, is "essentially a woman's paean of victory" and that during it woman has "asserted her rights and taken a place in the stirring events of the world" is picturesque enough and meaningless enough to pass for a plank in the platform of a woman's rights convention. It can hardly be intended to assert that during the century that is just closing any individual woman has gained any individual prominence or exerted any larger influence in "the stirring events of the world" than was gained and exerted by Joan of Arc, or by Cleopatra, or by Queen Mary of England, or by Queen Elizabeth of England, or by Queen Isabella of Spain, or by Katherine of Aragon, or by any other of the vast array of women that occupy conspicuous places in the history of the centuries that are past and gone. A close examination of the text of the published interviews or articles indicates, indeed, though it does not conclusively show, that the idea which it is desired to convey is that the opportunities for women to engage in the great, bread-winning occupations in life have been enlarged during the closing century. Mrs. Elizabeth Cady Stanton states this phase of the case in this language:

> In the face of leaders of Church and State they pushed back bolts and bars, walked the wards of the hospital, entered the courts of justice, expounded the commands of God in the pulpit and questions of government in legislative halls. In vain did men protest, as they saw the power slipping from their hands; vain were their thunderbolts of denunciation. Women began to fill an equal place, gradually taking possession of all the vantage points in the world of thought and action, crowding into the colleges by the thousand, pushing their way in the trades and professions, becoming the most popular orators, authors and actors, and rapidly coming into competition with the most distinguished musicians, scientists and philosophers, proving themselves the equal of man in every department where they have had equal opportunities for development.

All of the truth that is to be found in this fanfaronade may be summed up in the simple statement that, in many countries, what are termed the learned professions, and the scholastic institutions which lead into them, have been thrown open to woman. It is not true, however, that they have proved themselves "the equal of man in every department where they have had equal opportunities for development." Nature, or God, or whatever the creative power may be designated, has fitted the male and the female for the performance of different functions and while at long intervals male dressmakers, like Worth, and female soldiers, like Joan of Arc, may arise to confound the laws of creation, still such instances are but exceptions, and the general rule maintains its position as a controlling factor in the great battle of life that surges around us. The gasconading of the "strong minded," as they are pleased to term themselves, does not and cannot change all this or re-make what a greater power has created. At the bar and in the pulpit woman, as a matter of fact, has been a flat failure. In the medical profession, for some branches of which she is better fitted by nature, she has met with somewhat better success; but even there, she has never passed mediocrity and has only reached that stage of development in small numbers. The fields of literature, of art and of the stage (both lyric and dramatic) have always been wide open to woman. The dying century has brought her no "paean of victory" or "emancipation" in that direction. So far as concerns the trades, in which Mrs. Stanton asserts that women are "pushing their way" by reason of the increased opportunities which the "emancipation" of the closing century has brought, it may be pointed out that that of printing, or type-setting, is about the only one in which she has invaded. In that vocation woman has been a very qualified success. Commercially, her work is valued at much less than that of the tyrant, man, by those who purchase it as a commodity for the purpose of selling it again. Thus it goes all along the line. The iron jaw of the "strong minded" may clatter and clatter, but it cannot move the immutable laws of nature.

Perhaps if this "paean of victory" and "emancipation" were translated into more intelligent language it would be condensed into the simple statement that during the century that is just closing, and more particularly during the last third of it, the harsh exigencies of our complex civilization have driven large numbers of women out of home life, and the vocations they are adapted to, into the turmoil of business activity where they are struggling for a scanty pittance, and uncongenial surroundings, as well as limiting the opportunities and cutting the remuneration of the fathers and husbands and brothers who should be the bread winners. That, however, constitutes a strange "paean of victory" and "emancipation." Indeed, there are not wanting those who think that the American republic is founded upon the family hearthstone—a kingdom, if one may be allowed to employ a figure of speech, in which woman has ever ruled, with a sceptre of love, as Queen—and that this new order of things menaces both.

The Chief of Police controversy continues to concentrate public attention in San Francisco. The investigation into the charges of the *Bulletin* against Lieutenant Esola was concluded Saturday evening. Evidence in his favor proved what was said here last week, that he is an agreeable and respectable young man, who seems to have made many friends, but it was not proven that he possesses the knowledge or character required for so important a post as Chief of Police. His personality and record, however, are of secondary importance in the controversy in comparison with the intense feeling everywhere manifested against turning the department over to the *Examiner*. He is presented as the candidate of that newspaper; it has engaged itself in Esola's defense just as though its own reputation or that of its owner were at stake. Should this man be appointed, his selection would be due to the *Examiner* and to no other agency, and surely the Chief's first consideration would be for this journalistic friend and ally. It is hard to see how it could be otherwise. To place a paper in so powerful a position is a dangerous expedient and I imagine the commissioners will see it in that light. However, they are gentlemen of standing and position in San Francisco and are privileged to act as their best judgment dictates.

EQUIPPING AN ARMY

COL. O. F. LONG IN HIS OFFICE.

HOW much has the Spanish-American war profited San Francisco? Clear aside from humanitarian consideration, how much cold cash has it brought to the residents of the city? Stop before you read any farther, and make an estimate for yourself. I have put the question this week to all sorts and conditions of men and have been amused at their guesses. The average estimate was somewhere in the neighborhood of ten million dollars. One man put his figures high and made it twenty-five millions. All were away below the actual figures. In the year between June, 1898, and June, 1899, the War Department spent in San Francisco, on behalf of the Eighth Army Corps, fifty million dollars, of which over two-thirds, or fully thirty-five millions, went into the pockets of firms having headquarters on the Coast or of residents of San Francisco. This was for just one year, remember. In the two months before the opening of that year, there had been a heavy expenditure, since one military expedition had already been quartered, fitted out and dispatched. In the year from June, 1899 to June, 1900, it is estimated that the expenditure will come to thirty millions, of which the usual two-thirds will stop in San Francisco. Adding this sum, or twenty millions, to the figures for the busiest year, and allowing for money expended before June, 1898, and for the sums spent here from their pay by officers and soldiers encamped in the city en route, and you have a grand total of sixty million million dollars added to the trade of the city of the Golden Gate in two years by the army alone. How much the navy has disbursed in the port, I do not know, but while it is less than that expended by the army, it will add considerably to the total.

Rather startling, isn't it? Let us make a few comparisons. In 1898, California produced a little over sixteen million dollars' worth of the precious metals. Allowing that the production of 1899 equals that amount, still the war expenditures in San Francisco double the sum. We are having an oil boom of no small dimensions just now, yet the total output of the State's oil wells comes to just about one-fifth the sums circulated in San Francisco for the army. You can put oil on top of gold and silver and throw in a few manufacturing industries on top of that, and still not reach thirty-five millions in one year. Besides that, this money came in just when it was needed. It hauled us through a dry year. The whole country is paying for the war, while the war is paying only a few favored localities. The City of Saint Francisco is the most favored of these.

The agencies for the supplying of the Eighth Army Corps are divided into three departments—of subsistence, medical and Quartermaster's, the latter subdivided into the departments of clothing, supplies, and transport. The Quartermaster's Department has been the one with which San Francisco has had most to do. The other two draw a great portion of their supplies from the East. The Quartermaster's Department, on the other hand, does work of such a nature that most of the materials have to be purchased on the ground. Transports—coal—civilian employees—all these and a thousand other minor things are taken from California. It is on this department that the strain of the war came most heavily, and it is in this department that the emergency has been met most creditably.

CUTTERS AND TAILORS, CLOTHING DEP'T.

May 1st, 1899, Dewey took the harbor of Manila. At that time, the Department of the Pacific included about 3,000 men, scattered all over California and the southwest. Washington began to telegraph to Colonel Long, then, as now, at the head of the department, "Can you attend to five thousand men?" "Can you attend to ten thousand?" The number rose in a month to twenty thousand, and went up, by leaps and bounds in one year to seventy-five thousand. Long telegraphed back to the East for assistance, but they were busy then with the invasion of Cuba and had not a single tent or blanket to spare. It was "up to" the authorities here to provide, with their inadequate facilities, for the wants of this growing army, and to dispatch and equip them with the greatest possible speed, with transportation over the longest steamer route in the world. The government did not own a single military transport, and there were no supplies ahead. Yet within less than four weeks from Dewey's dash into Manila Bay, an expedition of three ships and two regiments, the first to leave our coasts for a foreign port, got away from San Francisco. More than this, they left thoroughly equipped and with adequate transports.

How much hard work and how much cutting of red tape this involved may easily be imagined. The government makes its own uniforms, purchasing other supplies by contract. Before the war, this took a force of about a dozen seamstresses with cutters to keep them supplied. Within two weeks from the first call, five hundred women were at work on uniforms. The regular officials had never had the slightest dealings with ships, yet three transports had to be secured, inspected and transformed into troop ships in four weeks. The demand for cloth, blankets, and underclothes, was greater than the available supply in all California. At times, as when the "Kansas dudes" came in clad simply in overalls and bandana handkerchiefs or when the Nebraska men arrived without blankets, it seemed as though the emergency were too great to be met. It *was* met only by a judicious dispensing with rules and by the hearty co-operation of San Francisco merchants. One or two examples will suffice. The red tape of the War Department requires that at least ten days' notice shall be given for bids on all supplies. A regiment would come in without blankets, and the stock in the store-rooms would be exhausted. To fulfil the rules, the Quartermaster's Department would have to keep the volunteers shivering at the Presidio for those ten days. The officials, in such a case, would put their positions in risk by accepting and opening bids at once. Such work was done many times in those lively days, and Washington has since approved the action. Again, certain manufacturing firms in the city found that their machinery was entirely inadequate to the demands. They telegraphed for new appliances at once, and had the raw material sent on by express instead of freight, paying the extra expense themselves. More money was given to the nation in those first days of the war than ever went into the Red Cross treasury.

FIFTY THOUSAND PAIRS OF SHOES.

The congestion passed, and the department was enabled to get back to rules once more. In the process of change, it had multiplied itself by about ten. This normal increase, calling, as it did, for an expansion of facilities all along the line, was not the least of the troubles of Colonel Long and his assistants. This movement is now complete, and they have been able to return to regular army routine and red tape methods. They are now supplying an army of about seventy-five thousand men, in the Philippines, Honolulu, Alaska, and California. They control ten transports owned by the Government, most of them purchased in the port since the war opened, and have used at various times some sixty vessels chartered for immediate needs. They have caught up on supplies, so that the storehouses are filled with clothing and equipment kept ahead, and there is no need of breaking the laws regarding contracts. They have moved the huge Eight Corps operating in the Philippines over a route nearly seven thousand miles long, and done it without a single fatal accident due to neglect of the department. The only casualty of any kind was the wreck of the *Morgan City* in the inland sea of Japan, and that was due to the carelessness of a German pilot. Compare this with the record of the English army in the present Boer war. They have moved a force about equivalent to our Philippine army over a route not quite half as long. In doing this, they have had about a dozen accidents, some with loss of life, and one resulting in the destruction of a troop-ship and several batteries of artillery. While it is true that the English had less time to get the entire force moved, it is also true that Great Britain owned transports and transport facilities previous to the war, and was not obliged to make them, as we were. The comparison here is all on our side. Even in our own Spanish war, the Pacific Coast, with more men to move, and a greater distance to cover, has come in for little of the hostile criticism aimed at the Eastern authorities.

INSPECTING UNIFORM CLOTH.

The business of the Quartermaster's Department centers upon the old, gray building on Montgomery street, the government dock, and the big storehouse, the building on Mission street once occupied by the *Examiner*. As the business now runs, it is hedged about by all the formality which goes into government affairs. Contracts for supplies are let on certain specifications furnished from Washington. Bids are made on that basis, and the award given to the firm whose price within the specifications is lowest. This done, the product receives the most rigid inspection. It is made especially severe in the case of woolen cloth for uniforms, in which a bigger business is done than *in* any other one thing. The material must be of a certain weight per yard, and must have just so many threads per inch in web and woof. It must endure certain tests for breaking, for wearing quality, and for color. Finally, the great bolts of cloth, as they come in, are run over a frame which looks like a printing-press and examined yard by yard for flaws. For holes and broken threads, a price is deducted from the contract, for other faults, it is rejected. Such articles as underclothes, socks, shoes, caps, hats, etc., are inspected one by

one before acceptance. The uniforms, made from cloth in the bolt by the government's own employees, have to undergo the same ordeal before they are packed and put away for shipment to Manila.

Although the matter of bids is hedged about by rules, yet there are opportunities for the officers to extend favors in the way of placing orders. Generally, partiality has been shown the Coast in this matter. This is partly because of the saving of time involved, and partly because of a feeling of gratitude for past favors. The Coast stood by them in the hard pull of '98; now they are standing by the Coast. The government has not suffered by this policy. I have the word of Lieutenant Lyman, of the Marine Inspection Service, that "the supplies we have bought in California are generally of high quality for the price, equal, and in many cases superior, to the best Eastern goods."

The acceptance and preparation of a government transport involves an immense amount of work, considering that it must always be done in a hurry. Following the acceptance and inspection by the Treasury Department's officials, comes an inspection by medical officers under the Quartermaster's Department. Even the best passenger vessel has to be changed in important particulars before she can be used to transport soldiers. The inspectors report on the alterations needed, sometimes involving an entire refitting, and stevedores and carpenters get to work. Such emergencies have sometimes raised the number of the Department's civilian pay-roll in San Francisco to 14,000. All this time, the problem of coaling must be solved, and in a region where coal is passing scarce.

The man at the head of this huge business, and the one who deserves the best share of the credit for the Department's present efficiency is Colonel Oscar F. Long, an old Indian fighter. Colonel Long is a native of Utica, New York. He graduated from West Point in 1876, and went into the Fifth Infantry, General Miles' old regiment. He saw line service against the Indians for sixteen years, mostly in Montana and Idaho. He was then transferred to General Miles' staff, and served there until nine years ago, when he entered the Quartermaster's Department at Washington. In 1896, he was transferred to San Francisco. The rest is part of the history of San Francisco's share in the Spanish-Filipino war.

Prologue to "The Two Noble Kinsmen."

BY ALGERNON CHARLES SWINBURNE.

SWEET as the dewfall, splendid as the south,
Love touched with speech Boccaccio's golden mouth,
Joy filled and thrilled its utterance full with song,
And sorrow smiled on doom that wrought no wrong.
A starrier lustre of lordlier music rose
Beyond the sundering bar of seas and snows
When Chaucer's thought took life and light from his,
And England's crown was one with Italy's.
Loftiest and last, by grace of Shakespeare's word,
Arose above their quiring spheres a third,
Arose, and flashed, and faltered: song's deep sky
Saw Shakespeare pass in light, in music die.
No light like his, no music, man might give
To bid the darkened sphere, left songless, live.
Soft, though, the sound of Fletcher's rose and rang
And lit the lunar darkness as it sang,
Below the singing stars, the cloud-crossed moon
Gave back the sunken sun's a trembling tune.
As when at highest high tide the sovereign sea
Pauses, and patience doubts if passion be,
Till gradual ripples ebb, recede, recoil,
Shine, smile, and whisper, laughing as they toil,
Stark silence fell, at turn of fate's high tide,
Upon his broken song when Shakespeare died,
Till Fletcher's light sweet speech took heart to say
What evening, should it speak for morning, may.
And fourfold now the gradual glory shines
That shows once more in heaven two twinborn signs,
Two brethren stars whose light no cloud may fret,
No soul whereon their story dawns forget.

—*In Saturday Rebiew.*

The lumber mills of Washington, which have been closed by mutual agreement during the past sixty days, re-opened on January 9th, and will continue in operation indefinitely, unless there is an over-production or some of the dealers outside of the breastworks attempt to cut prices. The mill men have formed a very strong association for mutual protection and those who have not become members are likely to have a hard time of it. The organization has kept up prices and has made such an arrangement with eastern dealers that, in case there should be a rise above the amount paid to Washington dealers, they are to share in the profits. It is a peculiar scheme, but both the local men and their Eastern connections like it and so all ought to be satisfied. One of the best features of the scheme is that it has kept wages up to the top notch.

The Roumanian minister of public instruction has sent a circular to the head mistresses of all girls' schools in Roumania to the following effect: "Experiments based on science and practice having shown that stays are hurtful to health, and interfere with the action of the organs of respiration, I decree that you strictly forbid the use of stays to the pupils of your establishment." A similar edict was not long ago issued by the Russian government.

1. A BREAK DOWN. 2. ARTILLERY GONIG TO THE FRONT. 3. A REST FOR THE WEARY. 4. THE REGIMENT'S BAGGAGE.

TRANSPORTATION IN THE PHILIPPINES.

BEN-HUR.

WHATEVER may be said of it from an artistic standpoint, as a spectacle and as a financial venture, the drama of *Ben-Hur*, as produced this season at the Broadway in New York, is the theatrical success of the year. It was a huge undertaking. Consider it for a moment, you who have read the book and know nothing of the play. No novel ever written was set in such a variety of splendid scenes. There is the desert with the single star in the heavens, the manager, Jerusalem the Golden, the galleys and the sea-fight, Athens in the days of her glory, the Groves of Daphne, the Mount of Olives, the Amphitheatre—these and a score of others rush to the mind in reviewing the book. It would have been impossible to present the play without bringing in these scenes, for the disappointment of readers, their imaginations filled with Wallace's splendid descriptions, would have ruined a presentation wherein this splendor was cut. The chariot-race alone was a great problem. It is the climax of the story; without it the play would have been like *Hamlet* with the part of Hamlet scratched. Yet it seemed like a scene well-nigh impossible for the stage. Consider. In the book, Ben-Hur drives his chariot so as to follow Messala's for seven turns of the Amphitheatre. At one point, his rival fouls him on a critical turn by lashing his gently-bred Arabs. Then, on the very stretch, Ben-Hur brings his steeds to a great burst of speed and catching the Roman's chariott-wheel with the hub of his own as he passes, wrecks the car and goes on to victory. Two chariots with four horses each have to be thus manoeuvred on the stage, and, while keeping up the illusion of a race, all this action must be introduced.

This problem had to be solved first of all, and it cost fifteen thousand dollars a-doing. The mechanism was first planned and put under construction. For each chariot was built a cradle twenty feet long by fourteen wide. On this, is set a runaway or treadmill, so arranged that the horses may run at full speed and yet gain no advance. In passing, it may be said that the problem concerned in producing a running horse on the stage is not that of getting him to make speed, but of getting him under way in the narrow limits of a theatre. These cradles travel on a circular railroad, and the horses are fastened to them by invisible steel cables. Back of these cradles, is placed the scenery of the arena. As the race starts, this revolves in a direction opposite to the apparent course of the horses. Thus the audience has the illusion of moving with the racers. It took three months to train the eight horses used. It was found that the incident of smashing the wheel was not practicable for the stage, and it was therefore cut.

This solved, the production of the twelve other spectacular scenes was comparatively easy. But meanwhile, a problem just as serious as the mechanical ones confronted the adapters of the play. The production, like that of *The Christian* is, frankly stated, a "play" to religious sentiment. Stated in terms of the box-office, it is an attempt to induce a large body of people who generally shun the theatre to attend because of the high moral purpose involved. It would not do to shock their sensibilities by introducing the Crucifixion or the ministry of Christ as factors, yet the novel hinges on these two things. Especially is this true of the scene where the mother and sister of Hur are healed of leprosy. It was a vital point and must be met. Finally, it was decided to do this by throwing over them, after they had prayed for deliverance, a light from above. The other delicate passages were dodged by similar methods.

As may be imagined, the drama hampered by these fetters is not a great one, It could hardly be so under the circumstances. Moreover, the "speaking-parts" are subordinated to the spectacle at every point. With two elaborate ballets, and a number of spectacular features, like the sea-fight, the race, and the miracle, not much is left for the actors. No, it is only a mediocre play, fair, what there is of it, and acceptably acted, but its startling value comes in the wonderful scenes, the beautiful costumes, the ballets and evolutions, and the mechanical devices. It is in for a long run here and abroad, although it can never be a road piece because of the heavy machinery involved. The shot at the religionists has hit the mark. Clergymen and congregations have crowded the Broadway to bursting and made glad the box-office. At its best, it is only a series of living pictures—think of it, the clergy taking their flocks to see living pictures!

There is an almost complete failure of the olive crop in Southern Italy and in Sicily this season, owing to the ravages of the oil fly, which appeared in unusual numbers on account of the prolonged drouth of last summer and fall. The loss to the provinces of Bari and Lecce alone is estimated at 60,000,000 lire, or $12,000,000. There will be a corresponding scarcity of oil, of course. The country people are having their eyes opened to the consequences of their wholesale destruction of insect-devouring songbirds.

VIEWS OF THE RAINIER CLUB, SEATTLE.

AN EXHIBITION OF BRONZES.

BY ARTHUR ALTSCHUL.

THE loan exhibition of bronzes at the Hopkins Institute, which has just come to an end, was not remarkable for abundance in first-class works; it was rather a modest display, yet not without interest and attraction. For one thing, the hundred odd bronzes brought together showed instructively the great variety of treatment and effect which this noble material admits, both in the quality of the surface (which may be polished and shiny, or smooth and dull, or rough) and in color; the principal shades I noticed at the exhibition were: "bronze color," silver, silver with a tinge of gold, black, greenish black, brownish black, brown, green, greenish gold, greenish grey. The eminent fitness of the material for the elaboration of minute and clearly defined detail was also sufficiently well illustrated, and still better its fine effect when treated in a large and monumental manner.

The most imposing object shown, the gigantic dragon vase owned by Mrs. Hearst, did not possess the charm of novelty, as it has been one of the chief ornaments of the Art Institute for a long time. It is a most elaborate and complicated work, a marvel of craftsmanship, and perfect in style and taste. Among the smaller Japanese works were some simple and pretty flower holders, especially one (No. 73) shaped like a square pillar spreading out at the top and base. The remarkable skill of Japanese artists in the naturalistic representation of animals was illustrated by a small figure of a tiger crouching and ready to spring at an enemy (86). There was also a Japanese dragon, believed to be 500 years old (88; not of bronze, but iron), an interesting and really attractive little monster.

Among the European works two little objects of venerable age may be mentioned first. One (130) is a statuette only a few inches high, found, according to the label, in Herculaneum, and amusingly misnamed "Discobolus." It really represents Venus in her familiar attitude of balancing herself on one foot and removing the sandal from the other. The tiny figure is adorned with bracelets and anklerings of gold. A work of very different character is a small Byzantine triptych (129), representing Christ, the Virgin, and St. John the Baptist. It consists of three bronze tablets, each containing a figure in flat relief, the background being decorated with *champleve* enamel in black and white; the decorative effect is very fine. The most attractive exhibit in the collection consisted of reproductions of a number of Greek or Græco-Roman vases, drinking vessels, candelabra and tripods, mostly found in Pompeii (loaned by Mrs. D. Bixler). These are delightful works, possessing in large measure the refined charm and the ideal quality which Grecian art habitually imparted even to objects of every-day use. There were also some good copies (mostly much reduced in size) of antique statues: the Narcissus of Pompeii, the "Dying Gladiator," the Sleeping Ariadne, and others. Renaissance sculpture was represented by a copy of the famous Flying Mercury, by Giovanni da Bologna; the eighteenth century by two graceful nude figures: Houdon's Diana and Falconet's "Venus at the Bath."

Of the works belonging to our own century, the most important was Dore's "La Parque." Fate, in the shape of a tall, haggard old woman, with an expression of stern majesty and inflexible determination, is shown seated. Before her, and leaning against her, stands Love, a beautiful youth. Both hold a thread, the thread of life, and Fate is about to cut it. The meaning of the work is not quite clear. One receives the impression that the mere fact of love thwarted by fate is not all the artist meant to convey; but the deeper significance is not clearly expressed. The composition is very fine, chiefly through its perfect unity and concentration, and through the strong contrast between the two figures. The execution, on the other hand, as in most of Dore's works, lacks individual character and true artistic refinement.

Surprising and regrettable was the almost complete absence of good examples of the true modern bronze style. Even Van der Straeten, the Gibson of bronze, was represented by only one example, and that not a very good one (The Debutante, 23). Another very delightful class of modern French bronzes—vases, etc., decorated with remarkably graceful and

Things & People.

The Sun's Unpaced Poetical Contest.

SOME time ago, a gentleman of more optimism than experience offered, through the New York Sun, prizes amounting to a thousand dollars for poems in refutation of "The Man With a Hoe," Markham's *Examiner* masterpiece. The awards are now announced, and John Vance Cheney is the winner. After a perusal of the prize poem, I am obliged to confess that Mr. Cheney has not climbed very high up Parnassus. I regret it, for it is time that the illogical basis of the Markham poem was exposed. It is hard to present logic in poetical form, however, and poetry to order is stiff at best—witness the prize poems on set subjects at Oxford and Cambridge, which have never been worthy the printing, notwithstanding the fact that Tennyson, Arnold and a score of other famous poets have written for the contests. So Mr. Cheney's uerses are stiff and formal—but they are doubtless the best of a bad lot.

* * *

The final word has not yet been said about "The Man With a Hoe." Most of those who have "roasted" it have talked and written around the subject. They have assumed that it is a slur on the laboring man in general. To Markham's credit be it said that this is not true. It is aimed at the dulled and stolid peasant class of laborer, the man who is nothing but a bunch of brutalized instincts on legs. This, I take it, is the intention of the man who painted the picture and of the man who wrote the poem. So far, so good. The fallacy comes in when Markham blames it all on the "masters and kings and rulers of all lands." The blame does not rest there. Let us be concrete. Some fifteen or twenty generations ago, two laborers of equal powers in every respect worked together in the fields. One did his work well, the other ill. One raised himself in his lifetime a little above the peasant grade, the other stayed there. The sons of the first one rose still more, the sons of the other existed, ate, vegetated and died. The descendants of the one, even to the twentieth generation are the enlightened class of Europe, the pioneer of civilization, the officers in the industrial army. The descendants of the other are the Men with Hoes.

"Whose breath blew out the light within that brain?"

Not the rulers of all lands, Mr. Markham, but his own unprogressive ancestry. Unwilling from generation to generation, to make the best of that which was in them, they left the mark upon the peasant race. Incidentally, this is just what is the matter with Mr. Markham's friends, the Boers.

***

The Passing of the Thanksgiving Game,

ALTHOUGH it is doubtful if the students of the two universities favored the change, the faculties and athletic authorities of University of California and Stanford have decided that their athletic teams will exhibit no more in San Francisco. All games in future are to be played on the campus, and the Thanksgiving contest is to be set back two weeks. I said when the change was first broached that it was advisable and for the good of the two institutions. Ir hurts a college and it hurts, above all, the members of the college athletic teams, to make exhibitions of themselves before the general outside public. The English universities, which originated amateur sport, ought to be our pattern in this respect. Their games are not for the delectation of the multitude, they are for the students themselves. Sport is only an incidental thing in the life of the Oxford or Cambridge undergraduate, a part of the development of the sound mind in a sound body. For this reason, the two English institutions conduct their sports on a basis so purely amateur that juggling with rules or professionalism or protests are things unknown. The fact that restriction of games to the campus was long ago recognized by Eastern college authorities as the first step toward athletic purity and that it has worked toward achievement of the desired result ought to be sufficieut argument for the change out here. I realize that there are great practical difficulties in the way, and that they may hamper college athletics for the next year or two. But these difficulties would have to be met whenever the change should come, whether now or ten years from now, and the faculties were wise in choosing this time, rather than a later one, for the plunge. The abolition of Eastern coaches is the unwise feature of the new program. We of the Coast are not yet out of athletic leading strings, and provincialism threatens us if we shut ourselves out from the world in this manner. The other "minor" colleges have not done so; such football teams as Cornell, Carlisle, and Wisconsin were coached this year by experts from the leading universities. If they are not ready for the change, much less are California and Stanford, who meet a Trans-Sierran team about once in five years.

A Romance of the North.

ANOTHER story has been added to the romances of the golden North. Early in the month, the steamer *City of Seattle* went arcticwards with a number of prominent citizens of Seattle on the passenger-list. It was a gamble with death against gold for stakes. If the weather kept open the voyagers would reach the North in time to stake rich claims before the spring rush; if the Arctic winter shut down, they would have to face death by starvation, cold and shipwreck. Therefore, when the time elapsed and she was announced on January 22, six days overdue from Skaguay, there were anxious times in Seattle. She was reported as having passed Juneau on scheduled time, and six days between there and the northern port meant a serious accident of some sort. The offices of the steamship company were filled that day with eager friends and relations of the Seattle passengers. On the 23d the cloud was lifted. The steamer *Cottage City* reached Port Townsend with the news that she had overhauled the *City of Seattle*, disabled and drifting on the rocks, and had towed her into Juneau. The ill-fated vessel had broken her propeller and would have been wrecked in an hour but for the chance meeting, It was almost a miracle that she was saved, but miracles have been frequent on the Alaska run

***

The Rainier Club.

THE leading social institution of Washington is undoubtedly the Rainier Club. Its membership comprises most of the prominent professional and business men of Seattle, and it is housed in a handsome and commodious structure in the very center of the Queen City. From the pictures of the institution, interior and exterior, which are shown here, an impression may be gathered of the comforts it provides for its members. The building, three stories in height, of pressed brick, is one of the finest instances of modern architecture in the city. On the first floor are the reception rooms, office, billiard hall, and library. The directors' room, dining-room, and kitchen are placed on the second floor, while the third is arranged in suites of apartments, which are, as may be imagined, greatly in demand among the members. The Rainier Club is often the scene of banquets and receptions, and affairs held within its walls have the same cachet which is conferred on entertainments given within the precincts of the Pacific-Union Club of San Francisco. There are three hundred members, and a long waiting list. H. C. Henry is president; E. C. Neufelder, vice-president; E. W. Andrews, treasurer; J. M. Gephart, secretary. Basset V. Tremaine is the manager.

***

The City Hall of Seattle.

STRANGERS in Seattle have wondered why a city of her size and energy should be contented with the ramshackle little building which serves the city government for headquarters. An old frame structure, patched up like a crazy-quilt, it discharges the functions of a city hall, a police station, a jail and a stable. It is overcrowded, distressingly homely, and inconvenient in every way. A peculiar legacy of a private citizen explains this condition of affairs. James Osborne, an old and eccentric resident of the city, died in 1881 and left a tangled will. By its terms, the estate was to be sold and one-half of the proceeds given to the city for a municipal building, providing Seattle would give the other half. The remainder was to go to an old friend. But Mr. Osborne had ignored the fact that he had given a lease of indefinite tenure covering most of his property to this same old friend. The latter showed no disposition to release his claim, and there was no legal recourse. Only recently did he give up this lease and permit the property to be sold. Even then, the executors failed to report in time and had to be summoned into court. This had the desired effect, and the city has now $50,000 assured as the nucleus of a City Hall Fund.

***

A Water-Rights Feud.

A VENDETTA of long standing has broken out again in the Stuck River and White River valleys. It is the old question of water rights, which has provoked more murders and assaults in the West than any other one cause. Many years ago, a farmer built a dam on the Stuck River, thereby turning its waters into the White. Claiming that the water always ran that way, he sold his farm and left the dam, which was a flimsy affair, to the mercy of the winter freshets. Other farmers planted in the bed of the Stuck River. A heavy rain burst the dam, and flooded the Stuck valley, ruining crops all the way down. Since then, the embankment has been rebuilt by the residents of one section and blown up with dynamite by those of the other nearly every season. This year, the building and destroying process has occurred twice, so that the two sides have nearly come to arms over the matter. The commissioners of King and Pierce counties have now intervened and will guard the dam pending a permanent settlement.

A New Hotel in San Francisco.

NEVER has it been so difficult to obtain hotel accommodations in San Francisco as at present. Though the metropolis of California has often been spoken of as a city of boarding-houses, the truth is that the supply just now is below the demand. The first-class houses are nearly filled up, while the lesser places are thrning away patronage. This is all due to the immense expansion which is the result of the war and which promises to place San Francisco and Seattle among the great cities of the country. I noted with interest the announcement of a new hotel on Van Ness avenue, in which the Crocker estate expects to invest over a million dollars. There are boarding-houses by the score on the avenue, but thus far the great caravansaries of San Francisco have been "down town." It is difficult, of course, to institute reasonable comparisons between the Golden Gate City and New York, but one can not help recalling that the location of most of the best and most fashionable establishments there are is far removed from the business region. I imagine that the model which has furnished Gotham with the Savoy and the Netherlands will most commend itself to General Warfield, who, together with the architect and the builder of the projected caravansary, has gone East to study the best types of hotel structures. We are promised an eleven-story building, in masonry and steel, the woodwork fire-proofed, equipped with all possible conveniences and luxuries. Some three hundred apartments are planned, divided into suites and single rooms, but each with an individual bath. General Warfield, the lessee of the Hotel Crocker, has certainly proved his capacity to manage a first-rate hotel. The California is excellently handled, and though small, is very successful, while the direction of the Hotel Rafael made a reputation for Mrs. Warfield, who has ability and experience far beyond the average. I cannot see how the institution can fail to succeed, and, it may be said, its chances of prosperity are not lessened by the decision of James L. Flood to put up a business block on the Baldwin hotel lot, which he so recently purchased.

***

Failure of a Conspiracy.

THROUGHOUT San Francisco there was an honest feeling of relief at the failure of the conspiracy to appoint Lieutenant Esola Chief of Police. Here was an individual, simply and solely the creation of a newspaper—a man of no special talent, capacity, or endowment, to whom it was proposed to turn over the most potent influence of the city's government. Will the average man believe that this power would not have been used to reward and punish the friends and enemies of the *Examiner*? The mere fact of the demand and the earnest fight made for its achievement demonstrates the importance of the scheme in the eyes of its projectors. The refusal of the commissioners to execute its will is construed as a personal affront; W. J. Biggy, who, it seems, was to have been a party to the undertaking, because he has repented of his error, is held up as a public enemy. The whole journal bubbles over, froths, and gurgles with rage at the frustration of its plan to make private property of the police department. Indeed, if some one had stolen the funds of the city treasury, it would not have made half the outcry. It is making an asinine exhibition of itself and lessening such influence as may still remain to it after years of journalistic malpractice. As for W. J. Biggy, his open opposition to the Esola scheme has made him more friends than he ever before had, charges of broken faith and denunciations to the contrary. He was counted on for a ready tool in accomplishing the conspiracy, and he has shown that the safety of the community is of more value to him than the good will of the *Examiner*.

***

Outcry About Patronage.

THE clamor of the Democratic organization in San Francisco for patronage is still loud in the land. The Board of Public Works, which has many hundreds of appointments, shows no inclination to regard the source of its being, and is giving the bulk of its places to Republicans. I am told that recommendations even from the most important quarters have been overlooked. Naturally this arouses bitterness among the men who, having labored for Democratic success, are compelled to see their promised reward filched by strangers. Nor at this juncture does there seem any other recourse. It is understood that Commissioner Mahoney must retire in the early future from the Board, but as he was appointed as a Republican, it is hard to see how the Mayor may do otherwise than select a Republican in his place. Under present conditions, Marsden Manson figures as a Democrat and Colonel Mendel as a Non-Partisan. However, in all such disputes the public loses nothing, but rather gains in having experienced men attending to municipal duties. Already it begins to be realized what an immense change for the better will be made by the enforcement of the civil service provisions of the new charter.

***

What Is a Lie?

THE average man, he whose business it is to go up against his fellow-man in business and politics, cannot fail to be impressed by the definitions of a "lie" given currency by Ambrose Bierce. In the testimony evoked at the Clark investigation in Washington, two witnesses admitted having said "the thing which is not," but refused to agree that the lapse constituted a lie. One declared "a lie is a false statement made to one who has a right to know the truth." The other, "a statement is not a lie if made with the understanding that it is false," that is if both parties to the statement so understand it. Few men would have taken the trouble, if they had the skill, to so phrase their fairh, but the first states exactly the attitude the average citizen takes in communicating with his fellows. Most of us consider it wiser to evade than to be rude, and so wittingly mislead one who asks intrsiuve questions on topics he has no business to inquire about. The moral obligation begins when the inquirer has the right,—either as an employer or as a friend to be told the facts. This is not the finest or the most delicate construction of honor, but it is the rough code of daily life, and breaches of it provokes an immediate and earnest resentment to which the wrath of the church seems mild.

BOSWELL, JR.

As head of the Orleans family as well as of the house of France, the Duc d'Orleans has conferred the historic title of Duc de Guise on his cousin, Prince Jean of Chartres, who recently became his brother-in-law. The title went with the Guise inheritance to the house of Conde in the last century, and on the extinction of that line in the early part of this century, to the Orleans. The last person to bear the title was the son of the late Duc d'Aumale, who died young.

BEN-HUR—ACT III, TABLEAU II. TEMPLE OF APOLLO, GROVE OF DAPHNE, REVELS OF THE DEVADISI.

SAD DAYS IN LONDON.

SPECIAL CORRESPONDENCE OF THE WAVE.

THE cloud is over London. When last I wrote, I said that, in spite of wars and rumors of more wars, the Londoners still found time to be gay, to marry and, to give in marriage with ceremony, to keep up the traditions of that race which loves stately functions, and whose young men and women danced in garrison before Waterloo. Alas, that is put behind us. Magersfontein and Colenso have been added to the list of black defeats, and the nation which has lost so many of her best in this bloody month is preparing to throw the rest into the struggle. It is more depressing here than it is down there, I fancy. There, even with the wounded rolling back to the cape every day, there is rush and hurry and excitement and hope of victory. Men are there with men, and men are the doers and not the sufferers of the race. But here, it is the women waiting. I was at the War Office with the crowd, yesterday, when the latest list of dead came in. It was quite too terrible and grand for me to write about; I know that I had rather see it in the trenches, when it is all glorified with the thought of heroism.

I remember standing on Newspaper Row in New York, on July 5, 1898, when returns came from Santiago. We had won two victories the day before, and the country was wild and exultant, but when the number of the dead was posted and the names began to straggle out, I felt, we all felt for the moment, that it was not worth it. What shall I say of the feelings called forth by this list of the dead, coming from a battlefield where the heroism of the race had been all in vain, where there was no victory to soften it? And the women—for in that crowd in New York there was probably not one who claimed kin to those whose names were flashed on the bulletin-boards, but here the sullen record brought tidings to their nearest and dearest. You could hear them sobbing through the crowd, now and then. I wish that some of the Boer sympathizers of our common race could have been there for their own shame.

The papers are full of stories about these pathetic incidents. How the news is broken in the cottage of the peasant, they do not say. With the true British bending to title, they are concerned mainly with the officers and nobility who have lost relations. There are enough of these. Admiral Pechal has three sons in the war. Two were killed last week; the third lies wounded in Mafeking. The death of Lord Roberts' son must have been told in America by cable, but I doubt if the story of the father's experience has crossed the ocean. Lord Roberts, who usually takes luncheon at the Service Club, was driven, by the questioning of inquisitive officers, to quieter haunts. He was sitting alone over his meal at the Athenæum, of which he is also a member, when some stranger at the next table said: "Sad news this about the death of Lord Roberts' son." The speaker and his party observed the agitation of the gentleman at the next table, who rose abruptly, and went into the hall. Lord Roberts, who knew that his son was wounded but supposed that he was in a way to recover, rushed to the tape-machine in the hall of the club. It gave him no news. Then he went to the man who had mentioned the news; the latter could only say that it was a rumor—he had no confirmation of it. Between hope and dread, the general searched for several hours before the news could be confirmed.

The wife of General Wauchope was in a shop in Edinburgh when a newsboy passed, crying the news of her husband's death—her first intimation that he was even wounded. It is said that Wauchope had a presentiment that this would be his last war. The same thing is told of Lord Winchester. He went into his last fight with a brooding feeling that he was to die before night. Still another story of a presentiment comes from Chelsea, where lives Colonel Goldie, a retired officer, who had a son in the war. One of the Modder River fights was on, and the colonel's family persuaded him to attend a political meeting, in order to divert his mind. Suddenly, he arose from his seat declaring that he must go home, for he had a presentiment that his son had been killed. It proved true; a telegram announcing the young man's death was waiting at his house.

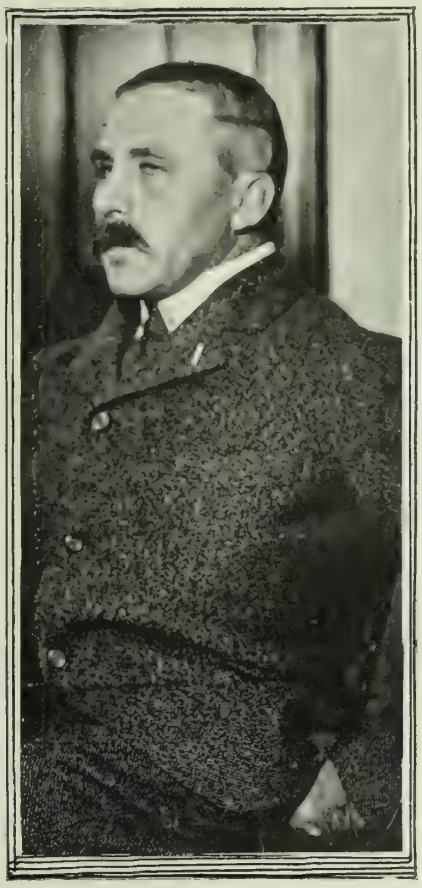
The list of titled dead and wounded is long, so long that I doubt if a respectable assemblage could be gathered for a reception or ball in any of London's grand houses, on account of the numbers in mourning. I shall mention only a few. The Earl of Durham has lost a cousin, killed at Magersfontein, a brother, Major William Lambton, wounded at Modder River, and another, Captain Hedsworth Lambton of the *Powerful* shut up in Ladysmith. The Duke of Devonshire has a nephew killed. Captain Marsham, killed at Mafeking, was a son of the Earl of Romney. Lieutenant-Colonel Keith-Falconer, grandson of the Earl of Gingore fell at Belmont. The war has touched the Queen's immediate family only once; her great-grandson, Major Count Gleichen, was wounded, although not seriously, at Modder River. These are some of the losses among the higher nobility. But as you go down the list to plain, "Lords and "Sirs," the number of the dead increases. It is no exaggeration to say that, if the war continues as it bids fair to do, and if the disparity of deaths between officers and men keeps up, there will be some such situation as existed after the Wars of the Roses, when half the noble lines in England ended, being without male issue.

Many more of the high nobility go out with the yoemanry now being enlisted. This change will put the war almost on a feudal basis, the landed gentry leading the foresters and tenantry of their own estates. These soldiers are furnishing their own horses, equipment, and clothing, which they take from the estate. It is rather a fine sacrifice that these young noblemen are making. They are giving themselves and their private fortunes for a chance at glory or the grave. Thus, Lord Chesham leads a regiment of his own tenantry, equipped with his own money and his two sons are lieutenants in the force. He leaves one of the most beautiful homes in England, Latimers, the castle of the family at Chesham, for the veldt and the rigors of campaign life. Lord Chesham, besides raising a regiment of his own, is the organizer of the whole yeomanry force. He has as assistant the Earl of Lonsdale, who is likely to be commissioned quartermaster-general of the new troops. Lonsdale is the holder of a string of titles. He is Viscount and Baron Lowther, a baronet, hereditary admiral of the ports of Cumberland and Westmoreland, and deputy lieutenant of two counties, but it is said that he now prides himself most of all on his colonelcy in the yeomany.

The Duke of Marlborough is better known to Americans than either of these two because of his marriage to an American woman. Besides paying for the equipment of his men, he will also pay for sending them on to Africa. The duke's military title it that of lieutenant in the Oxfordshire yeomanry, dignified with the title of the Queen's Own Hussars.

It is fitting that in this great feudal outburst, the Duke of Warwick should have a prominent place, since he is the holder of the title most famous in the old feudal system—of Warwick the "king-maker." The estate from which he draws his force is still the most beautiful country-place in all England. I is on the banks of Shakespeare's Avon, and was ancient when the "king-maker dwelt there. It endured countless sieges of old, but has outlived them all; Walter Scott called it "the fairest monument of ancient and chivalric splendor."

SPENSER MASTERS.



BRIG. GENL. LEONARD R. WOOD
GOVERNOR GENERAL OF CUBA.

THE TRANSVAAL SECRET SERVICE.

SPECIAL CORRESPONDENCE OF THE WAVE.

"THERE will be a new pro-Boer sheet in Paris inside the month," said my vis-a-vis at the *café*.

I followed his glance to a gentleman who had just paid his score and risen to leave the place. He was of a rather rugged Germanic type, muscular, easy-moving, and faultlessly dressed. Certainly, he did not square with my accepted idea of a Boer, and I mentioned the fact to my companion.

"No more is he a Boer, though he is one of their paid spies. Kruger's secret service goes further than that. He is a pure German, if you please. Others are French and Belgian and even—pardon me—American."

I saw the story on its way, and waited. For my companion was a French soldier of fortune, one of the glorious tribe of wanderers. Richard Harding Davis has led us to believe that the nomadic follower of adventure is always an Anglo-Saxon. But the type is as often French or Italian. This particular wanderer has built railroads and fought in wars all over Asia and Africa, and is still in his thirties. Every summer or so he comes to Paris and the delights of the boulevards for a few weeks, and then goes back to his adventures. Even as I write, he is on his way to attend to a contract in Abyssinia; this was one of his farewell nights in France.

"I was among them for two years," he said. "I saw Jameson tried and was at Pretoria when they let the prisoners go. I was down there last spring again. Because I am a Frenchman, they let me see many things which the English never knew. I kept them—then. I don't love the English. But it is all over now, and they are fighting.

"That Kruger, that old devil of a diplomat, saw what was coming a long time ago, and got ready to put his brains against the English force. He was the fox against the lion. The fox won. Do you know how he began? He took two Germans, who had been in the Emperor's secret service, and brought them over for managers of the Transvaal National Bank. They founded the secret service of the Republic, the completest detective bureau in the world. It is truly wonderful, the work their spies have done. You know how they have fooled the English, learned their plans, brought in guns, before their stupid eyes, all of Europe knows that. But there are some things very few people know. Cape Colony is full of people brought up to help the Boers. These men have directed the Afrikander party and influenced the Cape Dutch as they pleased. That is how guns and ammunition have been smuggled through under the high, stupid noses of the English. Ah, it was fine!

Does it cost? But yes. They say that last year it came to thirty-five million francs. Where did it go? Mostly in salaries—they pay well, you know—and then in bribes to British and to the Portuguese officials and to buying up newspapers. That is what our friend over there is doing in Paris, I suppose. Already, they have bought up *La Siecle* and some others. It is not every man they will take for a spy. He has to show why he wants to do it, and give recommendations and references. Then, if they like him, he goes on probation for many months. Other spies follow him and see how he does his work. If he shows bad faith, pouf! Out he goes. If competent, he is sworn in, and is put on good pay—two hundred to two hundred and fifty francs a week to begin, and more as he goes on, with travelling expenses if he goes abroad. Oh, it costs. Dr. Leyds has the spending of it all, and he is not parsimonious, I assure you.

"How do they work? In all sorts of ways. I could write a book about it. Some of them play with the German and French papers. And some have bigger plans. Do you know how they got their barbed wire for trenches to scratch the bare legs of those Highlanders? I will tell you. It was bought, last spring, to fence in the Netherlands railroad in Transvaal. Of course, the road was never fenced. The company had been bribed by Leyds, who was putting up the money for the whole scheme. That is not the only use he makes of his money. When business with the British is slack, he buys votes in the Volksraad. I knew the war was coming because Kruger and Leyds wanted it, and they would surely buy up the road.

"The English will win this war, and I am a Frenchman who say it and hate the English. But do they think they will govern the Transvaal after it is over? Not at all. Kruger and his hundred relatives and Leyds and all the others have fortunes of their own. Just as long as they live, these men will keep the trouble going. They say that one Boer is as good as three Englishmen in fighting. When you come to scheming one Boer is as good as twenty. Ah, they have more than they counted on, those English, and will have for twenty years!"

In fact, probably more is known of the Boer way of doing things here in Paris than in London or even Cape Town. In this cordial atmosphere, the friends of the Transvaal talk freely, rather too freely. Then, Dr. Leyds is close at hand, and Paris one of his centers of operation. For instance, I learned last week some new facts about plans and counter-plans over Delagoa Bay through two men who were active in negotiations concerning that point of active intrigue. The chief handlers of Transvaal corruption-money, outside of Leyds and his immediate cirle, make their headquarters there. One of them is General Pott, counsel for Holland and also for the Transvaal. Under him is a Jew, one Sammy Marks. The latter is Leyds' right-hand man in buying up the Volksraad whenever it is necessary. As a reward, he holds the spirits license monopoly. Together, these two have juggled with the corruptible Portuguese officials, and have supervised the entry of cannon and munitions.

When the talk of war first arose the doctor and Sammy, in conjunction with Dr. Leyds, plotted to get Delagoa Bay into the hands of the Boers. It was easy to import all they needed in peace, but Kruger foresaw the time when the British would make trouble by enforcing neutrality outside the port. The Transvaal authorities all but had the deal closed, when England awoke, for once, to what was going on and not only blocked the Boers but made an effort to get the port herself. Kruger had cherished ideas of a seaport and a navy, but when the British came into the game he knew that the chance was over, and devoted his energies to blocking the English.

The affairs of the Portuguese colony were tangled; Delagoa Bay was giving no revenue to the Crown, was, in fact, costing money. In 1890, when the Kingdom was in financial difficulty, she sold to one Colonel Andrade the right to the whole seaboard. Andrade fell short of cash, and carried his claim to the British foreign office, offering to sell it for ten million dollars. The British delayed, and Kruger, having received immediate notice from his spies at London, set about to block the scheme. The only course open was to get Delagoa Bay mixed up in international complications. The Portuguese, bribed by Leyds & Co., were induced to seize a railroad belonging to the American Colonel McWade, and the case went into arbitration. While the territory was in the courts, Great Britain could do nothing toward purchase. Therefore, Boer secret service money has kept it from decision for ten years. Even now, when the war is on, the English cannot buy the Delagoa Bay country because their title could never include the sea-coast. It shows better than anything else the subtlety of the Boer nature that they have played this dog-in-the-manger policy so long and so successfully.

ETIENNE MARCEL.

The prices for wheat are the lowest that have ruled in Washington in several years. At the warehouses east of the mountains thirty-seven cents per bushel is being paid and it is expected that even less will be offered next month. The explanation of the drop is that many of the grain carrying vessels have been pressed into the transport service by this country and England. There are few vessels available to carry wheat, and although there seems to be a good demand abroad it simply cannot be transported. Only half of the crop of 1899 has been disposed of. The rest of it is either held by farmers or else is stored. The impression is that prices will continue to fall until the supply in Europe gets so low that it will be absolutely necessary to increase it. Then vessels of some sort must be chartered and the prices will go kiting.

The division of statistics of the United States department of agriculture has undertaken the publication for wide distribution of lists of free employment offices and other institutions to which farmers may apply when in need of farm laborers. The co-operation of many charity organization societies, settlements, colleges, etc., has been secured, and it is hoped thus to facilitate communication between the farmers who want hands and those who are in need of work for the summer months, or for the entire year.

A REVIEW OF THE LETTERS OF ROBERT LOUIS STEVENSON

THE *Letters of Robert Louis Stevenson*, brilliant and fascinating, are at last in shape to be placed upon the library shelves, Mr. Stevenson's old publishers Charles Scribner's Sons, being printers of the same. The editor is Mr. Stevenson's lifelong friend, Sidney Colvin; and it must be said that Mr. Colvin's careful arrangement and luminous introductions have contributed in no small degree to the comfort of the reader. Other volumes of letters—the *Lowell Letters*, for instance—have been strung together on a chronological string, and the reader could go hang, so far as explanations were concerned.

It will not be possible in brief compass to trace through his letters the flowering of Stevenson's genius; but a few significant selections must be of interest. One of the author's early friends was W. E. Henley, also a poet, who occasionally exchanged manuscripts with him. The following letter was sent in reply to Mr. Henley's criticism of "Our Lady of the Snows".

"Clarify and strain," indeed? "Make it like Marvell," no less. I'll tell you what—you may go to the devil; that's what I think. "Be eloquent," is another of your pregnant suggestions. I cannot sufficiently thank you for that one. Portrait of a person about to be eloquent at the request of a literary friend. You seem to forget, sir, that rhyme is rhyme, sir, and—go to the devil.

I'll try to improve it, but I shan't be able to —O, go to the devil. Seriously, you're a cool hand. And then you have the brass to ask me *why* "my steps went one by one?" Why? Powers of man! to rhyme witn *sun*, to be sure. Why else could it be? And you yourself have been a poet! G-r-r-r-r!

Mr. Steveuson was not yet famous when he came to California in 1879. He was already sick nearly unto death with consumption; and he arrived at Monterey with no money to speak of, and with no friends. And yet in perfect good humor he wrote to his friend Colvin:

I am a reporter for the Monterey *Californian*, at a salary of two dollars a week! *Comment trouver-vous ca'*

And to his friend Henley this outrageous tale:

Yesterday I set fire to the forest, for which, had I been caught, I should have been hung out of hand to the nearest tree, Judge Lynch being an active person hereaway. You should have seen my retreat (which was entirely for strategical purposes). I ran like hell. It was a fine sight. At night I went out again to see it; it was a good fire, though I say it that should not. I had a near escape for my life with a revolver; I fired six charges, and the six bullets all remained in the barrel, which was choked from end to end, from muzzle to breech, with solid lead; it took a man three hours to drill them out. Another shot, and I'd have gone to kingdom come.

A few months later and the young novelist came to San Francisco. He, in a letter to Mr. Colvin, thus describes himself:

Any time between eight and half past nine in the morning, a slender gentleman in an ulster, with a volume buttoned into the breast of it, may be observed leaving No. 608 Bush and descending Powell with an active step. The gentleman is R. L. S.; the volume relates to Benjamin Franklin, on whom he meditates one of his charming essays. He descends Powell, crosses Market, and descends in Sixth on a branch of the original Pine Street Coffee House, no less; I believe he would be capable of going to the original itself, if he could only find it. In the branch he seats himself at a table covered with waxcloth, and a pampered menial, of High-Dutch extraction, and, indeed, as yet only partially extracted, lays before him a cup of coffee, a roll, and a pat of butter, all, to quote the deity, very good. A while ago, and R. L. S. used to find the supply of butter insufficient; but he has now learned the art to exactitude, and butter and roll expire at the same moment. For this refection he pays ten cents.

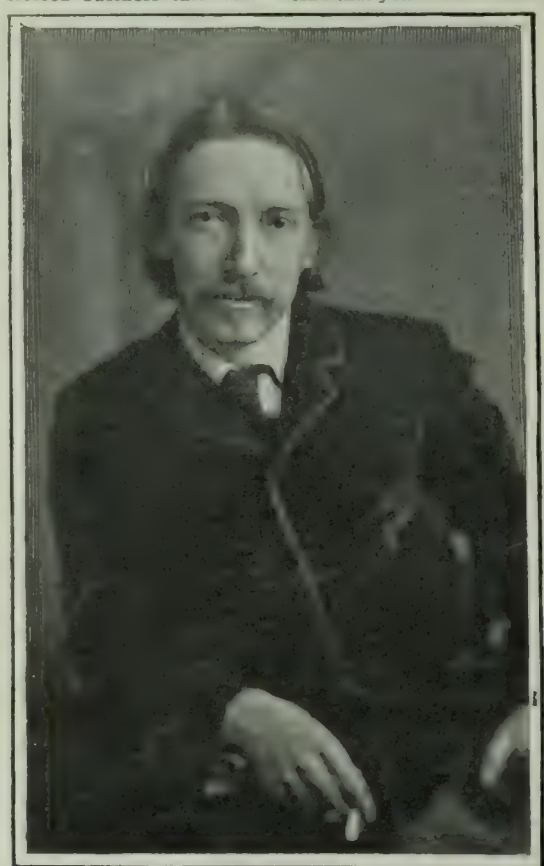
Half an hour later, the inhabitants of Bush street observe the same slender gentleman, armed, like George Washington, with his little hatchet, splitting kindling, and breaking coal for his fire. He does this quasi-publicly upon the window-sill; but this is not to be attributed to any love of notoriety, though he is indeed vain of his prowess with the hatchet (which he persists in calling an axe), and daily surprised at the perpetuation of his fingers. The reason is this: that the sill is a strong, supporting beam, and that blows of the same emphasis in other parts of his room might knock the entire shanty into hell. Thenceforth, for from three to four hours he is engaged darkly with an inkbottle.

His next appearance is at the restaurant of one Donadieu, in Bush street, between Dupont and Kearny, where a copious meal, half a bottle of wine, coffee and brandy may be procured for the sum of four bits, alias fifty cents. The wine is put down in a whole bottleful, and it is srange and painful to observe the greed with which the gentleman in question seeks to secure the last drop of his allotted half, and the scrupulousness with which he seeks to avoid taking the first drop of the other. This is partly explained by the fact that if he were to go over the mark—bang would go a tenpence.

As for coin, you see I don't spend much, only you and Henley both seem to think my work rather bosh nowadays, and I do want to make as much as I was making. The worst is my health; it is suspected I had an ague chill yesterday; I shall know by to-morrow, and you know if I am to be laid down with ague the game is pretty well lost. But I don't know; I managed to write a good deal down in Monterey, when I was pretty sickly most of the time, and, by God, I'll try, ague and all. I have to ask you frankly, when you write, to give me any good news you can, and chat a little, but *just in the meantime*, give me no bad. . . . Last night, when I felt so ill, the supposed ague chill, it seemed strange not to be able to afford a drink. I would have walked half a mile, tired as I felt, for a brandy and soda.

The end of it was, he had to give up his lodgings for cheaper, and was reduced to one meal a day. He fell sick indeed; but by this time he had friends in the city, and their devotion pulled him through. And then came good news from England. He writes:

My dear people telegraphed me in these words: "Count on £250 annually." You may imagine what a blessed business this was. And so now recover the sheets of the *Emigrant*, and post them registered to me. And now please give me all your venom against it say your worst, and most incisively, for now it will be a help, and I'll make it right or perish in the attempt. Now, do you understand why I protested against your depressing eloquence on the subject? When I *had* to go on any way, for dear life, I thought it a kind of pity and not much good to discourage me. Now all's changed. God only knows how much courage and suffering is buried in that manuscript. The second part was written in a circle of hell unknown to Dante—that of the penniless and dying author. For dying I was, although now saved. Another week, the doctor said, and I should have been past salvation.



ROBERT LOUIS STEVENSON.

"To have suffered, nay to suffer, sets a keen edge on what remains of the agreeable."

It is for this sort of personal revelation that the letters of a man like Stevenson are valuable; for such a man in his published works scrupulously avoids the slightest reference to his personal hardships. Some five years later we have, in a letter to William Archer, this:

I used myself to rage when I saw sick folk going by in their Bath-chairs; since I have been sick myself (and always when I was sick myself), I found life, even in its rough places, to have a property of easiness. That which we suffer ourselves has no longer the same air of monstrous injustice and wanton cruelty that suffering wears when we see it in the case of others. So we begin gradually to see that things are not black, but have their strange compensations; and when they draw towards their worst, the idea of death is like a bed to lie on. I should bear false witness if I did not declare life happy. To have suffered, nay, to suffer, sets a keen edge on what remains of the agreeable. This is a great truth, and has to be learned in the fire.

And again:

And here we come to the division: not only do I believe that literature should give joy, but I see a universe, I suppose, eternally different from yours; a solemn, a terrible, but a very joyous and noble universe, where suffering is not at least wantonly inflicted, though it falls with dispassionate partiality, but where it may be and generally is nobly borne; where, above all, any brave man may make out a life which shall be happy for himself, and, by so being, beneficent to those about him. And if he fails, should I hear him weeping? I mean, if I fail, why should I weep? Why should *you* hear *me*?

Stevenson's financial success came suddenly, as the result of American popularity. At the beginning of 1887 he was living, as usual, from hand to mouth. The success of *Treasure Island*, and *Dr. Jekyl* at once placed larger prices upon his work, and in September he could write: twelve articles in *Scribner's Magazine* on what I like; it is more than $2,000 (in reality it was $3,500), but I cannot calculate more precisely. You have no idea how much is made of me here; I was offered $10,000 for a weekly article—eh heh! how is that? but I refused that lucrative job.

Six weeks later he reported to his friend, Charles Baxter:

No likely I'm going to waste a sheet of paper. I am offered $8,000 for the American serial rights on my next story! As you say, times are changed since the Lothian Road. Well, the Lothian Road was grand fun, too; I could take an afternoon of it with great delight. But I'm awfu' grand noo, and long may it last!

Indeed, he became so well-to-do that he could afford to hunt up and pay some old London debts that were certainly not very pressing. He writes to Baxter:

I beg of you to consider my strange position. I jined a club which it was said was to defend the Union; and I had a letter from the secretary, which his name, I believe, was Lord Warmingpan (or words to that effect), to say I am elected, and had better pay up a certain sum of money, I forget what. Now I canna verra weel draw a blank cheque and send to Lord Warmingpan (or words to that effect), London, England. And, man, if it was possible, I would be glad to be out o' this bit scrapie. Mebbe the club was ca'd "The Union," but I wouldna like to sweir; and mebbe it wasnae, or only words to that effec'—but I wouldna care just exac'ly about sweirin'. Do ye no think Henley, or Pollick, or some o' they London fellies, micht mebbe perhaps find out for me? and just what the soom was? And that you would aiblins pay for me? For I am now on a salary of $2,000 a year for I thocht I was saedam patriotic jinin', and it would be a kind o' a come-doun to be turned out again. Mebbe Lang would ken; or mebbe Rider Haggyard; they're kind o' Union folks. But it's my belief his name was Warmingpan whatever.

Stevenson did not theorize a great deal upon his art. In comparatively few of his letters does he generalize; but these few generalizations may throw considerable light upon his methods. At the age of thirty-three he said:

Artistic sight is judicious blindness. Sam Bough must have been a jolly blind old boy. He would turn a corner, look for one-half or quarter minute, and then say, "This'll do, lad." Down he sat, there and then, with whole artistic plan, scheme of color, and the like, and began by laying a dation of foun- powerful and seemingly incongruous color on the block. He saw, not the scene, but the water-color sketch. Every artist by sixty should so behold nature. Where does he learn that? In the studio, I swear. He goes to nature for facts, relations, values, material; as a man, before writing a historical novel, reads up memoirs. But it is not by reading memoirs that he has learned the selective criterion. He has learned that in the practice of his art; and he will never learn it well, but when disengaged from the ardent struggle of immediate representation, of realistic and *ex facto* art. He learns it in the crystallization of day-dreams; in changing, not in copying, fact; in the pursuit of the ideal, not in the study of nature. These temples of art are, as you say, inaccessible to the realistic climber. It is not by looking at the sea that you get

The multitudinous seas incarnadine,

nor by looking at Mont Blanc that you find

And visited all night by troops of stars.

A kind of ardor of the blood is the mother of all this; and according as this ardor is swayed by knowledge and seconded by craft, the art expression flows clear, and significance and charm, like a moon rising, are born above the barren juggle of mere symbols.

The painter must study more from nature than the man of words. But why? Because literature deals with men's business and passions, which, in the game of life, we are irresistibly obliged to study; but painting with relation of light, and colors, and significances, and form, which, from the immemorial habit of the race, we pass over with an unregardful eye. Hence this crouching upon camp-stools, and these crusts. But neither one nor the other is a part of art, only preliminary studies.

And again:

People suppose it is "the stuff" that interests them; they think, for instance, that the prodigious fine thoughts and sentiments in Shakespeare impress by their own weight, not understanding that the unpolished diamond is but a stone. They think that striking situations, or good dialogue, are got by studying life; they will not rise to understand that they are prepared by deliberate artifice and set off by painful suppressions.

Ten years later, he wrote to Henry James:

Your jubilation over *Catriona* did me good, and still more the subtlety and truth of your remark on the starving of the visual sense in that book. 'Tis true, and unless I make the greater effort—and am, as a step to that, convinced of its necessity—it will be more true, I fear, in the future. I *hear* people talking, and I *feel* them acting, and that seems to me to be fiction. My two aims may be described as: first, war to the adjective; and second, death to the optic nerve. Admitted we live in an age of the optic nerve in literature. For how many centuries did literature get along without a sign of it?

And then a homely old rule for J. M. Barrie, more in jest than in earnest:

You should never write about anybody until you persuade yourself at least for the moment that you love him, above all, anybody on whom your plot revolves. It will always make a hole in the book; and if he has anything to do with the mechanism, prove a stick in your machinery. But you know all this better than I do, and it is one of your most promising traits that you do not take your powers too seriously. *The Little Minister* ought to have ended badly; we all know it did; and we are infinitely grateful to you for the grace and good feeling with which you lied about it.

The *Letters* come in two volumes, well bound in buckram, and are illustrated by E. C. Peixotto and others.

WILLIAM J. NEIDIG.

* * *

Saint Nicholas, which, since the discontinuance of *Harper's Round Table*, has held the field for high-class children's magazines, comes this month in an exceptionally fine cover, reminiscent of Boutet de Monvel. The little periodical is up to its former standard, which is saying a great deal, considering that some of the greatest juvenile stories ever written, "The Jungle Book" among them, have made a first appearance in its pages. The contents are well balanced between historical and descriptive articles and fiction, always, as is meet and right, with the balance on the the side of fiction. Probably the best of them in the current number is "Under the Headlight," a vivid railroad yarn by Albert Bigelow Paine.

BROWN'S BRONCHIAL TROCHES

Neglect of a Cough or Sore Throat often results in an Incurable Lung Disease or Consumption. For relief in Throat troubles use BROWN'S BRONCHIAL TROCHES, a simple yet effective remedy. Sold only in boxes.

Dr. Parker's Cough Cure.—One dose stops a cough. It never fails. Try it, 25 cents.

Babblings of a Belle

I DO not think that dear Miss Cricket will have to complain again for lack of gayety this season. Things this last week were very promising, and I can tell you I have had a number of very good times. I am becoming more deeply involved every day in my very interesting love affair. This will be very delightful news for you, and for all the girls I know, for the possibilities I suggested to you a few weeks past are almost becoming realities. My ardent admirer keeps our house a veritable rose garden, and the cigars Arthur smokes are the envy and admiration of all of his friends. He has of late taken to spending the evening with Aunt Sybil when I have gone out. That last step is of greater interest to me than all else in the world. Fancy what a man will do when he is in love. Of course, Aunt Sybil is a dear, sweet, old dear, but after she has told the story of her life with variations, in fact, made a regular symphony of it, her company is apt to become a little monotonous to both Arthur and me. But my precious angel seems to find her very congenial. Aunt Sybil told me the other night it became somewhat wearisome talking evening after evening about so frivolous a personage as myself.

Monday evening last we went to hear Nevada sing. I enjoyed her very much. She is a person who has a real charm about her and the exquisite tenderness of her voice made me feel very much as I used when mama sang me to sleep, when I was a wee, sweet baby. You will note I have a memory. I saw any number of people I knew, all of whom were delighted with her. Strange to say, she is not particularly appreciated by men. Tuesday morning I spent at the Golf links. Dear me! the more I try to learn to play golf scientifically the greater the impossibility seems. Why it should be the case, I do not know. I get to the third hole and then gaze plaintively at our beautiful bay and hills. After I have been urged by the caddy to try again, I take particular pains to lose the ball, and then decide to finish my game the following day. I, of course, am the exception. Most of the girls are playing a surprisingly good game. I heard an Eastern man say the other day that he saw more girls who played really well out here, than in any other place in America. The men, too, are progressing, but I really believe a great number of them only play because they desire the exercise. I do not know of any other that is more beneficial.

MISS BEATRICE TOBIN,
whose engagement to Charles Raoul Duval, has been announced.

On Tuesday evening twelve of us went to Mrs. Buckbee's to a Baby dinner. It was awfully good fun. The table decorations were very pretty and right in the center was a huge affair full of toys to amuse the youngsters. Jennie Blair looked too sweet for anything. She was a big Dresden doll, with her exquisite skin and pretty curly hair. Julia and Jennie came in baby carriages. Therese Morgan wore her fire cracker-dress, and the other girls, Bernie Drown, Florence Josselyn, Katherine Dillon and, I all wore muslin dresses with baby waists and full skirts. I make a sweet baby, being so little, but the big girls are not at all baby-like. I do not think I'd play baby were I one of the big ones. Ed Greenway was very amusing, and I think looked more like an attempt at a joke than any of the others, but Sam Buckbee, in his little sailor suit, was very cute. We had flashlights taken afterwards, and then played games, sang, and danced. The dinner was excellent, and, as we had part of the Hawaiian band we really had fun and were well entertained. The rest of the band was contributing to the amusement of Mrs. Irwin's guests. She had a very elaborate dinner that same evening. Mrs. Irwin's parties are always carried out with a great deal of real elegance. She has some of the most absolutely stunning "place plates" in San Francisco, and beautiful glass, china and napery. I am glad to know her sufficiently well to go into her house, if I happen to be passing, just before dinner, to see how very fine the table looks. I like to look at her new house, watch its development and think of the jolly parties that will take place there, when it is finished. Saturday afternoon Aunt Sybil went to the Irwins to a euchre party. There were quantities of roses everywhere, but when Aunt Sybil brought forth from the folds of her cape a dainty little Dresden vase, I forgot to inquire further about the decorations. She said she was sorry not to have won one of the bronzes, but as I am insane about Dresden, I am glad she was so fortunate. Most of those present were married people, and, as they are exceedingly fond of cards I am sure they had a jolly time.

Aunt Sybil was at two other of the older people's affairs last week. The first was to meet Mrs. Hunter, Mrs. Tevis's sister, and the other was to bid "bon voyage" to Mrs. Parrot, who has started for Scotland to spend some time with her daughter, Mrs. Douglas Dick, whose husband has gone to South Africa to aid in the very meritorious extermination of the Boers. Aunt Sybil met about the same people at each place—Mrs. Salisbury, Mrs. Harrington, Mrs. Smedberg, Mrs. Coleman, Miss Garber, Miss Gevin, and several others whose names I have forgotten. Florence Breckenridge particularly attracted Aunt Sybil. She has become an exceedingly distingue looking girl with a beautiful forehead. She told Aunt Sybil her great ambition was to play as well on the piano as her mother does. She took some lessons, I believe from De Pachman when he was here. He was very much impressed by her technique and the real depth of poetry in her playing.

Mrs. Rudolph Spreckels' house, the other day, was really a delightful representation of "things Japanesque." The effect was awfully well executed in every particular, and appreciated by her guests. It is so nice to have something new in the way of an entertainment, for these sterotyped teas, luncheons and dinners do become somewhat monotonous unless one may happen to be beside a very congenial spirit. I was delighted to have been invited to Miss Flood's house on California street. She gave a reception to her sister-in-law, Mrs. James L. Flood, who is a very handsome girl, I think. She has a beautiful figure, and is altogether exceedingly attractive. It is so nice to add another young married woman to our acquaintances, who is sure to entertain lavishly, and give us all a very good time. The Flood house would suit me to perfection. It is really magnificent inside. The frescoing especially won me. I do so love beautiful things. I was so carried away by admiration that Miss Flood told me to come up the following afternoon and spend just as much time as I liked enjoying the works of art and other things she owns. The girls and fellows at the Woods on Monday night had a jolly dance and dinner. In the afternoon there was a tea, and those who helped to receive remained to dinner. Some of the girls told me they had one of the very best times of their life.

Mrs. Ed Dimond had a most enjoyable afternoon, Thursday last, at her home. It was one of the few affairs this season at which one met all the younger married people. I looked at each one in turn, and thought to myself—Cricket dear, you will most likely be one of these next year. I cannot imagine myself at all looking upon myself as a bride. Think how many real brides there will be! Now Beatrice Tobin has announced her engagement to Charles Raoul Duval. I met him some little time ago at Burlingame and found him the quintessence of politeness. He has that subtle faculty, possessed by so many foreigners, of making one feel absolutely at one's ease in his company even before one gets to know him. Of Beatrice it is hardly necessary to say very much. We all know the Tobin girls well, and know they are fine girls whatever way you take them. Beatrice is interesting and sweet and rides as well as any girl I know. This year at Del Monte she was noted for her beautiful figure and gracious manners. I only hope she will not go to Paris to live for all time. I believe she is to be married after Lent.

Mrs. Maurice Casey and Mrs. Homer King each gave a dinner before this last "La Jeunesse." They were both jolly affairs, I really had a hard time making up my mind which invitation I should accept, as the two arrived the same morning. Arthur went to the King's, at which he had a splendid dinner and altogether fine time, and I went to Mrs. Casey's. The Worns decorated the dining room in greens and red and white flowers. The big oval table was adorned with a flag to carry out the effect of an army and navy dinner, and the flowers were brilliant crimson poinsettas and white azelias. After the dinner, which was very jolly, we all went down to the nicest party of the season. Many, many thanks to the "La Jeunesse" patronesses. I am merely echoing the sentiments of all young people I know. Lieutenant Haines led. Jackie is at his very best in his uniform and medals, and led so well. I felt so proud of him, for he is a very good friend of mine. The sabre figure was my favorite. I just adore the brightly shining steel, and the martial atmosphere of the whole ball brought me back to the stories one reads about the first balls in America. The cannon that shot forth the buttons was jolly fun and I am having mine mounted for a pin. The hall looked beautiful and has a floor that makes one dread the hour of leaving it. The girls all looked particularly well. Leila Voorhies, Katherine Dillon and Elizabeth Huntington wore red dresses and were as strikingly handsome girls as any in the room. Grace Spreckels, too, looked stunning, so did Katherine Warfield and Leontine Blakeman. Edith Preston was lovely in yellow and Alyss Latham sweet and charming in white. Charlotte Ellinwood had an exquisitely dainty gown that just suited her. I particularly liked the manner in which the lilies-of-the-valley were put on. All the girls, in fact, looked well, so it is difficult for me to mention more of them. I felt sorry for the army officers, but they do look so well in their uniforms they can afford to stand the heat and discomfort of it. I think most of us missed the navy. Poor fellows far away in Magdalena Bay, which I hear from David Sellurs, is very uninteresting, especially after hearing that a ball is being given half in their honor in San Francisco.

Well, Diary dear, I think I have told you all of last week's news. Monday night is the Golf ball at the Presidio Golf Club, and Tuesday we are to have a luncheon at Lillian Follis', in honor of Mrs. Flood. Other things of equal interest, I am sure, will keep us going until you hear from me again.

MISS CRICKET.

OAKLAND.

The event of this week was certainly the "Children's Party" that Mrs. Tucker gave at the Golf Club House. Everybody was in costume. Virginia de Fremery led a "Kinder Symphony" very well indeed, and Carrie Haven, Carrie Little, Horace Miller and Howard Veeder danced and sang the Mother Goose Lancers. It was an awfully amusing spectacle, exceedingly well carried out, and enjoyed by both those who took part and the spectators.

Mrs. Smith is giving a dance for her daughter Marian, on her birthday on February the 2d. She will also give a series of evening entertainments for older married people, where there will be cards, dancing, billiards and bowling.

The last meeting of the Monday afternoon whist club took place at the Browns, Floy Brown has exquisite taste in decorating and the fruit blossoms which formed banks in every corner were perfectly beautiful.

The Golf Cotillion a week ago went off splendidly. The rooms were most effectively decorated and all those who danced were in costumes. The red coats and pique skirts were exceedingly pretty and the gayety that prevailed was charming. Mrs. Bowles led admirably, notwithstanding the great crowd present.

An Exhibition of Bronzes.

Continued from page 6.

spirituelle little figures of nude nymphs—was likewise represented by but one little work, "The Moth and the Candle" (66). The "Dog playing with a crab," by Barye fils (65), is excellent. Finally a small Russian bronze of a Cossack mounted on his horse and in full marching order, bending down to his sweetheart for a last passionate farewell kiss, must be mentioned as a thoroughly satisfactory and pleasing little work.

Jesse Moore Whiskey has been the Kentucky standard with which all others have been compared since 1853.

The Original Swain's Bakery, 213 Sutter St., stands without a rival, and has stood the test for years. The most delicious meals are served by gentlemanly attendants, and the management takes pride in having everything orderly. It is just the place for business men and ladies out shopping to lunch.

"A Bright Little Boy"

Would be sure of a welcome in almost any home. But what a welcome he would have in a home where the hope of children had been extinguished. What a welcome this particular "bright little boy" did have in such a home, may be judged by the closing paragraph of his mother's letter, given below. There is no room for the whole letter, which recounts a story of fifteen years of suffering and a perfect cure by the use of "three bottles of Dr. Pierce's Favorite Prescription, two bottles of 'Golden Medical Discovery,' and some of the 'Pellets.'"

In many instances childlessness is the result of conditions which are curable. It has often happened that when "Favorite Prescription" has cured a woman of female weakness and the nervous condition attending it, her return to health is signalized by the birth of her first child. "Favorite Prescription" makes weak women strong, sick women well.

"I cannot tell half that Dr. Pierce's medicine has done for me," writes Mrs. T. A. Ragan, of Norris, Watauga Co., N. C. "It will do all that is claimed for it—prevent miscarriage and render childbirth easy. It has given me a bright little boy, and I would not have had him had it not been for your wonderful medicine. I cannot say too much in praise of it; I think it is worth its weight in gold. I thank God for my life, and Dr. Pierce for my health."

"Pleasant Pellets" clear the complexion.

GERMEA

The Ideal Breakfast Dish

Pique.

"Of all the men about town,
I hate that Adolphus Brown,
He is so sweet to that girl on the street,
She said with a peevish frown."

When later she tripped down town,
Her face wore never a frown,
As she chanced to meet, and joyfully greet
That good-looking Mr. Brown.

—*Plint.*

A child in Arkansas recently having died at the age of ten months, a coroner held an inquest over the body and, in making out the certificate of death, stated that the subject was unmarried, and that its occupation was "keeping its parents awake o'nights."

For more than half a century the famous Jesse Moore whiskey has been the standad brand of the world.

THE CONFESSION OF A WOMAN.

By Guy de Maupassant.

YOU, my friend, have asked me to relate to you the most vivid recollections of my life. No longer young, without relatives or children; I feel free to confide in you, as you wish, only promise me that my name, shall remain a secret.

I have been loved many times and, as you know, have often loved in return. A beautiful woman in the past;—I can say it now without egotism, as the charms I once possessed are vanished, leaving but faint traces behind them.

To me, love was the essence and life of the heart, as the air we breathe is the vivifying principle of the body. I should have preferred to die than have existed without tenderness. Many women pretend to love but once with all the fervor and strength of their hearts; yet often, I have cherished so violent a sentiment that I believed it to be the crowning passion of life, but the flame died a natural death, as a fire that lacks wood to feed it.

I am about to confide to you the first of my love affairs, of which I was wholly innocent, though its influence was the motive power of the others that followed, wherein I played a leading role.

At the time of this episode, I had been married about a year, to the Comte Herve'de K., a Breton of good family, but to whom I had never given my heart.

Tall and well proportioned, he carried himself with an air of "grand seigneur," but he lacked intelligence. You felt his mind to be stocked with ideas placed there by his father and mother, inherited by them from their ancestors. On every subject he possessed an immediate and narrow opinion, which he never hesitated expressing without the least embarassment or comprehension that possibly there might exist other ways of viewing the question. Here was a head, sealed as it were, against those ideas which circulate, regenerating and freshening the mind, as a breeze passes through a house, whose doors and windows have been left open.

The Chateau, where we passed most of the year, stood in the midst of a wild uncultivated region. It was a rambling, gloomy structure, surrounded by enormous trees, whose huge branches, hung with long festoons of moss, recalled to one the white beards of old men. The park, almost a forest, was enclosed by a deep ditch, or haw-haw fence, and at the extremity of the moor, lay two large lakes, filled with reeds and water plants. On the banks of a small stream which united them, my husband had had erected a hut from which to shoot wild ducks.

Besides one ordinaty servant, we kept a game-keeper, who, though a stupid, brutish sort of a creature, was absolutely devoted to my husband; also a maid, almost a friend,—passionately attached to me. I had brought her with me on my return from a trip to Spain, five years before. With her dark skin, melancholy eyes, and heavy black hair tumbled about her face, you would have mistaken her for a gypsy. At this time she was sixteen years of age, but appeared fully twenty.

Autumn had just begun; the hunting season was in full swing, sometimes on the neighboring preserves, but more often on our own. From time to time, I noticed a young man, the Baron de C., whose visits to the Chateau became singularly frequent and then ceased entirely. I thought nothing of it at the time, but I noticed that my husband's manner toward me had undergone an entire change. He appeared reserved, preoccupied, never embraced me, and in spite of the fact that he left me entirely alone, often in the middle of the night, I would hear a stealthy step pause ouside my bed-room door and, after a few moments, steal away. My rooms were on the ground floor, the windows looking out on the park, and sometimes in the night I fancied I heard someone prowling in the darkness outside the Chateau. I repeated my fears to my husband, who would look earnestly at me for a few seconds and then with a shrug of the shoulders reply, "It is nothing, you heard the keeper."

* * *

One evening just as we were finishing dinner, Herve, who had appeared unusually gay throughout the meal, said with a laugh that seemed to me to be somewhat forced, "Ma Chere, how would you like to go with me to kill a fox, that sneaks through the park each night and eats my grouse?"

I was surprised, and hesitated a moment, but, as he was watching me narrowly with a singular intentness, I finally answered, "Why certainly, if it will please you."

Doubtless you already know that I could hunt the wolf and wild boar like any man, so that there was really nothing unnatural in this proposal except in the manner in which it was made. My answer seemed to make my husband strangely nervous, and during the rest of the evening he was restless and uneasy, getting up to wander feverishly around and then reseating himself for a short time. About ten o'clock he suddenly said, "Are you ready?" And as he handed me my gun, I asked whether I should load it with bullets or buck-shot. This appeared to surprise him, but he replied, "Oh! buck-shot will do the work you may be sure!" After a little he added in a singular tone, "You can certainly boast of a wonderful amount of sang-froid.

I commenced to laugh, "I? How so? Why should I *not* be cool over the prospect of merely killing a fox? What is the matter with you to-night monami?"

We crossed the park in silence. The whole household slept. The old Chateau lay sombre and still, bathed in the silver sheen of the full moon; not a sound disturbed the silence of that night so clear and melancholy. Nature seemed dead, not a breath of wind, not the hoot of an owl broke the heavy inaction that hung over all. As we passed under the trees of the park, a freshness in the air struck me and the dank smell of fallen leaves met my nostrils. My husband did not speak, he was on the alert, listening for the least sound, peering in among the trees, seeming to scent the very shadows, possessed from head to foot by the eagerness and passion of the chase. We quickly reached the margin of the lakes. Their fringe of reeds was without motion, but in the water below were almost inperceptible movements. Sometimes a tiny silver point stirred on the surface, and from this center started light circles, like shimmering ripples, that widened without end.

When we had reached the hut where we intended to lie in wait for the game, my husband made me enter first. As he slowly loaded his gun, the sharp click of the hammer produced in me a strange feeling. He felt me shiver and exclaimed, sarcastically, "Oh! I see you do not enjoy the prospect! Come, let us go back!" I answered gaily, "No, my friend, I did not come here, to turn around and go back without some kind of sport; how strangely you act to-night!" He only muttered, "As you will," and again silence fell between us. At the end of half an hour, during which time not a sound had disturbed the tranquility of that peaceful autumn night. I ventured, under my breath, "Are you sure it will pass by here?" Herve started as if he had been stung, and, with his mouth close to my ear, whispered, "Too sure! Listen!" Again the silence.

I believe I had commenced to doze, when suddenly my husband seized my arm and in a changed, breathless tone he almost hissed "Look, there it is, out under the trees." I strained my eyes into the deep shadows, but could distinguish nothing. Herve slowly brought his gun to his shoulder, though his eyes were fixed upon mine. I, too, got ready to fire, when suddenly, not thirty feet away, a man appeared coming towards us out of the shadows, with bent body and rapid steps, as if he were being pursued. It was so unexpected that I screamed, but before I could turn around a flash passed before my eyes, followed by a loud report, and I saw the man roll over on the ground, like a wolf struck by a bullet. In horror I uttered a piercing cry, when a fierce hand, that of Herve, grasped my throat, choking me into silence. Then I felt myself lifted into the air by his strong arms. He ran with me towards the lifeless figure on the grass, throwing me brutally upon it, as if he wished to break my neck. I felt that I was lost, that he was about to kill me, too. Already his heel was raised to strike my forehead, when in his turn, he was clasped about the middle and flung to the ground, before I had hardly time to realize what had happened. Staggering to my feet, I saw kneeling on his chest, Paquita, my little maid, clinging to him like any wildcat, in a frenzy of passion, tearing out his hair by the roots, and scratching his face with her furious nails. Then, as if suddenly seized by another idea, she rose and throwing herself on the corpse, (which I now recognized as the young Baron de C.) she clasped it in her arms, frantically kissing the hair, the eyes and the dead lips, lingering there, as if seeking the answering caress, which had never been denied before.

My husband, having risen, stood watching her. At last he understood, and, falling on his knees before me, he cried, "My darling, forgive me, I suspected you, and in my unjust rage, I have killed the lover of this poor girl. It was my game-keeper, who so completely deceived me!"

As for me, I watched those strange, impassioned kisses showered on the lips of that dead man, by the half-crazed girl whose despairing sobs had now died to low moans of deepest anguish; and in that moment I realized that indifference had turned to hatred for the man whom the world called my husband.

Translated by Daisy C. Page,

FORTUNES IN OIL.

The Continental Oil and Development Co.

[INCORPORATED]

Only 6000 Shares of which 1,000 were put on the market and over half sold the first 10 days. This is a genuine opportunity for an oil investment. The Company owns by United States patent 5 twenty-acre tracts in the

"Oil Basin," Kings County,

the richest oil bearings in the entire belt. We have made arrangements for the latest improved machinery and will shortly be boring for oil, at which time stock cannot be had at any price.

No Assessments.

Wm. CORBIN, Pres. A. E. RUDELL, Secy.

222 Sansome Street, San Francisco, Cal.

The Fresno Alpha Oil Co.

Owns 640 acres of oil lands in the exact center of the intersection of the two oil belts upon which are situated the only producing wells in the region. Here is an expert opinion: "After a thorough examination I have no hesitancy in saying that from the exterior formation of shale and oil sands and the coloring, the lands are equal if not superior to any that I have inspected and prospected during the past twelve years."—J. M. Fleming.

Our property has plenty of water, from never failing springs. A contract will, within a few weeks, be let for sinking our first well. Parties who contemplate investing in oil should investigate our proposition. We offer only

a LIMITED NUMBER OF SHARES FOR SALE ON VERY EASY PAYMENTS.

Will be pleased to see you and to give you all information in our possession. Call or address O. A. LANE, Secretary

SOCIETY IN VAUDEVILLE.

SPECIAL CORRESPONDENCE OF THE WAVE.

WELL, Mrs. Stuyvesant Fish has started her salon, and society still stands. The wave of intellectual culture which is to sweep over smart society if you believe the society reporters, has begun in a gentle ripple. For it would not have done to begin *too* heavily, so Mrs. Fish opened with a vaudeville show. The diversions of the new Intellectual Set are to grow heavier and heavier as time goes on, until by Lent they may be expected to be listening to lectures on Maeterlinck. But vaudeville of a very light variety was the initial feature. Not amateur vaudeville, if you please. The players were well-known performers in the concert halls, and the sketch, a clever one, which bound them together, was arranged and mostly written by Frank Keeble.

The arrangements were kept a profound secret up to the time the curtain rose. The two hundred guests found, on entering the Venetian palace of the Fishs, that the ball-room was hung with great yellow posters announcing in red letters: "Vaudeville To-night. An Original Fish Story; Little Puddle but Big Fish, By Those in the Swim. Tickets Purchased on the Sidewalk of No Avail. Beware of Speculators; Free List Suspended." On taking their seats, the audience were handed a program folded inside of a little paper goldfish. This announced a skit entitled "A Fish Story." The characters all had fishy names—*Shad*, *Rowe*, Tim *Perch*, *Abe Pike*, etc. The curtain rose on John Saunders, dressed as an old plantation darkey, who recited a clever little prologue, and the event was on. I cannot say that it differed much from the vaudeville shows of humbler houses, except in the local hits, which were kind and yet clever and aimed at the audience direct. The one which took the house concerned Miss "Daisy" Post—"When is a Post not a post,—When it is a Daisy." Mrs. Oelrichs was picked as referee for a dispute "because she used to be Fair." And so on, as local hits go, nothing to tell about afterward, but full of the wit of the unexpected at the time.

This vaudeville was the big success of this season, but Mrs. Whitelaw Reid's dance to the winter's debutantes challenged it. This ball, an elaborate one, was for the season's debutantes, but particularly in honor of Miss Mary Crocker, who comes from your region of the earth, and is one of the most promising of the buds. Her mother and Mrs. Reid, you know, were cousins, and she will spend a part of the season with Mrs. Reid. The guests were received in the marble drawing room by the hostess and guest of honor. This is a wonderfully beautiful apartment, ornate, but tasteful. The walls are hung with gray tapestries, rare and old, matched in tint by marble columns of Louis XVI pattern with gilt capitals. Hangings of deep red and gold brocade make effective color contrast. The decorations for the dance were palms and orchids. Dancing commenced near midnight and continued until supper, or rather until the first supper, for there were two collations, one before and one after the cotillion. By the time this was on, the younger people alone were dancing, mostly the debutantes, and it made a pretty dance, as debutantes' cotillions always do. Worthington Whitehouse led with Miss Crocker, who wore white satin and tulle, simply made, as becomes a bud. The hostess was also dressed in white, trimmed with lace and pearls. The cotillion included seven figures, and the favors were brocaded silk sachet bags, old prints, scarf-pins vinaigrettes and fans.

I think that I have said already that immoral plays—or "spicy" ones if you like the word better, which I hope you don't—are not well received by New York society. I added, on that occasion, that our upper set has its faults, but that love of the salacious is not one of them. The opinion was confirmed by the reception given "The Degenerates" on its first week's run at the Garden. The smart set came sparsely the first night, and then left it severely alone. We have not lived down to the level whereon we can appreciate this thing, and much do I thank Heaven therefor. It is still running, and may run indefinitely, but the patronage comes through the attraction of Mrs. Langtry's name, sensational advertising, and through its popularity with the unmentioned class.

Let us pass over this weak imitation of Oscar Wilde and look at the Lily herself. Were it not trite, I should say with the critics that it seems impossible that this woman was an actress of many years' standing in the early eighties. Voice, form, face, all keep the fresh appearance of youth. It is marvelous. The interviewers are saying that she does it by a system, that she has made the saving of beauty a study and lives according to a regular course of life.

The Lily is a better actress than when we saw her last. She was never a Siddons, but application to her art has made her an intelligent player if not a great one. Those increasing years, which have passed her beauty, have brought to her mind a depth she used to lack. Really, the slimy part Mr. Grundy has made for her is well played.

I more than suspect that those representatives of high society, who attended the first night, came to see Mrs. Langtry's new Worth gowns. If they did, they discovered nothing especially overwhelming in importance. The Lily's costumes have more skirt and less corsage than we are accustomed to see here. The bodice of the evening gown was startlingly low before and worse behind. The tails of the skirt (no, I am not "making a break" when I say "tails;" it is the latest from London) dragged many a yard behind, so that she became involved in it more than once.

The gown in the first act is pale green satin, brocaded with clusters of Easter lilies in pink. The skirt had no ornaments except these clusters of lilies; it was plain and straight with one wide box plait. The bodice was built of a few inches of satin, a bunch of lilies at the shoulder, and diamond and pearl ornaments. The second gown is voted by critics of those matters the best of the lot. It is sky-blue satin, brocaded with stars in a paler shade of blue, and the skirt is bordered with a row of crescents in a shade still lighter. Princesse in form, and perfectly fitting, it has a V-shaped bodice filled in with creamy lace, sewn with brilliants so that it is one blaze of light. The whole dress is thickly strewn with brilliants. The chief triumph, however, comes in the fit. The lines are perfect. NETTA DYKE.

Deafness Cannot be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

IN THE SUPERIOR COURT OF THE CITY AND COUNTY OF SAN FRANCISCO STATE OF CALIFORNIA.

City and County of San Francisco, Plaintiff, *vs.* James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More B. More, and C. More Defendants. No. 67,877.

Action brought in the Superior Court of the City and County of San Francisco, State of California, and the Complaint filed in the office of the Clerk of said City and County of San Francisco.

FRANKLIN K. LANE
City and County Attorney, Attorney for Plaintiff.

The People of the State of California send Greeting to: James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More, B. More and C. More, Defendants.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the City and County of San Francisco, State of California, within ten days after service on you of this summons—if served within this County; or within thirty days if served elsewhere.

The object of said action is to obtain a judgment and decree of said Court adjudging that plaintiff is the owner in fee of all the real estate hereinafter mentioned, and to quiet plaintiff's said title as against each and all said defendants and to obtain other and further relief and costs, as specified in said complaint, which complaint is hereby specially referred to for further particulars.

The following is a description of the property affected by this action:—

All that certain piece, parcel or tract of land situated in said City and County of San Francisco, State of California, bounded and described as follows to wit

Commencing at the corner formed by the intersection of the northerly line of Bay street with the westerly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred (200) feet; thence at right angles northerly and parallel with said Fillmore street to a point at which the water of the Bay of San Francisco is twenty-five [25] feet deep at low tide, as the same existed April 27, 1863; thence at right angles easterly four hundred and sixty-eight 9-12 [468 9-12] feet; thence at right angles southerly and parallel with the easterly line of Fillmore street to the said northerly line of Bay street at a point thereon distant two hundred [200] feet easterly from the easterly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred and sixty-eight 9-12 [268 9-12] feet to the point of commencement.

And are hereby notified that, unless you appear and answer as above required, the said plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the City and County of San Francisco, State of California, this 20th day of March, A. D., 1899. [SEAL] WM. A DRANE, Clerk,

By WM. R. A. JOHNSON, Deputy Clerk.

OAKLAND RACE TRACK.

Racing Monday, Tuesday, Wednesday, Thursday, Friday and Saturday. Rain or shine.

Five or more races each day.

Races start at 2:15 P. M. sharp.

Ferry-boats leave San Francisco at 12 M. and 12:30, 1, 1:30, 2, 2:30 and 3 P. M., connecting with trains stopping at the entrance to the track. Buy your ferry tickets to Shell Mound.

Returning—Trains leave the track at 4:15 and 4:45 P. M., and immediately after the last race.

THOMAS H. WILLIAMS JR., President,
R. B. MILROY, Secretary.

AT THE THEATERS

The latest newspaper ebullition over the Frawley Company at the California *wasn't* a press-agent story. As stated in the papers, Mary Hampton has declared that the Frawley's, including the other Mary, are horrid, and has gone away, so there! Mr. Frawley is giving Miss Van Buren leading parts to her satisfaction, meanwhile, and has sent abroad for another leading lady.

The trouble with Miss Hampton is that she has not learned the fountain-of-youth secret held by Langtry and Bernhardt, and that she won't acknowledge it. That time of life comes to most actresses, and nine out of ten have a long struggle with their vanity before they give in and abandon themselves to parts of the Phosa McAllister order. Miss Hampton deserves all the sympathy due to one who is fighting against a disagreeable certainty. True, some the things she said about Tim and his people were not pleasant, but then, we have the word of the greatest of all play-folk that, "Hell hath no fury like a woman scorned."

In the interval, Frawley has adopted the doubtful policy of filling in a space between stars with two "tobasco" comedies. Doubtful, because, while they draw crowded houses for the time being, they will not be good for the company's reputation when they settle down again to melodrama and clean comedy. It is said that the Metropolitan Opera House in New York is going to be abandoned because of a plague of fleas which infested it after the Pet Dog show. The management fumigated the house and ran out the parasites, but people who remember have a disposition to shun the place because of what was there before. The same process of disreason spoils the business of a company which descends to *risque* plays. They have done it once, and when they fumigate and return to the old ways, the reputation sticks.

Last week, I had occasion to remark on Miss Van Buren's artistic use of rabbit's foot and grease-paint. I notice that, in her make-up for "In Paradise," she omits the dimples upon which I dwelt with such loving emphasis. Is there any connection between the two facts? If so, I have to thank her for proving what I said—that she is a consummate artist in making up. It was hardly the same Mary Van Buren this time. She had replaced the usual tip-tilted picquancy by a beauty of a different sort—the *chic*, smooth charm of the Parisian *demi-mondeine*. Incidentally, she would have pleased us all better if she hadn't worn a particularly unbecoming gown. Perhaps this fitted her as well as the part; this apparent slur is really intended as a compliment. Miss Van Buren was not made to play the salacious.

* *

Mlle. Trebelli comes forward to the edge of the stage, a round little body without make-up, mannerisms, or further pretension than lies in an effective bow and smile, and a delightful voice. At no time during her concert are you distinctly moved; instead of enthusiasm there is the restful feeling of quiet enjoyment. For Trebelli's repose is remarkable. Only her face is stirred by the changes of her song, and it will repay watching. She is an uneven singer—her trill, for instance, is never sufficiently clear cut—but her delicacy has an unfailing charm, and when she chooses, she can produce a ringing volume of tone. Trebelli has not a special selection for which her seating herself at the piano is a signal. At each concert she accompanies herself in three or more songs, and the combination of voice, manner, and graceful accompaniment complete her conquest of her audience.

For Antoinette Trebelli's personality is her dominant charm, and when you have heard her laughing song, you have the key to it. Back of the delicate art that can blend laughter into the staccato scale, is the jubilant disposition that blesses this unspoiled young singer. Her laughing song is a part of herself and the purity of her daily life. She has no sorrows, no regrets, no cares. Behind the dark red curtain at the back of the stage, watching eagerly while the applause is sounding, and flowers are passed up to the gratified artist, stands a slender woman, in invariable black. This is Mme. Voudour. On her shoulders falls the burden of contracts and business details, worries of which her charge is permitted to know nothing. These two women, who are the greatest friends, travel across the world together, in thorough Bohemian enjoyment of an artistic life. If fortune smiles, the most luxurious hotel is their home, while if for some reason the concerts are poorly attended, the two are equally happy housekeeping in cheap lodgings. They make their clothes, practice, discuss programs, and see the few chosen friends that Trebelli never fails to find in the cities she visits. Recently she spent the day among the hills of Marin county, and no meadow-lark was more joyous than she over the fresh green of the land and the various beginnings of spring.

* *

One of the peculiar features of this vaudeville season is the continued popularity of "The Holy City." There has been hardly a week when this has not been dished up at the Orpheum in some form or other, and it has never failed to carry the audience. The great Australian Baritone sang it, the Tramp Musician played it on the slide trombone, and now we have it in a woman's voice. Edna Bassett Marshall claims to be not only the only woman rendering the song in vaudeville, but the person who first brought it into the variety theatre and started the craze.

Speaking of Edna Bassett Marshall reminds me of the two small boys, Tommy Colleron and Wright Campbell, who do the tumbling act with the company, and this suggests a fact which will probably be unknown to western audiences. It is that Scranton, Pa., the town from which they hail, sends out more acrobats than any other town in the country. Just why it is, no one knows, except that it is the favorite form of sport there, almost to the exclusion of all others. The small boys practice tumbling instead of playing ball. The youngsters who play at the Orpheum this week were practicing in a vacant lot, when the Marshalls saw them, saw their value as a "feature," and snapped them up. They are just ordinary American boys, off the stage, and a pretty good sort at that. It is written in the annals of the Orpheum that they went to church last Sunday with "Joe" Newman, who holds the vaudeville record for piety.

The Orpheum has an excellent bill this week First and foremost is Papinta, whose act grows in beauty with each visit. The Pantie trio are individually clever, and so are the Sohlke's with their troop of five little pickaninnies. The ladder performance of the Holloways is really wonderful; Irene Franklin is rather second rate; Bruet and Riviere give their songs with true Gallic esprit; "Tactics" is undeniably clever, but the gem of the performance is Papinta.

* *

At the Columbia Theatre next week we are to hear the Bostonians, who open in the new opera, "The Smugglers of Badayez," by Minkowsky. Besides the old favorites, the company includes some excellent new people, and is said to be as strong as at any time in its history.

* *

"Friends," Edward Milton Royle's popular play, will be produced at the Alcazar this week, with Mary Hampton in the role which Selina Fetter Royle is identified with. Miss Hampton is to be the Alcazar's leading lady in future.

Blackheads, freckles, muddy skin, wrinkles, and red nose, or face. acted upon as if by magic.

New Stories Re-Told.

x x x

ENCOURAGEMENT INDEED.—A small but plain young woman, whose ambitions have kept her unmarried, went to the farm of a girl friend to spend the summer vacation. The girl had a brother, an industrious young man, who worked day and night to lift the mortgage on the property. The ambitious young woman watched him and sympathized with him, even going so far as to turn a grindstone for him, while he was trying to put an edge on the family axe. About the time she was ready to go home, he took heart and proposed. "Marry you," said the damsel. "How could I think of marrying a man with neither money nor prospects?" "You do not love me?" he asked sadly. "Then why did you encourage me?" "What encouragement have I ever given you?" she asked, in genuine surprise, for she did not forget she was a practical woman. "No encouragement?" he whimpered. "Then why did you turn the grindstone for me?"

x

THE BEAUTY OF THE HOUSE.—Representative John W. Gaines, of Tennessee, is vain of the reputation of being the handsomest man in Congress. There is a division of opinion, however, as to whether Congressman Foote of New York has not somewhat the advantage of the Apollo-like Tennesseean and the subject has been the topic of considerable controversy. One afternoon Gaines was found by a colleague pacing the cloak-room, his brow knit in thought, his face very red. "What's the matter?" asked the other. "You look excited." "Excited?" said Gaines. "I am not excited, but indignant, sir, indignant! What do you think I heard just now? That Mr. Foote, of New York, was the handsomest man in the House?" Then, standing back, striking an attitude and pounding himself on his chest with closed hands, he said proudly, "And look at me, sir, look at me!"

x

THE VERITABLE MACREADY.—Macready, the tragedian was a nervous man and intensely irritable. At the Park Theatre, he was playing Macbeth with Mrs. Sloman, who enacted Lady Macbeth in black velvet, point lace and pearl beads. In the murder scene, a point of Macbeth's dress caught on the tassels of her pearl girdle, so the string broke, precipitating the beads on the floor. They fell one by one and, in the intense silence prevailing, the sound was heard through the house. Macready, almost frantic, hurried the scene to an end and with the words, "Wake Duncan with the knocking, Oh! would that thou couldst," he threw the unfortunate Sloman off the stage with a "d——m you and your clothes ma'am. String your beads with wire next time."

x

TRUE GRATITUDE.—Soon after the first distribution of committees in the House of Representatives, Representative Foster, of Chicago, was introduced to Speaker Henderson. He had received but one committee appointment and that an obscure one. He remarked: "I am on a fine committee, Mr. Speaker." Mr. Henderson beamed. "I am very glad, Mr. Foster, you like your appointment," he said. "I always like to please the gentlemen of the House." "Oh," said Mr. Foster, solemnly, "I refer to the Committee of the Whole. You know, I am a member of that." While the speaker was gasping for breath, the new member from Chicago added: "At the same time, if you are very anxious to please, I would not object to being in your debt for some other good committee." And the Speaker passed his box of Philippine cigars.

x

MARRIAGE A LOTTERY.—In Cripple Creek, a sturdy miner drove up to the minister's house with a young woman to whom he desired to be married. When the ceremony was concluded and the minister's fee came up, the happy man discovered he had left his money in his other trousers. "What's your usual fee," he asked. "Sometimes we get $2, sometimes $5." said the parson. "Then ther ain't no usual about it," decided the Happy Man, quickly adding: "Tell ye what I'll do, mister; I'll gamble with yer. I'll wait a year, an' if this pans out O. K., I'll give ye ten, an' if it doan't"—— He smiled.

x

MILLAIS' PREFERENCE.—The first meeting between John Millais the artist and Mrs. Jopling, a pretty society woman of London, occurred at a private view of the old master's at Burlington House. Mrs. Jopling was walking with a well known artist when Millais approached: "A good show of old masters," remarked the artist after they had exchange greetings: "Old masters be bothered! I prefer looking at the young mistresses!" said Millais, with a humorous glance at Mrs. Jopling.

x

A SUBTLE COMPLIMENT.—The most subtle compliment ever paid Sir Henry Irving was by a working lad a few months ago on Hamstead Heath. Sir Henry was walking with a friend, and some youths of the laborer class were following him about curiously. At last one was heard to say, "Oh, I know 'oo it is, it's that bloke what keeps the theatre—it's Shikespeare."

PALACE and GRAND HOTELS
For nearly a quarter of a century these Hotels have been the recognized headquarters for Tourists and Travelers visiting San Francisco.
Their popularity has been acquired by reason of their unique location (being accessible to wholesale and shipping districts and amusement centers), the peculiar excellence of cuisine and service, and moderate charges.
The Grill Rooms for ladies and gentlemen have an international reputation, and the recently added Supper Room is now recognized as *the* place to obtain after-theatre refreshments.

EVENTS CURRENT.

The War in South Africa.

The South African war has rested in *statuo quo* the last week. It is the lull between storms. After the defeat of Warren's division at Spion's Kop, Buller withdrew, not across the Big Tugela river to the first base, as reported in the early dispatches, but to an advanced position between the Little Tugela and the Big Tugela. There, he rests just in touch with the Boer outposts. A report that he has advanced again is being circulated. If this is true, it means that the British will set themselves to relieve Ladysmith before they concentrate the army of South Africa for the advance into the heart of Orange Free State or Transvaal. The War Office at London will neither confirm nor deny this rumor. Later lists of killed and wounded show that the British loss in the late action across Tugela was fully up to the original 1500 estimate. Although the Boers as usual claim a small loss, reports from reliable sources state that they lost as heavily at Spion's Kop as did the British. Transvaal and Orange Free State have now put every available man in the field. They are at the extent of their resources. This fact signifies that from now on the balance of the war must swing to the British side—a prophecy which requires explanation. Admitting that the British have lost two men to the Boers' one, and admitting that this will continue to be the proportion in the rest of the war, the proportionate loss falls heaviest on the republican forces. The English can continue to give two one for in that manner until the army of the Transvaal is practically exterminated and still have forces at command large enough to take and hold both republics. This is a bloody solution, but it seems the probable one. The temper of the English people is such that the war will never be abandoned so long as there is even a remote hope of winning. On the other hand, reports from Americans and others with the Boer forces show that the forces of the two republics are already reduced materially by losses in battle. The Spion's Kop victory was of the Bunker Hill order. It will be remembered that in that fight the British, while the victors, lost so heavily that it was said "two more victories like this and we must give up the colonies." Warren's defeat was just such a victory for the Boers. It seems likely just now that Buller's campaign against the besiegers of Ladysmith will resemble, in essentials, Grant's movement on Richmond—a steady hammering wherein, although defeated again and again, the attacking force rallies and comes on once more until the enemy is worn out. Once Ladysmith is relieved by such a campaign, the Boer army will not have the strength left to repel a general invasion.

The African Question in Parliament.

The British Parliament assembled last week and was opened, as usual, with the Queen's address from the throne. Like the President's annual message, this address never means very much, being simply a resume of events and conditions known to everyone. The moving of the usual address in return, however, precipitated a warm debate. The Liberals offered an amendment criticising the government's conduct of the war. This was ably supported by Sir Henry Campbell-Bannerman, Liberal leader in the House, and by the Liberal minority in the Lords. The debate is still going on, but is so nearly concluded that the position of all parties is made clear. The supporters of the government side, while admitting that mistakes have been made, defend the policy and procedure of Secretary Chamberlain and the War Office. The Liberals attack this policy and the war record of the Tories with great vigor. Most of them are also of the opinion that war should have been avoided. Now that the war is on, they stand for fighting it out to the end. The Irish members, as usual, have no policy except an obstreperously hostile one, and content themselves with blocking proceedings, denouncing everything in sight, and applauding the Boers. Colonial Secretary Chamberlain has just concluded in the House of Commons an able address in defense of his party and his policy. In the main, he takes the position of the other Tory leaders. The government has made errors, but most of them were unavoidable. They entered the war unprepared; even so, this was because they had tried to shun conflict and were afraid of provoking it by open preparations. "Let the government bear the brunt until the time comes when, under happier auspices, we can see how far the blame is to be apportioned between this system and those administering it. . . . It is premature, to think of terms of settlement, but speaking for the government, there will never be another Majuba Hill agreement." Twice in the week, statements of the forces at the front have been made. Chamberlain holds that in a few weeks 200,000 men will be in South Africa. Wyndham, Parliamentary Under Secretary of State for War, gives the official count of forces at the front as 145,000. He adds that the government can state with authority that the Boer troops number 58,000.

Britain Releases Her Hold on the Canal.

The Clayton-Bulwer treaty, which has long stood as a barrier to our building the Nicaragua Canal, has been abrogated by Great Britain in return, it is said, for free port privileges in Alaska. This means that the last legal barrier against our control of the Isthmian water-way is removed. This treaty has hampered operations for years. It was entered into by Great Britain and the United States in good faith, and bound them to a joint construction and control of the canal. As time passed, however, it became more and more apparent that the canal was logically an affair of the United States, and that Great Britain was not ready to go to the expense of meeting us half-way on the construction. Should we proceed to do the work alone, the British would still have the right of joint control under the treaty, thereby gaining a half-interest in the water-way without paying anything for it. Negotiations have been pending for a year and were only just closed. Great Britain will modify the treaty so that her only demand is neutrality on the Suez principle. In return, it is said, she expects the surrender of a free port in Lynn Canal, or at least the right to construct at Pyramid Harbor piers by which British goods may be shipped to the interior, duty free in bond. When this trade is submitted to the Senate, strong opposition is expected from western Senators, as the surrender of a free port in Canada is held to injure western interests. Nevertheless, the measure is expected to go through, since it is a small price to pay for the free right to the canal.

Report of the Philippine Commission.

A few weeks ago, this department outlined the report of the Philippine Commission from advance reports given out to the correspondents at Washington. The first volume of the report, the one dealing with political conditions and making recommendations to Congress, is now submitted, and a point touched lightly in the advance statements is brought into strong prominence. This is the opinion of the Commission concerning the relative merits of colonial and territorial government. The decision is all in favor of the latter. The Commission announces itself unqualifiedly in favor of a government of the Philippines analogous to that of a territory of the United States with a Governor appointed by the President. They say it is desirable that the inhabitants of the archipelago should enjoy a large measure of home rule in local affairs, their towns to enjoy substantially the rights and privileges of towns in a territory. The provinces should be vested with substantially the functions of a county in a territory. This system might be applied to Luzon and the Viscayan islands at once, and a beginning might be made on the coast of Mindanao. The Sulu archipelago, calling for special arrangements with the Sultan, the Commission says, need not be considered in this connection. The Filipinos could manage their own town and county affairs through their own officers whom they could elect with no help from American officials, except such as would be involved in control from the central government at Manila. The suffrage should be restricted by educational or property qualifications or both. This system would necessitate a small body of American officials of great ability and integrity and of patience and tact in dealing with other races. The chimerical scheme of independent government under a protectorate and the British plan of free colonies are both discussed and condemned, the former because the United States would have to be responsible for the acts of the Filipinos while having no legal right to check them, the latter because the native colonists would differ from us in every respect and could not be expected to fit the British system wherein the colonists are presupposed to be homologous to the governing power. The scheme of territorial government is mapped out to the minutest detail.

Legislation for Alaska.

In the great mass of legislation which must be handled in this crowded session of Congress, it has been feared that the changes of legislation demanded for Alaska would be delayed. Anxiety on this point has been in a measure relieved by the introduction in Congress of three bills bearing on the subject. These measures provide a new schedule of licenses for gold claims, federal control and regulation of salmon fisheries and protection of big game. The first bill readjusts the schedule of licenses to fit new conditions brought about by the influx of gold seekers. All moneys paid in for licenses are to be set apart for the Alaskan Public School Fund. The salmon fisheries' bill is designed in accordance with the ideas of the Fish Commission, and is, roughly, similar to the law now in force in Washington and the Northwestern States. The game bill provides for an open and closed season for big game, which season is to be relaxed in the case of Indians hunting for food. These bills, of course, comprise only a small part of the legislation necessary for Alaska, but their introduction proves the territory will come under consideration. John P. Hartman of Seattle has been in the city of Washington in the interests of the Alaskan measures. He reports that affairs are moving smoothly. It is probable, in his opinion, that a general bill providing for the expenditure of more than half the revenues of the district will pass this session. Alaska is also to have a code of laws and a land law, giving landholders title of fee simple to their real estate. It is also likely that three judicial districts, each with its judge, marshal, clerk and deputies, will be provided.

Political Anarchy in Kentucky.

There has been a reign of lawlessness in Kentucky, as a result of the election controversies in that state. It culminated last week in the assassination of Goebel, the Democratic candidate for governor of the state, and in a general arming of the commonwealth. For a time, civil war was expected, but better counsel prevailed, and, although Kentucky politics are not out of the woods, it is probable that bloodshed will be averted. The trouble goes back to the last election. Goebel, Democratic was defeated for governor in a very close fight by Taylor, Republican. The Democrats contested the election, claiming that fraudulent votes enough to influence the result were cast for Taylor. The Republicans entered counter claims and Taylor was seated. The Democrats had a majority of the State Legislature and announced their intention of unseating Taylor and declaring Goebel the rightful incumbent. This caused immense excitement, and armed men of both factions poured into Frankfort, the capital city. On Tuesday, Jan. 30, Goebel was to have been declared elected by a party vote of both houses. That day, as he was proceeding to the State House, he was mortally wounded by a shot fired from an upper window of a building nearby. Four days later, he died. The assassin has not been found. Governor Taylor at once called out the militia, while the Democratic factionaries armed and assembled. The soldiery took possession of the State House and prevented the Legislature from meeting. Upon this, the Democratic majority signed a paper declaring Goebel legal governor of Kentucky, and J. C. Beckham, his running-mate on the ticket, lieutenant-governor. The oath was administered to the dying man at once, and he issued a proclamation ordering the militia to disperse. Some of them obeyed, but the majority stood by Taylor, who got out a counter proclamation, ordering the General Assembly to meet at London, Ky., in the heart of Republican districts. The Democratic majority met in a hotel and ratified the election of Goebel, adjourning thence to Louisville. The Democrats issued an injunction preventing the proposed transfer to London. Goebel died on Friday, Feb. 3, and the oath of office was administered to Beckham. Thus the situation stood over Sunday—two legislatures, divided on party lines, meeting in different places, and two sets of state officials. Meantime, there had been all possible show of arms and threats of violence, and only the most careful handling prevented riot and battle. Monday night, the leaders of both sides held a conference, and practically agreed on the unseating of Taylor. If this arrangement is not carried out, the case will have to be fought out through the injunctions obtained in the courts. The chances of bloodshed are not yet past, but the atmosphere has cleared considerably.

The Trust Situation.

The Industrial Commission has finished its labors in taking testimony and gathering statistics, and is weeding out the enormous mass preparatory to submitting its report to Congress. It is now admitted that much of the work done by this body is valueless. The sole department which has achieved any results of interest to the country or of use to Congress is that charged with investigating trusts. Even here, no recommendations will be made; the attention of Congress will be called to certain passages in the report, that is all. It appears that at one time the Commission spent considerable time in discussing the universal panacea now exploited by W. J. Bryan as his own original idea. This is a scheme to bring all trusts and industrial combinations under the control of the General Government, through the enactment of a law by Congress authorizing a bureau at Washington which should supervise trusts exactly as the Controller of the Currency controls the National Banking associations. The impracticability of this plan was disclosed, and the Commission gave up the idea. Then came the decision of the Supreme Court upholding the Sherman Anti-Trust law, the provisions of which are more potent and far-reaching than most people had believed them to be. That decision called a halt in the investigation, and the Commission closed its labors with testimony to begin the preparation of reports. Fragmentary and unconvincing as the results submitted will be, the Commission can hardly be held to blame. They have been handicapped from first to last by the fact that they could not compel the attendance of witnesses. They were granted no authority for that; their summonses amounted only to requests. The members of the Commission have, however, reached one conclusion. One and all, they are of the opinion, that, since the Sherman law can and will be enforced, Congress ought to hesitate before going any further with anti-trust legislation. Meanwhile, the Republican majority in Congress is planning a trust measure which will have its reason for being in political expediency. It is recognized that the trust howl is now the main hold of the Democratic party. Free silver is a dead issue. In all parts of the East except New England, public opinion is for expansion. With these two issues killed, Bryan and others have been directing their ante-campaign oratory at the trust evil. The passage of an anti-trust measure by a Republican Congress would take the ground from under their feet. If such a bill were put through in the spring or summer, it could not be ratified by the various state assemblies—a condition necessary to its legality—until after the election. All through the campaign, therefore, the Republicans could point to their trust record whenever the Democrats raised the howl. It would be a clever flanking movement, but it is too early to make any prophecies as to its chance of adoption.

German Intrigues in Venezuela.

Following close upon the decision of the Tribunal of Arbitration in the controversy between Great Britain and Venezuela over the boundaries of British Guiana comes another controversy over the turbulent little republic, and one that is likely, in the end, to give rise to serious trouble. Germany is preparing to squeeze Venezuela

for an old debt. In the late eighties, the republic decided to build a trans-Andean railroad, and raised the capital in Germany. It was believed at the time that the profits of such a venture would be enormous; therefore, the government pledged itself to the two German banking firms which lent the money for seven per cent. interest on the total amount of the loan. The road, being solidly and well constructed, cost much more than the original estimate; nevertheless, the banking firm held Venezuela only to payment on the first estimate. This seemed fair, but the money was not forthcoming. A long diplomatic correspondence followed, as a result of which a German squadron was ordered to La Guayra with instructions to demand an immediate settlement, failing which, the customs-house was to be seized and held. Then came President Cleveland's famous message warning Great Britain against her designs on the Guiana boundary, and the Germans substituted diplomacy for war. As the first step, a banking firm in Berlin, backed, it is supposed, by the government, loaned Venezuela $10,000,000 at usurious interest. Out of this principal, interest on the loan of the railroad funds and on the loan itself were paid for some time. Then came the Andrade revolution and payment stopped. Now, Venezuela is indebted to Germany for the loan on the railroad and the accruing interest thereon, for the time-serving loan of $10 000,000 and the interest thereon, for damages inflicted on German property in the Andrade rebellion, and for munitions of war purchased in Berlin. She has no way to make cash settlement. The country is on the verge of starvation, and is producing nothing, as all the able-bodied men are in arms. Germany takes this time to press for payment, not because she expects it, but because she wants a coaling-station in the Carribean and Venezuela has such a station, the island of Margarita. This is a point of great strategic value, being in the path of vessels passing in and out of the Isthmian Canal and in easy striking distance of both North and South America. It is admirably adapted to fortifications, has several good harbors, and possesses pearl fisheries second only to those of Ceylon. Germany is now the only great power which lacks a station in the West Indies. The demand for payment will be made immediately, and when the refusal comes, the Kaiser will show the real object of his game by demanding this island.

The French Educational Bill. Owing to the fact that it furnishes sensational "copy," the personal feature of the late French political tangles has been exploited in the American press to the exclusion of weightier matters. The educational bill now being debated in the Chamber of Deputies is a thing of more importance to France than the Nationalist conspiracy, yet very little is known of it on this side. The measure is the work of the Radical party, and was drawn up at the instigation of pronounced Socialists. Briefly, it is intended to do away with all denominational schools. Should it become a law, every French youth must be educated in state institutions up to the time he enters a university or technical school. Every applicant for a government position and every matriculate at a special school or university must show a certificate proving that he has been educated in the public schools. Thus, the students of denominational schools are shut out from government appointments and from institutions of higher learning. M. Aynard, representing not so much the clerical party as the conservative Republicans, has led the fight against this measure. In the name of the Commission of Public Education he has entered a strong protest. The bill, he says, goes to the extreme which is charged against the Roman Catholic Church. It is directly subversive of liberty of conscience and of action. Outside of that, it encroaches upon the liberty of the parent, a thing which is a tradition of French law. He points to the admirable school sytems of England and America as examples of the moderate and sane theory of education, wherein free schools are opened wide for those who will make use of them, but where no objection is made to an alternative system of independent denominational schools. M. Aynard's protest is said to be a remarkable document and has had much influence upon the French people. An immense amount of discussion on the subject is going on among serious thinkers in all sections of the press.

EDITORIAL COMMENT

Conclusion of California's Senatorial Contest

THE election of Thos. R. Bard to the United States Senate reflects great credit upon the Legislature of the State of California. Mr. Bard was not even a candidate for the office in the ordinary acceptance of the term. Early in the session Senator Flint, who was the original Bard supporter, with several of his friends united in a telegram to that gentleman inviting him to come to Sacramento. Mr. Bard arrived at the capital late Friday morning; at 4 o'clock the same day he was declared the choice of the anti-Burns conference; at 8 o'clock p. m. he was unanimously chosen by a caucus of fifty-two Republicans, and on the following Tuesday was elected Senator without a dissenting Republican vote.

The political history of the state offers no parallel to this senatorial fight just ended. In it *The Wave* has cut a prominent figure. This journal was the first to begin the crusade for a Governor from the North and a Senator from the South. The Governorship was sent to the South by the Northern politicians, so as to elect a Northern man to the Senate. The reelection of Mr. Bard, strangely enough gives both the Governor and the Senator to the South. The deadlock of last year was fought out along these lines. In all, one hundred and twenty ballots were cast and the last vote was almost identical with the first.

After the close of the regular session, the probability of an extra session became a subject of general discussion. Men who knew the game of politics believed such a session unavoidable. The opponents of Mr. Burns almost conceded that should such a session be called, it would mean his certain election. When the call was issued a few stout hearts gathered together for the purpose of organizing the forces in both houses that had at the previous session refused to vote for Mr. Burns. There were in all fifty-four such members. How many had been won over to the support of Burns, no one knew, but an organization of the remnant, whatever it might be, was imperative. Everyone conceded this, yet no member took the initiative until Assemblyman Joseph R. Knowland of Alameda, at his own expense, hired room eleven at the Lick House, and through the influence of Senator Flint and Assemblyman Dunlap, was able to secure the presence of not quite a dozen members, who agreed to stand together for an organization of the "antis." From this small beginning grew the conference that nominated Mr. Bard. Mr. Knowland, young and modest, did not thrust his own personality to the front, but those who know the "inside" know he was first to take the initiative.

Irving M. Scott, up to the coming of Mr. Bard, was certainly the most prominent candidate in the field. When the Republican conference took place Mr. Scott held enough votes to prevent a choice. He could by remaining stubborn or withdrawing his supporters have defeated the Bard movement, and so given Mr. Burns another chance at the general caucus. The situation was laid before him. If he was obstinate and selfish his action would have kept the other smaller candidates in the field also, and a reelection would have been prevented. He had been a candidate before Mr. Bard entered the field; had given six or eight months of his time to making the fight, but these considerations did not move him. He sunk all personal ambitions for party good. In an interview in the Sacramento *Bee* of December 29, when announcing his candidacy he said:

"If any good Republican shows more strength than I when the legislators get together, and my retirement would aid in uniting the party and electing that Republican, I will gladly, for the good of the party, withdraw my name and take my coat off for that man, whoever he may be. Our party is too great to be made to suffer on account of the ambitions of any individual."

Mr. Scott religiously lived up to this declaration. He might have broken up the conference that selected Mr. Bard, and so secured his own selection. What he did is but told in the Morning *Call* of the following morning.

Early this morning the independent candidates all recognized that the victory was surely drifting into the camp of Bard. There were hurried conferences and a quick decision. After careful consideration it was seen that Bard would have 29 votes, and Irving M. Scott might count upon 22. It was a critical situation for Scott, whose highest ambition was to be a United States Senator. But he saw that his ambition stood in the way of the accomplishment of the deepest desires of the people of the State. He saw that by remaining an aspirant he jeopardized the success of the organized opposition to Burns. So he withdrew, throwing his strength to Bard. And in his defeat Irving M. Scott has won a splendid triumph. He has won the triumph of unselfish patriotism, and deserves the commendation and well wishes of the people of California for an act that has been seldom paralleled.

His unselfishness and self-sacrifice inspired the independent Republicans with an enthusiasm that, with all their confidence, they had not yet felt. So when they met this afternoon they did so with the firm conviction that the great battle was nearing its end and that one of the greatest triumphs in the history of California politics was soon to be registered. At the afternoon conference, which forty-one men attended, it was unanimously decided to vote for Thomas R. Bard for United States Senator.

In another interview in the *Bee* after he had made this sacrifice, Mr. Scott said:

"My position has never varied from that which was announced in the *Bee* of December 29 in an interview with me. That position was a perfect willingness to support any man acceptable to the people of the state. As soon as the people of the South got rid of the various claimants and consolidated on Mr. Bard, I cheerfully assented to make that result a certainty. I am well satisfied and feel that the work I have done for the past year on that line has brought forth good fruit, and insures the elect on of the electoral ticket named by the friends of McKinley next November."

Mr. DeYoung is another gentleman entitled to commendation in this connection. Member after member tendered their support to him and urged him to enter the contest. Although an ambition to be United States Senator has been long cherished by him, and although the offers of support were of a most flattering character, well calculated to turn the head of an aspiring man, he set them to one side, and only urged that they unite on some strong Republican leader, and leave his own name out of consideration.

Mr. Bard strikes us as being evenly poised, conservative, and intelligent. His manner is pleasing, he is polite to all, and has the unmistakable stamp of a well bred gentleman. He listens with attention and then decides for himself. His words are carefully weighed, and he will not be found pursuing erratic ways or giving voice to convictions he is not prepared to support with facts and with arguments. He is a strong man and will ably and fitly represent California and do her honor in the United States Senate.

The Pro-Boer Howl.

A FEW weeks ago, the writer had occasion to treat of the attitude of the American people toward the British-Boer war. The statement was then made that, although the American people had exhibited a strange and undignified inclination toward the Boers, considering the favors extended by England in our Spanish-American war, the government of these United States could be trusted, in view of England's support in the turbulent times of 1898, to stand by our one foreign friend in this her hardest crisis. Congress has convened since that time, however, and has disappointed that expectation. The South African war has been made the occasion of a storm of Congressional oratory, and all of it on the Boer side of the question. The supporters of England in that body have been swamped, their utterances amounting to very feeble protests. Only the fact that considerations of international courtesy make the recognition of one belligerent a direct insult to the other, has prevented our National Assembly from passing resolutions recognizing the absolute independence of the Transvaal. In view of this fact, it is fitting to consider the motives which actuate our legislators in their fervid zeal for "liberty."

In every country, and in the United States in especial, there is an enlightened class of people capable of feeling, thinking and acting on their own ideas. These people are not swayed by the foolish utterances of frantic politicians or of professional mob-leaders. They form opinions, take sides, vote, on their own judgment of the case. If one of this class is a free-silver supporter, which does not happen very often, he is so because he believes from his study of the subject that free silver is the best thing for the interests of the country at large or for his own interests, not because William Jennings Bryan says that gold is crucifying mankind. Frantic oratory, loud mouthed "arguments," brass bands and torchlight processions have little or no influence or this class of the voting population. The shrewd politicians know this, and they turn their campaign work to the other class—the uneducated and unintelligent voters, the ones to whom "grand-stand plays" make the direct appeal. It is at them that the oratory of Bryan, the tracts of Atkinson and the showy fallacies of "Coin" Harvey are directed. It is for them that the great parties spend millions in parades, shows and spectacles. It is for them that our vote-seeking Congressmen are pounding the air in their efforts to show friendship for the down-trodden Boer.

For our experienced politicians know that nothing is so effective in drawing the unintelligent vote as empty names. For a century, freedom, republican ideals, love for the downtrodden, have been the stock phrases of this type of statesman. And the Transvaal side of the question is supported by these empty names. The Transvaal is a Republic. Note that. It does not matter that it is really an oligarchy more strict and hide-bound than that of Russia herself. It does not matter that the interior administration of Transvaal is a system of licensed thievery. It does not matter that one-third of the government revenues go for a secret service fund used to bribe and corrupt accomplices of the gang in control. It is a Republic. The unenlightened voter will take down the geography which he studied in the little red school-house and show you the map of Africa. There it is, as plain as print can be, "Transvaal Republic." Can anyone answer that argument? No indeed. Our Congressmen, with an ear over the Great Heart of the People, whose every pulse-beat circulates a million votes, do not try it. Instead, they howl with the mob, each one trying to out-do the other in the clamor for popularity.

In the previous editorial on this subject, it was shown that from the sentimental side our sympathies should be with the British and not with the Boers. It needs no argument, only a careful study of the facts, to prove that the justice of the cause lies with the English—that Great Britain and not Transvaal has been the agent of civilization in South Africa, that the government of Cape Colony is just and equable while that of the Boer Republics is corrupt and tyrannical; that Great Britain has in past time saved Transvaal from extinction by the savage tribes and has been rewarded by the most absolute ingratitude. So much for sentiment and justice. Throwing these aside, where does our best interest lie?

Rightly or wrongly, Philippines or no Philippines, this nation is committed to a policy of expansion. We have Cuba and Porto Rico on our hands, we are soon to build and control the Nicaragua canal. We are increasing our trade yearly with the far points of the Orient. We are no longer a hermit nation; we have outgrown our infancy and are about to take our place among the Powers. Unless we expect to stand alone, with our small army and puny navy, against the powers of the earth, we must seek alliances abroad from time to time. Where shall we look for alliances? To Teutonic Germany? To Latin France? To Slavonic Russia? Or to Anglo-Saxon Britain? It may be objected, and with some grounds, that we are not an Anglo-Saxon nation. In blood, indeed, we are not entirely. But in other and more important respects we are. We speak the language of the English. Our laws are founded upon the English common laws. Our minds, our opinions, our sentiments, are moulded by English literature. We are educated in schools modified from the English plan. It has been said that the man of the second generation of foreign immigrants becomes thoroughly American. What does this mean? Since American methods and ideas are Anglo-Saxon, it means that he becomes thoroughly Anglo-Saxon. Is it not natural, then, that we should link our destiny with the nation with which we have common ideas, common methods, common laws? To anyone not blinded by the sort of buncombe now being circulated by Congress, the decision is inevitably for England.

BURIAL OF MAJ. GENL. H. W. LAWTON, U. S. V.

SAN FRANCISCO has seen the best and the worst of the Filipino war, since that spring day, two years ago, when her own sons went on their long and uncertain journey to the Island of Luzon. She has cheered for the glory of departing regiments, she has watched the wreckage of war roll back to find rest at home. There have been sad days when the hospital-ship brought in the dead and wounded, or when the worn, sick regiments brought back their tattered flags. There was a glorious day when her own sons came home. From time to time, she has given the bodies of our heroes a temporary rest on their homeward journey. And now at last she has given refuge to all that is left of the hero of our later wars, the one general of the day who bore his title without fear and without reproach.

It was a simple ceremony, this transference of General Lawton's mortal remains from the ocean to the soil of his own land. I imagine that it was as Lawton would have wished it, that it would have fitted the views of the simple, manly American that he was, better than the elaborate ceremony that marked the departure of his body from Manila, or that will mark its consignment to the soldier grave at Arlington. He was the one commander of the American forces who despised rank and title, who dispensed, when he could, with the distinction between private and officer, who would leave a group of officers to shake hands with a common soldier of his own command. Decidedly, San Francisco saw the most fitting ceremony. The coffin was carried to a private establishment pending the arrival of the special train. Then, on Thursday last, it was borne through the streets of the city to the ferry on an artillery caisson. There was no music, no ostentation, no unnecessary display, only an escort of his comrades in arms and his fraternal order. This was all there was to show that the remains of the chief figure in our Philippine struggle had passed through the city to their rest.

The true story of Lawton's death was told for the first time on American soil by the officers in the escors. It will be told again, for his name, in a double sense, was one "not born to die." Every war has its popular heroes, personages remembered not for what they have done, but for their personality. They are made the heroes of romance, immortal when the doers of greater deeds are forgotten. Others than Roland of the Horn led the Frankish advance across the Pyrennes, others accomplished, doubtless, greater deeds, but Roland lives in song and story, while the others are forgotten. Greene and Gates were greater generals than Putnam and Ethan Allen, yet the last two will be the subjects of poems and tales when the first two are remembered only by specialists in history. What this lasting personal quality is, no one can explain; it consists, most probably, in a mixture of attractive and heroic personality with a romantic career. Lawton had this quality. His is the name of the Spanish War which will live in romance and poetry, when the others merely exist in history. And romance and poetry are the departments of letters which preserve names and keep them close to the people.

The Pioneer Movement of early days undoubtedly furnished California with many types of eccentric personalities. Of late years death has made stern havoc in the ranks of the Argonauts, but there still remain many men of marked and peculiar individuality, whose character gives color to the life of San Francisco. Take the career of the late Captain Friedman who died at the Palace Hotel recently. A silent, studious, reserved person, careless in dress and economical in habit, he was regarded by many as a miser. Some time ago he retired from membership in the San Francisco Verein because of his reluctance to pay dues, but the same day he was seen leaving an envelope containing several hundred dollars on the counter in the office of a sailor's relief fund. He was accustomed to do good by stealth, but balanced his charities by personal abstinence. His will devises an estate of nearly a million dollars to charity, the chief bequest being one of $300,000 for the benefit of the "Home and Hospital for the Hebrew Aged and Disabled." The majority of people were, of course, ignorant of the existence of Julius Friedman and only the real estate sharps and his old business associates knew of him as a millionaire. There are still living among us many men of his type whose style of living bears no relation to their wealth. They are members of the unknown rich.

Paris takes the lead in the campaign against spitting in public. A committee of the Town Council has recommended the putting up of enamelled signs in the principal streets and parks with the inscription- "In the interest of the people and to avoid the spread of contagious diseases you are requesfdd not to spit on the sidewalk."

A woman hanged for child murder in Vienna a few days ago was the first woman executed in that city since 1800, and the first in the Austrian monarchy since 1867.

EPISODES IN THE LIFE OF CECIL RHODES.

CECIL RHODES is besieged in Kimberley, and Kruger sits in Pretoria, directing the war. Of these two great personages so much in the public eye when the struggle in Transvaal was only a remote probability, we hear little now; Buller and Roberts, Cronje and Joubert come in for attention. Yet one or the other of these two—Rhodes and Kruger—is to be the dominant force in South Africa after the war is over. In the improbable event of the Boers winning out, Kruger will dictate the course of affairs in South Africa as long as he lives. If England wins, Cecil Rhodes will have as much to do with the destiny of the South African states from Pretoria to Cape Town, as he has had to do with the destiny of Rhodesia. Two uncrowned monarchs face one another. The only title of the first is that of President of a small state in the wilderness; the other has not even so much addition to his name as a patent of nobility, yet he is the greater of the two. Carlyle has shown how kings make themselves by virtue of the greatness that is in them. Such a king is Cecil Rhodes, known to his enemies as Cecil I of South Africa. Other millionaires there are who pile up wealth and fortune, but Rhodes is unique in that he acquires money only for the power that it will bring. His diamond operations, his formation of the Chartered Company, his extension of Rhodesia, were all done for power. Of other millionaires the word "money king" is used in a figurative sense, but of him alone may it be said literally.

Meanwhile, what of his personality? The Yellow Press had delighted in describing him as a stolid, cold-blooded machine, a man without personality, a brain and body without a soul. We hear anecdotes about his shrewdness at a bargain, his coolness under strain, his indifference to women. The truth is that Rhodes has a personal and social side, a strong one, but it is subordinated, as in the case of every strong, efficient man, to his purpose.

To begin with, there is a strong sense of humor in the man, and a ready wit. He likes a joke, and can turn one himself. Then, he is a lover of ease and pleasures of the body; also, he loves sport with the love of your true Englishman. If he does not yield to all these desires, if he is retiring, grave and stern in speech, ascetic and energetic in life, it is because he realizes that he has no time for such things. He admits himself that he is lazy, that he would rather ride than walk, yet he travels over the veldt day after day in a dusty khaki suit. Good eating and good drinking appeal to him, yet he must keep up the machine through which the mind must work, and he abstains. It has even been suspected that his traditional aversion to women comes from the same source; he is afraid to marry, lest domesticity should take some of his energy.

His wit is of the direct and ready kind. Two instances illustrate this and another point as well—his love of "gall." Absolute cheek is the surest way to his favor. On one of his visits to London, the interviewers sought him in vain. At last, one reporter who had been dodging about for a week trying to reach him, pushed by the servant at the door and up to the great man's apartments. Rhodes was taking a bath. The reporter brushed his valet aside and pushed on

Things & People.

The Book Deluge.

THAT much-debated topic—the reception and consideration of new manuscripts—is adverted to in the February *Ladies Home Journal*, in which a significant statement is made in regard to the number of manuscripts read and accepted. A bureau is maintained in the *Journal* office and Editor Bok is authority for the statement that 000 stories, essays and articles submitted were perused by experts. Out of that great number but 80 were accepted. The cost of MSS. secured by this winnowing process is far above the remuneration paid the most expensive authors, but it is said four new writers have been discovered and the "find" warrants all the trouble and expense of the investigation. This statement must not be taken to mean that only one per cent. of the submitted articles were of value. A large proportion must have been rejected because of unavailability. Every publication has a policy, a plan of work, marked out for itself, and it will buy articles that suit its purpose. Most of the published material is ordered from well-known writers and is prepared along certain stipulated lines. A new man realizing the character of a paper, sends it matter of fresh interest within its province. He at once becomes a "find." Literary discoveries, however, are oftener made in the direction of fiction, the great aim of the enterprising publisher being to be the projector of the next literary sensation. This honorable ambition makes manuscript reading a responsible department, and so an expensive adjunct of the business.

***

The Police Commission.

THE controversy in the Police Commission is supposed to be ended. It is understood that the Mayor's secretary, Colonel W. P. Sullivan, will be appointed Chief and that Mr. Biggy will gracefully resign in his favor. Colonel Sullivan is an agreeable and accommodating gentlemen with an excellent knowledge of the city's affairs and a ripe acquaintance with military matters. For many years he was connected with the National Guard and as Colonel of the old Third Regiment was a popular commander. He organized the Cadets of the Cross, whose chief officer he is. Professionally he is an expert accountant, was connected with the Pacific Rolling Mills for years, became interested in Democratic politics, co-operating with Gavin McNab in the reform movement, which resulted in the first election of James D. Phelan. Appointed secretary to the Mayor he has proved a competent executive and in a difficult post has kept all his old friends and made many new ones. I regret, however, that the Esola row has lost the city the service of Commissioner Thomas, who resigned in disgust, and avows avoidance of politics for the term of his natural life. Mr. Thomas, I feel sure, had the same impression of the Esola conspiracy as the other citizens of San Francisco, but being a lawyer and a stickler for judicial procedure, was quite determined to preserve impartiality and to give the defendant the benefit of the laws of evidence. He is the last man in the world to be "bulldozed" into taking an action of which his judgment and conscience did not approve, and would have made his position manifest later on. Politics is a rough and tumble business and not governed by any well-defined rules. He who enters as an amateur is liable to get the worst of it, especially if attacked before time to get his bearings has been given him. Mr. Thomas, a man of first-rate brain and great organizing capacity, would have proved an admirable commissioner and I regret that circumstances have robbed the city of his ability.

* * *

Now that the controversy seems ended, what a wild-eyed entertainment it was while it lasted. Yet the audacity of the scheme as it unfolded itself, was staggering. In the minds of most Californians is a well-defined sense of the *Examiner's* characteristics—its reckless aggressions, its unscrupulous prying and wanton disregard of both truth and private feelings in its search after sensation. Imagine it in the stronghold of inquisitorial power in San Francisco. On this page is a portrait—rather a character study of the man it proposed to make chief. Physiognomy abounds in surprises, I am well aware, but I think most people will agree with me, he does not look the part. I trust the *Examiner* will accept its defeat with such grace as it can command and spare the community further displays of its anger at Commissioner Biggy. Its wrath but helps its erstwhile friend and only makes the paper ridiculous.

***

A Journalist of Dawson.

THE journalist who would be free with his pen had better avoid Dawson City. No censorious criticism of the powers-that-are is tolerated in that environment, and the arm of the law is as long as its hand is heavy. This is a logical deduction from the experience of one D. W. Semple, editor of *The Gleaner*, who has had a specimen of Canadian justice which proved both costly and unsatisfactory. *The Gleaner* is a Sunday publication and is characterized by that breeziness of style to which the prevalence of yellow journalism in this country inures us. The proceedings of the High Court of Dawson were displeasing to Editor Semple and frankly he said as much in his paper. He was arrested and fined $1,000. Ten minutes were given him to pay it. He paid. He proceeded, then, in a subsequent issue, to tell succinctly what he thought of the Judge, and a warrant was issued arresting him for contempt of court. This meant a long term of imprisonment if he was caught, so he took flight. To give the impression he had gone to Forty-Mile, he set off down the Yukon, but doubled back to Dawson and lay *perdu* until the vigilance of the pursuit had relaxed. In the meantime the mounted police scoured the country for him, but he managed to slip out of town and headed down the Canadian trail to Bennett, thence to Skaguay over the White Pass railroad. After various narrow escapes Editor Semple got to Seattle and breathed again the blessed air of freedom. After a brief sojourn he went to Victoria and delivered himself to the authorities there, who will investigate his case and mete out a better class of justice than seems available on the Klondike.

***

Honor Among Thieves.

WHAT the reformers of Seattle have failed to do, a single disgruntled gambler has accomplished. One Clancy, the proprietor of a prosperous house, was not satisfied with the ordinary profits on faro stud poker and roulette, but must needs add the imported luxury of a Chinese lottery. The innovation proved popular and more than doubled his profits. This the other gamblers noted with jealous eyes. Clancy was making entirely too much money; also, he had violated the thieves' code of honor. Therefore, some of them drew on the "pull" and had the offendor arrested for conducting a lottery. He demanded that he be arrested for gambling also, but the police said that they had orders to close only the lottery game. Upon being released on bail, Clancy shut up his own house and swore out warrants under the state law for the arrest of every other gambling proprietor in town. Being entirely too wise to entrust this work with the police, Clancy had special constables serve the warrants. As a result, every den in the city is now closed tight. By this means, Seattle is saving some $50,000 a week, and the tinhorns and blacklegs are losing just that amount.

* * *

Had Clancy been disposed to hit the business "on the mark," he could not have chosen a better time. Election is one month away. As a fighter and an expert politician, Clancy must have known that the games will be closed during campaign time as a matter of policy, since no party known to favor gambling directly can hope for success—in so much does vice render homage to virtue. During the month before election, at which time perfunctory police raids could be expected, the "sure-thing" men hoped and expected to tide them over the spasm of election virtue. Then they expected to crawl out of the cyclone-cellar and resume operations on the accustomed scale. The action of Clancy takes away this season of heavy profits. As gamblers are improvident and keep nothing ahead for a rainy day, the magnates of the "profesh" are leaving town in droves, while the hangers-on are haunting free lunches and adding strength to the vagrant population. A few arrests in this quarter would do a vast deal of good—only the gamblers love and trust the police with a touching faith. They know their friends.

THE MAN WHO WOULD BE CHIEF

The Boer Character.

WITH considerable interest I note a movement among sympathizers with the Anglo-Saxon end of the South African controversy to aid the families of killed and wounded British soldiers. A dollar subscription list has been started in San Francisco, and signatures are being affixed at the rate of fifty a day. When one considers the fact that the Boers have about as much tolerance for Catholicism as had the Roundheads of Cromwell, the vast outpouring of sympathy from Irish Catholics is hard to understand. It is, of course, based on ignorance of actual conditions in the Transvaal. In the land of Kruger they have as little use for priests or papacy as they have for the Jews, and, being a stiff-necked generation, rarely hesitate at expressing their feelings. Someone has spoken of the Boer as a blend of Puritan and Apache. It is a fitting designation, especially when one remembers the treatment meted out by the followers of Kruger to their unfortunate Kaffirs. We, who are accustomed to shudder at the suggestion of violent punishment, would be rather shocked at the ineffable cruelty of chastisement with a sjambol as practised in the South African Republic. That element of the patriotic Boer character is touched upon by Olive Shreiner in her *South African Farm*, and, as her sympathies are entirely with the Transvaal, the authority should be good. However, as to Boer intolerance, ignorance and greed, ask any American mining man who has spent time in the Transvaal.

***

On the Northern Route.

A FEW days ago, the steamer *Excelsior* took a party consisting of seven men and one woman on a perilous trip to the frozen North. The men are going to face death by an overland journey to Nome City; the woman's destination is Unga Island, one of the distant specs of the Aleutian chain. She is a Mrs. Nelson, wife of a store-keeper at Unga, and she has spent three months in trying to get home from Juneau. Mrs. Nelson was born on the Aleutians, and took her first journey to civilization last summer. Returning in the fall she made the passage from San Francisco to Juneau in safety. At Juneau she took the steamer *Golden Gate*, bound North. This vessel struck a heavy gale and was blown and beaten half way across the Pacific and had to make for Cape Flattery. Thence, she put into Seattle. Mrs. Nelson's was the only ticket which read "Juneau to Unga." Accordingly, she was transferred to a boat bound for San Francisco, in the hope that she would find there a steamer bound for her home port. In this, she was disappointed, and had to return to Seattle. Now, the owners of the *Excelsior*, who also own the *Golden Gate*, on which she made her first trip, say that she must go through to Unga if it takes every vessel in the fleet. Her attempt is comparatively easy, as her route, rough as it is, lies all on sea. The seven men who accompany her are taking big, almost foolhardy, chances. They will land at Mount Carmel Mission and travel over an uninhabited, unexplored country to St. Michaels and thence, by ice, to Nome City—that is, if they ever get to St. Michaels alive. Old miners predict that they will not. An ancient sage named Virgil once had something to say of the lengths to which lust for gold will drive mankind. He could have found no better illustration.

***

A Coup in Elevators.

AN interesting episode in the career of Jeremiah Mahoney, of the Board of Public Works, was his purchasing the electric elevator patent devised by an engineer named Fraser, a resident of San Francisco. Fraser formulated the principle on which the electric elevator works and protected it the usual way. Jeremiah Mahoney, who is a very keen man, at once appreciated its merits and bought an interest in the device, and subsequently, after trial had proved its practicability, obtained control of it. The investment cost him a good round sum, but he could well afford it in view of the profits he foresaw in its development. About this time the Elevator Trust had been formed including the Otis, Crane and other patents, and its projectors imagined they had the situation, so far as elevator construction was concerned, in their own hands. Several big buildings were in process of erection by one firm of contractors in Chicago when Mr. Mahoney arrived there and twenty-two elevators were required for their equipment. The Trust had asked an exorbitant sum for its appliances and Mahoney found no difficulty in obtaining a hearing. The news of competition, however, at once reduced the Trust's bid $22,000, at which price it got the contract, but in extinguishing the Fraser Elevator they had lost their profit on the transaction. Mahoney was not put out, but went to the Trust's headquarters in New York, showed them his elevator and explained that he proposed to compete on all contracts throughout the country. There followed a period of negotiation ending in the relinquishment of his ownership for a quarter of a million dollars.

BOSWELL, JR.

Five tons of mail matter lie in the basement of the Seattle post office, destined for points in the Klondike and Alaska. This vast accumulation may never reach its direction unless the U. S. Postmaster succeeds in making necessary arrangements with the Canadian government. The mail consists of packages and newspapers which would be forwardable under ordinary circumstances, but as the government has to pay from twelve to twenty cents per pound for its transportation, it decided to hold it until better facilities have been created in Alaska. At present an effort is being made to have the Canadian service carry this mail as far as the railroad goes and then send it North on steamers when the ice breaks up. No agreement has been reached on this proposition, and many miners will wait until late in the summer for packages that were posted to them last year. It is hard, but it cannot be helped. As the mail is carried now over the trails only very small loads can be taken.

RUINS OF KAUMAKAPILI CHURCH.

THE FIRE DEPARTMENT AT WORK.

The loss of the fire which will be most regretted was that of Kaumakapili Church, the place of worship of the royal family of older days, and much venerated by the natives. It was one of the ancient landmarks now passing away from Hawaii only too fast.

FIRE AND PLAGUE IN HONOLULU.

IT is too early to say whether or no the sudden and wholesale destruction of Chinatown by fire is to be a blessing or a danger to plague-stricken Honolulu. The district was doomed and marked for destruction, of course, but it was intended that it should be done slowly, building by building, so that the inhabitants could be removed and isolated gradually. Now, while the whole district has been swept off the face of the earth and the filth in which the germs breed has been purified by the flames, the infected population has been thrown together in one mass. Persons developing the disease have mingled with healthy persons, and the consequences are feared. Up to the time of going to press, no additional news is in, and those interested in the islands can only hope.

To the white residents, this removal of the infected Oriental population is probably a blessing. The one case developed among the whites had not spread at latest accounts, and now the region of infection has disappeared, while the diseased part of the population is in quarantine far out of town. If there is any more bubonic plague, it is not likely to go beyond the native and Asiatic population. To the selfish Caucasian, this is equivalent with saying that the plague is at an end, so far as he himself is concerned.

Meanwhile, three thousand hungry, houseless, and almost starved natives have been added to the quarantine station. Of course, the facilities for attending to these people are limited, and there is likely to be much suffering. To this must be added the business depression brought about by a month's isolation from the outside world. It would be strange, indeed, if the Islands of Plenty had to appeal to the people of this country for assistance, but such may be the news which comes by the next boat.

Lyrics.

BY W. B. YEATS.

The poems of W. B. Yeats have recently been collected in book form. Cf the following lyric Dr. Robertson Nicholl says that it will outlast anything Rudyard Kipling has ever written.

"I dreamed that one had died in a strange place
Near no accustomed hand;
And they had nailed the boards above her face,
The peasants of the land,
And, wandering, planted by her solitude
A cypress and a yew:
I came, and wrote upon a cross of wood,
Man had no more to do:
'She was more beautiful than thy first love,
This lady of the trees';
And gazed upon the mournful stars above,
And heard the mournful breeze."

Another poem by the same hand is selected for high commendation by Richard Le Gallienne.

"We who are old, old and gray,
Oh, so old!
Thousands of years, thousands of years,
If all were told:

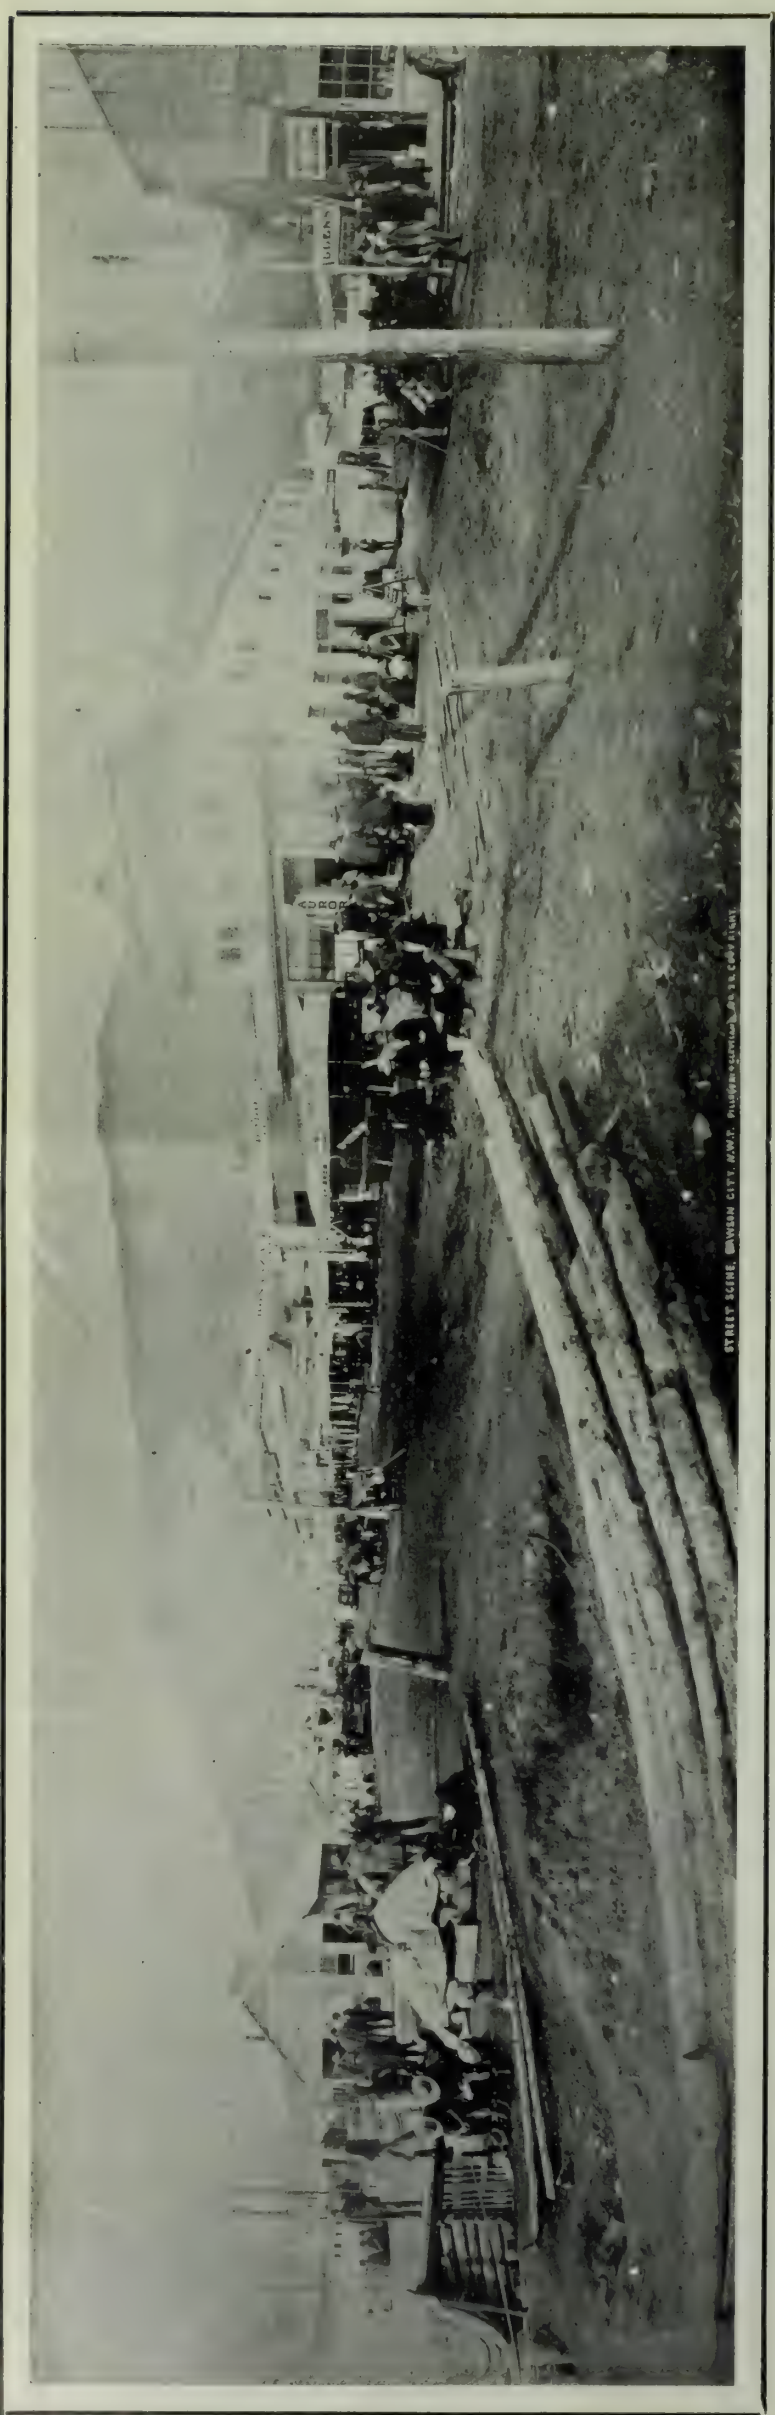
Give to these children, new for the world,
Silence and love;
And the long, dew-dropping hours of the night,
And the stars above:

Give these children, new from the world
Rest far from men.
Is anything better, anything better?
Tell it us then:

Us who are old, old and gray;
Oh, so old!
Thousands of years, thousands of years,
If all were told."

THE CONFLAGRATION IN HONOLULU.

PHOTOGRAPHED BY DAVEY.



SCENE OF THE LATE CONFLAGRATION IN DAWSON CITY—CORNER OF FIRST AVENUE AND SECOND STREET.

COPYRIGHT BY PILLSBURY AND CLEVELAND, SEATTLE.

Dawson City.

SUDDEN and destructive fires are the scourge of new mining camps. These towns are always slung together in a hurry, the buildings being designed for temporary use only. Therefore, they are erected without regard to the ordinary fire regulations observed in established burgs. No one looks upon the ordinary mining camp as a final place of residence; the inhabitants are there to get what they can out of the ground and then vacate to do their spending in more comfortable regions of the earth. If this is true of the ordinary camp, it is doubly true of Dawson City. The frozen North is not an attractive place for a permanent stay. Moreover, it is so far from sources of building material that it is put together out of the materials closest at hand. These materials happen to be inflammable, hence the disastrous fires which have visited the place from time to time. The last one was the worst of the lot, and, coming in the dead of winter, caused much suffering. An over-heated stove started it, and the fire department was powerless to check the spread of the flames. The total loss figured over half a million. In any other town of Dawson's size, it would be advisable to rebuild with substantial and non-inflammable stock. This is impossible in the present case. One thing can be done, however. The new buildings can be placed in such a manner as to prevent a sudden fire from spreading.

The conditions of life in Dawson City have materially changed—naturally for the better. To commence with, the extravagant prices that used to rule are of the past. Good meals may be obtained anywhere for a dollar to a dollar and a half and the best hotels supply twenty-one dinners or luncheons for $25. Cow's milk is, at last, an adjunct of coffee, and though rooms cost from four to six dollars per day, a capacious hotel is being reared which will change all this. In the condition of society there has been an immense advance. Dawson now numbers many virtuous and cultured women among its residents. Actually one reads in the society news of the *Daily News* and *The Gleaner*, of musical soirees; even literary recitals are not exceptional. There is a new opera house with a seating capacity of about 8 o people, and the season's repertoire included "Michael Strogoff" and "Camille."

Two telephone lines connect Dawson with the mining camps, but there is yet no electric lighting plant to relieve the darkness of the long arctic winter. A telegraphic line supplies direct connection with Skaguay and when a cable is laid between that thriving burg and Vancouver we shall be able to have daily communication with the metropolis of the Klondike.

As to its gold resources, the Klondike seems to keep up its record. The deposits are now being worked with the assistance of steam thawers, drills and pumps, and much territory has been added to that originally believed to be gold bearing. Though quartz locations have been staked by the thousands, no mother lode has yet been discovered, though doubtless this remains to reward some lucky prospector of the future.

It is interesting to note that the administration of mining laws is much more just than formerly and though many grieveances are still registered access is comparatively easy to the records of claims, while individual cases are quickly heard. On the whole the Klondike is a quiet community for the Northwest Mounted Police are both vigilant and efficient in maintaining the peace, so robberies and murders are few and far between.

EPISODES IN THE LIFE OF CECIL RHODES.

Continued from Page 5.

into the undraped presence.

"What the devil do you want?" said Rhodes.

"I came to interview you."

Rhodes looked at the intruder for a moment, and the beauty of it dawned on him.

"Get out of here!" he said. "Go down to the breakfast room and we'll talk it over at our ease."

It was the only interview he granted on that trip.

Another time, a young Boer, who had been, by-the-way, a beneficiary of Rhodes, having been given a farm for his services in subduing a native uprising, pushed into his study and addressed him.

"I have a farm, Mr. Rhodes," he began.

"Yes? And I suppose you want another one?"

"Not just yet sir. I just want to build a dam."

"I don't see anything to prevent you."

"Well, sir, I am short of the cash to build it. About eighty pounds."

Rhodes smiled and reached for a pen.

"Take it," he said, as he wrote a check for the amount. "Not for your dam but for your damn cheek."

In the Lobengula war, Dr. Jameson telegraphed down to Rhodesia that the chieftain must be crushed. Rhodes answered: "Read Luke, xiv, 31." When this found its way into the newspapers, all South Africa turned to the Bible. The verse reads:

"Or what king, going down to make war against another king, sitteth not down first and consulteth whether he be able with ten thousand to meet him that cometh against him with twenty thousand."

A woman hater himself, he is against his employees marrying. It is a business proposition. In that hard rough country, an unmarried man is of the most service. On this point he is brutally severe. Not long ago, a subordinate who has stood high in his service brought out a wife from England. The day of her arrival, Rhodes called the bridegroom to his office.

"I hear that you are married," he said, "and I have come to the conclusion that South Africa is a poor place for a woman to keep her beauty."

Lover of comfort though he is, Rhodes does not care for splendor. His palace in Natal is kept up mainly for the entertainment of official guests, while its owner dwells mainly under palm-thatches on the veldt. From one to another of these habitations, he travels in rough working costume. Recently, he found himself on a street car in Cape Town in this garb and without a cent.

"I am afraid that I have not a penny about me," he said to the American conductor, "can't you trust me? I am Cecil Rhodes, you know."

"The —— you are," said the conductor, "Dusty Roads, I guess!"

Only a loan from someone who *did* know prevented the magnate of South Africa from being dropped into the street for non-payment of a six cent fare.

This is a little of the personal side. But even on the business side, the last word has not been said about Rhodes. His quality is that of the general, the talent for moving operations in masses. No other millionaire of the present century would have undertaken a border war or pushed a railroad into the heart of a savage country without hope of one penny of immediate returns. He sees farther, things larger, than any of the others; that is why Barnato and his associates and every other big operator in South Africa have had to give in when his will crossed theirs. Barnato has told how he squirmed in Rhodes's grasp, and gave in to the master-mind in the end.

"The deuce of it was," said Barney, after Rhodes had carried him into some of his schemes, "what he said was so blooming true, don't you know."

That is the one secret of his power. He sees farther than the others, he knows whither he is going, and to convince others that he is right he has only to tell the truth as he sees it, which is so much bigger than the truth as they see it that their smaller minds can form no answering argument.

THEO. LOWE.

The war between the Great Northern Railroad and the Northern Pacific for supremacy in Seattle is being waged with resistless energy by both sides. President Hill, of the Great Northern, played a trump card recently in presenting to the city council a petition for permission to occupy some of the streets on the tide flats for depot and freight purposes. Accompanying it was a plan for a new depot which will rival many in the large cities of the country. Some months ago the Northern Pacific asked that certain streets on the water-front be vacated to permit it to build a $400,000 depot, freight sheds, etc., and to give passengers a roadway to the docks over a bridge. As has already been explained in these columns the water about Seattle is very deep and it has been found almost impossible to utilize the entire water-front for wharfage purposes. Now, the ground which the Northern Pacific requires is in the very heart of the shipping district and although it disclaims any intention of interfering in the traffic of the port, to grant its petition would be a free gift of the best part of the water-front. President Hill, of the Great Northern, has declared that he will move the terminus of his line to Everett if the opposition line is so favored, and citizens' meetings have been held to protest. However, the Northern Pacific petition was presented to the council and has been denied.

President Hill offers to make the new structure a union depot and is willing it shall be used not only by the Northern Pacific, but by any other road that may build into Seattle. His proposition is very fair on the face of it, but it must be remembered that the Great Northern owns a good deal of land on the tide flats south of the city and more blocks north thereof at Smith's Cove. At the latter place he has immense warehouses and docks that will accommodate a dozen of the largest ocean liners. It is from these docks that he proposes to send his new steamers to the Orient. With the Northern Pacific having a depot and freight yards between President Hill's terminals his road would be practically cut in two.

According to the Kaiser's new naval programme, Germany will have 40 battleships in 1910 instead of the 17 she has now, 20 large cruisers instead of 11, 48 small cruisers and gunboats in place of 32 and 114 torpedo boats instead of 84 as at present.

THE POTLACH AT KLUKWAN.

BY JOHN STOLLARD.

WHEN a white man, cognizant of all the conveniences of civilization, gets filled with the love of man and the blessings of life so that he has a desire to express his feelings externally, he does one of two things. He falls in love or goes on a jag. Rare beings of another stamp meet this emergency by going to church or holding a revival. When a Piute of our Western reservations feels the joy of life swelling up within him, he gets out his Winchester and takes to the warpath. The same principle again. But when an Alaskan Indian comes into a similar state of being, he falls back on an institution of his own. He gives a potlach.

A potlach is a jag of generosity, and consists in giving away everything in sight. It affords pleasure to the untutored savage, or it wonld not have lived as a custom all these ages, for the Indians of Alaska have been addicted to these social functions back to the earliest days of their tradition. Rightly understood, there is nothing peculiar about it. There is no people known to history which has not numbered among its customs the hysterical performance of some religious or moral act. In Babylon, people went through the fire to Baal. In Greece, Bacchus was worshipped by frenzied dances. In Rome, the women went temporarily mad in their devotions to the goddess of motherhood. Coming down to Christianity, the Crusaders threw down life and fortune to rescue the Holy Sepulchre. Still later—and here I am treading on dangerous ground and must crave pardon of both sides—the miraculous cures of Lourdes and St. Anne's fall in the same list. It is a good thing to do; performed in the ordinary way and with the ordinary spirit it is a duty and irksome, wherefore let us lash ourselves into a frenzy and perform the act at white-heat of zeal, so that it becomes a joy—that is the principle.

I do not know if I make quite clear this relation between the potlach and the crusades or the southern revivals. An Alaskan Indian has no religion except a crude ancestor-worship. He has no great burden of moral responsibility. As in all cases where the love o' woman has not yet entered into sexual relations, chastity is not considered part of the code. Neither is forgiveness, nor honesty. But it is a hard life he leads and an uncertain one, and charity of man to man is necessary or the race could not continue. In the long, barren winters, when he has wasted his supply of provisions, the native must depend upon his neighbor or die; the neighbor has learned that he himself is likely to come to the same pass, and he gives that he may be given unto in his own hour of need. Morals always go back to self-interest. Therefore, this one virtue which is set above all others in the Indian code becomes the basis of his particular form of religious hysteria. This explains the joy of the potlach.

It is true that that this crude donation-party, with the donations flowing the wrong way, has been perverted to another use, being made an adjunct to native politics. This also has a parallel in our effete civilization. A millionaire who desires a "pull" with his fellow-citizens has been known to build a hospital or a church to further that end. Only there is this difference: the white millionaire gives in a measured manner and keeps the bulk of his goods for himself, while the philanthrophist of Indian Alaska gives all his worldly property to his neighbors, leaving himself a voluntary pauper. A chief will save for years and years, trading with his own people and cheating the whites, until he has riches in provisions and blankets, and then, some fine day, he will gather his people from far and near and give it all away. It is the great occasion, the supreme moment of his life, like being elected to the Senate or having your play staged.

There is another kind of potlach, however. This one is a payment of accounts. Indian conscience is a curious thing, and is not tender, at least not at the moment of action, about stealing. If you find your neighbor's cache and need anything therein, take it—if he is an Indian. If he is a white man, take the whole thing, whether you need it or not. But after the necessity is past and there comes a return of prosperity, the good Indian holds a potlach for those of his people from whom he has stolen. An Alaskan Indian does not steal from his guest or those of his own totem, remember, nor from another Indian except when he is in need. But having done so, he saves up the recollection along with others of the same sort, and has a day of reckoning every few years. Such functions might be called "minor potlaches" in distinction from the "major potlaches" given for holy charity by capitalists and chiefs.

At a potlach of this sort, but a rather more extensive one than the usual run, I was privileged to be present in the fall of 1898. It was given at a town of the Thlingit Indians at Klackwan. The direct occasion was the completion of a house by one of a branch of the Crow phratry or totem-group, ten families in all, and passing rich. Having finished their new home, they had determined to give away the rest of their property in payment of old debts, incurred in their days of adversity. It was to be a swell occasion, a regular Bradley-Martin ball, with chiefs present from the Sticks across the lakes, Siwashes and Kakas from Wrangel Island, and others of the foreign nobility. Wherefore, having secured a priceless invitation, I rowed twenty-six miles up the river to see it, with the help of two ugly native princesses handling sculls and of a young buck who pulled us across the rapids by a rope flung from the bank.

The new house was built of planks and clapboards. It was a square structure about forty feet to a side, and meant to accommodate all the ten families of its owners. Being brand-new, it was then beautifully clean; it got over that later. Around three sides of the single room stretched a board counter; the center of the room was floored with clean, fresh dirt, where squaws were busy cooking. An American flag swung from the roof, for the Indians are very proud of the Star-Spangled — whether because of what it stands for or because the colors are good and crude, I cannot say; at any rate, it was conspicuous in all the decorations.

The guests from down the coast were there when I arrived, loafing around the banks, and enjoying themselves in a quiet, Indian way. The Sticks, however, were late. Time passed, and still there was no sigh of the missing guests; this was a dreadful annoyance, because the dancing was not to begin until they arrived. The Crow phratry, one and all looked as unhappy as the white hostess who has to keep dinner waiting. Then a runner came along the bank; the Sticks were just around the bend, he said, with many boats. Then they hove in sight, a dozen canoes fairly ablaze with color. Each boat held about a score of people, each clad in his or her brightest shirt, blanket and leggings. Some bore staffs, with gaudy streamers, some maces carved with totem symbols. Every boat carried an American flag at the bow. The canoes swung up to the bank. Their voyagers met a welcome which, for an Indian, amounted to wild enthusiasm.

As when the guest of honor arrives in feast-lit halls and the hostess gives the signal to the conductor, the music strikes up and the gilded youth who leads begins the grand march, so did the head of the Crow phratry give the signal for the grand opening by an outlandish yell—a squall, a screech of torment. All eyes turned to a structure built of blankets strung on poles standing near the new house. His yell was answered from within, and the noise that ensued was like that of souls in Hades. Suddenly, a cord was cut and the screen of blankets fell, revealing a body of about thirty Chilkat Indians in the throes of their tribal dance. The yells dropped into a monotone, which was taken up by the crowd. The dancers swung on and on until they dropped from utter exhaustion. Whether or no there are any set movements to a Chilkat dance I do not know; to the uninitiated, it seems to consist in all the contortions consistent with keeping balance. They tell me that there is method in it, but I could not see it.

The dance of the Chilkats over, the different phratries of the Thlingits took their turns in "doing stunts." Dressed in the gaudiest raiment possible, their faces smeared with native pigments, with red clay, with stove-polish, with any substance of good, solid color, they cavorted and capered to the limit of endurance. The other dancers waiting their turns joined in the low, wailing drone of the chant; by the time the last number was on, the crowd was lashed to a Bacchante frenzy.

How they saved any energy for the potlach in the evening, I do not know, but they were all on deck. It occurred in the new building. In the center of the hall was heaped a great pile of blankets—currency among the Thlingits. Some were of regular native manufacture, woven by the women out of goat's hair and dyed in all the colors of the rainbow with bands and totem signs; some bore the mark of San Francisco woolen mills. Beside them lay another pile of cotton goods and white sheeting in bales. The room was crowded to suffocation. Six hundred people were packed in that comparatively small apartment. The overflow peered through the windows, the doors, the cracks in the walls, like small boys outside a baseball game.

At this stage of the game, ancient Thlingit custom used to decree the sacrifice of a slave or two. But the laws of Russia and the United States have changed all this; instead, an old squaw of the tribe arose and exhorted the company at length. Finally, with an impressive gesture, she tossed the feathers of her head-gear toward the door, and Tish Yek, lord of the newly-made house, made a solemn entrance. He was glad in a wolf-skin, with head, tail and claws intact. Two female attendants in gaudy head-dress attended him; their clothes were a curious mixture of Indian ceremonial garb and white improvements. Under the blanket of the one escorting him to the left peeped the toes of a pair of high-heeled French shoes!

The chant arose again, mingled with wolf-snarls. Tish Yek strode to a place beside the blankets and made a speech. He was glad, he said, that so many of his friends were present, that he had seen some potlaches in his day and given one or two on his own account, and hoped to give many more. He hoped that they were all enjoying themselves. Then, the attendants began to wind the cloth and blankets around him, until he was hidden in their folds. The air was stifling; when, at length, he threw off the huge pile, he was steaming like a man just out of a Turkish bath. He arose and began to tear the calico into strips, a piece for every woman. Next, to every man came a blanket. It was all done decently and in order. Names were called, and the recipient stepped forward to take his share. Many present had, I was told, helped to put up the new house. This was the manner of their payment. Strangely, many of the beneficiaries responded in kind by giving back their gifts; mine host had about four hundred blankets returned to the pile, I noticed that the outsiders, Sticks, Chilkats and others were the leaders in this. Perhaps this is a point of etiquette.

The ceremonies of the night ended with this. As many as the house would hold rolled up in their blankets on the floor; the others found shelter where they could—indiscriminately.

The potlach feast came at noon next day. The girls of the party had spent the morning gaffing fish beside the river. They cooked these at the camp-fires, and they were the staple. To this was added a bountiful supply of crackers, pilot bread, cakes, sugar in lump and bulk, candy, and canned fruit. When the sun was high, the clans crowded around the counter inside the new house, the buffet of the occasion. Each individual carried a sack, and sunk his portion therein, to eat it at his leisure. This was all right, and pleasing to the Caucasian taste, but they dressed this food with salmon-head oil. If you have never seen or smelled salmon-head oil—no white man has ever tasted it—a description of the method of its making should be enough. When the big run comes, the squaws throw the heads of the salmon they are drying into pits. These they close up with wet moss and leave for ten days or two weeks to ferment. Then, when the smell rises to heaven and they deem the mess ripe, they throw it into great kettles and draw off the oil. With what an aroma a potlach feast is surrounded, I leave the imagination to judge.

At this feast, I sounded the length and breadth and depth of Indian generosity. I knew most of the village. I had packed and boated and hunted with their young men, I was there as their guest of privilege. Yet no one offered me any of the food passed around so plentifully. Finally, to test it, I went to the counter and asked for a share. A brown hand went out, palm up. I must pay or starve. The Thlingit code of morals does not stretch to cover the white man.

I have tried to draw a parallel between this custom and some of our own. Let me go farther and translate a big chief potlatch into terms of our understanding. Suppose that Chauncey M. Depew, for example, were smitten with a frenzy of giving. Then he would gather about him the Vanderbilts and the Astors and the Mills, the Stuyvesant Fishes, and the rest of the *haut ton*, and would pile up in his house all his stocks, bonds, deeds, mortgages, and ready cash, to the last farthing of his possessions. Then let him give a cotillion and a supper, and at the end of the festivity let him give away, piece by piece, his worldly goods, a block of New York Central to this one, a bunch of U. S. 4 per cents to that, a gilt-edged mortgage to another. Then, to complete the comparison, we will suppose that he retires to a cheap boarding-house to live on the bounty of one of his beneficiaries, and that his fellow countrymen, struck by his noble generosity, reward his virtue by electing him President. This is the American version of a potlach.

BUREAU OF EXHIBIT
of the Southern Pacific Company During the Paris Exposition at 29 Boulevard des Italiens.

An organization has lately been formed in Boston among unmarried working women to prevent the competition of married women who are partially provided for. They include workers in restaurants, department stores, and factories, and their methods are to secure the promise of employers that they will employ none but unmarried women, with such exceptions as may be offered in favor of women who have lost their husbands or are otherwise needy.

Germany's new civil code, the "Burgerliches Gesetzbuch," which was taken in hand twenty-seven years ago, came into force for the whole Empire on January 1 of this year.

French painters should have room enough at the 1900 Salon, as the architect of the building has provided them with nearly four miles of hanging space.

In BooKdom

THE reviewer of books is the only man in these days that can properly be called travelled. He alone it is that possesses the thousand-leagued boots, to be worn day in and day out, even to bed with him when he retires at night to continue in his dreams the wonderful adventures of some would-be Aladdin. Back and forth, hither and thither, now in Siberia, at the turn of a page in tropical Africa, thence descending into the maw of the earth even to its center, or being hurled at the moon from a gigantic mortar, this is his daily life. He goes everywhere, tries everything, falls in love with every kind of woman, hazards his physical existence in every variety of perilous adventure, his moral integrity in every variety of intrigue. And all for what? In order to tell his betters how it feels. For that is his business. He is a sort of itinerant tea-taster, wandering about the universe testing other people's wares. Only, he is not so well set up in life as his fellow critic. He is not paid so well for his work; he has not the leisure of the tea-taster in which to make faces; and he has to eat his samples, if he be an honest epicure, not taste them merely, since tasting is no test of a book. In short, since authors are pitiless fellows, regarding neither time, place, nor singleness of action, if they can but find some lithe-limbed Latin Mercury, some vagabond Greek Hermes, to serve them for a hero, or for a heroine some modern Cook's Venus, with her list of new cities in her hand and scalps of old ones at her belt—in short, the literary reviewer has to have india-rubber wits, that will stretch indefinitely in any direction and automatically snap back into place with their loot, and the digestion of an ostrich or of an artist to get it all into his blood, that which his wits have brought him.

Very few book reviewers, unfortunately, are equipped thus well. Most of the genus have hands and arms and heads and feet like ordinary men. Their wits, whatever else they may be made of, are not made of anything so stretchable as india-rubber. Their literary stomachs are apt to trouble them when they gorge themselves with wooden books, or with any other kind of books selected for them in advance. Other men eat too liberally of meats and viands that do not agree with them, and put their livers out thereby, or come off with the dyspepsia. Other men say to one another, let us throw our troubles out of the window; let us have no mercy upon our tormentors. Other men say, come, we will dine where we will, upon what we wil', from this day on. The reviewer cannot yet say these things; but he answers in his heart, tomorrow I too will take pity upon myself. And then he throws some poor book smash against the far wall of his cell with all his strength, and alas! another adverse criticism is registered against publishers and authors.

If you will listen you will hear a stiff slap against the partition. It is merely *The Princess Xenia*, by H. B. Marriott Watson (Harpers). If you will bear with your ear a little longer, you will hear excuses, reasons, perhaps even an apology for the outrage. The dyspepsia again, you will say. Like enough. Call it the dyspepsia.

But let us see. Perhaps the author is at fault, too. Perhaps the author's demands upon the critic were such that the bibliocide was justifiable. We take up *The Princess Xenia* once more and examine it. The book is plainly a romance of adventure. The hero is a young Englishman with a Van Dyke beard, a type familiar enough in fiction since the success of the *Prisoner of Zenda* some three or four years ago. The action is placed in Weser-Dreiburg, a petty principality lying between Prussia and Austria, or thereabouts, likewise familiar in the *Prisoner of Zenda* and its successors. The Princess Xenia herself is a queen-heroine, just as is the heroine of the *Prisoner of Zenda*. We have the usual intriguing diplomats, the usual word-play between them and the omnipresent and omniscient and omnipotent Englishman, the same dungeons and secret doors, plots and counter-plots, personal peril, gallant work of rescue, and so on, at the rate of about two adventures to each three pages. The Princess Xenia of course falls in love with the young Englishman; but instead of sacrificing herself to her country she at the last renounces her throne and becomes simply Mrs. Xenia Josefa Geisenthurm Lambert. It was at this departure from the *Zenda* type that the book went to the wall; so that the author was clearly to blame; for he did not follow copy, as he ought to have done.

There are, indeed, some few points of difference between *The Princess Xenia* and its predecessors in adventurous romance. For one, the Englishman has more money than any of his compatriots. He begins with £4,500,000 that he has inherited. Then, too, he has a unique way of making love; or rather, the author of his being has a unique way of making him make love. Not a word is said or plainly suggested about a love match between the Princess and Mr. Lambert until within five pages of the end of the book. Which shows that it is never too late to mend.

Another point of difference suggests itself in the author's literary style. He has a queer way of qualifying his verbs. No one ever does or says anything, and lets it go at that. He always speaks blandly, or gently, or with nonchalance, or with some bewilderment, or suavely, or stupidly, or calmly. If I may be allowed the indulgence in rhetoric, let me quote from the book:

"I am obliged that you promise so much," said Christopher, coldly.

"I wsa about to suggest," said Christopher, smiling.

"It's a toy, it's a toy," replied the Major, indifferently.

"You did not recognize me?" she asked, triumphantly.

"You speak," said Katarina, somewhat impatiently.

"My dear young lady," replied Christopher, smiling.

"Why, of course," she said, laughing.

"Ah, my dear Mr. Lambert, is it you?" he said, heartily.

"I came to-day from Paris," answered Katarina, graciously.

Prage waved his hand airily.

Christopher rubbed his chin reflectively.

Prage wagged his head pleasantly.

Christopher regarded her gravely.

Enough of *The Princess Xenia*. And now for a little jump over the Atlantic, in order to go picnicing with *The Other Fellow* (Houghton, Mifflin & Co.), a new book by F. Hopkinson Smith. Eleven short stories comprise the collection—stories that are picturesque and full of feeling, rather than dramatic. They are sketches from life, incidents, episodes, told as simply as possible, and told objectively. Mr. Smith begins in the Rocky Mountains, takes his readers (and reviewers) with him to Kentucky, thence to Venice, back again to America, to Holland, and then to America for the rest of the volume. There are many who will maintain that the short story as an art form has no future. It may be that it has not. The author of the present collection would be the last to claim for it precedence over his previous successes with the novel. It is none the less worth reading for that.

The hitherto unidentified *Contributions of W. M. Thackeray to Punch*, compiled by M. H. Spielman and published by the Harpers, lies upon this desk. It must be said that the editing is not all that could be desired, the matter being less conveniently arranged than might have been expected; but the contents are of great interest. I am tempted to quote from Thackeray's burlesque catalogue-entries of the Academy Exhibition, held early in 1844, in which the artist Turner is caricatured. Those who remember Turner's sometime fondness for meteorological phenomena, and his habit of attaching to his titles scraps of poetry—chiefly his own, from "The Fallacies of Hope"—will appreciate these burlesques:

"34. A Typhoon bursting in a simoon over the whirlpool of Maelstrom, Norway, with a ship on fire, an eclipse, and the effect of a lunar rainbow.

"O Art, how vast thy misty wonders are,
To those who roam upon the extraordinary deep;
Maelstrom, thy hand is here.

"1311. The Duke of Wellington and the Shrimp [suggested by the Napoleon picture, 'The Exile and the Rock Limpet'], Seringapatam, early Saurian.

"We must protest against the Duke's likeness here; for though his grace is short, his face is not of an emerald-green color; and it is his coat, not his boots, which are vermilion; nor is it fair to make the shrimp (a blue one) taller than the conquerer of Assaye; with this trifling difference of opinion, we are bound to express our highest admiration of this work. It is the greatest that the English school of quiet landscape has produced. The comet just rising in the foreground, and the conflagration of Tippoo's window in the banyon forest by the sea-shore, are in the great artist's happiest manner."

Thackeray in the same article also banters Maclise for his numerous pictures from the *Vicar of Wakefield*, and satirizes Landseer for his realistic accuracy in small things.

Another book that ought to be better than it is, good as it is, comes to me in *Recollections, 1832–1886*, by Sir Algernon West, K. C. B. (Harpers). Sir Algernon West was for many years private secretary to Mr. Gladstone: and he has had a long and intimate association with the public men of his day. Apparently a book by such a man ought to be of the greatest significance in the new lights thrown by it upon politics and politicians, men and measures. The *Recollections*, whether from life-long habit or by virtue of intention, is careful and discreet always. It is also entertaining, with a fund of good anecdotes and stories. Here is one about Thackeray:

"Lord Broughton had a peppery temper. One day Thackeray had at his dinner a special bottle of Madeira. There was one glass left, and Thackeray, patting Lord Broughton on the back, said, 'There, my dear old boy, you drink that.' 'I am not your dear boy, I am not old, and damn your wine,' said Lord Broughton."

In the years 1856–58 Sir Algernon West became well acquainted with John Delane, then editor of the London *Times*. He calls him "one of the most astonishing men of my day," and continues:

"How he ever obtained a position so peculiar to himself in political and social society was a wonder; for it was not only being the editor of the *Times* that gave it to him. Editors of the *Times* have existed before and since Delane, but none, I will venture to say, ever filled the place in society that he did. He was in the confidence of everybody of both political parties, and this confidence he never betrayed. No Minister would have thought it odd if Delane had sent in his card and asked to see him at any hour of the day or night. In society he was sought, of course, for the power he had more than for personal charm. He had a genius of some sort, but it did not show itself on the surface. He became editor at the age of twenty-three, and held the post for thirty-five years, when the influence of the *Times* was at its height."

Any professor of ethics may split this hair, whether it is all wrong to sin *en voyou*, and all right to sin *en prince*, as Mr. W. J. Locke confidently asserts in his late novel *Idols* (John Lane); also, whether a good woman's reputation is worth more or less than a man's life. There are other problems, chiefly ethical, involved in this book, but most of them can be settled without professional advice. It seems that a man who is something of a rake (*en prince*, be it understood), finds himself accused of murder. A good woman, the wife of his best friend, seeing that the case is black against him, swears to a false alibi in order to save his life. Her husband, strangely enough, sues for a divorce on the strength of her sworn testimony, he not having sufficient nobility of soul to understand her sacrifice for his friend. In the end she finds her ideal in the friend she had saved and weds him. When she discovers that he is already married she censures him for his deceit, not for her situation, which would have been the same, we are told, in any case. The first wife, however, dies opportunely, the husband is forgiven, and we hope that nothing more will ever be said about it, since he becomes a good man. It is a trifle mixed, but the author has thought it all out. He knows, of course.

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

Dr. Parker's Cough Cure.—One dose stops a cough. It never fails. Try it, 25 cents.

Don't drink the first thing the bartender offers — call for Jesse Moore Whiskey and see that you get it.

The Orignal Swain's Bakery, 213 Sutter St., stands without a riva and has stood the test for years. The most delicious meals are served by gentlemanly attendants, and the management takes pride in having everything orderly. It is just the place for business men and ladies out shopping to lunch.

The Ideal Breakfast Dish

NOTICE OF ASSESSMENT—ANDES SILVER MINING COMPANY.—Location of principal place of business, San Francisco, California Location of works, Virginia City, Storey County, Nevada.

Notice is hereby given that at a meeting of the Board of Directors held on the 29th day of January 1900, an assessment (No. 50) of five (5) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary at the office of the Company, Room No. 22 Nevada Block, 309 Montgomery street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 6th day of March, 1900, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Monday, the 26th day of March, 1900, at 1 p. m. o'clock, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

By order of the Board of Directors.

JOHN W. TWIGGS, Secretary.

Office—Room No. 22 Nevada Block, 309 Montgomery street, San Francisco, California.

Life insurance is good for your family. Health insurance is good for both YOU and your family.

You collect health insurance by living. You have to die before life insurance can be collected.

If you knew your health was threatened you'd insure it if you could. You can insure your health.

The stomach is the vital center of the body. The whole body is nourished from the stomach. The blood is made in the stomach. A disordered stomach means disordered blood, disordered body, disordered brain. You never heard of a sick person with a sound stomach.

Make your stomach sound and you insure your health.

How? As thousands of others have done by the use of Doctor Pierce's Golden Medical Discovery. It's the one sure medicine for the stomach. It heals. It strengthens.

"Words fail to express what I suffered for three years, with cold chills, palpitation of heart, shortness of breath, and low spirits," writes Mrs. A. C. Jones, of Walterboro, Colleton Co., S. C. "I could not sleep and really thought I would soon die. Had a peculiar roaring through my head all the time. Was so emaciated and weak I could not feed myself. My aunt induced me to try Dr. Pierce's Golden Medical Discovery, which I did, only to please her, and *six bottles cured me*. To-day am sound and well. During the three years I was sick I had five different physicians."

Consult Dr. Pierce by letter, free. All correspondence private. Address Dr. R. V. Pierce, Buffalo, N.Y.

Babblings of a Belle

WHAT a dining week I have had, my dear Diary. I have had even Aunt Sybil, who never makes odious remarks about too much gadding, remonstrate gently with this sweet child on the foolishness of overdoing it. But I look at it from my own point of view. I flatter myself too, that it is the point of view of a person with a great deal of real genius.

Get in all you can in one week, and stay at home every evening the next. You see when one starts in on Monday night with a gay ball, one has had the start, so if one keeps at it, there is no difficulty in finishing. Whereas, if one remains home on Thursday and then has a mild, small and early Wednesday, when Thursday comes one is dead tired and feels as though Lent could not come too soon.

I have been out so much that honestly I find a great deal of difficulty now in telling you that I am still absolutely interested in dancing. In the first place, my ideal lover has gone South for a short trip. I have accepted him, and the next thing I hope to do is to duplicate the Irwin house on the hill, from which I think one gets the best view in town. Where it is I shall tell you later. I shall be like Doctor Barkand, and have all my lamps and globes of Tiffany glass, and all my colored glass windows made by Bruce Porter. My dining-room furniture will be bought in England, the rest of the house the ideal lover says will be under his supervision. I think it very unreasonable, for though his taste in jewels and flowers is excellent, I have qualms about it with regard to furnishings. Still, I am living in hope. The great event is to take place in the autumn, so I can have our house a forest of autumn leaves. If I can induce him to be married in the Swedenborgian Church I will have things even more effective, for my religion is like the politics of the Vicar of Bray, all things to all people. The "ideal" is a Baptist and believes in immersion. Has never yet missed a Sunday from church. The girls say it is just the irony of fate that a maid who has at five different times joined different churches should meet with such a man. Of course he is not exacting enough to demand that I should be married in his kirk. I leave matters that hinge on the disagreeable and strong-minded to dear mama. She flatters herself on her ability to convince anyone that her view on all subjects is the only one. In a letter the other day, she said that when she first went to Coronado the feeling against the British was positively wickedly unjust. Now the Boers are the worst in the world. Mama has raised two thousand dollars to send to South Africa for the British soldiers, and most of it has been collected in Southern California.

I wish I had just a little of her strong character. Neither Leila nor I have been endowed with anything but a rare beauty, happy dispositions and a capacity for finding rich husbands. Arthur is plain looking, and has brains. I am so glad I have not; they must be so tiresome, especially if one only meets as many clever people as I have in the two years I have been out. Men do not really like clever girls, nor the kind of girls who are always trying to get something out of life. Such a funny thing happened to me last week. I told my French teacher of my engagement, and that probably I should go to Europe via China and India. Next day I received a bundle of "Baedaeker" guide books. I looked at them, and then came to the conclusion it was a mistake. At my next lesson I spoke to her of it. "Why Cricket dear," she said, "you cannot enjoy a trip around the world unless you first know all the points of interest in each town." I opened one after she had gone, and decided then and there to forego the t ip rather than read up about it. I love the sea; I am never seasick; I shall enjoy being wined and dined, meeting new people, but sight-seeing would bore me to extinction. I shall contrive to be dead tired if such a thing should even be suggested. Just fancy the irrelevancy of me gazing with admiration at the old masters. I believe they would come from their graves and scoff at my audacity. Upon my return, I shall tell you about it all, however.

You want to know all about the golf ball. It was a great success. The best fun was that so few of the debutantes were there. The golf girls just asked their particular friends. Of course it was select in the true sense of the word. The girls who were not invited are so spiteful about it. But I did have such a very good time. The girls gave it, the Morgans, Mary Scott, Edith McBean, Caro Crockett, the Carolans, and I've forgotten the others. There were awfully charming decorations, the work of the girls, most artistic too, and then the whole effect of the lights on the outside, the big fireplace and all, was beautiful. We danced until 12 and had a gay time, then supper. I do hope we shall have another soon, but I expect it was a good deal of trouble, and as the girls are working hard at golf, they will not have much time for dancing. Every morning a number go out to practice. Some of the girls keep right at it from early morn to dewy eve, and then go out to dine, to dance or to the theatre. The contest, from all I have seen, is undoubtedly between Alice Hoffman and Mary Scott. I love to watch them play. Mary is an out-and-out English girl. She has the British indomitable perseverance, and looks better in her golf suit than in her handsomest ball gowns. Alice is masterful and strong and plays with tremendous force, and from the manner in which she handles her clubs, one can be sure she is going to make an excellent score. We each have a wager on our favorite girl, and are getting a great deal of fun from it all. On Tuesday, Lilian Follis gave a jolly lunch at the University Club in honor of Mrs. James L Flood. It was a delightful affair and I don't think I've ever seen Lilian looking prettier. Mrs. Flood looks ever so young and really is awfully nice. There were a few married people there—Mrs. Robt. Oxnard and Mrs. Keeney, but all the others were of the set. The eating was capital, as you might expect, and the tables were beautifully fixed up—one in lilies-of-the-valley, another yellow jonquils, a third roses—I forgot the rest. The music, too, was excellent, and we all had a good time.

There was a big dinner that evening at the Hopkins'. Such a jolly fine dinner, too; a very amusing crowd who really did not seem to need entertaining, but afterwards we had a vaudeville show. Then there was the dinner given by Mrs. George Pope to Helen Hopkins and Gus Taylor. I like her dining room so much, and as Charley Felton was beside me, we had great fun together. The Popes have an excellent cook and beautiful silver and glass. I shall have all those things in my house, it helps entertaining so much. The table was lovely. I forgot to ask Mrs. Pope who decorated it. Thursday afternoon there was a sweet tea at Mrs. Berody Stone's house far out on Washington street. It is so picturesque and commands a view of the bay that makes it look just like pictures I have seen of Italian lakes. First I went to the Symphony. Aunt Sybil is so musical, she will not permit me to miss a concert if she wishes to go. I enjoyed it very much, especially the "Funeral March" of Beethoven's "Eroica." I really did not think there was sufficient volume to Tschaikowsky's "Romeo and Juliet," but one cannot expect too great things, Aunt Sybil says, from so young an orchestra. Friday there was a tea at Mrs. Pillsbury's and one at the Moores. I went to each, though it was my day at home, and had an excellent time. I am one of the few who really love teas. Then I forgot to tell you that the John D. Spreckels gave a dinner to Gertrude and Mr. Brander. I like him better each time I meet him; he is an awfully clever fellow, and Gertrude and he seem so very happy. It was jolly. There were only sixteen of us, so we all sat at one table. What fine entertainments the Spreckles can give when their new house is finished. It is such a huge affair, I often wonder how Mrs. Spreckels can look upon it with pleasure. It must be a fearful responsibility to have such a large house.

On Friday evening Mrs. Wakefield Baker invited a few of us to dine with her to meet Miss Rose of Chicago. She is a nice girl and has a very charming personality. We afterwards went to the Fortnightly. It was a jolly dance. Therese Morgan, in the stunningest gown I have seen her in this winter, led. She makes a fine leader, and was most ably assisted by Percy King. Percy is one of the nicest fellows; I really am very fond of him. The usual Fortnightly girls were in the first set and looked fine. Sara Collier, however, was the belle. She is a beauty. I watched her the entire evening. She reminded me of a beautiful, graceful swan. Miss Marie Louise Sussman was one of the girls who attracted especial attention. She is very dark with a classic face and beautiful figure. Therese Morgan was at her very best; I like her so much with her hair parted in the middle. Edith Preston, Margaret Salisbury, Linda Cadwalader, Caro Crockett, Katherine Dillon and Bessie Ames were all very attractive and had an exceedingly good time. I was much attracted by Howard Veeder; I got to know him quite well the other night, and have decided he can be one of my favorites. Will Page, Gerald Rathbone, Mr. Lewis, and the Kings, Percy and Frank, all added to my enjoyment very considerably.

I was deeply amused the other evening watching the girls and men who are enamored of each other, as they think unknown to the world. Each made it so obvious, I could not help remarking to several fellows with whom I danced, how funny it was. I do not think I should have allowed my "ideal lover" to make it quite so conspicuous had he been at the dance. It must be tremendously satisfactory to Mrs. Salisbury and Mrs. Collier to see these dances so well attended and the source of so much real enjoyment to all of us young people.

Next week the Huntingtons have an informal dance. Invitations are out for a cotillion to be given by Mr. and Mrs. Maurice Casey to their daughter, Katherine Dillon, on the 21st. Charlotte Ellinwood's invitations are also out for her Valentine Tissue Paper party. A card party is to be given to the older people Saturday, by Mrs. Morgan, and we are all awfully interested in the Mardi Gras, at which I for one hope to have a great and glorious time. I shall be able to tell you more about the costumes next week.

On Saturday I went down to Burlingame as the guest of Mr. Frank Carolan who is now Master of the Hounds of the San Mateo Hunt Club. The riding was fine. I would have given a lot to have followed the hounds, but Aunt Sybil said nay to all my entreaties. The only ladies who rode were Mrs. Harry Howard, who has a fine seat. Miss Spoivalo also rides well. The two Brittan girls were conspicuous by their habits. They wore plain waists and Lincoln green bloomers and rode astride. It is the really sensible way at a hunt, infinitely less dangerous than riding in the old fashioned way. As there was not real fox we did not have much fun when it was over except at luncheon. It was a big affair but most of the people were married. The other girls beside me were Manie McNutt, Genevieve Carolan and Carrie Taylor. We had a great day altogether, but next time I do hope they will have a real fox.

MISS CRICKET.

A well known teacher, (English, German French) going to Europe beginning of May wishes to chaperone ladies going abroad. Highest recommendations.
Address CHAPERONE, this office.

An Extraordinary Record.

109,203 cases of G. H. Mumm's Extra Dry, imported in 1899, or 72,495 cases more than any other brand was never before approached. Its quality can not be excelled at any price, and their vintage now imported was seldom equaled.

Jesse Moore "AA" whiskey is called fo everywhere. It is the drink of the people, no of the select few.

THE DOWNFALL OF BROWN.

"ONE of my recreations for many years has been to discover and classify certain mental failings which cannot properly be diagnosed as diseases," said a physician at the Lotos Club, "and as the result of my deductions along a special line of investigation a young acquaintance of mine worked out a revenge that was unique and married the girl of his choice.

"Business called me to San Francisco eight years ago and necessitated my staying there for two years. In my boarding house the star guest was easily Miss Sally Gilt, the only daughter of a Forty-niner, and a young woman with some beauty as well as wealth. Her devoted admirer was C. Knickerbocker Smith, who wrote society news for the *Chronicle*. Smith had come to the Coast from New York and failed in a business venture. He was a conceited, well-dressed, rather good-looking little fellow, and the strongest point in his favor was his undoubted attachment for Miss Gilt. I was very much interested in watching the progress of his suit with Miss Gilt, when it was interrupted unexpectedly by the advent of a young lawyer named John Fred Brown. Brown had inherited some money, and had worked hard at the law, but apparently had enjoyed no social advantages. Probably he had been too busy. At any rate, he was a man of some little importance in his way, and when it was evident that he also admired Miss Gilt the other boarders said: 'Poor Mr. Smith! He is out of it now. Mr. Brown has lots of money.' Miss Gilt was just an average girl, and was mercenary and ambitious. I half-suspected that Smith first attracted favorable attention by running in her name in the list of 'among those present' at some fashionable reception.

"She became very kind to Brown and correspondingly chilly to Smith. The affair interested me. I had concluded that Brown was a cold-blooded selfish chap, when one fine morning he announced to us his engagement to Miss Gilt. Smith came to my room that night very much broken up.

"'If Brown were a more decent fellow, Doctor, I wouldn't mind it so much,' he said, 'but I know that he has made careful inquiries about Miss Gilt's fortune before proposing. I am very fond of that girl and I had reason to believe that she was fond of me until Brown arrived. I don't know what I am going to do.'

"'Perhaps I can help you out and at the same time demonstrate one of my pet theories,' said I.

"'I don't see how it is possible,, he said.

"'If you wanted to could you make Brown's name well known in the fashionable list without exciting his suspicion or that of your editor?' I asked.

"'That would be easy,' he replied. 'I have been on the paper so long that my lists go as I write them. I don't like his name though. John Fred Brown would look queer. Anyway, such notoriety as that would simply please the beast. What are you driving at?'

"I explained my theory and after some debate Smith said that he was inclined to believe in it.

"'It sounds all right,' he said, 'and it is worth trying. If Brown isn't susceptible we can give it up. I'll change his name after it has been published two or three times to J. Fred Brown.'

"That was the way the plot was planned and two nights later Mr. Brown announced that he was going to take Miss Gilt to the opening performance of a New York theatrical company. The night after this performance Brown turned up for dinner looking just a little bit haughty. His haughtiness was increased when two or three of the boarders said they knew by their papers that Mr. Brown had been at the theatre the night before. It was the first time his name had ever been published in the fashionable list and he passed it off by saying carelessly that it was impossible to avoid the reporters in these days. I happened to know that he bought every daily in town and cut out the paragraph of names which included his own. Smith had asked the other society reporters to run in the name of John Fred Brown and that was how the deed was accomplished. I studied my subject closely during dinner and when Smith came to my room was able to assure him that in my opinion he could not fail.

"Brown was so pleased with the notice from the newspapers that he decided to court it again. He attended another performance, and the morning after his name was printed among the first nighters as J. Fred Brown. Miss Gilt's name was omitted. Brown patronized her a bit the following night. He was also rather supercilious with the rest of us and hinted that his social engagements might interfere with his being present at dinner during the season.

"Smith then settled down to work in earnest. He not only printed Brown's name among the list of those present at all first nights, but introduced it in gatherings where J. Fred Brown was unknown. Brown got extravagant. He never missed an opening night. He went to all semi-public dinners when he was permitted to buy tickets. One night he came down to dinner so haughty that he would hardly notice Miss Gilt. Smith explained it later. In return for a favor which he had been able to do for a woman she had sent an invitation to J. Fred Brown for the opening reception in her big house. She never had heard of the man before, but was on the outer fringe of society and was quite willing to entertain him. Brown spoke of the invitation casually at the table and said the hostess was an old friend who was very ambitious socially. He supposed that he would be bored to death, but he felt it a duty to go. I happen to know he bought a new frock coat for the occasion and he was so excited about it that he never went near his office that day. He was neglecting his practice and was spending lots of money on clothes.

"He was not quite so attentive to Miss Gilt.

"This reception gave Brown an opportunity to meet other people who entertained. His name had been printed so frequently that these people had a vague idea he was a social swell and some of them invited him to call and others invited him to receptions.

"J. Fred Brown was now socially launched and C. Knickerbocker Smith worked like a beaver to keep Brown's name before the public. It appeared in every list of fashionable names, and had he gone to one-quarter the places where the newspapers reported him at, he would have broken down.

"Brown took all this notice from the papers as his due. He joined two second-rate clubs. He even gave a little dinner at the Palace Hotel, and, thanks to Smith, all the details appeared in the next morning's papers. The game was very interesting. Brown was neglecting his practice and he was attending every affair that might tempt the papers to print his name. He kept all these notices in a scrap book. The more conspicuous he became the less devoted he was to Miss Gilt. The man was badly afflicted with what I have diagnosed as Newspaper Mania. I had observed it in other people and I felt a proprietary interest in Brown's case. Brown had it badly. He snubbed Miss Gilt two or three times before the other boarders, and she didn't like it. Brown's conversation was almost exclusively devoted to the society news of the day.

"Finally Miss Gilt announced that she had broken her engagement with him. It was not a surprise to the other boarders. Two weeks later she announced her engagement to Smith. Brown did not seem to be very much dejected then.

"Curiously enough from that date his name ceased to appear in any of the lists of those present. Brown went to the same old places and he examined the newspapers eagerly the next morning, but his name was not used. He sent anonymous notices to the papers and they were thrown into the waste basket. Then he tried to make up with Miss Gilt, but she wouldn't consider him at all. I had no sympathy with him. He had brought it on himself. Miss Gilt became Mrs. Knickerbocker Smith three months later, and her husband brought her to New York where her fortune supports them both comfortably.

"I was perfectly satisfied with the case. It had demonstrated my theory than an itch for notoriety was a disease with certain people, and I have always considered it a case worthy of being preserved in medical annals."

A College Graduate.

ALTHOUGH a beggar clad in rags,
Refinement on his features sate;
"Pray lift me from the mire," he said,
"I am a happy graduate."

I thought of all the kicks of life,
The bitter blows of unjust fate;
The thousand stings of tortured pride,
That plagued this college graduate.

I thought of these; and then I said,
"Friend, take this coin; it is not great;
But with it goes the blessing of
Another college graduate."

He took the coin, and I could see,
How bitterly desire and pride
Were struggling in the bosom of
The beggar standing by my side.

I clasped his hand, "Comrade," I asked,
"What college gave you your degrees?"
He brushed a tear away and sobbed,
"A barber's college, if you please!"

NEW YORK. & PARIS.

SPECIAL CORRESPONDENCE FROM THE TWO CAPITALS

YES, I believe that they are giving operas this year at the Metropolitan. I have attended a few times, and Mrs. Astor's toilets were superb. She went away at 10:30 the last time and would not take an encore; there was an Assembly that night. Remarkable, how Mrs. Jack keeps her hold on the social leadership. Mrs. Stuyvesant Fish looks well; she is drawing the men to her box. I notice that the management have been a little indiscreet in assigning boxes; more than one has been admitted to the big horseshoe without meet and just claim. This is a distinct drawback to the performance. The opera, did you ask me? Oh, yes, very good. What did they play? How the deuce should I know?

Which is not the way I myself would describe the perfomance, but it is about the view of the average opera-goer this season. In "crank row," down in the front of the pit, and in the remote fastnesses of the gallery, it is said that they listen to such snatches of the performance as drown out the conversation; also, the critics—some of them—listen in a bored sort of way. But the bulk of the audiences go this season for a very different purpose since the management began to print on the programs lists of the boxholders with a diagram showing the location of their boxes, and decreed that the lights should remain bright while the curtain is up, instead of dark, as before.

It was very clever of the management to think of it. You remember, perhaps, how Ole Bull's business manager once defined music. "Music," he said, "is the art of getting as many people as possible into one place and making them pay the highest price to get there." Very well. Now the Metropolitan management have taken counsel with themselves. Why do the bulk of people come to the opera? The box-holders come to be seen, and the chair-holders to see—the boxholders. Then, if additional facilities for seeing and being seen are furnished, won't the opera be more popular? Won't more people come? The sequence is as plain as the nose on your face. Hence, the receipts have never been so large and, incidentally, the attention has never been so little directed toward the stage. The last night I was there, Mrs. John Jacob left before the beginning of the last act. Most of the box-holders followed suit, and the theatre began to empty. There was a whole act of the greatest music written yet to be rendered by the greatest singers in the world; that mattered not. The prima donna was gone; the performance was over. Had "Mrs. Jack" been anxious to expose the vulgarian humor of the whole thing, she could not have chosen a better way.

Of course, it is hard on the singers, those player people who live on admiration, and they are complaining bitterly. In years past, the audience used to rise to a great passage and the curtain-calls were genuine. That is put behind us. The "cranks" who yell "bravo!" after a solo of Alvarez become the target for well-bred opera glasses. They give curtain-calls nowadays in a subdued, well-bred fashion—at least, they are taken for curtain-calls by the man who operates the machinery. This is part of the performance and is expected. But it doesn't make any real difference. So long as Mrs. Astor stays, the house is enjoying itself. For very decency, the management is thinking of renting a claque. It would save the audience the trouble. Unblushing, isn't it? But it pays.

Perhaps because adversity has drawn them together, the singers at the Metropolitan, who furnish the punctuation for the conversations, are remarkably harmonious in private life, a rare and unusual thing in New York, where Grand Opera is synonymous with a half-a-dozen feuds. Life among the singers, according to all reports, is one long-continued love-feast. The whole cast, on the night of the first performance, went to supper together! Such a millenial state of affairs has not happened in New York since Father Knickerbocker began to remember. Cynics are saying that it is because the renowned Jean de Rezske is absent. This would account for the tenors, but not for the sopranos and the bassos, who join in the general harmony.

They are a lot of happy family groups this year. Eames and her husband live in exclusive privacy at the Marie Antoinette, where he makes a bluff at painting to pass the time. Most of his artistic work, however, comes in the designing of his wife's costumes. In the same retirement, Mme. Nordica and her husband dwell at the Waldorf. He is studying to be a great tenor and practices daily under her tutelage. Both are beset by that strange species of woman, the prima donna worshipper. It is said that some of these have moved into the Waldorf and the Marie Antoinette in order to be near their idols. If so, they get no nearer than an occasional glimpse, for the doors are guarded most jealously.

Herr and Frau Schumann-Heink, in their apartments at the Belvidere, are a typical German couple. They dwell in an atmosphere of sentimentality and German cookery most beautiful to behold. It takes Germans to do that sort of thing; 'tis a fine art with them. The only regret of this couple is that the little Schumann-Heinks, who are legion, cannot be with them. They ought to be there, to complete the picture.

Calve and Sembrich live the single life, the former at Sherry's, the latter at the Savoy. They are the two most approachable people in the business, which is a cause of great grief to their maids and managers. Left to themselves, they would fritter away strength and energy on chance visitors. Each has a "steerer." It is the attendant of her private apartments, bribed by her manager, in Sembrich's case; in Calve's, it is her maid. To see the latter get rid of an enthusiastic visitor is to behold a work of high art.

NETTA DYKE.

A NEW IDOL.

PARIS must have an idol; this is an axiom. That idol must be a military man; if there is anything more axiomatic than an axiom, "this is that." General Gallifet, had he yielded in the smallest possible particular to the popular pressure against Dreyfus, might now be occupying that position. But Gallifet is a hero of the real stripe, not the tinsel sort described of Mr. Dooley and loved of the French, and has held himself square to his duty. So Mercier, who led the van in the attack on poor Dreyfus, has stepped into the place. "Vive Mercier!" Oh, memory! Ten years ago, and it was "Vive Boulanger!"—and now, there is the plain name, "Ernest Boulanger" on the tombstone of a suicide. Had I a personal grudge against any French officer, I could wish him no worse fate than the elevation to this doubtful height.

You must know by this time that Mercier has won his election to the Chamber of Deputies from the district of the Loire. Nominally, he was supported by the conservative Republicans; really, the Royalists backed him and secured his majority, and he is now the head and front of their hopes. Just how far he has sold himself to them, God and the Duc d'Orleans know, but the government suspects a great deal, for Mercier is continually tracked by spies. One incident in this espionage throws a pecular light on the General's thriftiness. The head spy is a cabman who has his stand just in front of the Mercier mansion. The general is "onto" this man. Therefore, he uses that cab exclusively for his official visits. When he has driven around Paris for a whole day and has mounted up fares to the sum of some fifty francs, he hands the detective-driver a franc in payment! Loth to lose the means whereby he draws his salary, the spy takes the coin without complaint, and Mercier economizes thereby. I hear that he gets good servants cheap on the same basis.

It may not be generally known that Madame Mercier is English by birth and a cousin of General Sir William Penn Symons, the British general who was killed at Glencoe. She has numerous nephews fighting with the British at Glencoe. But the party of a good wife is her husband's party, and Mme. Mercier is a good wife in that. She is a devoted French woman in opinion, and hates the Radicals, the Dreyfusites and the powers that be just asfervently as her husband. They tell a story which illustrates the extent of her feeling. An English friend was complaining of the infamous Parisian caricatures of Queen Victoria.

"Yes," she answered, "but remember how the English papers insulted the General."

It is a business arrangement, through and through. Mercier needs a political boost, and he needs money. The Orleanists can give him both of these. The Orleanists need a hero, since the Duc is what my countrymen would call "n. g." and his family have never, not a man of them, smelt powder. Mercier can give them that. The deal is an advantageous one for both sides, and is really of no harm to France, as the Royalist cause is mainly a joke. If harm comes of it, 'twill be through the elevation of Mercier, who is a man of more than a little real ability, not through that of Orleans, who cannot harm anyone, being half-idiotic and wholly lazy.

By-the-way, the mouthpiece of the Royalist cause has been changed. It was the *Gaulois*, edited by Arthur Meyer, a Jew. Meyer took sides against Dreyfus in the days of his trial, and the French people, much as most of them hated the Jews, did not honor him for his defection. His fellow religionists rank him with Judas, the Christian Dreyfusites put him several stages below, and the Catholics and Nationalists, to whom his defection was calculated to appeal, refused him delivery of the thirty pieces of silver. Orleans saw that the new recruit was unpopular, and repudiated him utterly. He did this in a strictly private letter, intended for publication, to the Duc d Luynes, with injunctions to keep it absolutely secret and get it the front column in the newspapers. The worthy descendant of white-plumed Henry of Navarre fell into a towering rage at the thought that the dirty press had stolen his burning words, and had his picture taken in the position. This may not be exactly what happened, but it describes the Orleanist way of doing business.

The letter stigmatizes Meyer as a dirty traitor and annouces that *Soliel*, Edouard Herve's old organ, is the official publication of the Orleanist party. That paper took up the Mercier campaign at once, and steered him through into the Chamber of Deputies. It was a campaign of blood and fire, of course, one of the finest ebullitions of Gallic yellow journalism ever seen even in this favored land.

There is a lull in the theatres just now, pending the storm and stress of the Exposition. Bernhardt is filling in with "Camille" and "Hamlet," and saving up "L'Aiglon" for the year of big receipts Coquelin is using "Les Miserables" for a filler pending the revival of "Cyrano" for the Exposition. Rejane is saving up "Madame Sans Gene" and "Zaza." Mounet-Sully, somewhat feeble and almost blind, has as great a vogue as ever. He will present a Shakespearian repertoire for the Exposition. There are no new concert-hall favorites; perhaps they, too, are being saved for the summer. Since Guilbert recovered from her operation and went back to work, it has become apparent that her vogue is over. The latest novelty in the concert-halls is the wrestling-match, which has attained the importance of a star feature. One of the latest matches has lasted over two weeks and bids fair to keep going as long as receipts come in. The principals are Kara-Ahmed, a Turk and World's Champion, and Paul Pons, a Frenchman and World's Champion. The winner is to contest with Jack Careek, a New Yorker and World's Champion. Twenty other World's Champions are waiting to challenge the winner of this match. Championships are as common now as the Legion of Honor.

ETIENNE MARCEL.

The Hot Baked Bean.

O! a dainty thing is the hot baked bean,
And it creepeth right to the spot
In the wintry time, when the fresh and green
Of garden truck is not.
He must be dyspeptic and victim of bile
Who scorneth its ruddy brown
As it comes to the table, all smoking the while,
With a slab of rich pork for its crown.
Food for an emperor, king, or a queen;
O! a dainty thing is the hot baked bean.

The lumberman droppeth his shining axe,
When he heareth the whistle blow,
And straight for the shanty he maketh his tracks
Through the pine woods o'erladen with snow;
On the prairie, the cook climbs the mess wagon, yells,
And the cowboy, with appetite keen,
Spurs his bronco amain, for there, wind-borne, he smells
Assurance most sweet of the bean.
Quickest of all moves of that day, I ween,
Are moves at the call of the hot baked bean.

Whene'er there occurreth a fierce vacuum
In the maiden of Boston's interior,
Full well doth she know the correct pabulum
And scorneth all viands inferior.
Though Ibsen and Browning et al. have a zest,
And give her a pleasure serene,
There's naught fills the vacancy under the vest
Like the browning on top of the bean.
Food for an emperor, king, or a queen;
O! a dainty thing is the hot baked bean.

—Chicago Record.

$100 Reward $100

The reader of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

IN THE SUPERIOR COURT OF THE CITY AND COUNTY OF SAN FRANCISCO STATE OF CALIFORNIA.

City and County of San Francisco, Plaintiff, *vs.* James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More B. More, and C. More Defendants. No. 67,877.

Action brought in the Superior Court of the City and County of San Francisco, State of California, and the Complaint filed in the office of the Clerk of said City and County of San Francisco.

FRANKLIN K. LANE
City and County Attorney, Attorney for Plaintiff.

The People of the State of California send Greeting to: James S. Angus, W. S. Goodfellow, Thos. E. Crothers as Executors of the last will of James G. Fair, deceased; and Charles G. Fair, Theresa A. Oelrichs, Virginia Fair, Phil. More, B. More and C. More, Defendants.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the City and County of San Francisco, State of California, within ten days after service on you of this summons—if served within this County; or within thirty days if served elsewhere.

The object of said action is to obtain a judgment and decree of said Court adjudging that plaintiff is the owner in fee of all the real estate hereinafter mentioned, and to quiet plaintiff's said title as against each and all said defendants and to obtain other and further relief and costs, as specified in said complaint, which complaint is hereby specially referred to for further particulars.

The following is a description of the property affected by this action:—

All that certain piece, parcel or tract of land situated in said City and County of San Francisco, State of California, bounded and described, as follows to wit

Commencing at the corner formed by the intersection of the northerly line of Bay street with the westerly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred (200) feet; thence at right angles northerly and parallel with said Fillmore street to a point at which the water of the Bay of San Francisco is twenty-five [25] feet deep at low tide, as the same existed April 27, 1863; thence at right angles easterly four hundred and sixty-eight 9-12 [468 9-12] feet; thence at right angles southerly and parallel with the easterly line of Fillmore street to the said northerly line of Bay street at a point thereon distant two hundred [200] feet easterly from the easterly line of Fillmore street; thence westerly along said northerly line of Bay street two hundred and sixty-eight 9-12 [268 9-12] feet to the point of commencement.

And are hereby notified that, unless you appear and answer as above required, the said plaintiff will take judgment for any money or damages demanded in the Complaint, as arising upon contract, or will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the City and County of San Francisco, State of California, this 20th day of March, A. D., 1899. [SEAL] WM. A DEANE, Clerk,
By WM. R. A. JOHNSON, Deputy Clerk.

The Theatres

A STOCK situation of the comic illustrator is that of the small boy who, walking over an icy pavement at the head of a line of people, slips and tumbles the whole line backward like a house of cards. Such a thing happens sometimes in the realm of the mind. Someone makes a "break," and the contagion spreads. It happened Monday night at the Alcazar, with humorous results.

The play was "Friends," and, be it said, before we go farther, it was well played. In the third act Mary Hampton as *Marguirite Otto* has a stormy scene with George Webster, playing *Harold Hunting*. At one place the lines read—I quote from memory—"I command you to let me pass, Mr. Hunting!" That is what Miss Hampton ought to have said. Now whether her mind was filled with the new beauties Ernest Hastings has acquired since he was written up as a matinee favorite, no one knows, but this is what she did say:

"I command you to let me pass, Mr. Hastings!"

The gravity of that scene was wrecked for several moments.

Hastings himself was a party to the next gambol of the imp of confusion. He is cast in "Friends" as *John Paden Jr.*, who is at outs with *Paden Sr.*, as played by Jeffrey Williams. The old man is trying to force a marriage on his son. He says, or should say: "You are young, good-looking, have money—besides, you are my son."

This is what Mr. Williams said: "You are yonng, etc.—besides, you are my father!"

The audience was just recovering from this, when Miss Emily Wakeman as the maid of *Marguerite Otto* came in to announce a visitor. In the play, *Marguerite* is an orphan unmarried and sought by two or three lovers. I do not know who is down in the playbook as the visitor, but Miss Wakeman announced blithly.

"*Mr.* Otto to see you, Miss!"

Whether there was laughter or tears back of the Alcazar scenes Monday night, is known to the company alone. But the audience enjoyed it, which was what they came for.

* *

The new bill at the Orpheum will be an almost entire change, few of the present people being retained, and these will change their program. Cushman, Holcomb, and Curtis head the list with an operatic comedy, "The New Teacher." Monroe and Mack are singing and talking comedians. Deets and Don bring a musical novelty. The Romale Brothers do an acrobatic turn, and Frank Coffin returns with a number of new songs. Holdovers are Mr. and Mrs. Perkins Fisher, Irene Franklin, Papinta, and the biograph.

* *

Following "Friends," which has had a most successful run at the Alcazar, "Oh, Susannah," a howling farce of the style of "Charlie's Aunt" will be the bill.

* *

Monday night we have a new and untried play, a genuine "first night," at the Columbia, when the Bostonians present Herbert and Smith's new opera, "The Viceroy." It promises to be one of the most elaborate productions ever given a comic opera in the West.

* *

The Frawleys will present for their last week in San Francisco "An Unconventional Honeymoon," one of Augustin Daly's comedies. It is a modern rendering of "The Taming of the Shrew," and the Katherine of the cast will be Miss Keith Wakeman, who has just returned from Europe. The piece was produced here by the Frawleys two years ago under the title of "The Transit of Leo," and at that time made an immense hit.

* *

The third of the series of Symphony Concerts under the direction of Henry Holmes will take place next Thursday afternoon at the Grand Opera House at 3:15. An interesting program has been provided. It includes: 1. Overture, "Coriolan," op. 62 (*Beethoven*). 2. Symphony, "Fraternity" in F No. 4, op. 48 (*Henry Holmes*). 3. Variations upon a Theme by Jos. Haydn, op. 56a (*Brahms*). 4. Overture, "Tannhauser" (*Wagner*).

MARCIA VAN DRESSER
who takes the place of Jessie Bartlett Davis as leading contralto with the Bostonians.

Since success of "The First Born" and "Only the Master Shall Blame" and other native plays at the Alcazar, that house receives on an average one new play a week for consideration.

The Bostonians come this time without Jessie Bartlett Davis, the Alan-a-Dale of tuneful memory. She should not be allowed to pass without some mention of an incident of her last visit but one, which was unnoted in the papers at the time. It was the last night of "Robin Hood" for the season; it had been a record-breaking run at the Columbia, and on this final night the applicants for tickets would have filled two houses. At the end of the final act, the audience refused to leave and gave them curtain-call after curtain-call, until Barnaby came forward and suggested that the audience join the company in singing "Auld Lang Syne."

As the singing began, a cat came running up the aisle, pursued by an usher who was trying to eject her. Thoroughly alarmed by the noise she went over the orchestra at a bound and onto the stage. Mrs. Davis stood there in her boy's costume. It was any port in a storm for puss. Straight up the tights she went, and on to Mrs. Davis' shoulders, where she turned, spitting and growling, to face her pursuers. The singer took the cat in her arms and petted her into quiet. But just then the song reached the high note in the chorus—"*We'll* tak a cup o' kindness." The shriek was too much for puss. With a yowl that could be heard in the audience, she wriggled loose and fled.

In time of peace: in time of war
The favorite drink is Jesse Moore.

IN THE DISTRICT COURT OF THE UNITED STATES, NINTH CIRCUIT, NORTHERN DISTRICT OF CALIFORNIA.

In the matter of the Insolvent, the California National Bank of San Francisco.

T. K. STATELER, the Agent of the California National Bank of San Francisco, which bank was duly adjudged insolvent by the Comptroller of the Currency of the United States on the 14th day of January, 1889, pursuant to the provisions of an act of Congress entitled "An Act authorizing the appointment of receivers of National Banks and for other purposes," approved June 30th, 1876, having filed herein a petition praying for an order of sale of the choses in action and the unsold personal property belonging to said bank, now in his possession as said Agent, and which said choses in action and unsold personal property are fully set forth and described in said petition;

IT IS HEREBY ORDERED, that said petition be heard before this Court in its court-room in the appraiser's building at the corner of Washington and Sansome streets, San Francisco, on Saturday the 10th day of February, 1900, at eleven o'clock a. m.

IT IS FURTHER ORDERED, that a copy of this order be served by said Agent upon all the stockholders of the bank, standing as such upon the books of the bank at the date of its adjudication as insolvent, either by personal delivering a copy hereof to each of said stockholders or by sending a copy hereof through the mail addressed to his last known place of residence, postage prepaid, at least ten days prior to February 10, 1900.

IT IS FURTHER ORDERED, that a copy of this order be published in *The Wave*, a newspaper printed and published weekly at San Francisco, aforesaid, at least once a week for three weeks prior to the hearing of said petition,

Dated, January 10, 1900.

JOHN J. DE HAVEN, Judge

ROBERT BRENT MITCHELL, Mills Building San Francisco, Attorney for Petitioner.

Ladies Do Not
Seek assistance from new and untried preparations, but use the old, time-tried and reliable CREME DE LIS. It removes every trace of sallowness and other cutaneous defects and the skin regains that softness and purity of color so rarely possessed by adults. Blackheads, freckles, muddy skin, wrinkles, and red nose, or face, acted upon as if by magic.

Jesse Moore Whiskey has been the Kentucky standard with which all others have been compared since 1853.

New Stories Re-Told.

x x x

THE MULE A TOTAL LOSS.—A Copperhead correspondent who had made himself obnoxious to General Rawlins applied to that leader at Vicksburg for news. To a member of his staff the General consigned the journalist with orders that he be taken to the trenches within a stone's throw of the enemy and, if possible, lost there. The two set forth, but the moment the newspaper-man's hat and his mule's ears showed over the ridge which he had climbed to get a view, there came a volley of musketry ten yards wide which shied the top of his hat off. He slipped to the ground in safety, but the mule was literally filled with lead. When the two returned to headquarters Rawlins hailed his aide: "I thought I told you to lose that Copperhead reporter, somewhere," he said. "I did the best I could," was the reply. "He came back, but I have the honor to report his mule a total loss."

x

HIS SIX SHIRTS.—A punctilious Southern lady was married to a happy-go-lucky Carolinan with a notorious disregard for all matters of dress. He was going off on a trip and his wife packed in his satchel six shirts, exacting a promise that he would wear a fresh one every day. He returned home in due course and the good housewife proceeded to unpack the bag. Lo, not one of the shirts was there. "What's the matter, John," she asked in great perturbation; "where are all the shirts I gave you?" John protested that he had followed orders and had put on a clean one every day, but what had happened to them he did not know. He retired downstairs to think out the problem. Ten minutes later an excited face was thrust into the room and a happy voice rang out: "I've found 'em, my dear; I've found 'em! The whole six shirts are safe! I've got 'em all on!"

x

REVERSED THE PRAYER.—On a Louisiana plantation soon after the war one of the oldest darkies got religion, but in a rather hazy fashion. As Christmas approached his family clamored for a turkey. So he prayed earnestly for one, saying: "O Lord send a turkey to this poor sinner," but no turkey came. Day after day he kept up this petition, without bringing the coveted prize any nearer. Then on the morning before Christmas he changed the wording of his prayer to "O Lord send this poor sinner to a turkey," and about midnight his prayer was answered.

x

A FAIR TRIAL.—Congressman Evan E. Settle came to the front in Congress in the contested case of Aldrich vs. Plowman. "The situation reminded him," he said, "of a poor fellow who had been brought before a Dutch magistrate on some petty charge. The Justice wanted to impress him with a due sense of the fairness of the trial he was about to receive at his hands. 'Mine frent,' he said, 'dis court she vill hear all the vitnesses mit you; she vill hear all the lawyers mit your side of the cases; und she vill dook it unter advisement for dree tays; but after that time she vill geef a chutgment against you.'"

x

A NOBLE RETORT.—Haliburton, author of *Sam Slick*, while a member of the House of Commons, felt called upon, while attacking the policy of the Gladstone government, to denounce one of its younger members, whose speech had contained not argument but caricature, which he declared was entirely out of place in so august an assembly. "Wonders will never cease," said Gladstone, on rising to reply. "Here is the author of *Sam Slick* declaring caricature has no place in the House of Commons, though he himself has found a place here."

x

A NATURAL QUERY.—Among the congregation at a service of song in a Washington church was a mother with her little daughter *aetat.* five. One of the selections was "I Love to Steal a Awhile Away." It was drawled out in the good old-fashioned way to the end, and the little miss after the first line seemed to be lost in study. In the midst of the prayer that followed she climbed up on the seat beside her mother and in a stage whisper asked: "Mamma, what are 'whileaways,' and what do good people want to steal them for?"

x

HAD NOT MOVABLE TEETH.—A North Columbus woman has a charming little daughter who is very indiscreet. The other day in the midst of a reception the little girl cried on account of the toothache. Her mother tried to console her. "There, my darling, don't cry. Your toothache will pass away." "How will it go away?" replied little Edith, her voice broken with sobs. "I can't take my teeth out like you can, mamma."

x

INS AND OUTS.—While Richard Croker was in London recently he and an American friend passed the magnificent structure on Fleet street, known as the Inns of Court. "I wonder who they all are—that endless crowd which pours out from the Inns?" asked the friend. "Oh, they are the outs," replied the Tammany chief."

PALACE and GRAND HOTELS

For nearly a quarter of a century these Hotels have been the recognized headquarters for Tourists and Travelers visiting San Francisco.

Their popularity has been acquired by reason of their unique location (being accessible to wholesale and shipping districts and amusement centers), the peculiar excellence of cuisine and service, and moderate charges.

The Grill Rooms for ladies and gentlemen have an international reputation, and the recently added Supper Room is now recognized as *the* place to obtain after-theatre refreshments.

EVENTS CURRENT.

The South African War.

For the third time, General Buller has crossed the Tugela River, and for the third time he has given it up and retired to his original base of supplies. The circumstances of this third failure read much like those of the Spion Kop affair. On Tuesday, Feb. 6, this third attempt was begun by a feint at the center of the Boer position. This movement was successful in drawing the Boer fire, and under cover of it engineers threw a pontoon across the Tugela to the right of their position. A flying column crossed this bridge and seized Val Kraantz, a hill which commands the approach to Ladysmith on the Boer left. They held this all night, and there was rejoicing in London. The following day, however, the Boers came back at them with a heavy attack. It was discovered that several long-range guns controlled the elevation enough to call for all the best artillery in Buller's command to defend it, leaving none to assist in the advance. Moreover, scouts reported that a dozen masked batteries were concealed along the road; to advance would be to run into a trap. Buller accordingly fell back again, having added 250 to the total of British losses. The news of the week next in importance regards General Roberts and a projected move against the Orange Free State. The whereabouts of Roberts has been a mystery all along. It is now known that he is in command of Methuen's old force on the Modder River, and that this army is on the move. The interior of the Orange Free State is reported to be his destination. If this is the case, Buller will still continue to hammer at the Boer force on the Tugela, in order to prevent Joubert from forming a junction with the Orange burghers. Ladysmith, however, is regarded as doomed, and the generals in command are now sharply criticised for wasting four months and thousands of lives in trying to relieve the garrisons at that point and at Kimberley, instead of proceeding to the heart of the enemy's country at once. The total British loss now foots up to 12,000 killed, wounded and captured. 165,000 men are now at the front, with 15,000 on the way. The temper of the British people remains firm. Certain correspondents hold that a large element of the English are ready to give up the whole thing and make another Majuba Hill settlement. This may be so, but if it is, neither the press nor Parliament show any such disposition. A resolution introduced in the Commons by the Irish Nationalists, to grant entire independence to the Transvaal, was defeated last week by an overwhelming majority. Parliament and the Cabinet are deeply concerned with plans for increasing the army. One such scheme, the revival of the old militia act, which would give about 600,000 available troops, is sure to be fought energetically by the Liberals.

The Insurrection in Luzon.

The most important recent news from the Philippines is the announcement that General Otis is soon to be relieved of his command. The change will be made at his own request; he is worn out with the long campaign and the climate, and his health demands a rest. He will be succeeded by General McArthur, who will take full command in both military and civil matters. It should go without saying that this will bring about improved conditions. Otis, the careful, methodical, clerk-like, civil governor was no soldier, and botched pretty badly all the campaigns of last year. The insurrection has subsided, partly of its own weight, partly through the vigorous campaigning of the late General Lawton, yet strenuous direction is needed even now. McArthur can be trusted to take such a course. The only operations reported lately are a series of guerrilla attacks in the province of Albay, Luzon, where the Americans have garrisoned several of the towns. The insurgents are harassing our troops by night attacks and by burning fields and buildings. They always scatter before the American advance, but return as soon as our troops are back in quarters. When these towns were captured, the inhabitants fled. Although our officers have offered them every inducement to return, they have not done so. The cause of this is said to be the fact that the insurgents have them "rounded up" and guarded in the mountains. In a general way, this is Aguinaldo's policy. If he persists, it may be far more troublesome than the open warfare of last spring.

Territorial Government for Hawaii.

Representative Knox, chairman of the House Committee on Territories, has just submitted to Congress his report on the bill for the territorial government of Hawaii. In introducing his resolution, he states his reasons for believing that the change should be made as soon as possible. Many doubtful questions of admirality and marine jurisdiction have arisen, as well as of criminal procedure, rendering it uncertain whether there is now any tribunal for the decision of important questions affecting property and any legal method by which criminals may be indicted or juries impanelled. There is also grave doubt concerning the legality of the franchises now granted by the Hawaiian government, and the Homestead Act, which should bring a very desirable class of citizens to the islands, is not yet in operation. The plan of government recommended is exactly like the territorial plan now in force within our own boundaries. By this method, the standing Hawaiian laws, when they do not conflict with those of the United States, remain in full force. The class of citizens who would thus be admitted are fully up to our standards. The major portion of the population is made up of Chinese and Japanese, but these would rarely be eligible to the franchise. Most of the Chinese are only temporary residents, intending to return to China. Chinese exclusion would go into effect at once, thereby shutting off the supply. The same is true of the Japanese, who are mainly contract laborers, and intend to return home when their contracts expire; the application of United States laws, which forbid contract labor, would prevent continuance of the system. The Portuguese and native Hawaiians are industrious, and amenable to our institutions, while the controlling class is American. A few minor provisions, including one which states that the governor shall be a Hawaiian, were inserted at the request of the citizens of the islands. The population of Hawaii is estimated in the document at 130,000, the majority being Orientals.

Settlement Delayed in Kentucky.

When, last week, leaders of both the warring factions in Kentucky agreed to settle their differences by retiring the Republican officials in office and seating as Governor the Lieutenant-Governor elected on the Democratic ticket, it was thought that the trouble was over. The refusal of Governor Taylor to sign the agreement prevented this settlement, and affairs are now in the state which existed on the day following Goebel's assassination, excepting that there are two full sets of state officials and two state legislatures meeting and pretending to govern in remote cities outside the state capital. The agreement made by the joint committee was presented to Governor Taylor early last week; he delayed a decision for several days, until the impending crisis of Goebel's funeral had passed, and then announced his refusal. Meanwhile, the troops were retained at Frankfort, the capitol, and the Republican and Democratic sections of the Legislature were meeting separately, the one set at London, the other at Louisville. Following his refusal to sign, and urged by hot-headed Republican partisans, Taylor announced his intention of sending officers to Louisville in order to arrest enough Democratic legislators to make a quorum. Better counsel prevailed, and this plan was abandoned. The Governor came to a final decision Saturday, when he definitely refused to sign the peace protcol and announced his intention of remaining in office until the matter could be settled in the courts. Injunction suits instituted by the two sides are pending in both Federal and state tribunals, and the first step in unraveling the tangle will be to settle the question as to where jurisdiction lies. There seems to be no further danger of bloodshed; that was averted in the period just after the murder and at the funeral of Goebel, two occasions when public feeling was intense and when the outbreak would have come if it is coming at all. The assassin has not yet been caught, although the police have arrested several persons who are supposed to know something about the case. At the time of the funeral, which occurred on Friday, the Democratic leaders of Kentucky vied with one another in paying tributes to the dead man, and the opposition press was silenced through force of circumstances. Nevertheless, the truth must be told. Goebel, while he died under such circumstances that he became a hero to his adherents, was an unscrupulous politician of the most dangerous variety.

Prospects Favorable For Canal Agreement.

The Hay-Pauncefote agreement, by which England agrees to abrogate the Clayton-Bulwer canal treaty, providing the Nicaragua Canal is kept neutral, comes up for ratification by the Senate at an early date. The Committee on Foreign Relations has been considering the measure and will, it is admitted even by the opposition, report favorably. Ratification is practically assured, and the action is endorsed by a majority of the newspapers throughout the country. Nevertheless, that section of the American press which denounces the administration on principle has been making more than a little noise. The head and front of the opposition is directed against the neutrality declaration, which declares against fortifying the canal. The anti-administration organs claim that this practically hands the waterway over to England, since in the event of hostilities it will belong to the power having the strongest navy. Moreover, the Anglophobiacs assert that there is no need of abrogating the Clayton-Bulwer agreement, since it had practically lost all binding force—a contention which has no facts to support it. In spite of all this, the Committee on Foreign Relations will report the fortification clause and will make no substantial changes anywhere in the treaty. Abroad, there is no likelihood of any protest except from France, where capital is interested in the Panama scheme.

The Pacific Cable Question.

The question of the Pacific cable, which is one of the important matters to come before Congress at this crowded session, is in such a tangled state that it may not be settled this year at all. Two courses are open to our legislators,—direct government ownership, and subsidy of the Pacific Cable Company, the one being provided for in the Corliss bill, the other in the Sherman bill. The measures are before the House Committee on Interstate and Foreign Commerce and the Senate Committee on Naval Affairs, and both are about equally divided on the question. J. A. Scrymser, president of the Pacific Cable Co., is maintaining an active lobby at Washington. He himself has introduced testimony in the investigation of such character as to weaken his case. He gives the lie to the estimates of Admiral Bradford and other naval officers by setting his estimates of cost $200 per knot higher than theirs, and this without shadow of proof. It is on the basis of this estimate that his company asks $400,000 a year subsidy for the transmission of government messages. Moreover, he has all along made the assertion that no other government would permit a cable owned by the United States to land on its shores. This has been entirely disproved; it is shown that at least four of the world's great government-owned cable lines are given this permission freely. A thing which carries weight with the advocates of the government plan is the fact that the operators on most private cable lines are British subjects. In the event of war with Great Britain, operation of a private line by Englishmen would be a serious danger, whereas, were the government to own the line, a school of native experts could be trained with a view to exclusive American operation. The Pacific Cable Company estimates the cost of construction at $25,000,000, while the Navy Department sets the figures at $10,000,000. As can readily be seen, all these inaccuracies and widely-varying statements do not make the task before Congress any easier. The balance of opinion seems to lie in favor of government control.

Passing of the Boycott.

On February 1, this year, the boycott, as a weapon of organized labor, ceased to exist. On that date, the American Federation of Labor decided to abolish this doubtful means of enforcing the rights of labor. This action was accelerated by the recent tie-up of the street-car lines in Cleveland, Ohio, an action which paralyzed all traffic in that city, and which only resulted in bringing the cause of organized labor into disrepute among peaceable citizens. Moreover, the committee which has been investigating the matter discovered that this method had degenerated into a system of blackmail. Fakirs and crooked labor agitators have been using it all over the country to extort money and gain influence. This has brought the system into such general disrepute that the rank and file of labor unionists generally refused to enforce a boycott. Boycotts, while voted "as easily as motions to adjourn," remained ineffective on the union slate. It is only in rare cases, as in the Cleveland affair, where there has been strong feeling on both sides, that any enforcement was possible, and then the strong feeling which brought it about resulted in riots, disorders and troubles of every variety. One case was revealed where an employer bribed corruptible leaders of a trades-union to declare a boycott against other employers in the same line of industry. In view of these revelations, the Federation was almost unanimous in opposition to the wornout farce. Charles E. Hawkes, representing the unions of San Francisco, has been working for some time to the desired end, and has been the leader in this new movement.

Hypnotism as a Moral Agent.

A paper by J. D. Quackenbos on "The Moral Value of Suggestive Hypnotism," published in the current *Harpers*, is a distinct contribution to the literature of this little-known subject. The author has for some time been engaged in curing mental delusions and bad habits by the hypnotic method, and he summarizes his results in this article. He attributes the action of hypnotism to a theoretical sub-consciousness, acting under the ordinary consciousness and largely independent of it. This submerged consciousness is brought to the surface in the somnambulistic state induced by hypnotism. And, very strangely, this ordinarily sleeping self controls the conscious self, so that, once it is conquered, the other part of the mind is under control. In curing perversions and bad habits by hypnotic suggestion, the operator, after gaining the confidence of his patient, puts him in the somnambulistic condition by ordinary methods, and conveys to him suggestions of moral control. Upon awakening, the recipient of the suggestion has no remembrance of what has happened, but the tendency toward the habit is greatly lessened. Nevertheless, this will, in time wear away unless treatment is kept up. If the sittings are continued long enough, however, it ends in an entire change of character. Desire of the patient to be cured and faith in the operator are an absolute necessity. It has been found that a patient will not accept a suggestion totally at variance with his character. An honest man cannot be made to steal in a cataleptic condition, nor can a person naturally vicious and degraded be persuaded to high ideals or moral acts. The victims of habits, who are victims in the sense that they are held by a tendency of which they wish with their higher selves to be rid, are the ones whom hypnotism cures. A patient can never be treated while the controlling consciousness is in paroxysm; for example, it is of no use to treat a drunkard while he is on a debauch; the period of depression following an excess is the best time for the work. Hypnotic treatment is frequently enforced by what is called auto-suggestion. In this, the patient, through his conscious mind, himself conveys to his unconscious mind the suggestion of improvement. The author is inclined to believe that this auto-suggestion plays a much greater part in life than most people believe. He has used a combination of the two methods for correcting all manner of habits, vices

and delusions, and where the patient has sincerely wished to be cured he has been almost invariably successful. A few cases, however, have baffled all attempts, and he believes that they indicate the presence of some disturbing factor utterly unknown to us at present.

Popular Election of Senators.

The popular election of Senators is a matter sure to come up in the present session of Congress. There has been considerable agitation on the subject throughout the country, especially in the South and West. Representatives from these two sections will have pressure brought upon them looking toward immediate action. It will require a constitutional amendment to bring about the change, and before such an amendment becomes a law it must win a two-thirds vote from Congress and be submitted to the people. The House would probably pass such a law, but the Senate is most certainly opposed. The Committee on Privileges and Elections, in whose province the matter comes, is professedly against it, five out of nine members having declared adversely. The New York *Herald* has been collecting opinions from the Governors of the various states. From this very imperfect straw-ballot, it would seem that only New England favors the system as it now stands. Most of the Western and Southern Governors stated they believed the popular election of Senators to be the wish of the majority. The arguments for the change were exploited in the last National campaign by the Democrats. It is held that election by a small gronp of state Assemblymen gives an immense opportunity for corruption and bribery, that through this means rich men and not able ones are chosen. Support is afforded to this theory by the fact that most United States Senators are rich. Against this, is the argument which guided the founders of our government, that the two houses should be chosen from different classes of the population so that one might check the other and thus prevent hasty class legislation. No better way was known to Washington and his associates, no better way is known now, than the election of one body by the people direct and the other by the representatives of the people. Between these two, there is a third opinion, that advocated by Congressman Kahn of California. The state conventions of the two parties, in nominating Assemblymen, might agree on Senatorial candidates, and pledge their men for them. This seems, however, only a clumsy device, with no advantage over direct election. One thing is certain; the opposition of the Senate, which must be overcome before the constitution can be amended, can only be conquered after a long, hard fight. Elected by the old method and mainly dependent on it for their hopes of re-election, the Senators will not yield save to great popular pressure extending over a term of years. While the majority of voters are possibly in favor of the change, the desire is not nearly great enough, at present, to force the Senate's position.

The Extra Session in California.

The extra session of the State Legislature of California came to an end on Saturday, February 10, after being assembled thirteen days. The real object of this session was the election of a United States Senator, a thing which failed of accomplishment at the regular session. In this the state legislators succeeded, electing Thomas Bard of Ventura. There were, however, other reasons given by the Governor as an excuse for calling the session, and after the close of the senatorial contest the House and Senate disposed of a fair amount of legislation. Most of the bills passed or killed were unimportant and had to do with the machinery of the Houses, but a few are worth mention. A law providing for the extension of wharves in San Francisco for more than the legal 600 feet from the bulwarks was passed. This is a necessary change, as the city's wharfage is now inadequate. In the same line is a bill enacting that the anticipation of revenue of wharves for construction and repair be permitted for a period of five years instead of one and allowing the leasing of new wharves, the revenues to be applied to construction. The defective wide-tire law was repealed; a new and sound law presented as a substitute was defeated. Finally, and perhaps most important of all, Governor Gage's pet scheme of unchecked gubernatorial power was wrecked, the Senate defeating the bill to give the governor unlimited power of removal, as well as the one providing that he should have greater control in matters connected with the State Lunacy Commission. The cost of the session was a bit above $32,000.

COMMUNICATION.

A Novel Suggestion.

EDITOR WAVE:—Will you permit me to make a suggestion with respect to the selection of United States Senators? A movement is on foot to transfer the right and power of selection from the Legislature, elected by the people, to the people themselves. All this we believe in the interest of the public welfare. The opponents of the present system insist that the use of money is responsible for the selection of United States Senators under the present scheme of things; and they charge that the National Senate is merely a millionaire's club.

Of course you know and we all know there is some truth in this charge. It is very seldom a man secures the office of Senator, as Mr. Bard did, without the use of money. But you know and I know that the use of money will secure party nominations. You know and I know that, as a rule state conventions of both parties are usually controlled by the worst elements of both parties. It sounds very fine to say, "Let the people elect the Senator," but bless your soul you know and I know that the people will have mighty little to do with nominating the men for whom they are to vote. The bosses will do that for them.

I have a suggestion to make. Let the Legislature put up the Senatorship at auction whenever there is a vacancy. Doubtless bidding would run high. One hundred thousand dollars might be gained to the State. Let this money be used to educate growing youth and grown youth in the details of government. Let the people be taught what honesty means in public life, and what dishonesty will lead the Government to. Let this money be gathered in and so employed until the people have been educated up to a point where they heartily rebel against such a proceeding. Let the proceeds from the sale of office act like the scorpion's tail, let it sting the scorpion to death. It sounds cold-blooded, does'nt it? But it strikes me an exploiting of such a plan would bring a lesson home to the average citizen.

Yours truly,
A LEGISLATOR.

EDITORIAL COMMENT

Senator Bard's Traducers and Party Reorganization.

AMONG decent Democrats, particularly among the Democratic members of the legislature who are cognizant of the facts, the infamous attacks of the *Examiner* on Senator Bard have been commented on with supreme disgust. Turn loose the tongue of any fallen drab and she at once proclaims all womankind lacking in virtue. Like the *Examiner*, prototype nothing save scandal plays upon its slanderous tongue, but, fortunately, only the ignorant and vicious give credence to the tales. Mr. Bard was elected squarely and honorably. He was the one man under whose standard all of the Republicans opposing Colonel Burns might unite. His decided supporters could have been numbered on the fingers of one hand, but the hour had come when political and personal differences had to be buried and a selection made that would leave after it no heart burnings, no sores, no wounds. Thomas R. Bard filled the requirement admirably. He had created no antagonisms, and besides all this he was known and recognized the length and breadth of the State as a Republican of life-long standing, as a man of high and honorable purpose, and a gentleman in the strictest sense of the word. It was but natural after the long and hard-fought contest of last year that too much bitterness had been engendered to give any hope of the members uniting on any candidate who had been prominent in that contest. It was early apparent that the easiest solution of the problem was a general uniting upon a man of the Bard type. This was the natural, logical solution of the fiercest and bitterest senatorial contest ever witnessed in California. Men who had long cherished this ambition, men who, perhaps, according to all of the rules, were better entitled to the office, laid down their arms, set aside their personal ambitions, and with apparent cheerfulness withdrew for the sake of party harmony. This is what elected Mr. Bard. But now comes the *Examiner* basely insinuating that the sum of one hundred thousand dollars had been expended by the sugar trust to secure the election of Mr. Bard. It is a lie: a willful and deliberate lie, intended to blacken a name unsullied and a reputation that is spotless. Doubtless the lie has traveled eastward to be heralded by the *Journal* in New York, and so to be copied and repeated by other Democratic journals, ignorant of the truth. This may be journalism, it may be good Democratic politics, but we doubt it, and doubt it strongly.

The sending of the senatorship south must end the senatorial ambitions of Governor Gage, if, as it is reported, he cherishes any such ambition. The South was entitled to the senatorship, and despite all the trickery and cunning employed to defeat that end the prize has been unexpectedly secured to it. Setting aside the motives that impelled Mr. Gage to convene the Legislature in extra session, the happy outcome of the senatorial question has had a most salutary effect upon his party. A grave and threatening issue has been solved—and solved so advantageously that even the *Wave*, which has said some "severe things" of the Governor, is inclined to congratulate him upon his course in convening the Legislature. Another campaign is close upon us. Internal party differences must be healed. Still one thing is manifest: there must be a retirement of some party leaders.

The general situation is very much as it was at Sacramento. A new man or a new set of men are needed to lead. Party antagonisms must not be carried over into the coming campaign. If the retirement referred to does not take place naturally, peacefully and voluntarily, then it should be brought about forcibly. The attitude of the best Republicans should be that of the Irishman who notified the participants of a quarrelsome assemblage, that "he would maintain peace and order if he had to lick every man at the meeting."

CHARLES M. SCHWAB, president of the Carnegie Steel Company, Limited, recently expressed to the representative of an eastern magazine his disbelief in technical education for men in his line of business. Briefly stated, his opinion is that trade itself is a school and that it is more important to master the practice at the outset than to become versed in the theory. Of forty heads of departments under Mr. Schwab, only three are from technical schools; the rest have come up from the ranks like himself. Hence he concludes that the time spent in education keeps a young man out of the active struggle too long, in an age when so much depends on beginning early.

These remarks of the great steel maker open the way for an interesting discussion on the value of technical education. Certainly three out of forty is a very small proportion for the technical schools to show, especially since the lower ranks at the Carnegie Company are crowded with graduates of such schools, anxious to put into practical use their technical training. On the other hand, other lines of employment and other professions do not show the same results at all. Taking the law for an example, in this day of the world few who are at the top of the legal profession are of the old sort of lawyer who studied law nights as a hardware clerk. The higher in the profession one goes the more thorough has been the preparation. In this business, surely, it is proved that an early plunge into life does not pay. Some other consideration must, doubtless does, enter into the relations of technical graduates to the trades. The writer can venture to select some of these. In the first place, all colleges and schools of higher instruction are softeners of customs and manners. After four years at a school that is more or less fashionable, it is hard for a young man to accustom himself to overalls and dirty work—conditions which do not move the lad who was apprenticed to it as a boy. Another reason is that the technical schools, being still comparatively new, are not yet teaching the useful arts in the same practical manner in which a university teaches law or medicine. And it may be urged in favor of the technical schools that they are comparatively young and that, in the youth of such men as control the Carnegie works today, the schools were not offering courses in practical work. The decision for and against cannot be settled until the present generation is grown up and in charge of great industries in its turn.

Automobiles vs. Street Railways.

TIME and the progress of invention is destined to solve one phase of the question of municipal ownership in a most unexpected manner. The future of street railways may lie in the direction of municipal ownership, but if it comes to that the deal will be promoted by the owners of street railways, who will take advantage of the popular cry to work off upon this municipality something that promises to be obsolete within the lives of men now living. The omnibus constituted first means of transportation within thickly settled communities. Streets and highways under government care were not always smooth—indeed not always passable. The comfort of passengers, the economy of operation, led to the construction of iron railways along which the omnibus might be hauled. The primitive street car was but little more than a "bus" on wheels. The ease and comfort of the rail highway beside the rattling, rocking, rolling "bus" soon drove that primitive conveyance out of use. The plodding horse and mule have been supplanted by the electric motor and cable rope, but this car is still the "bus" of old. Iron rails were made necessary because of bad highways. In these days of asphaltum and bituminous rock they are no longer a necessity. With the progress of the automobile—and the everyday citizen has no conception of the progress that has been made with this new motor-vehicle—the ordinary street car as we know it, with iron rails laid along the highway, will disappear and become obsolete. We will, with smooth highways, go back to the omnibus of old, but propelled by electricity and gasoline. Passengers will be landed at the curb, exclusive franchises will disappear, "bus" lines will spring up, and the citizen will be offered any one of a dozen lines out and along the principal streets of large cities. We will look back with something of contempt upon the methods now in vogue. The more you study them the more primitive they seem. Cobble stones, plank roads and basalt blocks alone make street railways possible and necessary. Smooth streets and the automobile will solve the question of municipal ownership of street railways, unless, as we have said, the railway owners themselves shrewdly work off their properties upon the municipalities.

FEDERAL courts are construing the law of copyright in its application to photographs much nearer the original meaning than has formerly been the case. The first intention of this law was to enable a person photographed to retain control of the negative and to prevent unauthorized use of it in publications, etc. The law provides that for every unauthorized reproduction the offender is liable to the injured party in the sum of one dollar. It will be readily seen that this rate is ruinous to a newspaper of large circulation. Photographers who owned the copyright on certain photographs would find half-tone reproductions of them in current newspapers—since it is often impossible to tell whether or no a photograph is copyrighted—and sue them for a sum equal to one dollar for every unit of circulation. Such cases grew frequent, the photographers winning in almost every instance.

The first break in the system occurred last month, when the Supreme Court in the case of *Bolles* vs. *Outing*, ruled that the plaintiff could collect damages for a per capita rate only on the copies found and seized at the time the writ was issued, not for papers already placed in circulation. This, of course, reduced the enormous damages which could formerly be collected in such a case.

Just before that, a case tried in Denver, Colo., established legally that a photograph of natural scenery cannot be copyrighted, even when the photographer has colored the print. A still later decision, rendered in New York, rules that no photographs can be copyrighted unless they are made with a view to art—unless they are an attempt at artistic work. Just what constitutes artistic work, the decision does not define; that will probably be left to intelligent juries.

EXECUTING BANDITS IN NEGROS.

PHOTOS BY J. L. DARMES.

NEGROS ISLAND AND ITS BANDITS.

THE Spanish of the Philippines have a proverb about the Island of Negros. Freely translated, it runs about like this:

"Six continents and many isles
Of nothing, God made all those;
Then of selected, hand-picked stuff,
The good Lord God made Negros."

In fact, Negros Island is the garden-spot of the Philippines, and the region in all the group which will best pay for American cultivation. Luzon is rich and fertile, but it is thickly populated and pretty well under cultivation and has a climate which makes trouble for Caucasians. Negros, on the other hand, is sparsely settled and mainly wild, while the climate is superior to that of any other region about the Indian Ocean. The wild state of the country is due to the bandits who inhabit the upper mountains. The Spanish never conquered them, so from time immemorial they have kept the interior absolutely wild and made farming on the coast a dangerous venture. As soon as an agricultural community became prosperous, they would sweep down on it, destroying cane and rice fields, murdering the defenders of the ranches, and driving off their flocks into the hills. The Spanish soldiery usually arrived at the scene of these raids after the robbers had safely escaped, and joined pursuit as a mere formality. In a year's occupation, the Americans have done more to check these raids than did the Spaniards in three centuries of control.

In the matter of health, the experience of the Sixth Infantry, who have occupied the island since the Californians returned, is a case in point. They have "hiked" all over the island, until every man in the command is sore. They have chased bandits day after day through a jungle so dense that native guides have had to cut the way. They have bivouacked in mud and rain, tempting fever had there been any to tempt. Yet they are one of the healthiest commands in the service. They are reported at Manila as strong and robust and actually growing fat on native delicacies and captured bandit beef. The experience of the First California is to the same effect. They had a hard time, along with the rest, in the spring campaign around Manila. Then they were sent to Negros for a few months, and came back the heartiest, healthiest lot of volunteers who left the islands for home. Yet their life at Negros had not been restful; they did their share of bandit-chasing. An officer of the Sixth wrote to me awhile ago that he would be willing to wager that nowhere in the United States could a command undergo the hardships which his regiment has seen and have so small a percentage of sick and disabled. It rains heavily as in all tropic lands, but the rain brings no fever.

Geologically, the island is of volcanic formation. A strip of lowland around the coast is under partial cultivation and contains all the settled towns. Beyond this, rise foothills, fertile beyond description, with plantations dotted here and there. Above that, the mountains, thick with valuable timber, culminating in the active though orderly volcano of Canlaon. The range of which this is the summit is the backbone of the island, and is inhabited only by the bandits. Rumors of deposits of gold, silver and coal come fast from this region, but no one knows for certain or ever will know until Uncle Sam finishes the cleaning-out process. Of the treasures hidden in the soil, more can be said. Scratch the earth with a stick, and it blossoms. The crops of rice and cane secured by Spanish planters with comparatively primitive means, are remarkable. Were it placed as near the United States as Porto Rico, it would be a market-garden beyond compare. As it is, the absence of a suitable market limits the demand for everything but the two easily-handled staples—rice and sugar. Others will follow, for it has been said that Negros will grow anything except a mortgage.

GOING TO MARKET IN NEGROS.

As for the insurrection, there isn't any, and never was, any more than there was a civil war in Missouri when the Jesse James gang was running wild. It is simply a matter of the Papiecio robber bands I mentioned before. From time immemorial they have terrorized the planters, levying tribute in money and cattle when it is not paid. As I also said before, the Spaniards lived on easy terms with this system, while the turbulent Americans went in to suppress it. Then Aguinaldo sent down a few Tagalos of his own stripe to persuade these lewd savages of their opportunity. They were not asked to rise in defense of Tagalo liberty; they would not have understood. The emissaries simply told them that the Americans had troubles on hand in other parts of the archipelago, and that there was a good chance for plunder. Most of the agents joined the bandits, and kept things interesting. The Americans, in squads of ten or a dozen, followed up each of these raids by a pursuit into the hills. Sometimes the robbers escaped them, sometimes whole bands of them were wiped out. More than once, a corporal's guard was rushed by a company of naked bolo men and escaped death only by the superiority of their weapons. The policy adopted was one of extermination, root and branch. Barbarous as it seems, this is the only way of dealing with these people. For generations, they have followed the trade until it is their only conceivable mode of life. The rifle and lynch law must deal with them.

There is an interesting prisoner held by the Sixth Infantry just now. He is a chief of these Papiecios and was caught red-handed in a raid on a hacienda. With his feet in stocks, he sits under the guard of an American regular and curses him in choice Spanish. He has been plying his trade for ten years. The Spanish criminal records of the islands devote about fifty pages to his career. The murder of a ten-year-old girl is not the worst of his deeds. Now the point comes in this: when captured, this cut-throat carried a gold-mounted sword and major's commission from Mr. Aguinaldo, the Washington of the East. Just what will be done with him eventually is not known, but if he were turned over to the soldiers or to the townspeople he would not last long.

Negros does not want American laborers. Native day labor of the best quality costs fifty cents, Mexican. Steady work brings $1.50 per week. A good cook comes for $6.00 a month; skilled mechanics, as native skill goes, can be had inside of $1.00 a day. Japanese and Chinese clerks come for next to nothing at all. But there is room for Americans, nevertheless. Overseers are in great demand and, just now, guards for the fields against the bandits. The Spanish are too easy and forceless to make good superintendents. An American with force and "go," who can act decisively and quell riots with his own hard fists, is the man for the place. Discharged regulars have all the work they can do acting as guards at high prices. When a bandit heaves in sight of an Anglo-Saxon gentleman armed with a Krag in guard of a plantation, he takes himself elsewhere, and the Spaniards and the peaceful natives put a childlike faith in the prowess of these guards. Above all, men with small capital and some experience in tropical farming have a splendid opening. The bandit region is being pushed further and further back into the hills, and great areas of rich, virgin soil have thus become open for the planter. It is a great opportunity.

Above and beyond that, Negros is a wide field for American manufactured products. They want our goods, in which they have a firm faith. Plows, agricultural implements, nails, hardware, boilers and machinery for the sugar factories, cotton goods, all these and many others would sell like the proverbial hot cakes. All that is needed is a few enterprising commercial travelers.

NEW YORK'S UNDERGROUND RAILWAY.

YOU have all heard of the Irishman who won the sewer contract, or the garbage contract, or the pipe contract, and moved his family up-town on the proceeds. Mr. Dooley, if no one else, has made him famous. The Irish are a nation of politicians and of contractors. Now, an Irishman has broken all records for contracts. John B. M'Donald, of New York, a Celt and a Tammany man, has just closed the biggest contract ever undertaken. He has agreed to build the new underground railway which is to furnish rapid transit to Greater New York for $35,000,000. He binds himself to complete the work in four and a half years. Moreover, the terms of his agreement are such that the work will not cost the city one cent, while at the end of fifty years the municipality is to own the road. He makes the agreement on his own behalf; he has no partners.

The new road, with branches and all, will be twenty miles long. The main trunk line runs from a point in front of City Hall and will extend to Harlem. There will be two systems, one of local trains, making frequent stops at way stations, the other of through express trains, covering the distance between the two localities in fifteen minutes. City business men who reside in Harlem may go home to luncheon when the road is completed, making the trip in an hour. Between the extreme termini at Bronx Park and City Hall the schedule time will be twenty-six minutes, the express trains running at from thirty to forty miles an hour with several stops. The whole system will be operated by electricity on the third-rail plan. Possibly, some new appliance for increasing the speed of electric trains may be invented before the road is completed. In that case, the running-time will be reduced. The twenty-six minute schedule is calculated on present conditions.

The financial basis of the contract is peculiar. Mr. M'Donald agrees to build the road for a sum of $35,000,000. He deposits with the city treasury a sum of $1,000,000 as a guarantee and a bond for $5,000,000 to insure faithful performance of his work. From time to time as sections are finished, bonds bearing interest at 3½ per cent. will be placed on sale to cover the proportionate cost of these sections. M'Donald is to pay the interest on these bonds, adding thereto one per cent. to be applied as a sinking fund for their eventual payment. When the work is done, he will have the right to the use of the road, leasing or operating it as he desires, for the term of fifty years. By that time, the accumulations of the sinking fund will have been sufficient to pay off all the bonded indebtedness, and the road will revert to the city. Theoretically, the city does not pay one cent for the road. Practically, of course, the inhabitants of the city do pay for it, since the sum comes out of the pockets of those who use the line. Nevertheless, this a more enlightened method than the issuance of unlimited franchises to private corporations, and is in line with the policy of the European cities beside which our cities are as infants in the science of municipal control.

Within thirty days, work will be started, the Mayor of New York turning the first shovelful of earth. Workmen will then begin the excavation at forty points from City Hall to Harlem. The work will be pushed forward as rapidly as is consistent with the exacting specifications furnished by William Barclay Parsons, the engineer employed by the Board of Rapid Transit Railroad Commissioners. Mr. M'Donald has stated that he will employ an army of ten thousand men, sub-contractors and the laborers under them. So far as possible, the work will be done without disturbing traffic. Openings, similar to those made for laying pipes, will be sunk in the streets. They will be covered with planking during the day and while the delving is going on. At night, the planking on one side of the street will be removed and derricks with long lines of hanging buckets will carry away the earth and rocks. Blasting will also be carried on at night. The mountain of surplus earth thus removed will not be Mr. M'Donald's smallest source of revenue in connection with this work. It will probably be used for the reclamation of waste lands along the Jersey shore.

From the city terminus over the first mile or two of the way, the course is through sand and loose dirt, and the excavation is comparatively simple. There will be some extra outlay here for bracing to prevent the tunnel from taking the bottom out of New York, but even this will be comparatively simple. The roof in this section will be of steel, square, not arched as is the case with most tunnels, and supported by steel pillars braced between the quadruple tracks. There are no exceptionally high or heavy buildings in this region, so that there will be little trouble. On the other hand, the rest of the way must be cut out of solid rock. While this is slower and more costly, it also obviates the necessity of heavy bracing, as there is no danger of buildings being disturbed. The rock on which they stand makes a foundation no tunneling can disturb. Twice the course will emerge from the tunnel and cross sunken portions of the city on enclosed viaducts, and once it will sink by a gradual grade to go under the Harlem river. This portion will be lined throughout with tight steel cylinders, so that it is really a great pipe, water-tight.

A disturbing factor which the layman would not be disposed to consider is the interference of the road with water-mains, sewers and underground telephone lines along the way. These have to be reckoned with, and in doing so the contractor must spend sums which go far into the millions. In certain business districts, the underground area is a network of crossing pipes. These have to be sunk or lifted above or below the line of the road, and that without disturbing their normal action. In some places, old sewer systems will be replaced by new ones as the cheapest way out of the difficulty; in others, new pavements will have to be laid. All this goes in the cost, and must be done without expense to the city or to the companies owning the mains.

For the way trains, there will be fifty stations, beginning on the level of the street and going down to the roadbed by a wide stairway, faced with enameled brick and lighted by electricity. At the terminal stations, special galleries will lead to the tracks of the through trains. At each of these stations, except those crossing the boulevard, the course must be widened to admit of waiting-rooms and galleries. This, also, is a big item of expense.

John B. M'Donald, the contractor who takes up this gigantic task, is a native of Cork, Ireland, and is about in his father's business, for the latter, in his time, did much street work for the city of New York. M'Donald the younger came to this country as a child and was educated in the common schools. He went into the business early, and has been concerned with big schemes all his life. In 1880 he completed a large harbor contract for San Francisco. He built a long tunnel in Baltimore for the Baltimore & Ohio, has constructed many miles of railroad, and was the chief constructor of the nine-mile tunnel under Lake Michigan of the Northwestern Elevated of Chicago. More recently, he has been engaged in excavating the Jerome Park reservoir in New York, a $7,000,000 job. He is said to be worth upward of $10,000,000. Although not exactly a politician, he stands close to Tammany and is a staunch friend of Richard Croker. Just how much this had to do with the awarding of the contract, it is hard to say, but it will make Tammany responsible, in a sense, for the whole deal. If the system by which it is financiered proves faulty or if M'Donald fails to keep the terms of his contract, the Wigwam will be held to account.

This is not to be New York's only venture in underground railways. If all goes well, the contract for such a line between Brooklyn and Manhattan under East River will be let inside of two years. SPENCER MASTERS.

Although the name "boycott" came into existence only twenty years ago, the institution is an old one. The first instance is recorded in 1327, when the citizens of Canterbury, England, having a quarrel with the monks of Christ's Church, declared in mass-meeting that "no one, under penalties to be imposed by the city, should inhabit the prior's houses, that no one should buy, sell or exchange drinks or victuals with the monastery, under similar penalties."

THINGS & PEOPLE

The Old Journalism in San Francisco.

HOW very different the journalistic field in San Francisco is from what it was a decade ago. The celebrities who were then being starred in the dailies have all either passed over the divide, or are glowing in other spheres. In the late eighties Harry Bigelow was leader in the newspaper Bohemia, and with him were Arthur McEwen, Eddie Morphy, Will Hart, H. R. Haxton, Ed. Hamilton, and a score of lesser note. Newspaper headquarters were then on lower Montgomery street, the *Call*, *Examiner*, *Bulletin* and *Post* being clustered in the region between Sacramento, Clay and Sansome streets. Every night between 7 and 8:30 at the adjoining rotisseries one found the various groups dining with such luxury as their exchequer or their credit permitted. The Frenchman's on Merchant street, just opposite the Clay street market, was the favorite gathering place for the wits. A stout, dark-browed Frenchman was its host and familiar spirit and alas, he suffered in pocket by a too keen appreciation of the brilliant spirits who flocked nightly to partake of his provender. His specialty was duck, and he served the delectable canvas-back and the juicy sprig cheaper than anyone in town. Soup, fish and a sprig duck, with salad and cheese and fruit, cost 75 cents. The fine art of cooking the birds he certainly had and for his friends he always superintended the process. There was a round table at which Bigelow and his crowd invariably sat. The chairs were squeezed around it as tightly as possible and the conversation was not only loud, but general. The gossip of the editorial rooms, which forms so large a share of journalistic talk, was retailed there with great gusto, but in addition, one heard all the inside comment on the politicians and men of affairs who happened at the time to be prominent, delivered with that indescribable frankness characteristic of that disillusionized guild. Beside the newspaper crowd, the artists from their Latin quarter studios came there. Emil Carlsen, Joullin, Theodore Wores, when he was in San Francisco, Chas. Rollo Peters, Willis Polk and many more were to be found there at dinner. Sometimes Joaquin Miller stamped in and was gleefully greeted by Bigelow, who invariably did the honors for such celebrities as happened to appear on the scene. He would rush forward, clasp the visitor by the hand or round the neck and greet him as though he were his dearest friend just back from South Africa or Samoa, and then it was "Sit down with us, old fellow, and have a duck."

* * *

At intervals there were field nights. On one occasion I remember a big gathering over which Bigelow gleefully presided. Ambrose Bierce was there that night, and Arthur McEwen; also Will Hart, recently returned from Samoa; H. R. Haxton, coolly appraising the gathering; Emil Carlsen, Morphy, Joe Ward, city editor of the *Examiner*; Patsy Brady, just arrived from New York and a great success with a string of stories which were never added to, and snatches of gossip about celebrities with whom he pretended to have been on terms of intimacy. Half a dozen others, less notable, were of the crowd and the talk was excellent, dominated, of course, by McEwen, whose best stunt was a brilliant monologue irridescent with verbal brilliants. Morphy had a knack of interrupting at intervals with dry witticisms delivered in an inimitable brogue for which McEwen never forgave him. Bierce was always a sympathetic listner, though he would occasionally interpose a disclaimer or an objection in a mild kindly tone, so very different is his personality from that of the bitter and ironical Prattler. Every one had a duck that night and Bigelow insisted on providing a higher grade of claret than was ordinarily dispensed at a 75 cent meal. The session was protracted well into evening and it was told with great gusto next day by what expedients several men had managed to cover assignments that they had neglected. Nothing delighted Bigelow so much as escorting some visiting Englishman or Frenchman to these gatherings, and he never failed to have the patter of Picadilly or the gossip of Paris to exchange with them. It was a wonderful memory that of Pete's—it grasped the externals of an infinity of subjects. He never forgot a face or a name and his personal charm of manner enabled him to get news that no other man in town could touch. He fell a victim to the very facility and attractiveness of his character and his sad degeneration put an end to Bohemian days in San Francisco. It is a new generation that occupy the editorial rooms of the dailies—thus far it has developed no great writers—none at least who focus public attention as their predecessors did.

***

The Carnot Debate.

FOR the fifth successive time the Carnot debate has been won by the University of California from her old opponents of Stanford. Willsie J. Martin, who gains the right to the coveted medal this year, presented one of the best speeches ever delivered in an intercollegiate debate on the Pacific Coast. It was a forceful, logical and eloquent address, and well deserved the honor. In fact, the whole contest was on a high standard, and showed, in comparison with those of former years, a decided advance in college debating. The speeches of Marrack and Springer of Stanford would have taken the medal in any of the earlier years. The decision was placed where it deserved to be, a thing which has not always happened in previous intercollegiate debates, but the losing side has nothing to be ashamed of.

* * *

Listening to the young speakers last Friday night, I was reminded that oratory, or at least that the William J. Bryan sort of oratory which depends upon thrill and "spell-binding," is passing in our colleges, and, since one usually applies in life what he learns in college, it is passing in the world. I suppose that it was the rise of Daniel Webster and the impetus it gave to spell-binding in his *Alma Mater*, Dartmouth, which originated the college oratory I used to hear in the days of my youth—which means pretty well before the war. In those days, the Sophomoric style of oratory involved spouting as though the speaker were commanding the applause of listening senates. Contests and debates were won by frantic appeals to liberty and justice and the spirit of free institutions. The direct style of these six young men, who spoke easily and fluently and appealed to common sense and reason and not to the feelings, would have stood no chance at all. Time has changed all that, and the change is a reasonable one. In only one section of this country does the spell-binder idea still linger; in the Middle West, the home of Philistinism and William Jennings Bryan, they still go in for rolling periods and stirring appeals. This exception only proves the rule.

***

The Manuense Affair.

OF COURSE the *Examiner-Journal* has orders to "roast" the administration whenever opportunity presents; that goes without saying. Also, the Monarch of the Dailies has long waited for a chance at the Quartermaster's Department of the Pacific Station. The first opportunity has just arrived; there was trouble of some sort on the last round trip of the *Manuense*, and the *Examiner* seized the occasion to scourge Shafter, Secretary Root, the Transport Service and everything else in sight. Now, personally, I am not so strong an admirer of Shafter's that I squander my monthly stipend sending him flowers, but I believe in giving the devil his due. And I am a strong admirer of the men who have directed the Quartermaster's Department and the Army Transport Service during these trying times. They have moved a large army over the longest transport route in the world under the most adverse circumstances, and this slip, if it can be laid at their doors, is the first serious mistake they have made. But an impartial study of the affair ought to convince anyone that they are no more to blame than any other employers who hire, upon good recommendations, an employe who proves incompetent. The *Manuense* left this port after being inspected and pronounced seaworthy by officials of the Treasury Department. Even if she was not fit to sail, the responsibility does not lie with the army authorities, who have been so careful about this matter that they have obtained permission to have the transports inspected and overhauled every trip instead of once a year, as is required by law. If, therefore, she left port crippled, the Treasury people are to blame. It is charged that she was undermanned; this also is untrue. The records show that she carried seventeen men over and above the number required by law. After the ship was on the high seas, the chief engineer proved himself drunken and incompetent; with him and with the volunteer officers who plied him with liquor, rests the blame. This man holds a regular chief engineer's certificate from the English authorities, and came well recommended by the vessel's owners. There was absolutely no way of foreseeing that he would conduct himself as he did. Employes fail at times to live up to the expectations of their employers; this was one of the times. This and this alone is the basis of the *Manuense* howl.

***

Fusion is in Confusion.

IN Seattle, the forces fusion are split up. Unless differences are patched before the appointed day the Republicans must score a complete victory. An entire city ticket is to be elected in March. The number and variety of candidates for nomination is beyond all precedent and so clamorous are they that the fusionists will never be able to agree on one ticket. The Democratic convention was first announced for February 7th. Thereupon the Citizens' League decided to meet on the night of February 6th, in order to get a ticket in the field before the Democrats could act. Now the Populist City Central Committee has advised its followers to attend the League convention and has issued instructions that their presence will not interfere with the faithful taking part in the Populist convention set for February 12. The plan of the Democrats was to nominate their candidates and then confer with the Silver Republicans and the Populists. The formation of the Citizens' League, however, has upset this. Members of all the reform parties have joined this organization, and, if it does not accomplish its ends it will probably succeed in defeating any ticket that may be run against the regular Republican nominees. The object of the League is to kill the franchise that the Council recently reported favorably on for the new Consolidated Street Car Railway Company. This concern owns almost the entire street car system of Seattle and the franchise asked will give it a thirty-six years' lease of life. The League also demands municipal ownership of lighting and other plants. Present indications seem to portend the indorsement by Populists of the citizens' ticket; subsequently an effort to bring Democrats and Silver Republicans into line. If this fails there will probably be three tickets in the field: Regular Republican, Citizens, Populists and Democrats and Silver Republicans. A peculiar feature of the campaign is that a number of broken down politicians from the East are pushing themselves to the front in the hope of obtaining office. It is to be hoped they will be turned down by whatever party they may affiliate with.

The Passing of Dawson.

DAWSON, the golden, Dawson, the mushroom city of great and sudden wealth, is passed. From a mining town, whose name was synonymous with wealth, to a deserted village—this change is in process of accomplishment as a result of the Cape Nome rush. The adventurers and gold-seekers who thronged the Canadian town in the early days are packing up their belongings and their wealth for the overland trail to Nome. Even in this, the dead of winter, sleds and dog-teams leave Dawson hourly, carrying some of these hardy souls on their adventures. The theatres, dance-halls and gambling-houses of the metropolis are being taken apart for transportation to the new fields; in six months, all the large buildings spared by the recent fire will be set up at Nome. The breaking-up of the Yukon ice will be the signal for a general exit of those who have not already dared the dangerous winter journey. These conditions are causing great anxiety to the owners of Dawson claims. While there is now an overstock of labor in the town, the first rush will take away with the surplus most of the miners working as employes in the claims of others. The diggings are growing poorer, and have degenerated to the point where they cannot be worked with profit at any advance on present wages, so the owners can offer miners no inducement to stay. It would seem as though mining would be suspended pending the return of the Cape Nome surplus.

***

The Slot-Machine Craze.

THE seductive slot-machine is crowding the gambling-houses as a reducer of Seattle pocket-books. In no other town of the country have these little gatherers of inconsidered trifles so strong a hold. From the ordinary poker-machine, which returns cigars or drinks—sometimes—for value received, the mania has spread to those machines which pay money to the winner. There is the "color" device, which lets out a shower of nickles into a cup when the player happens to catch the red or the yellow on the polychrome wheel, the automatic roulette machine, and, last of all, the attractive device known as "Klondike"—the Klondike in this case being for the man behind the wheel. I have a little suggestion of my own for any reformer who wishes to demonstrate the folly of trying to beat a nickle-in-the slot machine. Line up before an ordinary poker-machine with, say, ten nickles. Then make an agreement with the bar-tender that, instead of drink-checks, he is to give you two nickles for every drink you win. Play out your ten nickles, and then continue to play the nickles you win. In nine cases out of ten, you will have lost both the original investment and winnings within forty plays. I know, because I have tried it.

***

The Removal of Biggy.

SOMETHING of an *impasse* has undoubtedly been enacted by the removal of Police Commissioner W. J. Biggy. Under the charter appointive officers may be removed for cause the mayor being required to immediately notify the Board of Supervisors and furnish it with a statement of the *cause*. The question is what ground will be assigned in this instance. So far as the public is concerned Commissioner Biggy has done his duty and in refusing aid in the election of Lieutenant Esola he offended the *Examiner*, not the community. Unquestionably, public sympathy has been with him in his stand, and it will be hard to convince people that his decapitationt is due to any other reason. The result will be to make a martyr of the ex-chief—a pose which he will undoubtedly live up to. 'Twould have been better politics for Mayor Phelan to have let the commissioner alone. As one member of the Board he could hardly prove a disturber, whereas now he has been put in a position to make trouble. The majority of purists who have engaged themselves in censuring the Mayor over this police esclandre seem to forget in it all his motives and all his brilliant achievements. No man in American politics who has to campaign and conduct fights on a broad scale can quite avoid entangling alliances. Mr. Phelan is the most active, most industrious and most effective executive San Francisco has ever had, but, like other human beings, he is liable to error. Recent biographies show that even President Lincoln, who stands now for what is highest and best in American history, had, at times, to succumb to political exped ency. While I objected strenuously in the Esola affair, the final selection of Colonel Sullivan should put an end to further detraction, and while I am sorry that Mr. Biggy should have been removed, I predict that six months hence the whole business will be forgotten. It is not easy to exercise power to the best advantage, but in criticising Mr. Phelan, let us not forget his honorable victories: Mr. C. P. Huntington, than whom there is no wiser man in America, says, "The man who makes no mistakes makes nothing." I know that but one end and motive animates the mayor—the public good—and I have no hesitation in declaring this talk about him having forfeited public confidence as unmitigated buncombe.

BOSWELL, JR.

The Labor Department's annual report states that 230,000 men lost 10,000,000 working days last year on account of strikes. The strikes won in one case out of five. In the last five years 60,000,000 working days have been lost and wages amounting to $100,000,000. The capitalists lost more than the workers, in that they rob the workers of three-fourths of the wealth produced.

THE KERN COUNTY OIL FIELDS

THE J. B. TREADWELL WELL.

THE petroleum industry is opening a great period in California's history. The rocks of the Golden State have a second provided notable chapters in its story, and the later one to be provided by its bedded sandstones and blanketing shales promises an industrial romance that will be one of its leading glories.

People are not in the habit of taking a romantic view of the dark and dirty stuff that they are getting from a strange laboratory of nature, but down in the rocks it is one of nature's romances and mysteries. To the quicker fancy the theme may easily be, "The Mystery of the Anticline," or perhaps, "Hydrocarbons in Death and Life." Suppose Kipling should write, "What the Drill Said." From what millions of living things of what millions of years ago and by what wondrous art nature distilled the peculiar and complex creation, men of science are still disputatiously inquiring.

An oil field is picturesque everywhere—in canyon, desert, city streets, or the ocean surf. What petroleum is and what things are made from it and done with it is an interesting story of science and art. An oil "rush," with its peculiar pranks of human nature, with winged feet and flaming hopes and nimble wits, is a novel, and there is another novel to be read by him who can see the larger meaning underlying this petroleum industry when it is projected into the future of the life and growth and the commercial and industrial greatness of California and seen in its place in the sweeping course of a state's destiny.

California mineral oil is and will probably remain chiefly valuable as fuel, and its great significance lies in the development of a cheap fuel supply, which has been from the beginning the chief industrial need of the state. Steam coal must be imported under payment of duty and has cost about $6 a ton at tidewater,and more at interior points, such as in the San Joaquin valley, where raw materials from forest and mine, from mountain and plain, invite scores of valley towns to become flourishing hives of industry. Electric power is furnishing one solution of the problem, and now petroleum is rushing to this field with an effect that will be revolutionary.

In the great number of tests which have been made in comparison with coal, the results show that from two and one half to three and one half barrels of oil are equal to one ton of superior coal. Two barrels of some oils would be equal to one ton of a cheap steam coal. California oil is now sold at varying prices, chiefly to large consumers who effect long contracts at confidential prices, but the cost is about $1 per barrel, or a little more, varying with cost of transportation. The development of this fuel supply is thus equivalent to supplying coal at from $3 to $4 per ton. The advantage to manufacturers and the encouragement of industrial progress is evident.

One encouraging feature of the situation is that while production is increasing rapidly and promising nearly to double in the near future, the demand advances even faster and promises to keep on increasing. This very increase in supply has been an important element in increasing the demand, because during recent years large consumers were unwilling to change their steam plants when it was not certain that the supply would be adequate and permanent. The oil industry may look forward to a market that will tax its production, though it should reach 10,000,000 barrels a year, and there need be no fear that the discovery of new fields will produce an oversupply.

Probably one half of the present production of petroleum is now being consumed in San Francisco and the bay region. The total product in 1898 was about 2,250,000 barrels,and it was probably 3,000,000 barrels in 1899. The sugar refineries are the largest consumers, the Western Sugar Refinery using 35,000 barrels a month. At the Selby Smelting Works 6,000 barrels are used, the gas companies take 15,000 barrels, and powder works, potteries, and other establishments,consume varying quantities. As large as is this consumption about the bay, it could be and undoubtedly will be multiplied several times if the supply is developed. The railroad companies are the largest consumers in the state. The Santa Fe is now using oil exclusively in its engines in Southern California, and when its extension to San Francisco is completed, it will abandon coal north of Tehachepi as we l. The Southern Pacific is following the example of the Santa Fe, having equipped many of its engines in Southern California for using oil, and it will increase its consumption as fast as an advantageous supply can be secured. Both companies have developed oil fields of their own and are seeking new fields. They also buy largely, and the Sante Fe has contracted for most of the supply that may be developed in the Kern river field. The railroads of the San Joaquin valley alone provide a great additional demand. The people of the valley will dig the oil that hauls their wheat and pears to market. So extensive is the market open to the oil miner, that should another Coalinga or Los Angeles field be discovered and suddenly add a million or two barrels a year to the supply, oil prices, in this time of prosperity, would be but slightly affected, and any reduction of price would quickly stimulate additional consumption.

The demand for fuel oil will steadily increase, too, with the development and cheapening of transportation, by tank lines, tank steamers, and tank cars. The oil produced in the San Joaquin valley is practically all shipped to the bay, which stands ready to take vastly more, but with the development of the supply in the valley wiil come a growing home demand. A cheap fuel near at hand will invite the establishment and enlargement of valley industries to the building up of the property of the valley counties. There is thus, from many points of view, an unlimited market for the oil producer, and no other industry in the state can look forward to a larger and more certain period of prosperity. And every other industry has in this one an ally and a support, to the upbuilding of the state's greatness and prosperity.

California was a long time finding its o'ly riches. Seepages and other indications were numerous all through the coast region, and there was a wild oil excitement in the early sixties, but oil in paying quantities was not found and production did not become important until ten years ago, when it was about 300,000 barrels a year. It grew steadily as the Southern California fields developed, until it exceeded 2,000,000 barrels; but there was no oil boom until about a year ago, when returning prosperity brought greater demand and rising prices, and when remarkable gushing wells flowing 1,000 barrels a day were discovered a few miles from Coalinga. This strike and the new demand for oil at better prices started prospecting for oil, and soon the movement, fed by the luck of Messrs. Canfield and Chanslor in suddenly becoming millionaires, and the increasing talk about oil on every hand, had the familiar but no less strange psychological effect on the public mind which resulted in an "excitement," with its storm center in the San Joaquin valley. The "rush" is still on and is largely made up of fools and rascals, wise and honest men, and enterprise. Hundreds of wells are being drilled in Fresno, Tulare, and Kern counties along the great belt where the geological formation warrants prospecting, and in several districts developments have already demonstrated the existence of oil in paying quantities,and of a legitimate basis for the industry. There has been much "wildcatting," but even this increases prospecting and hastens real development.

In the Coalinga field in western Fresno county, where the production is about 100,000 barrels a month, new wells are being bored with every prospect of increasing the yield of the known productive area and of extending the field. This oil is the lightest and most valuable found in the state. Most of it goes to the bay in tank cars.

Next to this field the one most favorably talked about is the Kern river district, a short distance north of Bakersfield, where several wells from 200 to 600 feet deep have developed yields of a very heavy but valuable oil. Reports of the yields of wells here are very conflicting, but the Kern river district will unquestionably be a great one, and as the oil-yielding strata are not steeply tilted, it is likely to cover a large area. The McKittrick region in the foothills across the valley west of Bakersfield will also be an important district.

It is likely that but a beginning has been made in oil discovery in this valley and that the branch railroads and tank lines already resulting from the progress made will be multiplied. Developments have been limited to the edges of the valley, where the unaltered sandstones and shales lie nearer the surface and in steeper folds, but there are vast possibilities in these strata where they underlie the whole valley at great depths. There are few geological data to go on as yet, but it remains a possibility that valuable stores of natural gas and oil are collected in buried domes of these deep-lying beds, and will be tapped some day. Then men will look again to the great stores of iron and base ores just up in the mountains, and in many ways enterprise will rush to greet nature's fuel where it comes to the light.

There is much in this field to learn and to tell, and the joint future of this industry, valley, and state is a large one. The oil business is today adding a new feeling of life and enterprise to those valley counties and quickening courage and effort. The oil fields are in arid plains and hills which await water and its blessing of green things and blooms. The oil industry needs water and so water wells and pipe lines are being developed, and when the oil is gone the water will remain and be in some degree another indirect benefit from the oil boom.

J. O. DENNY.

GEOLOGICAL FORMATION.

KERN COUNTY is one of Nature's great laboratories with the roof off, and the sections in which are found the oil-bearing sands bring the observer closely in range with the processes attending the wedding of hydrogen and carbon as typified in petroleum, present in large areas.

Agassiz once said to me that California seemed like a fragment from another world which had been hung like a pendant on the western coast of America. Certainly no section of this continent offers greater opportunities for the study of stratigraphical geology than we find along the Pacific coast, and Kern county, with her diversified mineralogical resources gives us a wonderful gamut in the metallurgical scale.

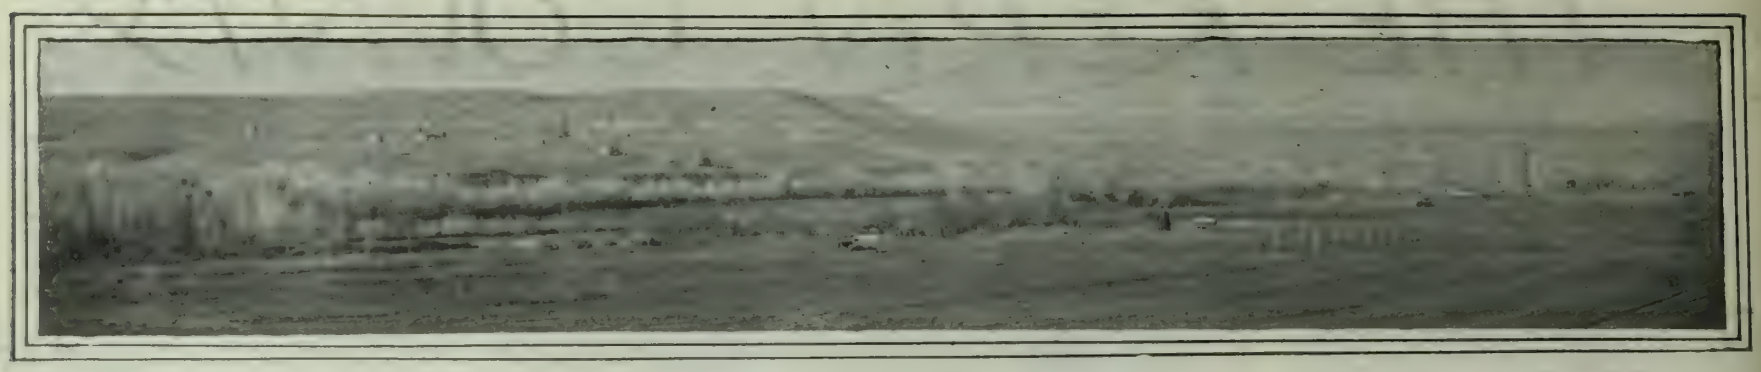
A lifetime could be spent in the study of the fossils to be found in the hills and vales of Kern county, and it is rare indeed, that one will find such immense deposits of sharks' teeth, both of the *Carcharodon augustidens, Lianna elegans,* and even of the immense *Carcharodon megalodon.* The infinite seas of prehistoric time, in their majestic drift and flow, gave to Kern county the prolific deposits of gypsum, and the diatoms laid their skeletons as the fundamental base of the great beds of infusorial earth. The intermediate hills shorn of much of their alluvium in the pathways of resistless glaciers bring us nearer to the measures of unaltered sandstone; and blue-clay hills, by their curious physiological presentiment, attract even the attention and excite the interest of the most casual observer, covered as they are in many cases with selenite, carbonate of lime, and anhydrite.

In my investigations along the oil belts in this county, I have frequently found those brilliant masses of coloring, staining the earth's surface, which have been forced up by gas, after being released by the action of oil in the lower chambers of the geological workshop, and which can always be accepted as typical of oil and gas territory. In common with other oil sections in this state the strata in certain parts of Kern county have been uplifted and cover in degrees of the dips of the anticlinals nearly the entire arc. The district known as the Kern River district, lying almost within the limits of the city of Bakersfield, is in many respects unique among the oil sections of California. In a report submitted some months ago I called attention to the fact that the famous Township 28–28 was a table which had been subjected to but slight disturbance, and that all the conditions were to be met with here for the making of a most prolific oil field. While there are many contiguous sections that have been disturbed, it would seem that some great series of cushions intervened to break and soften the force of seismic and volcanic strains, and left this locality intact. North of this township there are varying conditions, but sufficient indices to trace the oil belt between fairly certain lines for many miles. This belt zigzags its way according to local conditions from NW to SE and NE to SW, along the western line of the San Joaquin valley.

There is a medial oil belt extending through Kern county on northerly lines, which crosses the western range in the vicinity of the Kreyenhagen district in the northerly abutting county, which deserves attention as the oil movement grows. Along the western boundaries of the county we find another oil belt, with great anticlinals running in from San Luis Obispo county. In this locality much of the drilling has been done near the point of atmospheric contact—where the oil-bearing sands have been uncovered by the erosion of the southeasterly dips of the anticlinals. A number of wells have recently been sunk farther away from these exposures, and larger producing wells and oil of a lighter specific gravity, by reason of the presence of more hydrogen, will be the result of this line of development here. I am satisfied that there are locations along the oil belts in Kern county which, when developed, will yield 1000-barrel wells, for the Oil City belt continues down into this county.

The story of the growth of the oil industry in Kern county is being optimistically told by the drill, day by day, and the contrast today presented by the Kern River field with its forest of derricks, with the vision in my mind of the one solitary rig standing on the occasion of my first visit there, is a striking one. Where experience and judgment have guided the development, in the matter of land selections and well locations, producing wells have been found. Where blind guesswork and overweening trust to the hazards of accident have been the ruling factors, the results have been costly to the tyros; but taking the operations as a whole, the average of producing wells to the number drilled is much greater than in the Pennsylvania oil fields, where, too, the line of experience has been more marked. Kern county will yet make us many new millionaires. It has already added to the wealth of California.

N. M. OGDEN.



WHERE OIL WAS DISCOVERED IN KERN COUNTY.

THE OIL FIELDS.

A TRIP THROUGH THE KERN RIVER AND McKITTRICK REGIONS.

THERE is a down-East Yankee saying to the effect that "seeing is believing." I had heard reports and rumors of the oil fields of the Kern River District, most of them conflicting I determined to see for myself. Accordingly, on the first of January, this year, I started on a pilgrimage of inquiry.

At the breakfast table of the hotel in Bakersfield, I had the good fortune to meet an old friend, who has an extensive acquaintance with oil men. Through him, I was introduced to some of the prominent operators in the city. One of them, Mr. W. F. Bryant, a well-drilling contractor, was kind enough to include me in his day's journey of inspection. It was my first sight of active drilling in the district. We stopped on the way to visit three or four derricks in operation, making our final halt on Sec. 8–28–28, where we witnessed the drilling of a well for the Petroleum Center Oil Co. of San Francisco. The workmen had reached a depth of nearly eight hundred feet, and were in the act of screwing on another section of casing. We watched them sink it to the level of the derrick floor. I was impressed, here as elsewhere, with the interest the men take in the work. They were as eager and energetic as though they themselves were the owners. Mr. Bryant informed me that well-drilling is a trade which, owing to the large property interests involved, amounts almost to a profession and cannot be trusted to careless workmen. The men work in continuous shifts of twelve hours each, and earn from six to ten dollars. Their assistants known as "tool dressers," are paid from three to four dollars. The whole force was working eagerly, pressing on toward the strike, which they all expected within a week. In fact, they have "struck it" since.

In the afternoon drive back to Bakersfield, Mr. Bryant gave me volumes of information concerning oil-drilling, a process too technical to be easily understood by a layman. If he had only known it, my interest in the talk centered not in his technical description but in his own unbounded faith in the Kern River country. He shows a reason for the faith that is in him, since he "takes his own medicine" by investing heavily in Kern County location.

The next day, I hired a rig and was off on a voyage of my own. With me, I took Mr. Aston, a local photographer. We drove to a bluff over-looking the river and selected a spot for a view. It was a clear day, without fog or haze. Along the course of the river, we could count forty derricks. The new industry has changed the whole aspect of the country, scattering what was bare, gleaning desert two years ago with a scanty, scattering of lofty derricks. Close at hand, an oil-plant is not a beautiful thing, but at that distance detail is lost, and the long pyramids produce the stately effect of ships.

That same afternoon, we visited and inspected the wel's of the San Joaquin Oil Company, in charge of John A. Bunting. The men were at work on two "holes"; both had already showed oil. The first was capped, the other was still in the hands of the drillers. Later, we went on to the famous 28–28 district, the site of the Petroleum Development Company's wells, the Means property and the Elwood well where oil was first discovered on Kern river. Four wells of this company are producers, and the Santa Fe Railroad takes the entire output. We closed that busy day by a visit to the Mack and Keith interest, known as 33 Oil Company. Mr. Mack, who is a prominent capitalist of Bakersfield, was a party to the first Kern county deal in patented oil land. The company has five producing wells. They are investing heavily in new machinery, notably a large and powerful pumping outfit. It is a close corporation and has contracts ahead for the entire production.

I had scheduled the next day for a visit to the McKittrick district, forty-eight miles away. The single train to that point is supposed to leave at five a. m. from a station a mile out of Bakersfield. An alarm clock hauled me out at four; I threw down a hasty breakfast and went outside to find the hotel bus gone. With two or three fellow-victims, I telephoned for a hack; there was none to be had; then someone brought the news that the hotel's carriage of state would return for us. It was after train-time then; two of the other left-overs started to walk, but I, with the faith of experience in way trains, stuck it out. The bus came in about dawn, and we picked up the pedestrians on the way. One of them was fished out of an irrigation ditch, into which he had stumbled in the darkness. We reached the station at six, an hour late, and waited for the train an hour at that.

That was not the end of my troubles with transportation in McKittrick. With the time-allowance, the train gave us a four-hour stay, too short a time by far to make the circle on foot. The passengers broke for the only livery stable; I, being but a slow traveler, was distanced, and lost my chance. I would have spent that day in the town but for Fred Knewing, who gave me a place in his four-seated rig, the last carriage available.

The exterior of this famous district is as barren as its interior is rich. No vegetation except a wisp of sage-brush here and there; only bare, broken desert. But all along "the break" lay black patches of oil seepage; one small canyon we crossed several times was lined with it. In some places it had formed in pools of two or three barrels.

Oil is everywhere in McKittrick. Not only does it lie open to the soil, but it is poured out around the wells in apparent wastefulness. The Kern river gusher has two great tanks, holding 1,000 barrels each, for storage, and both full to the very brim. Yet from the well to a canyon hard by a stream ten inches in diameter was running to waste. I was told by the superintendent that this was unavoidable. The pressure is so strong that it has blown away the cap several times; this stream is a sort of safety-valve. The first time old Kern objected to being confined, he sent a stream higher than the derrick straight up into the air and all but wrecked the plant. Some days, this well has flowed 1,500 barrels. Besides the two tanks in use, another and larger one is going up.

The next important attraction on our list was the California Standard Oil Co.'s well. This well is only a short distance from the depot and the company has shipped several carloads of oil to Oakland and other points. They pump about 150 barrels per day, which is all they can conveniently handle with present facilities. They own three standard rigs with which they are drilling new wells, and have the fullest equipment of any company in the field, including a seven-mile water-pipe line. Near by this site are the three producing wells of A. B. Treadwell, an oil pioneer who owned the first pumping plant installed in the district.

A hasty visit to the El Dorado property, and then the inner man became clamorous once more—for we had breakfasted early. There was no time for a visit to the company boarding-house, so we spread a box back of the derrick with the provender at hand, mostly beer and cheese, and feasted. Good appetite served to make us forget the unenticing smell of fresh oil, and we made a hearty meal. The scene impressed the photographer's artistic soul and he "snapped" us on the spot. Hardly had the last cork popped, when we heard the whistle of the train, on schedule this time, and I knew that my visit to the Kern county fields was over.

To summarize. I had seen, and I came back believing in the future of the district. Where one or two derricks stood a few months ago, there are now nearly two hundred. With my own eyes I have seen twenty producing wells along Kern river and eight in the McKittrick district, and I know from others of several more. I have found that the business men of Bakersfield, the town nearest at hand, are showing substantial faith by their large investments. Moreover, my observation of the companies forming and operating leads me to believe that there is very little "wild cat" speculation. It is an easy matter to lease good grounds near producing wells, and to get favorable terms if promise is given that drilling will begin at once. I am certain, also, that the infant business has a future beyond prophecy.

W. H. S.

KERN COUNTY COURTHOUSE.

BAKERSFIELD REALTY.

RISE IN VALUE OF KERN COUNTY PROPERTY.

ALTHOUGH Bakersfield has long enjoyed the reputation of being one of the best business towns in the state from a merchandise point of view, it has at the same time time been one of the quietest from the realty point of view. Yet, while the real estate market has been sluggish and transfers have been few and far between, prices for property have never fallen so low as in most of the other parts of the state. Bakersfield has never had a boom in real estate and has consequently not experienced the inevitable reaction which follows a fictitious inflation.

Another cause of the small number of transfers in the past has been that, while enjoying the reputation of doing a large amount of merchandise business, the citizens of Bakersfield have also been noted for their backwardness in the matter of public improvements and lack of interest in the matter of developments which would affect the appearance and subsequently the transfers of realty.

In the past eighteen months, however, there has come a mighty change over the conditions of life in Bakersfield. It is a clearly recognized fact among realty operators that the most potent influence affecting movements of property is active advance in public improvements, such as new pavements, sidewalks, grading, better lighting and better water service. Two years ago Bakersfield awoke to a realization of her position in such matters, and since that time her progress has been unparalleled. The effect has begun to be felt in a very decided manner in real estate circles. Prices during the period of torpidity which preceded held only for the reason that the very large bulk of salable property was owned by resident property owners, all of whom were well able to hold on, especially as they were placed at no expense in the way of developments. Now that extensive improvements have been begun some of these owners have begun to let go and at figures which stimulate business. It must not be inferred that a boom in the usual sense of the term has set in, but with conditions for solidity in the realty market, business is assuming that steady, healthy tone which is so encouraging to the growth of a community.

Spread over a large amount of territory as Bakersfield is, there is still much desirable property close to the business center and in the best residence part of the town that may be bought at reasonable prices. Completed dwellings, however, are hard to buy at any price, but during the past several years of the writer's experience there have never been enough good residences for sale or rent to meet the demand. Since the beginning of the present winter this condition has been accentuated, so there is a veritable need for homes. I take this great and constantly increasing demand to be one of the best indications for the future of Bakersfield, and regret that capital is so slow in meeting the needs of the town in this respect. Newcomers complain that rents are high as compared with other parts of the state, but every observant realty operator knows that high rents are a good indication of the general prosperity of the community.

To us who are familiar with the influences now at work which assure Bakersfield such a great commercial future, the importance of her citizens' rising to take advantage of the splendid opportunities so suddenly thrust upon them, is most apparent. Bakersfield is really at the crossing or junction of two great transcontinental railroads, and it is here at its first entrance to the San Joaquin valley that the wonderfully progressive influence of the Santa Fe begins to make itself felt. Here it will have its largest western shops and here there must be a great railway center. The reversal by this road of the traditional policy, "all the traffic will bear," especially on local freight, has opened the eyes of the rest of California to the great possibilities of the country surrounding Bakersfield for producing cheap foods, such as hay, grain, pork, beef, and dairy products, which are now drawn from across the mountains. Here there is an abundant area of land available for raising these staples, and there is every reason for its development.

The next great factor in Bakersfield's future, and the one which has poured more than a million of outside dollars into our laps in the last few months, is the oil industry. This has undoubtedly passed the experimental stage and no one familiar with oil matters doubts for a moment, after an inspection of what has really been done, that we have the largest and most easily worked field in the United States, if not in the world. With the army of consumers that this industry creates and the products to supply them right at our doors can there be any uncertainty about the future of Kern county and its capital?

THE LARGEST IRRIGATED FARM IN THE WORLD.

THE largest irrigated farm in the world, the greatest diversity of products in any one section of the country—these are the boasts of Kern County, California. For the first, Bakersfield and the empire of which it is the capital shows the Kern irrigation system; for the second, the farmers of the region have proved by practical test that every agricultural product which can be raised within the limits of the United States proper will thrive in some portion of Kern County. Beyond this, are the rich Randsburg gold deposits and the wealth in asphalt and petroleum which has astonished the country in the past few years.

The soil is a rich, alluvial loom, deep and fertile. Very little clearing is necessary; in the beginning, it was desert land, without trees or bushes, without rocks. When water, the one thing necessary, was brought to this land, it stood ready for the plow. Much of the other valuable land in this country has been won from rocks or forests; this wilderness alone needed but water and labor to make it blossom. Over this is a mild, healthful climate, hot in summer, but not enervating because it is a dry heat. Frosts are rare and light; the rainfall comes mostly between November and April. Happily, Kern County, like other farming sections which use a well-supplied system of irrigation, is mainly independent of the fickle skies.

As stated above, this soil supports the greatest variety of products. Wheat, barley and other cereals grow luxuriantly and the quality is unsurpassed. Over 100,000 acres of alfalfa of highest quality grow in the limits of the county. Vegetables of every variety flourish. Mostly, these are grown between fruit-trees while the latter are coming into bearing, and in many districts for years afterwards. All varieties of temperate and semi-tropical fruits and nuts flourish here, and add their quota to the total production. Stock-raising was one of the first farming ventures made in the section, and is still growing in importance; horses, mules, sheep, and especially cattle graze on the broad up-lands. More lately, and since farms began to encroach on the pasture domains, feeding and fattening Mexican and Arizona cattle for the San Francisco market has been practised with profit.

There is scarcely room here to treat of that system of irrigation by which Kern County and all that empire of which Bakersfield is the capital obtains its water supply. It is a wonder to all who inspect it, being one of the largest and most complete in the world. Kern River is the main artery of the system, and Mt. Whitney is its heart. For over a hundred miles of its course, Kern River runs through the Sierras, its two forks splitting the mountain-chain. Then it turns at right angles and empties into the valley. This gives the stream a tremendous contributing water-shed of over three thousand square miles, with natural reservoirs in the lakes and streams of the higher valleys and meadows. This is an important advantage; it means that dry years have little effect on the flow. Furthermore, these valleys will some day be dammed across for storage. No other river is so admirably placed as this; consider, it begins its course in lofty mountains and plateaux, where the supply is perpetual, and then flows its main length through a rich farming region, where it waters a land of plenty. Not only that, but Kern River is brother to the Nile in that it is rich in fertilizing material and when used for irrigation supplies plant life with those chemical constituents which are most needed. At the same time, such is the valley's surface grade that it is an impossibility for the water to run so rapidly as to carry away the surface soil.

About thirty miles along the river from the point where it leaves the foothills, is the head of the Kern River irrigation scheme. It is just below Buena Vista Lake, a natural reservoir utilized in the system. This point is high enough cover or make irrigable about 600,000 acres of land in the delta, having a gentle slope of from five to eight feet to the mile to south and west. There are twenty-seven main canals in the system, with an aggregate length of more than 300 miles. Cross and lateral ditches from this main channel come to 1,100 miles more. Neither do these figures include the arms of ditches used to convey the water to each twenty-acre lot in the system.

Besides the river itself, which makes a steep descent, the canals furnish sufficient water-power for hundreds of manufacturing industries. Already, the electricity generated for the Power Development Company from this source lights the city of Bakersfield. In the new towns of the new empire, streets will be lighted and tramways run in the same manner, and power will be left over to turn thousands of spindles. Moreover, this resource has already been linked with another, and the welding will continue in future. Cold storage plants for the keeping of meat have been instituted in several places along the line of the valley. In future, the meat raised in the luxuriant pastures of the Kern River Valley will be kept fresh for market by power generated at home. Add to this the growing oil industry, which puts a cheap and certain source of power close at hand, and it will be seen that the manufacturing possibilities of the region around Bakersfield are unlimited.

OIL MEN IN THE OFFICE OF THE SOUTHERN HOTEL, BAKERSFIELD.

THE OIL CLUB.

BAKERSFIELD has an oil club. It is true that it has no directors or standing committees or ladies' nights or posting of new members or any of the thousand and one familiar institutions of the regular and ordinary club. To join it, you only have to deposit your baggage and valuables with the clerk of the Southern Hotel and affix your signature to the register, and you are a regular member in good standing. To gain a visiting membership, you simply drop in on the parlors of the hotel in the evening and contribute your knowledge or ignorance of oil to the conversation. Just now, it may be added, regular membership is a little hard to secure, because the house is generally packed from top to bottom, and the management is contemplating an extension of facilities.

Meetings occur every evening and lap over into the daytime. Dinner over, the guests and visitors pack the office. Men of standing in the industry who have made their piles and are reaching out for more, capitalists who have come in to try their luck, speculators with a hundred good things up their sleeves, mingle on common ground. There are visitors and guests who have nothing but prospects, and there are such well-known operators as Captain C. A. Fuller of Oakland, one of the early purchasers of patented oil lands in the Kern River district, J. J. Mack of Bakersfield, C. A. Canfield, the oil king of Coalinga, who has invested $100,000 in Kern oil lands and is building a $20,000 machine-shop in Bakersfield, A. B. Butler, the Fresno vinyardist, W. E. Knowles of Samuel & Knowles, San Francisco, Attorney Maurice V. Samuels of San Francisco, P. E. Bowles, the Oakland capitalist, W. T. Sesnon, C. E. Worden, J. A. Bunting, the Berrys of Klondike fame, who are said to be making more hard coin out of oil than they ever did out of gold, and hosts of other well-known men.

Membership in this unique club is self-regulating. If you know the meaning of "scrippers," "stove-pipe casing," "oil sand," "fishing job," and the rest of the jargon of the business, you belong there; if you do not, there is no reason for your coming, unless you are an observer of human nature and are studying a very interesting class of men.

The common characteristic of all oil men is a great, Attic calm. A strike involving hundreds of thousands may have been made during the day, or a deal involving millions may have been closed; you would not suspect it from the quiet air of the assemblage that evening. Perhaps one of these big transactions is closed on the spot. The parties thereunto draw up their agreement on the hotel paper, blot it on the register, and call upon the clerk, Mr. Chaney, to witness the same. That worthy, who is interested in oil himself and would be a Rockefeller did he own all the properties whose transfer he has witnessed, will affix his signature with the reigning matter-of-fact air, and drinks conclude the ceremony. Fortunes pass from hand to hand in this unceremonious manner.

In time to come, when Bakersfield is a big city, she will have other oil clubs and exchanges, but the Southern's fame will live as the stamping ground of the pioneer oil men.

In the recent discussion as to the merits respectively and relatively, of white and brown bread, there appears to be a weighty leaning, on the part of professionals, in favor of the former. They are firm in their belief, after having made elaborate investigations, that white bread is more nutritious than the brown variety. No denial is made that the latter has its merits, namely, that it tends to remove the torpidity of the digestive system, so frequent in persons of sedentary habits, supplying also mineral matters, especially phosphate of lime, so important for bone building. The white bread also, it is claimed, supplies mineral matter, and as regards fat, is said to afford a larger proportion of this essential food than the brown bread.

Every locomotive that is built in the West nowadays has the new anti-bandit attachment. On all the new engines of the D. and R. G. Railway are iron pipes extending along the roof of the cab and connecting with the boiler. Through these pipes, without making a perceptible motion, either the engineer or fireman can send, under 200 pounds pressure, a jet of steam and boiling water that would effectually cook anything living that happened to be on the front end of the baggage car. The diameter of the pipe is one and a half inches and a single second would drop any man who tried to stand before it in action. The steam leaves the pipe at a temperature of about 750 degrees, hot enough to have the toughest of outlaws cooked by the time the train could be brought to a standstill.

A householder in London recently noticed that his cook had stuck up in her kitchen a map of South Africa, with the British possessions colored red, the Transvaal brown, the Orange Free State yellow, and Portuguese territory green. "Do you take an interest in the war, Mary?" he asked. "No, sir," replied the cook, "but I mean to 'ave a skirt like that brown bit, and blouses like them other colors; and I'm just keepin' the map to match the patterns with when I get a hevenin' hoff, sir!"

THE GIANT OIL CO.
AND THE
CALIFORNIA STANDARD OIL CO.

Two corporations which have attracted considerable attention by the Rigor with which they have begun the development of their properties are the Giant Oil Company and the California Standard Oil Company. Together the two control some 1300 acres in alternate 40 acre tracts in the best portion of the McKittrick district. They are in Sections 11, 12, 13, and 14, Township 3 S., R. 21 E., and Sections 19, 20, and 28, Township 30 S., R. 22 E. The California Standard was incorporated early in August, 1899, with a capital of $500,000, at $1 per share. Its officers are—J. M. Merrell, president; W. J. Dingee, vice-president; M. J. Laymance, secretary. The Giant Oil Company was incorporated later in the year with the same capitalization and directorate. Both concerns have been actively at work and make an excellent showing for the few months of their existence. They own five standard rigs, four of which are in operation drilling night and day with a crew of some twenty men in attendance. They are really the best equipped companies in the field.

One of the California Standard's wells is producing from 150 to 200 barrels per day, and for some time it shipped a carload per day. Pumping has been temporarily suspended, however, owing to the wearing out of the pump cups by the sand, something that invariably happens with fresh wells. A new pump is ready, so constructed as to overcome this trouble as soon as it is set in. The shipment of oil will be resumed. The Oakland Gas Company has placed an order for one car load per day, to be filled as soon as possible. If this corporation should cease development at this juncture, it would still be earning seven per cent on its capital stock, from the profits accruing from this one well.

The Giant is drilling a well within 200 feet of the Kern River Oil Company's well that produces between 500 and 1000 barrels a day. They should duplicate this strike within thirty days. In addition to owning all their derricks and rigs, these corporations have a seven mile pipe line, through which a splendid supply of fresh water is derived for their wells near McKittrick station. This water is also a source of revenue, as they sell the precious fluid to other companies in the neighborhood at reasonable rates.

The offices of the California Standard and Giant Oil Companies are in the Mills Building, rooms 15 and 16, second floor, and at 460 and 462 8th street, Oakland.

KERN RIVER AND McKITTRICK OIL COMPANIES.

Petroleum Center Oil Club.

This company controls 660 acres in Township 28-28 and 80 acres in Township 29-28. On January 27th, they struck oil in Section 8-28-28 at a depth of 802 feet. This being only the first sand, they sunk their drills lower yet in the direction of the second or primary stratum, which is generally reached about one hundred feet below the first. At present, the company is drilling its second well on Section 28-28-28, in

full confidence that oil will be struck at a depth of 500 feet, as producing wells on all four sides have made finds at that depth. It is the present intention to drill 23 wells on the holdings in this section. Furthermore, on February 9th, stakes were set and lumber ordered for five wells on Section 8-28-28, where operations will be pushed as rapidly as possible.

The El Dorado Oil Co.

The El Dorado Oil Company has a history. The corporation is now working on 160 acres of the best oil land in the McKittrick district and have a well that on its initial test showed a capacity of one thousand barrels per day. This location is part of 640 acres leased from the Buena Vista Oil Co., which some eight years ago set about boring for oil. They drilled down 392 feet and struck oil in such quantity that it shot 30 feet into the air. Sand followed and choked up the casing. They drilled 20 feet deeper, but strange to say, did no more. In March, 1899, Clarence J. Berry and F. M. Keller of Klondike fame, together with W. J. Roberts, W. M. Spencer, W. J. Berry and M. McWhorter, began investigating oil possibilities and leased 640 acres from the Buena Vista Co., then organized the El Dorado Oil Co., leasing the 160 acres on which the old well was situated. They commenced cleaning out the old well, but the stovepipe casing telescoped, so they began ten feet away and struck oil at the same depth. They continue to a depth of 600 feet, but failing to secure a landing, plugged and perforated the casing. Oil came spouting up in great quantity and as a test 300 barrels were pumped at a ratio of 1,000 per day. The oil gained 165 feet in the well in one day. This occurred January 4th ultimo. Mr. A. B. Campbell, who was present, took a sample of the oil to be analyzed by State Mineralogist A. S. Cooper, who pronounced it of a high grade and worth $4.50 per barrel at current market prices. This well was finished January 12, and the company is drilling another well 300 yards from the first. It is proposed to go down twelve to fifteen hundred feet, where they should strike a gusher. The members of this company control individually 3200 acres of the choicest oil lands in the McKittrick district.

Three Strong Companies.

Among the many concerns organized in the past few months to develop the petroleum resources of Kern county, the tripartite composed of the Berry Oil and Development Company, the Dominion Oil Company and the Fuller Oil Company take high rank. The parent company, the Berry Oil Company, was organized August 9, 1899, with W. J. Berry, president, John Heenan, vice-president, and Alfred Fuhrman, secretary, and with W. J. Berry, John Heenan, Alfred Fuhrman, C. A. Fuller, W. H. Berry and J. E. Farnum as board of directors. The properties of this company are situated in Sections 21 and 29, T. 28 S., R. 28 E. Practically the same incorporators founded another concern, the Dominion Oil Company, November 1, 1899, with George W. Terrill as president, and Joseph King and W. E. Hale added to their board of directors. Their holdings lie on Section 21, T. 28 S., R. 28 E. On January 20, 1900, the Fuller Oil Company, with some of the best holdings on Poso Creek, was organized. Captain C. A. Fuller and Alfred Fuhrman are respectively president and secretary of this company, and the directors are C. A. Fuller, D. B. Donahoo, W. J. Berry, Alfred Fuhrman, C. H. Dunsmoor, Carl W. Mueller and Joseph L. King. These companies have explored and prepared their lands; rigs are ordered, and by the end of the month extensive drilling operations will begin. Stock is not on the market; the companies were organized for the benefit of the shareholders. Several of the incorporators are heavily interested in outside oil lands, notably Captain Fuller and Alfred Fuhrman and George W. Terrill, who is president of the Home Oil Company in the Coalinga country.

The Bachelor Oil Co.

This company is attracting attention among oil experts as one of the most active in operation. Its holdings comprise valuable tracts in the Kern river, Poso Creek and Summit districts. Acknowledged experts believe that the investors in this stock will not regret their venture. Already, shares have advanced seventy-five cents and will not be long offered at that figure. Considering the low capitalization of the company and its choice properties, an investigation should persuade the most skeptical that this stock would be a wise buy even at a much higher figure. The directors are anxious that prospective investors should visit their offices and look into the condition and prospects of the company. Their first well is now down about 300 feet, with indications exceedingly satisfactory. This rate of progress in development and the steady sale of stocks will soon enable them to withdraw shares from sale, since they have been placed on the market for development purposes only. Tyree M. Bell, president of the company, and Ambrose Harris, secretary, may be found from 9 a. m. to 5 p. m. daily at the offices of the company, room 612 Examiner Building, and they will be glad to give full information to any and all investigators.

The Kern River Oil Co. is one of the most substantial and progressive institutions in the field. In the McKittrick District it has one well yielding 600 to 1,000 barrels daily and two more in course of development. Its second derrick was up and drilling commenced January 22nd, and the third is well under way. The company is amply provided with tankage, the company having 2,000 barrels tankage at the well and 1,200 barrels at the station.

In its Kern river territory the company has one well drilled on Sec. 4-29-28, which yields about 50 barrels daily, and has machines drilling on Sec. 4-29-28 and on Sec. 28-28-28, which should prove big producers—at least if indications count for anything.

R. H. Herron & Co.

This enterprising firm has shown its confidence in the permanency of the Kern county oil fields by opening a branch house, which is in charge of Mr. W. W. Nellis. They carry a twenty thousand dollar stock in their Bakersfield warehouse, consisting of all kinds of oil well supplies. This is the only house on the coast that deals exclusively in oil well supplies. Mr. Herron was for many years engaged in the oil industry in Pennsylvania and he possesses a thorough knowledge pertaining to every requisite of the oil business. The parent house is located in Los Angeles, with branches in San Francisco, Coalinga, Hanford and Bakersfield.

Sterling Oil and Development Co.

The Sterling Oil and Development Co. will commence drilling on the northeast corner Section 31, Township 28-28, in a few days. This property is right in the heart of that famous township, and thirty-one producing wells surround them. All of their neighbors have struck oil at a depth of from 350 to 460 feet. Mr. John A. Bunting, president of the San Joaquin Oil Co., is vice-president of this corporation, and he will superintend the operations of the Sterling with the same careful attention to details as characterized his successful development of the former company's producing wells. No stock will be sold after Feb. 12th.

The Century Oil Co.

The Century Oil Co. of California is developing the southern half of Sec. 24-28-27. They have drilled through two oil-bearing strata and are near the main body. Extensive preparations for further development are under way. The officers and directors of the company, all residents of Oakland by-the-way, announce that they have no shares on the market. Of the capital stock of 100,000 shares, 75,000 are subscribed and 25,000 reserved in the treasury for development purposes. Messrs. W. W. Whitman, E. Bishop, W. A. G. Mackenzie, W. P. Todd, J. Benson Wrenn, J. F. Smith, E. B. Browne, Henry Newton and E. Lehnhardt compose the board of directors.

The Kern county illustrations in this number of *The Wave* are reproduced from photographs furnished by Mr. Frank C. Aston of Bakersfield. Copies from the original negatives and view work of any description may be procured from him at a reasonable price.

The Colorado Pacific Oil Co.'s well is now down over 500 feet and the company is very well pleased with present indications.

BAKERSFIELD BUSINESS HOUSES.

Bakersfield's Big Store.

John Wanamaker, the originator of modern department stores, used to boast that a person might enter his vast Philadelphia establishment, entirely naked, and in due time emerge dressed completely from head to foot, and, if required, a wagon load of provisions, household furniture, carpets, crockery, etc. could follow. Dinkelspeil Bros. of Bakersfield go still further, for they not only sell articles of wearing apparel, provisions, household furnishings, etc., but they will sell you a wagon—and at a pinch—possibly a horse—to take the goods away.

This firm has been located here since 1889. Its members are both comparatively young men, and have no old fogy ideas. They occupy and own an ornate building on 19th and I streets, and its three floors—including the basement—measuring each 106 by 122 feet, are laid out and arranged similarly to department stores in cities ten times the size of Bakersfield. The grocery department carries a full line of teas, coffee, canned goods, imported delicacies, etc. The dry goods department is no less complete and the Bakersfield ladies who are noted for their taste in dress find no difficulty in being suited. The men's clothing and furnishing department is equally well equipped, and anything from a pair of overalls to a fashionable Stein-Bloch suit of clothes may be found. Farm wagons, carriages, hardware, crockery, carpets, oilcloth, in fact almost every commodity or article used by man or woman, is on sale. It is a common saying in Bakersfield: "It ought to be good, for I bought it at Dinkelspiel's." Of late the house has been very busy making oil and water tanks—for they have a factory as well as a store—and do all kinds of tin, galvanized iron and plumbing work.

Kern Co. Foundry and Machine Works.

Messrs. A. J. Webster and Wm. Busse conduct the Kern Co. Foundry and Machine Works at Bakersfield. They make light and heavy castings of every description. Horse powers are always ready; castings for standard and other rigs are carried in stock. Any length of stems can be made to order on short notice; castings, all sizes, cut and threaded to order; damaged and worn out taper pins and boxes recut. They also do all kinds of repair work. Their business has largely increased of late and they contemplate the erection of a new building as soon as arrangements can be made for construction.

A Popular Boniface.

Running a country hotel is by no means an easy task and if one does not give his personal attention to the details things are bound to go wrong. Mr. W. F. Coulter has followed this rule ever since he purchased the Southern Hotel, and notwithstanding the crowded state of the house during the present oil excitement he conducts it in an admirable manner. The best in the market is always demanded and expected from the local butcher and grocer, and woe betide them should they fail to come up to the mark. The office is in charge of Mr. H. B. Chaney during the day and he is succeeded at night by Mr. E. W. Bishop. Both gentlemen are popular and attentive to the wants of the guests. The dining-room is in charge of a lady who possesses the happy faculty of pleasing everybody, even the exacting, fault-finding drummer, who grudgingly admits that "the Southern is pretty fair for a country hotel."

BELAUS PIONEER STORE.

A. C. Wroot, Plumber and Tinsmith.

Mr. Wroot has a fully equipped shop and is prepared to do all kinds of plumbing, sheet iron and tin work. He makes a speciality of building oil and water tanks and is prepared to do anything in that line on short notice, at a figure as low as can be quoted by any firm in town. Mr. Wroot was for many years engaged in business in Chicago before coming to Bakersfield three years ago.

One of the best established and most reliable firms in the oil country is that of Hunt and Hunter, stock and real estate brokers, of No. 1805 Chester Ave., Bakersfield. They enjoy the reputation of listing only reliable oil stock; therefore, purchasers may feel safe in entrusting business to them. Oil companies who entrust stock to their handling will find their methods square and above-board in every respect. Their reputation in real estate circles is equally good. This class of business Hunt & Hunter handle on commission only.

The Oil Land Syndicate.

One of the most intelligent institutions connected with the newly developed oil business in California is the Western Land and Oil Syndicate which owns lands both east and west of Bakersfield and in the McKittrick district. Boring for oil is not a part of its business, but it offers oil lands for sale or lease and will take stock in boring companies as part payment for its properties. It has expert reports on all its properties and is in position to afford valuable information in regard to oil land.

LOS ANGELES FIELD.

THE WEST LAKE OIL CO.

The West Lake Oil Company, which was incorporated in January, 1900, owns the valuable oil-bearing properties of Messrs. Clark & Bryan and their associates, San Francisco capitalists being heavy investors. This concern holds a large territory, a portion of which is highly developed. The remainder was pronounced at the outset to be oil-bearing land. Further developments in the adjoining region have proved this to be a fact, properties on all sides having yielded oil to the drill. With the whole tract developed, the West Lake Company will have a greater production than will any six companies now operating in the Los Angeles field. The plant, which is owned by the company and upon which there is not one dollar of debt, includes two pumping jacks upon concrete foundations, two complete drilling rigs, tools, casings, storage, settling and supply tanks and pipe lines, forming one of the most complete and modern outfits in California. Two wells are in process of drilling, while $20,000 has been placed in the treasury to insure continuous developments and the sinking of fifteen or twenty more wells in all.

At present, the West Lake Co. is producing about 400 barrels a day, the various wells giving each from 25 to 75 barrels a day from wells about 400 feet deep. Experts say that there is a secondary source of supply in a lower stratum of oil-bearing sand. Good dividends are paying monthly, and will increase with further development.

The names of local men in the company should be sufficient guarantee to investors of the stock, but with the added weight of M. L. Gerstle, capitalist, and Mr. W. H. Gerstle, member of the Alaska Commercial Co. of San Francisco, Ira Meek and E. B. Stone, capitalists of San Francisco and Oakland, and part owners of the Oakland, Haywards and San Leandro Electric Road, the McCarthy Company of San Francisco, Charles W. Allen and F. M. Thomas of Los Angeles, Charles McCarthy of New York, Edgar D. Peixotto, of San Francisco, J. H. Hubbard, Boston, Mass., and others, will make the West Lake Oil Co. the strongest oil company yet organized, both from point of merit of the holdings, and production, and men back of it.

The company is capitalized for $500,000, with shares at a par value of $1. Stock is non-assessable, and the officers of the company draw no salary. The office of Clark & Bryan at 127 W. Third St., Los Angeles, is headquarters for this concern.

The Wilson Oil Company.

A solid concern of the sort that appeals to the hard-headed man of business is the Wilson Oil Co. of Los Angeles. This company was incorporated Jan. 17, 1900, under the state laws, with a capital stock of $250,000. It holds nearly two blocks of land in the heart of the new Los Angeles oil field and seven acres one mile west of present rich locations, a tract which is directly in the line of development and which shows every prospect of riches. All these tracts and all the tanks and machinery in use are owned—not leased—by the company. Eight wells are already down, and now in full operation; each averages 25 to 75 barrels a day, making the company's total output about 300 barrels at $1.10 every 24 hours. The oil-bearing stratum on this property is only 400 feet down, rendering boring a comparatively easy process. Development is to be pushed as fast as materials can be procured; from now on, the company expects to sink two wells per month. From calculations made on the present output, the company expects that, beginning with February, dividends of from 2 to 2½ per cent. will be paid monthly on all shares. Chas. W. Allen is the secretary and the offices are at rooms 125-126 Hellman Block, corner 2d and Broadway. Officers and Board of Directors of the Wilson Oil Company: M. L. Gerstle, San Francisco, president; W. D. Wilson, Los Angeles, vice-president; Charles

A PARISIAN FORTUNE TELLER.

Special Correspondence of The Wave.

SHE dresses, when off duty, in gowns "just as good as" Worth's. She may be seen any evening in one of the more fashionable of Paris's gay resorts in company with a fashionable acrobat from the Folies. She is a handsome woman, with extremely shrewd eyes, when she is not being observed. Look at her for more than a passing moment, and she drops over those eyes that gauze veil of concealment, the mark of the swindler. Her hours are from ten to four, her office is in a dingy little den away off by the river, and in its squalid ante-room duchesses and demi-mondaines, countesses and actresses, all who can pay ten louis-d'or for a single sitting, await her pleasure. But she doesn't wear her pseudo-Worth gowns in business hours. She is gotten up to the part in a gypsy rig besprinkled with strange amulets and Eastern jewels and with a fine, Oriental complexion worked in. It is Madame Angot, gypsy fortune-teller and fortune-gatherer, chief of a brood now infecting Paris. You might judge from all this that the lady has some peculiar and fascinating style of mummery which she uses to delude. Not at all. She employs only the plain cards of the Irish servant-girl.

Madame Angot has worked wisely by confining her gains to the money of fools which crosses her palm in the shape of regular fees; hence she is regarded as "safe," and keeps her clientele. It is something to have a reputation, even in swindling. Others, more greedy and less wise, combine fortune-telling with blackmail. It is easy for a smooth operator to twist secrets out of anyone so "easy" and gullible as to run to fortune-tellers. These secrets once obtained, blackmail is the inevitable result. The widow of a French admiral is even now prosecuting one of these necromancers who has been sending her threatening letters on postal-cards. Hundreds of others lack the pluck to bring the matter into the courts.

It is only the fashionable fortune-tellers who levy blackmail, because they alone have their clientele among the rich. There is another class which preys upon the credulity of servant girls, poor demi-mondaines "and sich." The fee amounts to a few francs, yet with frugality and humble, upright living a fortune-teller may amass a competence on even these pittances. Paris is infested with them now; it is a craze, a mania.

To change the subject, let me write you about that all-absorbing feminine topic, dress, and beneath this head let me say something about the Frenchwoman's indoor garment, "robe de l' interieur," as she herself would call it. 'Tis a copy of that all-adaptable American garment, the tea-gown, and spread over a wider range of usefulness than we would dream of. Be she wife of a workman or wife of a duchess, the Frenchwoman wears that gown indoors for every sort of daylight use. No daughter of France but changes her street dress the moment the door closes behind her. That is the one secret of French charm in dress, by-the-way—adaptability to circumstances. For bicycling, knickerbockers; for the street, tailor-mades; for church, the same with sober suggestion of piety; for the automobile, the long dust-coat; for the house, the loose, easy, flowing, tea-gown, with a loose, short and easy corset beneath.

There is a simple variation on this indoor robe in the *saut de lit*, that dress which madame la Parisienne of elegant society wears in the morning to lounge in her boudoir. It is cut on straight lines and without seams, and fastens in front by a jewelled brooch. I saw one in a boudoir the other day. Never mind who wore it or what I was doing there. Cream liberty satin was the ground-work; over all was a veiling of finely accordeon-plaited cream chiffon, and the lining throughout was of ermine. The bedroom slippers to match were of white satin, lined and edged with the same fur. Think of it—ermine on a gown that is only half-sister to a tea-gown.

An exquisite "robe d' interieur" was worn at the Comedie this week by Mlle. Lara. It is of simple cream taffeta, and clings closely to her lithe, svelte figure. From the round, decolette bodice to the feet falls an overdress of plated accordeon chiffon; at the bottom is an edging consisting of five graduated rows of narrow, cream satin ribbon. At wrist and bosom is a mass of transparent Venetian lace. The sleeves are full and of the accordeon-plaited chiffon, and around the neck is a frill of the same material edged by a band of rich fur. A sash which is finished in a big bow just behind the shoulders completes this costume.

ETIENNE MARCEL.

THE BURLINGTON OIL CO.

The Burlington Oil Co. of San Francisco is one of the most prosperous of the moderate-sized concerns doing business in the Los Angeles region. On their property, situated within the City of Angels and Oil, they own fifteen producing wells, which yield a steady flow of 1800 barrels a month. The company has been incorporated upon a $60,000 basis, with shares at $1 each. At the present market value of oil, it can be seen how well these shares will pay, especially in view of the fact that the operating expenses are low. The wells owned are all producing, it having been the company's policy to invest in these and no other. Stock is listed with the Producers' Exchange of San Francisco and with the Los Angeles Oil Exchange. The officers are: J. Gerstle, pre ident; E. Avery McCarthy, vice-president, and Harry Francis, secretary-treasurer; the officers, together with E. B. Holden and E. D. Piexotto, make up the board of directors. The McCarthy Co., 646 Market St., San Francisco, and 410-411 Henne Block, Los Angeles, are agents for the Burlington Co.

Oil Lands Should be Protected.

The Interior Department has decided in numerous cases that oil lands cannot be located under the placer mining law, until there has been an actual discovery of oil, and that surface indications however strong and convincing to an expert, are not sufficient evidence of mineral character, on which to base a withdrawal of the land from other appropriation. Hence, it is advisable for all persons holding mineral claims to undeveloped oil lands to have the same located in some manner that will protect them in their possession while they are developing their claims.

Parties desiring this protection are invited to correspond with me.

Terms, cash. I do not locate any lands on shares or on any contingencies whatever.

THE COLORADO-PACIFIC OIL CO.

Room 2, 4th Floor, Mills Building, San Francisco.

TELEPHONE No. 5802.

Capital Stock, $1,000,000.00. Par Value of Share, $1.00 Each.

This Company is organized under the laws of the State of Colorado, having its main office in Colorado Springs, Colo., and its stock is full paid and non-assessable. It is now operating on Section Ten (10), Township 28 | 28, in the Kern River Oil District, Kern County, California, where it has a favorable twenty year lease on the entire Section with an option to purchase same. It owns a standard rigging on the premises and is now putting down its first well on the Southeast Quarter of the Northwest Quarter of that Section. The Company also has ample funds in the treasury for prosecuting its prospecting and development work, and is now making investigations through its expert with the view of acquiring additional territory in this and other producing districts. The Company's expert, who is the leading oil expert on the Pacific Coast, states:

"I am thoroughly satisfied that the producing wells of the Kern River district will be found upon the table covering the North half of Township 28 | 28; here I consider one of the most promising localities for oil I ever saw. The mother source, so to speak, of the district is here. The conditions are perfect. Put your big standard rigs to work and watch results, at the depth of 1000 or 1200 feet. You will see big producers equal to the best of them. You will understand that the oil formation makes a turn here, and that where that is you will always find a table or straight formation. In my opinion, the oil being struck down next to the river is only the drippings from this table. One proof that such is the case is, that the oil taken from the wells further on up the hill is a much better quality. I made an examination of Section Ten (10), Township 28 | 28, and find that the highest point in the Township located in this Section is 900 feet above the water line of the Kern River. Wells drilled in this Section would naturally be much deeper than in the lower sections of Township 28 | 28, but I feel certain that these wells will be very large in production capacity, and the oil of light specific gravity, in other words, fulfilling all the conditions for flowing wells."

The Directors of the Company are as follows:—Irving W. Bonbright, of the Banking house of William P. Bonbright & Co., Colorado Springs, Colo., and London, England; J. R. McKinnie, President of the Exchange National Bank, of Colorado Springs, and President of the Moon Anchor Consolidated Mines Company, of Cripple Creek, Colorado Springs; Percy Hagerman, Treasurer of the Pecos Valley & North Eastern Railway Company, Colorado Springs; R. C. Thayer of the law firm of Hall, Babbitt and Thayer, of Colorado Springs; R. G. Hanford, mining, San Francisco.

Information with reference to this Company, its present status, and prospects, can be obtained at the office of its Vice-President, R. G. Hanford, Room 2, Fourth Floor, Mills Bldg., Tel. No. 5802, or of Emile E. Kahn, Asst. Secretary, 218 California St., Tel. No. 5908.

Babblings of a Belle

THE person who said Dear Diary that "the course of true love never did run smooth" should have been discouraged or suppressed. I really believe that a great many of those silly old proverbs and axioms have done a great deal of harm. Now, if no one had ever said anything about the inability of true love to run smooth perhaps it might have run along quite unruffled, and I saved a great deal of trouble. I foolishly allowed my "ideal lover" to take a trip to Coronado. He wanted to get papa's and mama's consent to our engagement. Parents are so difficult to understand. I labored under the hallucination that they would be overjoyed at my choice. Fancy my surprise when papa wrote me that he would not dream of allowing me to marry a man of the "ideal lover's" type. He was not the sort of man to thoroughly understand his little daughter. Of course I was exceedingly annoyed, and wrote and explained to papa and mama that I had made up my mind that the "ideal lover" was to be my husband; that he thoroughly understood my idiosyncrasies, and that as I was doing the marrying, they might just as well comply to my wishes. But they were most unjust to the "ideal." They told him I was a frivolous little being who did not know her own mind. The consequence is he talks of taking a trip to the Hawaiian Islands. Poor fellow, I suppose he is heart-broken, while I am actually telling my best friends of my engagement; but have not gone into the cup business yet. Fancy parents as well brought up as mine taking so much upon themselves.

Notwithstanding the fact that I am living under the "ruffled true love stage," I have not made my grief the subject of conversation in highways and byways of my young friends. Monday night last I invited a number of girls to go to the theatre with me to see the Bostonians. There were twelve of us and we had a jolly time. I saw several theatre parties in the house. Elizabeth Huntington gave one to Della Mills, who left Sunday morning with her family for a trip to Europe. They are to stay abroad for six months and are to be in Paris throughout the Exposition. What luck. I quite enjoyed the "Smugglers of Badayez." The singing was fairly good. As the opera was light, it took my mind, to a great extent, off my own trials and tribulations. I noticed the Hopkins girls, Mary Scott, Caro Crockett, Katherine Dillon, Carrie Taylor, the Popes, George Newhall, the Taylor boys and several others in the house. All seemed to enjoy themselves very much. After the opera most of the parties adjourned to the Palace. I like that supper room more and more all the time. As for the music, it is most delightful to my ears.

Tuesday I spent at the golf links. I find I cannot stay at home and read, or write, or sew these days. I have to live in a whirl of excitement. It is exciting, you know, to watch the girls practice golf who are going in for the cup. I went around the links with one after another, and am surprised at the numbers of wild flowers growing out there. One would really believe spring had heard our calling and come to us. There are any number of meadow larks, too, whose exquisite song made me forget my own troubles and feel glad that I was living and able to enjoy nature in all her moods. I love the Presidio links—in fact I am getting quite interested in the game. As Arthur says, if I would only go in for it I should beat all the other girls, for I have never yet tried anything that has not been a wonderful success. Tuesday evening I went to the McNutts to dinner. It was only a small affair but awfully jolly. Mamie is so entertaining and Ruth looked lovely. I find I am getting very interested in Isobel Kittle. She is the sort of girl that would be a fine friend and I am thinking seriously of cultivating her. Georgia Hopkins and Mary Scott were the other girls. The men particularly met with my approval. Sam Boardman, Gerald Rathbone, Harry Stetson, Nat Wilson and a Mr. Berry, whom I am predisposed to like. I do not know him well, but Arthur has promised to cultivate him for me. That same evening Leah Shingleberger gave a dinner at which euery one had an excellent time. Flossie Deming looked particularly pretty. She has such beautiful hair and a complexion that suggests the bloom of a peach.

Wednesday a number of us went out to a luncheon at the Spreckels. The table was most charmingly decorated with roses. The Spreckels can have me to luncheon or to dine with them whenever they like, for they thoroughly understand the art of cooking and setting a table. I had a very jolly time and again forgot my serious "Ideal Lover" trouble in the brightness that surrounded me. I think most of the luncheons this season have been very successful. Still all the girls I know infinitely prefer any other form of entertainment. It is so difficult for girls who have as little time as the society girls of the world to have an opportunity to become really interesting as talkers. Were entertaining really made worth while, I suppose one would meet the cleverest men and women in the social whirl, but I fear that will not be for many years in San Francisco. Fancy the bliss of sitting through a dinner at which one was beside a man who put himself out to give one a good time. I, for one, would have my appetite taken away by the surprise. In San Francisco the real art of giving a dinner lies in the point of trying to get jolly girls to entertain the men who have so little that is interesting to say. Still we manage to get a certain amount of pleasure out of it all, and make the best of life. Thursday noon Ruth McNutt had a few of us to an informal luncheon at her home on Pacific avenue. She seems to be gradually becoming stronger and is one of the jolliest girls, I think, of the younger set.

Saturday evening Elizabeth Huntington gave us such a jolly dance. I love these informal affairs. Everyone entered into the spirit of youthful gayety that pervaded the house and had a capital time. I wish the people who have these ball rooms would give little dances more frequently. It is really but little trouble and a tremendous amount of pleasure is derived from it by the young people.

This coming week is not to be so bereft of entertaining as this last week has been. Therese Morgan will give a luncheon. Wednesday evening will be Charlotte Ellinwood's tissue paper party, and then we have the dear good Fortnightly to look forward to on Friday evening. MISS CRICKET.

Fainting Spells

Are peculiar to women. Men rarely faint. Many women are liable to what they term "fainting spells," and this liability is always most marked at the monthly period. This alone is sufficient to connect the "fainting spell" with a deranged or diseased condition of the womanly organs. The use of Doctor Pierce's Favorite Prescription cures irregularity, heals inflammation and ulceration, and stops the drains which weaken the body. It builds up the nervous system, increases the vital powers, and so removes the common causes of faintness in women. There is no alcohol in "Favorite Prescription;" neither does it contain opium, cocaine, nor any other narcotic.

"It gives me much pleasure," writes Miss Ella Sapp, of Jamestown, Guilford Co., N.C., "to thank Dr. Pierce for the great good received from the use of his 'Favorite Prescription' and 'Golden Medical Discovery.' I had suffered for three years or more at monthly periods. It seemed as though I would die with pain in my back and stomach. I could not stand on my feet without fainting; had given up all hope of ever being cured, when one of my friends insisted upon my trying Dr. Pierce's Favorite Prescription. With but little faith I tried it, and before I had taken half a bottle I felt better, had better appetite and slept better. Now I have taken two bottles of 'Favorite Prescription' and one of 'Golden Medical Discovery,' and am happy to say I am entirely cured, and all done in two months' time, when all other medicines had failed to any good."

A well known teacher, (English, German, French) going to Europe beginning of May, wishes to chaperone ladies going abroad. Highest recommendations.

GERMEA

The Ideal Breakfast Dish

A Tribute of Dream.

"Had I the heavens' embroidered cloths,
Enrought with golden and silver light,
The blue and the dim and the dark cloths
Of night and light and the half light,
I would spread the cloths under your feet;
But I, being poor, have only my dreams;
I have spread my dreams under your feet;
Tread softly because you tread on my dreams." W. B. YEATS.

STATE OF OHIO, CITY OF TOLEDO, LUCAS COUNTY. } ss.

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the City of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of HALL'S CATARRH CURE.

FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D., 1886.

{SEAL.} A. W. GLEASON, *Notary Public.*

Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free.

Sold by Druggists, 75c.
Hall's Family Pills are the best.

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

Marvelous Champagne Figures.

109,303 cases of G. H. Mumm's Extra Dry were imported in 1899, being 72,495 cases more than any other brand. Carrying an immense stock of choicest wines, its quality will always be maintained. Its 1895 vintage now imported is exceptionally fine.

Hotel St. Nicholas, corner Market, Hayes Larkin and Ninth. American or European plan. Ira R. and James H. Doolittle.

How can the British trooper bold
Defeat the wily Boer,
Unless he tones his system up
With good old "Jesse Moore?"

MRS. DOBLEY'S STRATEGY.

Mrs. Dobley appeared unexpectedly at the office just as her husband was preparing to go out for luncheon.

"I knew I'd just catch you," she exclaimed delightedly. "I just thought I'd enjoy surprising you! Now I want you to take me to one of those funny places where you get all the queer things to eat!"

"I suppose you mean a French restaurant?" said Mr. Dobley.

"Yes. Where you can get snails and mussels and things they don't have at American places, and cook coffee at the table and make salad dressing. I think it's lots of fun!"

"All right," assented Mr. Dobley, never suspecting his wife's deep-laid plans. She knew that a luncheon such as she had briefly sketched was calculated to put Mr. Dobley in first-class humor, when she might suggest anything wild, from a music hall matinee to a slumming trip in Chinatown. Dobley always walked into the trap blindly, although he had been worked in this way many times before. But French luncheons prepared as they were at Bignon's put him in a reckless mood. So they secured a pleasant table by a window, from which they could see the afternoon throng on the avenue, and Mrs. Dobley ordered luncheon.

"It's such a lovely day," said Mrs. Dobley, nibbling at a caviar sandwich, "that it seems a shame for you to go back to the old office. Suppose you telephone them you won't be back today."

"And what do you propose?" asked Mr. Dobley as he extracted a snail delicately from its shell. His accents suggested an amiability that would consider the purchase of a steam yacht or a trip to Europe.

"Oh, we'll think of something," said Mrs. Dobley, passing him a dish of stuffed olives, of which she knew he was particularly fond. "Aren't you going to smoke, dear?"

It was an understood thing that when the Dobley's lunched at Bignon's, Dobley was to smoke cigarettes all through the repast. Mrs. Dobley said it made her feel as if she weren't married.

"How is it," asked Mr. Dobley, "that we can't have cooks who know how to give this delicate flavor to soup?"

"We never can until we live in Paris," said Mrs. Dobley. "We shall some day. We shall go to Paris and take an apartment and live just as they did in 'Trilby.'"

"But until then," said Dobley, "must we continue this humdrum existence here in New York?"

"Do you know what I think would be great fun?" suggested Mrs. Dobley, insisting on the smaller half of the cold lobster, as she knew Mr. Dobley particularly favored it with Tartare sauce; "the next thing to Paris, in New York is——"

"What, my dear?" asked Mr. Dobley, with some alarm.

"The French shops on Fifth avenue," said Mrs. Dobley, sipping an absinthe *frappe* with the air of an habitue.

"Oh," said Mr. Dobley, "I've never heard of them."

"No!" said Mrs. Dobley, regretfully, "because you only see the bills from the big department stores where I have to trade and where any one can go and buy the same thing."

"Who has the price," put in Mr. Dobley.

"But I never feel that I can quite afford to buy at the French shops, for, of course, everything is imported and hand-made and high-priced! But, oh, they have the loveliest——" here Mrs. Dobley leaned across the table and whispered confidentially to her husband. "You simply can't get them anywhere else! And you go around in those little shops and see the things and you can quite imagine you are in Paris. Mrs. Van Ripper got a lot of things and she showed them to me yesterday when I called. Some beautiful——" Mrs. Dobley whispered once more.

"Really?" said Mr. Dobley.

"Yes—polka-dotted—all silk. You can't get them except in one shop. I tell you what we might do. We could go around and look at some of the things. We need not buy any unless we wanted to. There are a few little things I must get—have you any money with you?"

"Some," said Mr. Dobley, "but I have my check-book, anyway."

"Oh, that will be perfectly lovely!" exclaimed Mrs. Dobley, radiantly. "First we'll go Mme. Fittem's. I want you to help me select a pair of those new French corsets. I can't decide which pattern to take.

Mr. Dobley paid the bill, and complimented the waiter on the excellence of everything. Then he and Mrs. Dobley went out to a hansom cab, looking so gay that a bald-headed man by the window said: "These pretty typewriters have the most luxurious luncheons of any people in New York."

The corset shop was a bewildering place to visit. It was dim and perfumed and filled with fascinating wax ladies in startling negligee with small waists and a noticeable lack of limb. But Mr. Dobley, fortified by his French luncheon, entered almost blithely. The saleswoman looked after him admiringly. They were accustomed to men who sneaked in sheepishly to make purchases without looking round. Mme. Fittem greeted Mrs. Dobley like an old friend.

"I want to see some of those new Paris girdles," said the latter; "I want to order some, but I can't quite decide on the pattern."

"Do you mean the eighteen-dollar ones?" asked Mme. Fitttem.

"The black brocade with violets and pansies and rosebuds. Which do you think I ought to have, Mr. Dobley?"

"Violets, or pansies, let me see?" said Mr. Dobley. "This is rather nice; don't you think so?"

He was gazing admiringly at a beautiful wax brunette clasped in a gorgeous lacy creation and ending in a ruffle and a marble pedestal, like a mermaid from a marble yard.

"Those have the real lace edge and solid gold clasps," said Mme. Fittem; "they are really one of the finest pairs ever made!"

"Oh, I am sure they are too expensive," said Mrs. Dobley; "these simple eighteen-dollar ones are all I can afford!"

Mr. Dobley gazed at the pansy brocades with a scorn bred of French cookery. "Those look positively mean beside these," he said, decisively.

"But these are really too fine for ordinary use," said Mrs. Dobley.

"Why not have both?" said Mr. Dobley, as though the idea had suddenly occurred to him, as indeed it had. "How much are these?" He indicated the brunette mermaid.

"A pair to order like those would be $60," said Mme. Fittem.

"They are beautiful," said Mrs. Dobley.

"Both pair," said Mr. Dobley, taking out his pocket book.

"And a box of assorted silk lacings?" said Mrs. Dobley with a cheerful smile. "Good morning, Mme. Fittem—good morning."

As the Dobleys made their exit, the expression of the saleswomen had changed from mere admiration to hero worship. Mrs. Dobley rustled her skirts ostentatiously, something as a hen clucks its pride in its chickens. She felt prouder of Mr. Dobley at that moment than if she had seen him presented with a medal. "And now," she said: "to the hosiery shop?"

"Certainly," said Mr. Dobley, with his most debonair manner. "Do you know I can never imagine why some men object to go shopping with their wives? I would rather select hosiery than play poker, any time. Do you have to try 'em on? Don't mind me, you know. After that corset place I can go through anything!"

"Oh, certainly not!" said Mrs. Dobley; "they only have samples on those wooden—"

"Limbs?" suggested Mr. Dobley.

"Blocks—I was going to say," said Mrs. Dobley, "and you order a dozen of this kind or a dozen of that."

"Oh, I see," said Mr. Dobley; "you don't get 'em by the crate or the keg?"

"Here it is," said Mrs. Dobley; "you see those dark blue with small white dots—those are like Mrs. Van Ripper's—only three dollars a pair—I am going to have some of those."

"And those black ventilated kind?" said Mr. Dobley, "they look rather giddy?"

"Those are open work," explained Mrs. Dobley; "those are five dollars a pair!"

"That's nothing," said Mr. Dobley; "we must keep above the Van Ripper standards!"

Mr. Dobley insisted on adding a box of embroidered handkerchiefs and a dressing-coat with lace butterflies inserted over its surface. A blonde saleswoman with blue eyes stated that it was just off the French steamer, and Mr. Dobley wanted two, but there was only one in the shop.

"These French shops are positively the most charming places I have ever been in!" he said, enthusiastically. "They seem so appreciative when people buy a few little things. Haven't you a few more on the list? The next time I go out to get you a present you won't catch me going to stores where they have grinning dudes for salespeople."

"Oh, you couldn't exactly go alone," said Mrs. Dobley in some alarm. She realized that Mr. Dobley would be the most popular man in New York with the proprietors and saleswomen of the shops they had just visited.

"Why not?" said Mr. Dobley.

"Oh, it wouldn't look just right," said Mrs. Dobley. "You couldn't very well select things yourself, could you?"

"Oh, I don't know," said Mr. Dobley. "After to-day's tour I feel that I could select outfits for female seminaries. I know all about the plain-ribbed and the silk and lisle mixed. I am an authority on the sudden-hipped model and the long-waisted medium. You couldn't palm off any plain plated hooks on me and I know that baby ribbon is not exclusively for infant's wear. I don't see why you should bother about shopping any more, Mrs. Dobley. I will relieve you of that annoying detail. Why, those saleswomen are too obliging for anything. Take that Titian-haired peach——"

"What?" said Mrs. Dobley.

"That demure-looking blonde girl in the glove store," said Mr. Dobley. "She seemed to me to have a beautiful disposition—so kindly—and—where is the next place you wished to stop, my dear?"

"I don't think we will stop at any more places to-day," said Mrs. Dobley, carelessly, "except, perhaps, the florist's."

"And then," said Mr. Dobley, "where do we go? I am just beginning to get in the spirit of this thing. Suppose we go——"

"Home," said Mrs. Dobley, with some decision. "Dinner will be about ready by that time, and the Van Rippers are coming. But we have had a lovely time, haven't we?"

"Lovely!" said Mr. Dobley, emphatically. "I'm going to take Van Ripper to-morrow."

Ladies Do Not
Seek assistance from new and untried preparations, but use the old, time-tried and reliable CREME DE LIS. It removes every trace of sallowness and other cutaneous defects, and the skin regains that softness and purity of color so rarely possessed by adults. Blackheads, freckles, muddy skin, wrinkles, and red nose, or face, acted upon as if by magic.

New Stories Re-Told.

x x x

A NOBLE SENTIMENT.—Private Dempsey, of the "Dublins," had done a few odd jobs at his Captain's quarters, for which he was duly rewarded in coin. His Captain then said apologetically, "I'd give you a glass of whiskey, Dempsey, only the mistress has gone out, and I don't know where she put the keys. The only liquor left out is this bottle of Benedictine, and I don't think you'd care about the stuff, although it was made by the Benedictine Monks." "I'll try it, av ye plaze!" replied the soldier. A small liqueur-glassful was handed to him, which he swallowed with evident relish. "Ah, sir," said he as he smacked his lips, "Heaven bless the Holy Fathers for makin' the drink, but hang the man that made this glass!"

x

TAK'N PRISONER.—Some Army Reserve men, before leaving for the Cape, were entertained at a farewell supper by their fellow workers in Dundee. "Now, boys," said the chairman, after an appropriate speech, "treat what is on the table as you would the Boers." As the feast ended one of the Reservists was observed stowing away a bottle of whiskey in his pocket. "What's that ye're daein', Tam?" shouted the chairman good-humouredly. "Oh," replied Tam, "I'm only obeyin' orders! Ye telt us to treat the supper as we would the Boers, and, ye ken, what we dinna kill we tak' prisoners."

x

A SICK FAMILY.—In a Pennsylvania town the Health Office was notified of a case of malignant typhoid fever in a dwelling house on a side street. A messenger was sent to paste labels on the doors. This functionary found himself short of fever labels, so he placed his last on the front door and going around to the back gate pasted a diptheria label there. This circumstance nearly caused a panic among the hucksters who work both the fronts and rears of the houses. "Gee!" commented a big huckster, "dat's de sickest fam'ly I ever seen. It's lucky dey ain't got a side door. Dey'd have smallpox on dat, sure."

x

VARIATIONS IN SWELLED HEAD.—At the Cosmos Club in Washington a certain official belonging to the present Administration, noted for his egotism and pomposity, cautioned one of the scientific members of that exclusive body about mixing his drinks. "Don't," he exclaimed, "don't, old man, drink champagne and whiskey together. You will have a swelled head in the morning." "Well," replied his friend, "if I do I will get over it in twenty-four hours at most, but you—you won't get over your swelled head until the end of this Administration."

x

MADE UP FOR THE PART.—A certain little fellow had his picture taken, and when the family got the negative of it they were horrified to see the face of the boy all puffed out and the eyes bulging, and exclaimed in a body: "Why, what on earth did you do to make your face look like that?" "Didn't do a thing," said the innocent little fellow, "but just see if I could hold my breath until the man got through takin' my picture."

x

A DISTINCTION—John I. Blair in his earlier days owned a western railroad, along the route of which he established a series of lunchrooms at which employes of the road were to be charged 50 cents and all passengers 75 cents. Mr. Blair once dined at one of these places, and, concluding his meal, laid down a half dollar. "Hold on!" cried the cashier, "you don't belong to this road." "I know that," replied Mr. Blair; "the road belongs to me."

x

NOT THE POET'S STYLE.—Walter Scott and Morritt were once in Galgate, Barnard Castle, where was situated the inn the "Burns' Head," which had a portrait of the bard as a sign. Morritt showed this to Scott, and asked if it was like the poet. "How long has it been there?" asked Scott. "Two or three years," was the answer. "Then it's not like Robbie," said Scott; "Robbie would never have stayed so long outside a public-house!"

x

A PROPHET AT HOME.—Soon after his nomination as Postmaster General, Hon. Frank Hatton paid a visit to his home town, and, wishing to know how people who knew him as a boy were impressed with his progress in life, asked an old fellow who didn't know him: "Well, what did the people about here say when they heard that Frank Hatton was appointed Postmaster-General of the United States?" "Oh! they jest laughed."

x

A WESTERN VERDICT.—"We find," said the foreman of a Western jury, "that if, as the prisoner says, the shootin' was accidental, then he ought to hang, fer in these gun affairs a man oughter know his own mind. It oughter be shoot to kill or no shoot. A man who has accidents happen to him with a gun is dangerous to our society, an' oughter be put out of the way for the safety of respectable folks."

PALACE and GRAND HOTELS

For nearly a quarter of a century these Hotels have been the recognized headquarters for Tourists and Travelers visiting San Francisco.

Their popularity has been acquired by reason of their unique location (being accessible to wholesale and shipping districts and amusement centers), the peculiar excellence of cuisine and service, and moderate charges.

The Grill Rooms for ladies and gentlemen have an international reputation, and the recently-added Supper Room is now recognized as *the* place to obtain after-theatre refreshments.

EVENTS CURRENT.

British Success in South Africa.

At last the tide has turned in South Africa. Kimberley is relieved, Cronje's force, which had held the town in a state of siege, is driven back and is fighting on the defensive, this being the first time the Boers have been in this position since the war broke out; Buller, in his steady, persistent hammering, has crossed the Tugela for the fourth time and captured positions which, it seems likely, he will be able to hold instead of abandoning under pressure as in his former advances. His chances there are problematical, however; the real success of the week and the only considerable British victory of the war was in the brilliant operations around Kimberley. As usual in this war, there are few details, and we will not understand how it was accomplished until the mail comes through from the front. Early last week the fact that Generals Roberts and Kitchener were in command at Modder river and had concentrated an army there leaked out through the censorship. The next thing heard of Roberts, he had departed on a mysterious movement with General French's cavalry command and a division of mounted infantry, about 10,000 men in all. The curtain dropped again; the next news that came in was a dispatch from Roberts stating that French had reached and relieved Kimberley. The astonishing feature of this news was the list of casualties—only twenty in all. On Monday, Feb. 19 still more puzzling news came over the wires; General Cronje, in command of the Free State forces around Kimberley, was then in full retreat, with Roberts pursuing and Kitchener, in command of Kelly-Kenny's cavalry, marching to intercept the retreat. Too late for confirmation this week comes the report that Cronje is hopelessly surrounded and must surrender unless he springs a surprise. The mysterious feature of the whole affair is the accomplishment of this end, for which Methuen fought three bloody battles ending in disastrous defeat, with almost no fighting. Either Cronje is leading General Roberts into a trap, or—and this seems the more likely—the great English general has entirely out-manœuvred the Boer commander and rendered his situation so hopeless that he has accepted defeat without engaging in a useless battle. If this is the true situation, it proves that England's need is for generals who know their business rather than for more men or long-range guns. It is too early as yet to say whether or no General Buller has any great chance of success in his fourth advance against Ladysmith. He has taken a strong Boer position on a range south of the Tugela, and has thrown a force across the river. It remains to be seen whether or no this will be another Spion Kop. Fighting is now going on at that point, and Ladysmith is again hopeful. Unofficial advices have it that the Boers are falling away from their positions in front of Buller. This is explained by Dr. Leyds, the Transvaal agent in Europe, who says that the Orange Free State forces with Joubert are going home to defend their capital against Roberts. If this is true, Roberts's brilliant piece of generalship has not only relieved Kimberley, but has assisted Buller to relieve Ladysmith.

Building Strike in Chicago.

Long-expected trouble has broken out in Chicago between the Building Trades Union and the Building Contractors' Council. The Building Trades Union has been considered one of the strongest labor organizations in this country. It has been in a position to dictate to employers of labor, and has done so to a tyrannical degree. It has even gone so far as to prescribe to contractors and architects what materials should be used on their structures, and had reduced hours to the lowest possible limit. Finally the union, urged on by walking delegates and professional agitators, passed a rule that Saturday afternoon should be given to the workmen as a half-holiday with full pay. The contractors, under pressure, yielded to this demand at first, for already building operations were almost paralyzed because of the high price of labor and the preposterous exactions its leaders found themselves able to enforce. A Contractor's Council, with 2,200 firms represented, was organized to resist these encroachments and it was decided to make the Saturday half-holiday a test question. Accordingly they announced that full time would be required on Saturday, Feb. 10. The agitators went to work at once, and the laborers left their work and walked out on strike at noon of that day. Ten thousand men were involved in this movement; twenty thousand more were already out of work as a result of paralysis of building activities, brought about by labor troubles. The strikers seemed to expect sympathy and sympathetic strikes, but they failed in this. Even the most non committal newspapers of Chicago took sides with the contractors, and the expected strikes in other industries have not materialized. As it is, the strike is a large one. Half a million dollars in wages per week is the loss to the laborers, while the contractors have been obliged to stop all work on seven big office buildings and scores of smaller ones. The value of buildings in course of construction is figured at $5,000,000 and contracts amounting to $15,000,000 are held in abeyance pending settlement. Further, $5,000 000 worth of contracts under consideration will not be submitted to contractors until the present struggle is ended. Some work is being done by non union laborers, but in the main, building has stopped. The workmen have not tried to interfere with these so-called "scabs," realizing that public opinion is against them and that it will be further alienated by any show of lawlessness.

The Conservative Reaction in China.

The Chinese Empress Dowager, now the virtual ruler of the Empire, seems to have taken a firm stand against foreign encroachment. A late imperial edict issued from the palace at Pekin ordered the viceroys and governors of the maritime provinces to resist, by arms if necessary, all aggression of outside powers. The language of the edict on this point is unmistakable: "It is our express command that, should any high official find himself so hard pressed by circumstances that nothing short of a war would settle matters, he is to set himself resolutely to work out his duty to this end." Further, if they find that their ancestral homes need to be "protected from the invader," they may take up arms at once without asking instructions from Pekin. The dethronement of Emperor Kwang Hsu and the passing of power into the hands of the old Empress is confirmed by the latest advices. The former Emperor is not dead, as was thought at first, but is held a prisoner at Pekin. Shortly after his deposition it was believed that the edict would be revoked in deference to popular pressure, it being the first time for two thousand years that public opinion had accomplished anything in China. This belief was set at rest by an edict issued January 25, wherein the Emperor formally announced his abdication and, "thanking the Empress Dowager for her kindness," gave into her hands the choice of a successor. European intrigue has something to do with this movement. The Chinese papers assert that the Russians and the French are backing it with a view to downing the British. Color is lent to this statement by the fact that the Russian and French legations had notice in advance of the Emperor's deposition, while the British were taken by surprise. The former Emperor was a friend to England, America and Japan, and was therefore feared and disliked by the French and Russian diplomats.

Russia Active in the East.

The Russian armies on the borders of Afghanistan have been unusually active of late, and the movement has caused more or less uneasiness in England. The first intimation of such a movement came in the early days of the Boer war. The matter was mentioned diplomatically to the Russian Ambassador at London; he passed it over lightly, claiming that the supposed movement was only a part of the autumn maneuvers, and was so positive in his denials of hostile intention that the British were forced to believe him, especially since Russia had, a few weeks previously, assured the Chamberlain Government that she had no intention of taking advantage of the British embarrassment. News from Central Asia comes in slowly, but now it is known that the first information was more or less correct and that the Russian Ambassador was misleading the government at London. Lord Salisbury and his advisers are on the horns of a dilemma. If they ask the crafty ambassador for information, they will get the same reply as formerly, while if they send to St. Petersburg a note asking for an explanation they will cast aspersions upon the truthfulness of her ambassador and upon her good faith of the protests of friendliness made early in the war. Two reasons other than designs upon Afghanistan and Northern India may be back of this advance. The Czar is intriguing for the control of Persia and the Persian Gulf, and this may be only a blind to turn attention away from the real objective. Again, the knowledge that the Russians hold a position close to the gates of Herat may be of use to Russia should she ask of England any small diplomatic favors in connection with China or Persia. It is a bluff, most probably, and if so, it has accomplished its object by scaring the diplomats of Great Britain.

Favorable Report on Canal Bill.

The House Committee on Inter-state and Foreign Commerce has submitted a favorable report on the Hepburn Bill for the early construction of the Nicaragua Canal. The report covers the objections made to the plan, the probable cost and the estimated returns, and dwells at length upon the Clayton-Bulwer treaty of 1850 and its bearing upon the subject. Practical details are first discussed. Estimates of cost have ranged from forty to one hundred and forty-five million dollars. The lowest is undoubtedly too low, as it is based on calculations designed on the shids of forty years back when draught and tonnage were small. On the other hand, the highest is also exaggerated. Estimates of the tonnage which would pass through the waterway are also variable. One authority has placed it at only three hundred thousand a year, while some estimates go up to eleven million. Making a conservative estimate at four million tons, the profits, on the Suez scale, would come to over six million dollars a year. This would pay interest on the loan, cover running expenses, and leave over one million dollars a year for profits on the original venture. Besides this, if the United States decided to use the canal for encouraging American shipping, a reduction of rates on vessels owned in this country would be the greatest possible stimulus to the American ship-building industry. It is admitted that certain persons claim to hold concessions from both Nicaragua and Costa Rica for the building of an interoceanic canal. The committee has investigated them all and believes that they are inoperative. We should control the canal, for the additional power it will give to our navy if for no other reason. As for the Clayton-Bulwer treaty, the committee believes that Great Britain has violated its provisions and that it has therefore no more binding force. Its spirit was transgressed when, after agreeing that America and Great Britain should have joint control of a waterway to the East, the British built and held for themselves the Suez Canal. The British violated the treaty in 1860, when they contracted an alliance with Nicaragua permitting the landing of troops in that country. We ourselves were parties to this when we made a similar treaty with Nicaragua in 1868. But above all, conditions have so changed that, in the judgment of the best authorities of international law, the treaty may be considered to have lapsed. This is, of course, a partisan view. Others, the English in particular, do not hold the old treaty so lightly. Nevertheless, there is a strong feeling in both the House and Senate against recognizing it as a factor. The Hay-Pauncefote agreement, which recognizes and then abrogates the Clayton-Bulwer agreement and binds the United States not to fortify the canal, is now looked upon as a loser when it shall come up in the Senate for ratification. It will be laid on the table for the present, in the hope that some other way out will present itself, but it is almost certain to fail of ratification in the end.

Legislation for Cape Nome.

The affairs of the Cape Nome mining district are before Congress in the shape of three bills all more or less conflicting in tone and intent. The whole matter hinges on the definition of the beach claims. It is a new problem in law legislation, for never before has gold in paying quantities been discovered on the sea beach. As is well known, the beach diggings have been controlled, up to this time, by the United States army, being given out by the army officer in sixty-foot widths to individual miners. A bill before the Military Committee of the House provides for permanent control in this manner, while another one now before the Committee on Public Lands grants the Interior Department full authority. Neither of these bills was prepared by actual members of the committees; they have been originated by Congressmen under pressure from individuals directly interested in the diggings. A third bill which bears indirectly is that of Senator Nelson, called "a bill to preserve rivers and harbors." This favors the leasing system for tide-lands, and, if passed, will permit of a monopoly of beach claims by chartered companies. The members of the committees have reached no agreement. Even the law on the subject is obscure. Good Alaskan lawyers claim the statute now in force establishing a sixty-foot reserve does not apply to land containing gold or to cases where land adjacent to the beach has not been taken up under the homestead law. If they are confused on this point, the authorities are wholly at sea regard ng rights of dredging submerged sand for gold. Many applications for dredging rights are now before the War Department; almost without exception, the army men have refused these, pleading that Congress ought soon to act on the question. This may not happen, however, during the present crowded session, as it will take much time and labor to unravel the law and precedents of the case.

The School System of Manila.

The Government now maintains thirty-nine public schools in Manila, and is making a mild attempt at enforcing universal attendance by children of school age. The main reason why the attempt is not pushed with more energy is the fact that there are not nearly enough houses to accommodate the school population of the city. The system as it runs at present is patched up from the old Spanish plan. In the days when Dewey was blockading the town, the entire Spanish educational system was suspended. Shortly after the city was occupied by our troops, Chaplain McKinnon of the First California began a search for teachers and pupils, and, with the help of the military authorities, soon had several schools in operation. They ran along somehow until the opening of the Tagalog rebellion, when several of the institutions were deserted by the pupils, and the Provost Marshal had to issue a proclamation announcing that, unless the attendance increased, the buildings would be closed. This had the desired effect, and the system dragged on until June 1, 1899, when McKinnon was relieved by G. P. Anderson of Oregon, a Yale graduate and the present superintendent. Now the educational system is in three divisions—the primary schools, the high schools and the normal. The two last-named are left, for the present, in the hands of the Jesuit Fathers, who conducted them under Spanish rule. The primary department is non sectarian in character. In each of the twelve districts of the city there are at least two schools, one for boys and one for girls. In the teaching force there are eighty-five mestizos and natives, forty Spaniards, and twenty-one Americans. The curriculum is about like that of an American primary school, except that instruction is given in Spanish, with English added as a special study. The old religious instruction of the Spanish schools has been judiciously dropped. The attendance is about 5,000, out of a school population of 25,000; this does not include the attendance at private and parochial institutions. The high and normal schools are in the hands of the priests, and are granted a subsidy until the Government plans can be extended. Just now there is urgent need for more buildings. In general, the natives take kindly to our school system, and are disposed to send their children. This is believed by the army authorities in Manila to be one of the surest means of winning over the Tagal population.

American Fruit-Growers and German Laws. The late announcement of Herr Von Bulow, German Minister of Foreign Affairs, to the effect that the rigid examination of American fruit is to be modified in future, is of great importance to American fruit-growers. The cable dispatches do not state just how the change is to be made, except that it will be to our advantage. The discrimination against American fruit in Germany dates back two years. At that time, German growers awoke to the fact that our farmers were crowding them out in their own market. In 1897, our annual exports of fruit amounted to about four and a half millions; one-half of this consisted of apples and more than half went to Germany. American apples were superior to the German and were sold at least as cheaply. There was a howl from the agrarian party; the government responded by prohibiting the importation of plants, slips, fruits, dried fruits, or even the boxes or packages in which they are shipped. Subsequently the embargo on fruit was removed, with the provision that it should be given a rigid inspection at the port of entry. The German cry of "wolf" caused other nations to take similar steps; Austria, Switzerland and Canada have since passed laws directed against our fruit trade, while other nations took the matter under advisement. The fruit men appealed to the State Department at Washington, and the matter was investigated and placed before the German government in its true light. Careful experiment showed conclusively that the San Jose scale does not spread from fruit to tree. This fact was submitted to Germany, together with the recommendations of the State Department, and had the result noted above. It may be added that the failure of the German apple crop, causing a famine in this staple, may have something to do with this change of heart.

Slow Work on the Paris Exposition. According to the latest reports, work on the Paris Exposition is proceeding very slowly, and it is doubtful if the buildings can be finished and the exhibits installed in time for the scheduled opening. Heavy rains and snow-storms and labor troubles have seriously retarded progress. Of the sixty-two days of December and January fifty have been stormy, and 1200 carpenters, the most important body of men employed at this stage of development, have been out on a strike for some weeks. It was promised in advance that several important buildings would be done by Feb. 1, but these still lack a good month's work of completion. The Chicago Exposition was behind specifications on Feb. 1, 1893, and was prepared for the opening day only after the most strenuous exertions, yet the French are even farther behind at the corresponding date, and are much slower builders than the Americans. The Alexander Bridge alone is in a satisfactory stage of completion. Barring this, the prospects for the big fair are excellent. The political situation has cleared, and the managers are certain that the hatred of France engendered by the Dreyfus affair and anti-English feeling will not injure attendance to any great extent. They have issued orders for 65,000,000 tickets of admission, 20,000,000 more than were issued for the Exposition of 1889.

EDITORIAL COMMENT

The Backbone of Reorganization.

WHAT does the Republican party of California need of re-organizing or harmonizing? Having decided which of these two shall take place the question naturally arises, "Who shall lead in the movement?" There lives in the interior of the State, among Republicans who come to state conventions, a fine spirit of rebellion against the domination of the solid boss-ridden boss-controlled vote of the San Francisco delegation. In both Democratic and Republican state conventions a solid delegation from San Francisco, in the hands of a single man, is all-powerful in compelling country delegations with a "favorite son" to toe the mark for the boss programme. There seems to be no place for a reform movement to gather the basic strength necessary to do battle with the San Francisco boss. A solid South represents some 150 votes in a Republican state convention. The solid delegation from San Francisco is within one or two of that number. In matters of politics the South is usually a unit—but unfortunately not for a principle. They consolidate on candidates—and are as willing as any one of the several counties of the North to trade principles for their "man." The county that sends an assemblyman or senator to the Legislature for the purpose of procuring the enactment of some special pet measure, commits a political crime. As soon as it becomes known at the capital that the constituents of Jones or White from this or that county expect him to pass any given measure for the benefit of his county, every crooked member of the Legislature is against that measure until Jones has bartered away his honesty and agreed to support a multitude of iniquitous measures in return for support to his bill. The county that sends a "solid delegation" to state conventions seeking the nomination of some popular "favorite son" to a given place on the state ticket, renders that delegation easy prey for the manipulator. While the boss may have a large block of delegates at his command, he needs more votes to place corrupt or complaisant men upon the ticket, and if the "favorite son" has a large enough following, and if the position he aspires to is not one where he can accomplish any particular harm, his shouting, half-blind followers are taken into the camp of the boss and programmed for the boss slate. When the delegation that has betrayed its party for the "favorite son" returns home, a brass-band and steam-beer reception follows, the county glows with pride, because her favorite has been chosen to such high honor, and so the farce is played out until the final act.

Probably it will never be possible to eliminate this evil of selfishness from politics, but perhaps it may be mitigated as the masses grow more intelligent politically. An instructed delegation to a state convention or an instructed legislator is, to use a slang expression, simply "a pudding" for the manipulator who represents the corrupt side of politics.

In the coming "reorganization" the party has this to fear. Aspirants for the gubernatorial nomination to succeed Mr. Gage will not be likely to find much that is commendable in any plan that does not have for its ultimate object their nomination at the head of the ticket. Reorganization to one candidate means the elevation of his particular friends and his own nomination; while to another equally "prominent" reorganization, it means exactly the opposite thing.

It requires time, money, patience and constant effort for an individual to accomplish much in state politics. There are young men in the Republican party who, with less effort than others, might put themselves to the fore front, and lead the party to victory. But the public must prepare itself for this, that the principals in the movement which seems inevitable will be men ambitious to lead—not as politicians, but as seekers after high political preferment. Even though these leaders be respectable what does it matter, if the ambition of one or more of them is to become governor.

Within the large cities the reorganization movement will hardly be felt. In Sacramento, San Jose, Oakland, and Los Angeles, too, probably, there will always remain the taint of the boss, to plague the mixed and thickly settled community. These delegates, though in the minority, will make themselves felt, and will demand concessions. To the country the party must look for the backbone of any movement that is intended to break down the strength of bossism.

Settling Water Rates.

THAT the newly-installed Board of Supervisors of San Francisco is made up of honest, intelligent, well-meaning men, willing and anxious to serve the municipality to their best ability, no one doubts. Consider each member as an individual or the body as a whole, and the tax-payer must extract some satisfaction from the process. Neither small jobs, demagogic posing, corrupt practices, nor any of the unholy vices, large or small, that usually creep into such boards, will be likely to find encouragement among such men, unless all signs fail. If the impulse of the charter and new civic life is responsible for this refreshing novelty in municipal politics, then God bless the charter!

Just now this body is considering the question of water rates. No blatant demagogue has appeared among them to shout vain invective into their ears, nor has the thrifty corruptionist yet made an appearance among them. These twin evils of decency seem not to abide among the members of this Board. In an orderly and businesslike manner they are proceeding to ascertain the cost and value of the water plant for the purpose of establishing a basis upon which to prepare a schedule of rates. The corporation itself, represented by its agents, engineers, accountants and attorneys, is laying before the investigators the cost of acquiring and maintaining its property, in a manner quite frank and unobstructed by technicalities or dilatory tactics. The entire proceeding is at once proper and businesslike, and over it all prevails a spirit of frankness and fairness upon both sides. Politics is entirely eliminated and the confounded and confusing clap-trap that demagogy usually injects into such proceedings is happily absent. The matter in hand is a business proposition and is being so treated.

If the municipality owned the works, its legislative officers might meet in just such a frame of mind and discuss in just such manner the cost, the value, the expenses of maintenance and operation, the fixed charges of interest, sinking fund, etc., preparatory to fixing water rates for the ensuing year. In such a discussion, the best business principles alone should govern deliberations. In fixing the rates which the water company may charge, no one but a rascal would permit unfairness to creep into his judgment. The power to regulate is vested in the Supervisors to prevent extortion on the part of the corporation. But the Board may not enforce an unfairly low rate any more than can the corporation enforce an unfairly high rate. This is elementary. The corporation is entitled to live. It cannot be arbitrarily crushed out of existence or compelled to conduct its business at a loss. If a fair profit is obtainable the corporation is entitled to it. What are the profits of such a corporation—the sum of money earned by it *over and above* operating expenses, repairs, betterments, interest on bonded and floating indebtedness? It is essential for the corporation to earn all of these to survive, and it is quite as essential that the owners of such property—the stockholders—should receive a fair interest on their investment. It has been conceded, we understand, that five per cent. shall be considered a fair dividend to stockholders, and, having reached this point, we are somewhere near a place where this water regulation will be lifted out of our politics. The power to regulate earnings is the next thing to ownership itself, indeed it is one of the chief functions of ownership. This power has been woefully abused by preceding Boards of Supervisors, and if the present body can but succeed in settling the question as completely as our unfortunate laws will permit, they will confer a lasting benefit on San Francisco. But they must bring their own good intelligences to bear on the subject and permit no one, not even Mayor Phelan, to dictate or foist his own ideas and theories upon them. Unfortunately, the mayor is possessed of an ambition to score off corporations, to utilize their necessities as the opportunity for his own political aggrandizement. This tendency must not be forgotten when the final decision must be come to.

Year in and year out, it has been charged that Spring Valley water company has interfered in municipal politics for self protection; year in and year out it has been charged that venal and corrupt Supervisors have extorted large sums of money from it under threats of abusing the sacred power lodged with them. Year in and year out it has been charged that political bosses and Supervisors have made violent raids upon this corporation for the purpose of depressing the value of its stock upon the market, driving timid and helpless holders to sell at a loss so that the politician might buy at a low figure and sell at a profit when the attack inspired by him was suspended. The members of this Board know that this water question has been prolific of scandal ever since the unfortunate "new constitution" was adopted. We do not claim that truth is behind the scandals in question, nor do we deny them, but we do know, and every good citizen knows, that true or untrue, the community at large is harmed by their constant and regular reiteration. If this Board could put this water question out of politics, could settle it fairly and honestly so that no aspiring demagogue or thrifty Supervisor of the future could again profit by it, we would all heave a great sigh of relief. Of course this Board cannot amend the constitution, but it may settle this question in the minds of all honest men. Frankly we believe this, we believe this water company that has been charged with corrupting our politics will be encouraged to work for honest Supervisors if this Board will but demonstrate that honest men dare to do right.

There are others.

COLONEL DONAN, whom the Seattle *Times* describes as "one of the most entertaining men who has ever been connected with journalism in the United States," some years ago settled in Portland, Oregon, which place after a few years' trial he determined to quit. Writing to a friend at Seattle before leaving Portland, he said:

"I am sorry I did not go to Seattle, instead of coming to Portland. Everything indicates that you are to have the second city—if not ultimately the first—on the Pacific Coast. This place had the chance, but its d——d 'Old Pioneers' and 'Native Sons,' its mossbacks and pullbacks and miscellaneous mulligrubbers have killed it, in spite of all its natural advantages and its hoarded money. I think the Union Pacific system will build to the Sound during the coming year; and that will put the finishing touches to the competition of this metropolis of sluggards."

And while the *Wave* reader at the San Francisco end is reading this extract let him ponder over the query as to how far it is applicable to San Francisco as well as to Portland. If we had a Colonel Donan about to quit San Francisco for Chicago, he would not vary his tone in referring to the shameful way in which the natural advantages of the western city had been permitted to languish and go uncared for by those who in the nature of things should have given them their best attention.

Errors of British Warfare.

Apart from the undoubted individual superiority of the Boer over the British for the style of fighting now going on in South Africa, it is an undoubted fact that the British officers have made some terrible mistakes in the work in hand. This is admitted not only on neutral ground but in London, where public opinion is united in condemnation of certain officers and commanders. The main points of failure are enumerated by the experts of the principal English magazines. The expert of the *Fortnightly Review* maintains that the first blunder was in the failure of the War Office to make ready in advance, the military considerations being overruled by political expediency. Among the generals, all have blundered. This, remember, was written before Roberts took control and before the Spion Kop disaster. Gatacre at Stormberg broke the commonest rules of tactics. White blundered by halting at Ladysmith to be shut in. Methuen failed to follow advantages. Buller has the least blame to bear; the officer who advanced the artillery without adequate reconnoisance is the one responsible for the Tugela defeat. When all is said, however, he believes that the heavy blame should rest on Lord Lansdowne and the other civilians of the War Office, who are responsible for the unpreparedness of the army.

The expert of *Blackwood's Magazine* accuses all the commanders, especially Methuen, of gross stupidity. They have failed to follow whatever advantage they had gained, they have been foolish in the handling of the men, bringing them into action when they were in bad physical condition; they have fought without scouts in a style of fighting where good scouting is half the battle. The great mistake of the War Office is in the furnishing of antiquated artillery. More cavalry and mounted infantry, better cannon and intelligent generals are the great needs

The writer for the *Contemporary Review* is less caustic and more hopeful. He, too, harps on the stupidity of the generals, and criticises their poor strategy in dividing their armies when they should have massed them, and omitting in their plans of campaign all consideration of what the Boers might do. Writing a month before the relief of Kimberley, he recommends that Generals French and Gatacre combine with Warren's reinforcements and advance in mass to crush Cronje and relieve Kimberley. Strangely enough, this is just what has been done this week.

DRILL OF THE BRIGADE. ONE OF THE TWO FIRE ENGINES.

THE BUBONIC PLAGUE.

ORIGIN AND VARIETIES OF THE DREAD DISEASE.

MUCH as we have heard of the bubonic plague since it began its spread around the Pacific, it is doubtful if many people understand with any degree of accuracy just what it is and is not. Science itself can not tell over-much about the scourge, for it is a peculiar disease, with many features still unexplained. Yet, the known facts are little disseminated in this quarter of the globe. It may be that we will have occasion to know more of it before long, for it has appeared on all the coasts of the Pacific except the American side during the past two years. Beginning with Northern China, it has shown successively in Southern China, in Japan, in the Straits Settlements, in Manila, and in Honolulu. It is one of the characteristics of the disease that it travels slowly. One year, it devastates a town, runs its course and disappears; the next, it shows up in some village say, fifty miles distant, or in some seaport visited by vessels from the infected district. The Black Plague, the name by which the disease was known before modern science named it, shows in three forms, the bubonic, the enteric and the pneumonic. The bubonic is the most common and fatal form. In this variety, besides the fever and delerium which marks all three forms, the characteristic symptom is a swelling of all the glands in the body, especially the bubuoes, which break just before death. The enteric variety attacks the intestines and is, strange to say, least fatal of all; in an epidemic, the great majority of cases which give recoveries are of this form. The pneumonic variety is least understood; in this, the lungs are attacked. Pneumonic cases are almost without exception, fatal.

If we are to rely upon the statements of the French scientists, who have made the plague a special study, we must admit that many precautions taken by towns infected with the plague-scare are misdirected. In Hilo, recently, the shot-gun quarantine was especially strict against mail and goods coming from Honolulu. Yet it is doubtful if the disease is ever carried far in this manner. The germ can not live long away from organic life. In the bodies of men and animals, in the organic life in heaps of filth, it grows and thrives; removed from these, it perishes in a short time. Dogs, cats, rats, mice and snakes are the chief carriers of the disease, which never attacks cattle or other herbiverous animals. Rats, especially, are dangerous in plague time. Wherever there is an epidemic, one of the first signs is the discovery of dead rats. The mortality among these creatures harks back to one of the mysteries of the disease; it is believed, in some unknown way, to infect the soil of a district where it appears. This is the more inexplicable because of the fact noted above that, when removed from organic life, the germ lives only a short time. It may be that it finds in the soil elements of nutriment, or it may be that the presence of filth containing maggots or other low organic forms accounts for it. At any rate, the disease always disappears suddenly and unaccountably after one season's ravages, as though the infected earth had taken it and let it run its course. This peculiarity, as well as the filth theory, would account for the mortality among rats, as they run close to the ground. As these rodents infest the holds of vessels, they are believed to be the most active disseminating agents, and it is likely that they, and not Chinese immigrants, brought the disease to Honolulu. If we have bubonic plague on the Pacific Coast, it is probable that the rats will bring it here; while the authorities of San Francisco or Portland or Seattle are quarantining goods and passengers, some of the dangerous vermin will slip ashore and precipitate the infection. This is not idle speculation, but a strong possibility. The first white victim in Honolulu, with the exception of a degraded woman who lived among the Chinese, caught it from a rat.

The one saving grace in this terrible plague, and the one thing which ought to prevent it from claiming any great number of white victims, is the fact that it is not communicated by direct infection like small-pox or other epidemic diseases. It must enter the system through some cut or abrasion in the skin. In India and China, the natives die like sheep while the whites are almost immune, because the natives go barefoot, thus making cuts and sores frequent. As the germ infects the soil, cuts and bruises on the foot are brought close to the source of infection. Even when the disease takes the enteric form, that is, when it attacks the intestines, it does so through the intestinal canal. In experimenting with the disease in the laboratory, scientists have proved all this beyond doubt. Animals confined with plague bacilli do not take the disease until it is communicated to them. In travelling from person to person, direct contact is not necessary, but it is necessary that a sore or scratch shall give entrance. Nevertheless, an abrasion no larger than a pin-prick is sufficient. It is not certain whether insects, such as mosquitoes, gnats and flies, carry the germ, but it is sure that they are a fruitful source of contagion through their skin-piercing bites.

Once contracted, the disease is the most fatal known. In the Honolulu epidemic, now partially arrested, eight cases out of forty-eight recovered, but this is an unusually low rate of death. The rule is that ninety-five out of a hundred die, the recoveries being generally among those who contract the enteric form, this bearing the same relation to the bubonic as varioloid to small-pox. When the disease has a hold on the system, there is no known cure; the only thing to be done is to nurse the patient and hope. There is, however, a preventive. An elixir discovered by French physicians and now used universally by doctors and nurses dealing with the plague, renders the subject immune in the same degree as vaccination against small-pox. That is, the person thus fortified may take the plague, but only in a very mild form, from which he is almost sure to recover. Applied in the very early stages, this preparation will cure, but when the disease has made any progress it only hastens the end. The injections of this fluid must be renewed every few days, as it fortifies the system for a short time only. This, together with elimination of the filth which furnishes a breeding-place, forms the only good method of fighting Black Death.

Seattle is making an earnest effort to have the headquarters of the Department of Alaska of the regular army located in that city. General Randall has been placed in command of the Department and directed to remain in the Queen City until the season opens in the north. In support of the claim that Seattle is a better place for the headquarters than some of the Alaska towns suggested, it is pointed out that none of them can be reached during the winter without considerable difficulty, and in addition the cost of building storehouses in Alaska would be great, while there are plenty of buildings in Seattle available for the purpose at a moderate rental. The fact that Seattle is a more desirable place of residence is also pointed out. A memorial has been sent to Congress on this matter. Another memorial has been sent to the same body asking that Pacific coast ship-builders be given the same opportunity to bid on the construction of government vessels as is given to the builderson the Atlantic coast. The Chamber of Commerce and several other of the industrial associations of the city are behind these movements.

In recent years nettle fibre has come greatly into favor in the manufacture of fine yarns and tissues. Many factories in Germany use these fibres for spinning and other purposes. Nettle fibre produces one of the finest tissues obtainable from any known kind of vegetable fibre. In view of the importance which this seems likely to attain in connection with the weaving industries, it is intended to introduce the cultivation of nettles, if possible, into the Cameroons.

The difficulties in the way of housing and feeding the 20,000 students in Boston who can afford to pay but a small sum for board and rooms have suggested the idea of erecting a ten-story building, in a central location, where some eight or nine hundred of these young people may live at an expense of from $2.50 to $4 a week. Besides the 411 rooms in the proposed building, there will be a gymnasium, reading rooms, bowling alley, billiard room, and a concert hall capable of seating eight hundred people. The cost is estimated at $750,000, and this amount it is proposed to raise by subscription.

INSURGENT PRISONERS PLAYING PELOTA IN THE COURT YARD OF BILABAD PRISON.

FORTUNES IN OIL.

BY RUBEN FRANCIS.

TO the outsider, whether in Europe or the East, California is the land of a thousand booms. The California millionaire is a figure in literature. When the author of *L'Abbe Constantin* wanted a husband to account for the wealth of his American heroine, he made him hail from the Golden State. Take any French novel which introduces a rich American heiress, and it is ten to one that before you have gone fifteen pages you find that she comes from the same favored region. Even Kipling, looking for a rich father to *Harvey Cheyne*, the hero of "Captains Courageous," made him the magnate of a railroad on the Pacific Coast. And so it goes. California and large fortunes occur together in the public mind.

Where there is much smoke, there is usually some fire. Sudden and unexpected booms, with the accompanying accumulation of fortunes, have been a feature of the history of California, which has been a peculiarly favored region for short cuts to wealth. First, there was the big '49 gold boom, which made history in its day. Then came the quicksilver excitement of 1857 and 1858. This was dying out when gold and silver were struck at Washoe and Virginia City. When the Pacific railroads were finished to the coast, a real estate boom followed in San Francisco, and thousands made fortunes or "went broke" in speculating on locations. This merged into the great Comstock speculation. Then, in the early eighties, the extension of the Atchison, Topeka, & Sante Fe to Los Angeles brought a real estate boom to Southern California and the San Joaquin valley. When this excitement ran its course and died away, to be followed by "land-poor" times, it seemed as though we were at an end of our booms. People have talked these twenty years about "stable prosperity," "steady development," and all that, but there has been no more thought of booms.

Now we are at the beginning of another excitement that has every chance of outfooting most of its predecessors. It is hardly six months old now, but it is already running wild. Citizens of San Francisco who have heard of the new oil fields now being opened and exploited are inclined to be a little skeptical. No such skepticism prevails in the South, where the results have been observed first hand. Los Angeles is as excited over oil as Seattle is over Cape Nome. Those who have not oil stock already are saving and borrowing to invest, and men are throwing up their positions to rush to the fields exactly as the residents of the Northwest gave up their places last year to get into the Klondike. New companies are being organized by the hundreds, and their stock sells with great readiness. Four corporations organized in Orange County for $150,000 each sold out their stock in Pennsylvania within a week. All the local workmen who know anything about oil drilling were snapped up at high wages long ago, and others have been rushed on from the East. Dealers in drilling appliances have orders for months ahead.

Although the possibilities of the industry have only just come into public notice, the mining of oil did not come up suddenly, but as a gradual development. For many years the state has produced petroleum. In 1893 thoeutput was 303,400 barrels. By 1898, when the first rumblings of the coming boom were apparent, the yield had risen to 2,240,058 barrels. Then, in 1899, it reached the neighborhood of 4,500,000 barrels, valued at about $6,000,000. In 1893 there were less than 200 active wells in the state. Now there are 2300, with more spouting up every day, 1200 having been sunk last year alone. The present average daily production of 12,000 barrels will, it is estimated, be raised to 25,000 by the end of the year. Dr. Lyman Gardner of the United States Geological Survey has made what experts consider a conservative estimate in stating that the fields now discovered ought to be yielding 60,000 a day within a few years. When the strata of asphalt rocks at great depth are understood, he believes that the yield will be increased beyond that figure—how far beyond he does not venture to say.

Santa Paula in Ventura county and Puente in Los Angeles county are the oldest fields in the state. They have been operated for nearly twenty years and had a good market near at hand, until the discovery of greater fields lowered prices. The Los Angeles field was, until this year, the heaviest producer in the state. The Westlake Park district is in the city proper, and has transformed what used to be a choice residence district into a forest of derricks. The residents of this district have temporarily checked development by enjoining the oil men. Even at that, the field gives 80,000 barrels per month. Last year the Coalinga fields took the lead, and are now yielding 105,000 barrels a month. The Kern county field, where one well alone spouts steadily 760 barrels a day, had the most rapid development of any opened last year. But Coalinga still holds the lead, both for total production and for average per well. The entire product of this field comes from eighteen wells. The Fuller and Whittier fields in Orange county are also wonderful producers. The Summerland field, located near Santa Barbara, is unique in that some of the wells are out in the ocean quite a distance from shore. The machinery is operated from piers, and the companies engaged are doing a lucrative business.

There are the usual stories afloat concerning poor men grown suddenly rich by fortunate investments in oil. C. B. Canfield of Los Angeles is an example. A few years ago he was engineer for a mine at Randsburg. He went to work as a laborer sinking wells, and learned the business. Then he took in as partner Joseph Chanslor, a young grocery clerk of Los Angeles. Together they sunk wells on wild land in the region of Hanford, Tulare county. Whether it was luck or judgment that brought them success no one knows except themselves, but they have just made a contract with the Southern Pacific Company to furnish 100,000 barrels a month for two years, and have refused an offer of $900,000 for two wells at Coalinga.

Samuel W. Beel came to the Coast as a commercial traveler for a factory at Cleveland, O. He had been an oil driller in Pennsylvania, and he pricked up his ears when, at Bakersfield, they told him that crude oil oozed from the foothills a few miles away. He went to see next day, and as a consequence gave up his situation and raised $2,000 to sink wells. Now his company pays him $30,000 a year in salary and $6,500 a month dividends on stock. Besides that, he has just sold 700 acres of undeveloped oil land that cost him $12,000 for $230,000.

In 1895 W. W. Porter was a ranch hand in Kern county. Finding evidences of oil in a foot-hill canyon, he got an option on seven acres of the land and paid for it out of his savings. Two years later he persuaded a San Francisco capitalist to pay for a well. It spouted at once, and he sold his find for $145,000. He kept on investing, and has made in all $425,000, with accumulations still coming in. He has a contract with the Santa Fe road to furnish 20,000 barrels a month at $1.20 per barrel.

These oil discoveries mean more to California than an addition of some ten million dollars to the annual output of the state. From the very first, manufacturing industries on the Coast have been handicapped by the scarcity of fuel. That is just where the usefulness of the Pacific Coast product comes in. Only five per cent can be refined for illuminating purposes, owing to the fact that the base is asphalt, whereas petroleum with a paraffin basis, such as is mined in Pennsylvania and the East, is the only kind suitable for lighting. It is fuel oil, heavy and dense, and it furnishes the article California manufacturers have been seeking. Already the locomotives of the Santa Fe railroad are using it on the Southern California division to the exclusion of coal. So are the beet sugar factories of Chino and the southern counties. They have taken 400,000 barrels for the purpose this year. In the same period the manufacturing concerns of San Francisco have used 100,000 barrels. The time is near at hand when every wheel in Los Angeles and vicinity will have native petroleum back of the motive power.

The suitability and cheapness of oil fuel was proved by a series of experiments conducted on behalf of the Santa Fe railroad when its officials were debating on the change. The decision was all on the side of the new fuel. It was found that a train would run on a ton of coal 26.07 miles, and on a ton of oil 38.46 miles—a gain of 12.39 miles per ton. But a ton of coal costs about $7.25, while a ton of oil, at present prices, comes to $6.90. Thus, price for price, oil was found to be fifty per cent the more efficient. Beyond this, it is more cleanly and more easily handled, considerations not to be overlooked. Similar tests made by other railroads and manufacturing firms have had analogous results. The Santa Fe, as heretofore stated, adopted it exclusively, and the Southern Pacific has followed, and will probably end by making it standard fuel for its great system.

LATE LITERARY LIGHTS.

SPECIAL CORRESPONDENCE TO THE WANE.

THE position of a literary man or a journalist in the English capital is a paradoxical one. Here, entirely contrary to the American custom, the wielders of the pen and pencil are eligible to the highest society; literary celebrities are, in fact, sought after—'tis one of the moves of the social game. The lucky hostess who could entice the unenticeable Kipling into her drawing-room would score a checkmate on all rivals. Yet, in spite of this—here comes in the paradox—the feeling of *cameraderie* among all men and women who dabble in letters, from the highest to the lowest, is very strong. They stick together, they associate one with another, they realize, in this monarchy, something of the meaning of the term, "republic of letters." That is how it happens that I have known men whose names are great in English letters; that is how it happens that I cherish some slight personal reminiscences of two literary celebrities who died the other day—W. D. Blackmore, the novelist, and G. W. Steevens, the young correspondent killed last month in Natal.

My experience with Blackmore was limited to one visit which I made with a mutual friend some years ago. I had expected to find this novelist-gardener a rather forbidding personage; the facts proved how far was my idea from the reality. He was as near John Bull in appearance as he could possibly be, but his manners were the simple and pleasant ones of the higher type of country gentleman. He met us with quiet cordiality and conducted us to the low-roofed Devonshire house which was his home and in which he died. It is a plain and picturesque house, simply furnished, with an air of country neatness about everything. We chatted for awhile, about men and things. His dialect had a touch of Devonshire breadth, his words were straight and homely Anglo-Saxon. I noted an aversion to speaking on literary matters; market-gardening, his vocation and his hobby, seemed to interest him mainly. After a time, he invited us to stroll over his domain with him. It is one of those highly-cultivated gardens peculiar to Europe, where the greatest possible yield is gotten out of the smallest area. There are only eleven acres in all, and cultivated to the very limit.

As we walked along, I found myself forgetting that this was one of England's foremost novelists and remembering only the expert gardener. From time to time, he stopped before a tree or vine which showed some signs of overbranching and pruned it to his own satisfaction before proceeding. Most of his peaches, of which he made a specialty, were grown in the English fashion over walls, but just at this time he was experimenting with some American peach-trees which he was trying on the English climate. It was with genuine regret that I learned, some months afterward, that the climate had proved too severe for the changelings. Although he had amassed a competence from his eleven acres in past time, he was complaining just then that the business was losing money. He laid it at the door of the middlemen, but anyone could guess that the failure of his own powers had much to do with it. Even then, he was carrying his arm in a sling as the result of a paralytic stroke, and the disease which ended his life had set in. As we left him, waving us good-by from a peach-laden wall, I was ready to renounce the world and all its ambitions to prune and graft and delve in Devon with old Blackmore. It was a very happy life, I have no doubt; to him was given his meed of earthly success, together with much of "that peace which the world cannot give," and which rarely falls to the successful man.

Blackmore lived to the allotted age and went his way after a life full of good things; surely, no one who was not among his intimates finds the heart to grieve for him. With Steevens, it is different. He was only thirty, and was entering upon a splendid career when death cut him off. Perhaps he was less known in America than in England, although his first success came in his splendid descriptions of the Chicago Exposition for the *Pall Mall Gazette*, strong, brilliant articles which formed the most complete and masterly comment on American politics ever appearing before the British public.

These articles assured him a position in journalism, and paved the way for his assignment to the *Mail's* staff in the Omdurman campaign. The letters he wrote from Kitchener's army gave him a world reputation. In all war correspondence I have ever read, I never remember a more vivid and sympathetic account than this of Steevens's.

Probably you are picturing him in your mind by this time as a six foot stalwart, bronzed by sun and exposure, as a soldier of fortune of the Harding Davis type. The facts are entirely different. Steevens carried through all his short life the physique, the air, the manner, even the fresh complexion, of an Eton schoolboy. How he ever got together the materials for his surpassingly great correspondence, I could never even guess, for he lacked entirely the faculty of approaching men. Introduced to one, he blushed like a schoolboy.

I saw him first six years ago, when he had just come down to London to find his fortune. He was introduced to me as a young journalist recently from Oxford, who had just joined the *Pall Mall Gazette* staff. Having Yankee ideas on what constitutes a newspaper-man—for I was then fresh from San Francisco—and believing that "brass" was the *sine qua non*, I put him down in my mind as a predestined failure. The next time I heard of Steevens, it was as the famous correspondent whose American articles were the talk of all journalistic London. Our second and last meeting was at a dinner. I had expected to behold him transformed by success, what was my surprise to find the most awkward, boyish simplicity, the same blushing demeanor. He went out with the Kitchener expedition after that, and I never saw him again.

Steevens was married to a woman somewhat older than himself, and was devoted to her. With her, his step-children, and a dozen adopted waifs, he lived, while in England, on a modest estate in the Midland counties. These same little waifs, his adopted children, stood for a side of Steevens's character which was never known until his death. It had been his custom, it appears, to keep in the family a few homeless urchins, rearing them as his own and giving them the affection of a father. As one grew old enough to go out and shift for himself, Steevens and his wife would cast about and find another to fill the place. I said awhile back, I think, that Blackmore was a happy man. So was Steevens, perhaps the happier of the two; he had lived his life to the full in his thirty years, he had tasted love and success, and it was cut short before disillusionment came. The world, not he, is the loser. S. M.

THINGS & PEOPLE

Changes in the Benard University Plans.

SENSIBLE counsels have prevailed in regard to the new buildings at Berkeley. The regents of the University and the backers of the plans have recovered from their early frenzy of enthusiasm, and, realizing that the hundred million dollar idea advocated at first would be impossible in a State which can with difficulty be made to grant a one hundred thousand dollar appropriation for new University buildings, and which is almost the only one in the Union that taxes her private universities, have brought down the estimates to a moderate and sensible scale. Mrs. Hearst and her advisers have now reduced the fancy frill-work of the plans, which were their most expensive feature, and have dispensed with unnecessary buildings until her estimate of fifteen millions looks feasible and practical. Architect Bénard is to have the sketches for his revised plans in by April 1, and the finished scheme is to be handed in Oct. 1. A considerable reduction of expense will be made by the employment of students in the architectural department as assistants and by the use of brick and stone made and quarried in State institutions, thus saving the cost of transportation. Furthermore, it is expected that owners of stone quarries will make liberal terms in consideration of the advertising involved. In the revised plans there are about twenty-five buildings, all reduced in grandeur from the original scheme. The intention is to erect the president's house and the mining buildings first, followed by the administration building, the auditorium, the library and the gymnasium. It will take about ten years to finish these in stone; ten years more will be required for the complete plans.

* * *

I hope that in the revised plans M. Bénard has placed some other building than the gymnasium in the central position. That eminent Frenchman had evidently taken his ideas on American colleges and American students from the yellow journals, so that he planned that building as the heart and center of his dream of a University. Football—and the things that thereto pertain is not the leading activity of our modern colleges, the newspapers to the contrary notwithstanding. The library should occupy the central position, as it does at Columbia and Chicago. Stanford has made a similar mistake in giving the chapel central place, but even that is better than to have this undue prominence put upon the things of the flesh by the placing of the department of physical culture before that of mental culture. In the revision of the Bénard plan this should not be overlooked.

Railroad Franchises in Seattle.

FOR some time negotiations have been under way to reorganize and consolidate the street car system of Seattle. The claims of the several parties have been adjusted, but there remains the necessity of acquiring from the city a new franchise covering lines in existence and providing for lines to be constructed. The City Council seemed satisfied to meet the requirements of the street railroad managers, and there is little doubt but that these demands would have been conceded. At the last moment, however, a number of prominent citizens composing a committee of one hundred interposed and obtained an injunction preventing the board from taking action. Now it is up to the aldermen to appear in court and show cause why the franchise should not be sold to the highest bidder instead of being donated to the promoters of the consolidated scheme. At the fateful meeting of the Council it seems that two bids were submitted—one by the corporation, the other offering a high percentage of fixed charges tendered by a well-known lawyer behind whom the One Hundred stand as backers. Further proceedings will be of deep interest, but, in the meantime, the public grows impatient, and seems satisfied that the consolidators be given their way. They offer a first rate system, new cars, fast service and polite direction, and these are desiderata in Seattle.

A Journalistic Dilemma.

DEEPER and deeper the wonder grows as to the positions to be assumed by the *Call* and *Examiner* in the coming national campaign. Here is the *Examiner*, the dear defender of our liberties, which has been whooping for William Jennings Bryan with one breath and the retention of the Philippines and expansion with the other, while the *Call*, always a sound Republican paper and a hater of the Boy Orator of the Platte, is wild against expansion. And now, Bryan and his party are being slowly pushed into making anti-expansion their issue for 1900. The free silver bubble has burst, and William Jennings, in his efforts to inflate it, is blowing into empty air. The Republican majority in Congress is likely to knock the ground from under the trust propaganda by passing an anti-trust amendment. Anyone who has followed the course of Bryan's stumping tours must realize how he is hedging on silver and trusts and bringing the expansion issue into prominence. And, since the Democratic party is a one-man power just now, the one man being Bryan, the national campaign is likely to be fought on his line of policy. This brings us back to the issue in San Francisco. Will the old, staunch Republican *Call* bolt? Will the *Examiner* go Republican? As a Republican, I devoutly hope not.

Another Architectural Outrage.

THOUGH the Ferry building differs in several important directions from the original design—the tower being lower and less gracefully proportioned and the two wings designed to finish off the ends having been omitted through economy—still the effect is good. It is a graceful structure, and is generally admired by visitors. The requirements of the Post Office necessitate the erection of a new structure, and the accepted design was published recently in the dailies. It is an abortion. Ample space would be available if one of the wings of the original scheme were added, but I imagine this would be less profitable to projectors and executants than the creation of a distinct habitation. So, next to the fine lines of the Ferry will rise a squat, ugly, low-browed building utterly out of harmony with its alignment, and a mar and blot upon the approaches to the city. The Architectural Institute should take some action in this connection and attempt to stop the commission of what veritably constitutes an outrage upon taste.

***

A Discredited Prophet.

SNOW fell in Seattle last week to a depth averaging between one-eighth and one-quarter of an inch. The thermometer dropped nearly to the freezing point, and the old residents of that warm-weather pampered city commenced to talk about the "blizzard." What hardships that passing spell of cool weather worked on the people can never be fully described. Seeming to mock their sufferings an item appeared in a morning paper simultaneously with the snow, in which the weather observer triumphantly informed his readers that his bookings for the season included no appearance of the Ice King. That ruler of the Polar regions would shun Seattle the rest of the year, and the balmiest weather that ever delighted an inhabitant of the fields of Elysium would hereafter prevail. Had not this optimist resided far out in the suburbs, making necessary a long tramp through the quarter-inch of snow, no one can say what dire vengeance a maddened mob of shuddering Seattleites would not have taken on him.

***

A Generous Millionaire.

THE exquisite satisfaction of unlimited wealth is best appreciated by the offspring of the thrifty millionaire who has enforced at home those dictates of economy to which he ascribes the upbuilding of his fortune. One of this ilk died some months back leaving a most respectable heritage to be disposed among half a dozen brethren. Of the sons the first had a business "down town"—quite a business, too, but with rather better expectations than results. The young heir had gone into it largely to gratify his parent, and its exactions failed to interest him, as its results did not gratify his ambitions or wants. Well, when the blow fell, he went back to his desk, but a day or two later he threw his pen down, and with a "Old man, you can have this whole thing for yourself" to his partner, he marched out, and the other fellow now owns the whole concern. The survivor is certainly to be congratulated on the good fortune which befell him so suddenly, though the donor could well afford to be generous in the new condition in which he found himself.

***

Municipal Politics in Seattle.

THE political situation in Seattle grows more complicated as the day of election approaches. The Populists have adopted the Citizens or Non-Partisan ticket, and the two are endeavoring to bring the Democrats into line. Overtures have also been made to the Silver Republicans to come into the fold, but as the best offices have been gobbled up by Non-Partisans and as a desire for office does play a part in the making up of tickets, even of reform parties, these overtures are not likely to be accepted. So with two or three tickets in the field against the Regular Republican nominees, the latter have the best chance of governing the city for the next two years. Many differences have arisen among the fusionists. They accuse each other of double dealing and of playing into the hands of the Regular Republicans. That the election will be bitterly contested is indicated by the controversy between the fusion leaders and also by the fact that the registration this year has been the largest in the history of the city. Just 10,500 voters have qualified to cast their ballots. This number indicates that the city has a population of about 80,000.

Gallant Medical Men.

THE stories that come from the Transvaal relating the coolness of British army surgeons in performing their functions under the Boer fire are paralleled by many instances of a similar form of heroism on the part of the American forces in the Santiago and Philippine campaigns. Two well known physicians of San Francisco are among the men who have won reputations for courage on the firing line. Surgeon-Major Geo. F. Shiels was mentioned by General King for distinguished bravery, which consisted not only in performing his functions in the field hospital, but also in utilizing his skill as a rifle shot in attacking the enemy. His brother-in-law, Dr. Ernest K. Johnstone, attracted the attention of General Lawton, who in the last despatch dictated a few hours before his death states that "the exceptional daring and high sense of duty exhibited by him during this expedition, particularly at the battle of Zapote river, when he gave the immediate first aid to the wounded along the river bank and on the bridge, deserves material recognition." He adds a recommendation that "this gallant young surgeon be commissioned either major or brigade surgeon, or major and surgeon of volunteers. Dr. Johnstone, who is now in San Francisco attending to the practise he abandoned to take service in the U. S. army, has no immediate intention of returning to the Philippines, though Dr. Shiels is still in service there.

GRAVE OF CAPT. FORTSON IN LAKE VIEW CEMETERY, SEATTLE.

Obsequies of Fortson and Fletcher.

THE obsequies of Captain Fortson and Private Fletcher, two members of the Washington Regiment of Volunteers who met death in the Philippines, was made the occasion of a public ceremony in Seattle recently. The remains were brought from Manila in a transport, and all Seattle turned out to do the memory of her departed heroes due reverence. On the day of the funeral flags flew at half mast all over the city; business houses were closed and in many instances hung with mourning, and an immense concourse followed the funeral to the graves in Lake View Cemetery. The several military organizations turned out in full force, all the officers of the regiment were present, together with Governor Rogers and his staff. The ceremonies were performed in the Armory, which had been decorated by the Red Cross Society and Fortson Relief Corps, Rev. J. P. D. Lloyd officiating. Tributes were rendered the deceased by several distinguished clergymen—indeed, every honor that friends, comrades and countrymen could render was paid the dead heroes. Both graves were magnificently adorned, being lined with flags and covered with evergreens and flowers.

***

A New Use for Waste Land.

SOME land is valuable for the cultivation of crops, some as a site for buildings, some for its mineral contents. But it has remained for Seattle to show a new productive use for land. There are ten hillside lots in the business section of the city which raise damage suits. Every few months, these lots change their location, spilling over into the street, into the surrounding property, anywhere in the neighborhood. Whenever this happens, the owners collect damages from the city. With almost human intelligence, these lots move often enough to render themselves as profitable as though they were leased at water-front rates. The city grew tired of the drain on the treasury recently, and decided to condemn this property. The city attorney assessed their value at $500 each, but the jury before whom the condemnation suit was tried thought differently; such valuable producing land, in their opinion, ought to bring $1,500 a lot. The city cannot pay this price, and the owners hold their paying location. Meanwhile the land, having been quiet for a while, shows signs of preparing for another profitable move.

BOSWELL, JR.

The Boer war has given rise to a new journalistic specialist—the war expert. Each London daily has one or more.

CHARACTERISTICS AND CAREER OF CALIFORNIA'S NEW SENATOR

THOMAS R. BARD IN 1870.

THE man California has chosen, after a trying experience with deadlocks and political chicanery, to represent her in the Senate, is rather out of the ordinary run of political leaders. Indeed, prior to the Senatorial fight just past he could hardly be called a political leader at all. True, he stood for Congress away back in the seventies, was a figure-head presidential elector in 1892, and has held a few offices in his own county, but he has never appeared before the public as being connected with the "machine" in any way whatsoever. This is not the only point of difference which distinguishes him from the ordinary Congressman. He is a business-man and something of a rustic, a strong "church member" and a Prohibitionist in a mild sort of way. These are not attributes which obtrude themselves in the average United States Senatator, certainly. A man may generally be judged by the estimates of his neighbors, and in Ventura, where he has lived and worked for thirty years and grown up with the country, Thomas Bard is respected and admired by all classes and all parties. In that region, his name is a synonym for commercial honesty. At one period of his business life he had to furni h a bond of over a million dollars in his capacity as trustee of an estate. It was obtained inside of a week by a subscription circulated among the business and professional men of Hueneme, only two refusing to sign the list.

Thomas R. Bard was born in Chambersburg, Pa., in 1841 of the efficient old Scotch-Irish stock which has given so many statesmen to this country. His father was a leader of the Franklin county bar and was a candidate for Congress when he died in 1851. The present junior Senator from California attended the Chambersburg Academy, graduating in 1858, and studied law for a time in his native town. His health failing, he went into the Cumberland Mountains and practiced surveying for a time. When the Civil War broke out, Bard was a member of a forwarding firm in Maryland. He was at this post during the heaviest part of the fighting and occasionally participated himself as an unenlisted Union scout. On an expedition in this capacity, he had a very close shave. He got too near the Confederate lines and was captured. His story of his presence did not tally with that of others in his party, and he was taken out to be hanged as a spy. By good fortune, a detachment of union cavalry rushed the camp just then and rescued him. But the rope was round his neck and that of his companions.

Mr. Bard's chance for fortune came in those war times. His firm had some dealings with the government, and the ability of this quiet, steady young man came under the notice of Colonel T. A. Scott, then an assistant to the Secretary of War. Scott had heavy interests in Southern California lands. He needed a manager, and he offered the position to young Bard. In 1864, being then but little over twenty-three, Bard came to the Ventura district and took up the work. There were not over a dozen Americans on the 277,000 acres of the Scott holdings, yet he proceeded at once to development. Scott believed that the land was rich in oil, and gave directions for the sinking of wells. It was the beginning of the oil industry in California.

With his removal to California at the age of twenty four years begins the story of Bard's active life. The property that he was to manage consist d in 277,000 acres of land, mostly non-producing, in Ventura, Los Angeles, and Humboldt counties. He was to develop, to farm, to barter this land at the best advantage to his employer. The first venture was with oil, and went wrong. A well was sunk in the Ojai country, but it turned out entirely non-producing. From this, Bard turned to the development of agricultural possibilities. He ran on to a series of dry years at this point, but persevered and demonstrated that farming could be made to pay in Southern California—a fact which was strongly doubted in those days. This success had to be followed by another period of struggle. There was some question about Scott's claim to a portion of his land—a boundary line was hazily defined. A lawyer in Ventura knew this and got squatters to settle on the disputed area. For years Bard fought them in the field and in the courts until, in Cleveland's first term, he obtained a decision absolutely reaffirming the Scott claim. In all that time he was frequently in danger of his life from roughs among the squatters, but he fought it to the end and won.

Bard's political activity began in 1868, when he was a supervisor of Santa Barbara county, in the days before Ventura was carved out from that district. Later he was one of the commissioners who made laws for the new county, and he was on its board of supervisors for two years. In 1877 he ran for the State Senate from his own district, but lost by a small majority. From that time until the office of senator sought him he refrained from seeking place, but was always an enthusiastic Republican, supporting the party with money and influence. Bard has always been a religious man, being a member of the Presbyterian Church and an elder of that communion, and he leans rather to the Prohibitionist sentiment. Therefore much of his activity has been directed toward securing local option in his own and surrounding towns. From time to time the nomination for governor or senator was urged upon him, but his refusals were consistent. In 1892 he took a figure-head position as Republican presidential elector. It was a year of a hard-fought Democratic victory, and he had the somewhat peculiar honor of being the one Republican elector who succeeded.

Meanwhile Mr. Bard had been making a quiet, steady business success, in the line of all his other successes, not sudden nor brilliant, but gradual and stable. With his earnings in the Scott employ he had been acquiring interests of his own. He had been extending his property gradually until it included rich holdings in oil, in agricultural lands, and in city property. He has money invested in the banking business throughout the southern country, and has a good sum out in mortgages, which, it is said, he never forecloses. Once, chance to double his wealth by unfair means came to him, but he resisted the temptation. It was in 1882, when Colonel Scott died. Before his death the Colonel had become embarrassed financially and had put his California interests in Bard's name. Legally, the trustee could have claimed every acre of the property. The Scott heirs never expected to receive anything. To their great surprise Bard turned over the whole property to the last penny. It footed up well over a million, and pulled the estate out of debt. A man who gives up a million dollars for principle is a good man to elect senator.

Briefly, let us see what sort of man this is whom California has chosen to represent her. Solid, rather than brilliant, methodical, stable, he has yet a mind of great grasp and force. It is the force of the growing oak tree which splits rocks rather than that of the lyddite shell, however. That sort of force labors, and endures, and pushes on, quietly but irresistibly. Bard is a religious man, an earnest Presbyterian; religious conviction goes, somehow, with steady strength of that sort. When he first came up to the Legislature and opened headquarters, he presented a contrast to the regular Sacramento crowd; his quiet, his evident earnestness, his sober calm stood out so that he was a marked man. The qualities which brought him a fortune and which prevented him from laying violent hands on another are the qualities which will make his reputation at Washington; he will not be a brilliant, spectacular senator, but he will be an honest and an able one.

BERYLWOOD, SENATOR BARD'S HOME IN HUENEME.

The appetite of the people of the Far East for Puget Sound canned salmon is a tradition of the First Washington regiment. The "folks at home" used to send salmon by the ship-load to the regiment at the front, until it palled on their taste, and they began to give it away to the natives. Then a new use was found for the home presents. It was found that the most ardent disciple of Atkinson became a meek and mild amigo in the presence of a can of salmon. Similar results ensued when, in Japan, they presented the last of their stock of canned salmon to the little yellow people. "If we'd a' had a few loads of canned salmon," said one of the Washington boys lately, "we could have taken the whole blamed Orient!"

There is now a prospect that many cargoes of salmon, both canned and fresh, may go to the Orient before long. A representative of the Japanese government has just been touring the Northwest, looking over the salmon industry with a view to encouraging shipping to Japan. It appears that the Russian government has just placed restrictions on Japanese fishing on the coasts of Siberia, and cut short the supply in Japan, where fish is was a important food. The Japanese gentleman stated in Portland that he believed the Japanese market to be good and that he considered the venture of sending salmon to the open ports of the islands a paying one. Some time ago, the agent of President Hill of the Great Northern reported the same thing from Japan, but salmon men in Washington and British Columbia laughed at the idea. It is now likely that these same dealers will send a portion of their next season's catch to Yokohama and Nagasaki.

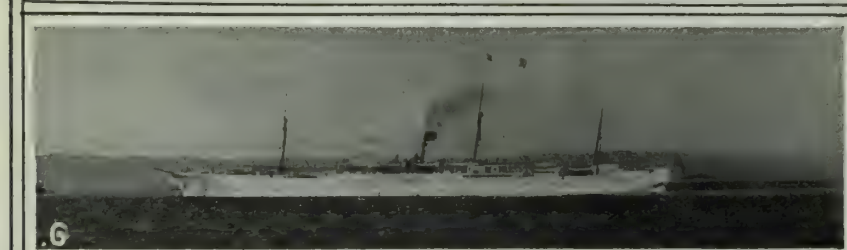
President Hill's experience with these scoffers recalls his part in the beginnings of cotton shipping on the Pacific Coast. Learning that all manufacturers of the island were buying their raw material from English firms, which brought the cotton from the Southern States and shipped via Liverpool, he tried the experiment of carrying a cargo across the continent and Pacific. It was proved that this was cheaper than the Liverpool-Suez route, and now most of the cotton used in Japan goes in American vessels and via Portland and Seattle. Yet the exporters of the Sound ridiculed Hill's cotton ideas at first, as they have just finished ridiculing his fish ideas.

Lady Tama Arnold, the Japanese wife of Sir Edwin Arnold, has just published in London a little birthday book which she calls *Golden Pages*. She justifies the title with the lines, "For golden gleams the pages where names of friends do shine."

Pietro Mascagni has finished the score of a new opera, "The Maskers," which he has dedicated to himself. The dedication runs: "To myself, with my distinguished consideration and unchanging esteem."

England having no Academie has to fall back upon her journals to appraise and crown the works of the year. Appropriately enough, this again has been done this year by the *Academy*, which awards six sums of twenty-five guineas each, as follows: Poetry, to W. B. Yeats, or *The Wind Among the Reeds*; fiction, to "Zack," nom de plume of Gwendoline Keats, for *On Trial*; biography, to Hiliare Belloc for *Danton*; history, to G. M. Trevelyan, for *England in the Age of Wycliffe*; translation, to Mrs. Garnett, for her translation of the novels of Turgénev.

A FLEET Of TRANSPORTS



1. U. S. TRANSPORT THOMAS. 2. SHERIDAN. 3. LOGAN. 4 SHERMAN. 5. GRANT. 6 MEADE. 7 MISSOURI. 8. WARREN. 9. HANCOCK.

THE TRANSPORT SERVICE.

BY JOHN STOLLARD.

LIEUT. CHAS. LYMAN, U. S. A.
Assistant Marine Superintendent.

HOW many of those who look at the pictures on the opposite page and are lured by the heading into reading this article, know anything about the constitution, government, and working of the United States Transport Service? From the cities of the Pacific Coast we have watched the great, black ships fade out in the mist many and many times the past eighteen months. We saw the first troop ships depart, loaded from topmast to gunwales with volunteers, and sent off by all the noise-machines in the harbor; we see the transports in their white peace-paint slip in and out as quietly as liners, now that the first parade and glory of war is done and it has become simple business. The plain, blue uniform with A. T. S. on the collar has become a familiar sight on the streets of San Francisco and Seattle. Yet how many can tell, without stopping to figure it out, what part in the government machine is occupied by the transport service, how it is governed and conducted, or how it happens that this whole new department has been constructed out of nothing and put in perfect running order in the short space of a year and a half?

The transportation of troops is as new a thing in this country as the idea of foreign colonies. In the War of 1812 some few regiments were hauled in haphazard fashion back and forth over the Great Lakes. Again, in the Civil War, Grant used the Mississippi to a very limited extent for the movement of troops. But this had nothing in common with modern army transportation. Grant's men traveled in old-fashioned paddle-wheel steamers down an inland river. At its longest the journey took little over a week. If anything went wrong the boat would be run ashore for repairs. The problem that presented itself to the army authorities at the beginning of the Spanish War was a vastly different proposition.

Let us study the factors of that problem as it presented itself to the officers of the Quartermaster's Department of the Pacific Coast, where the strain came the heaviest. An army of unknown proportions was to be sent seven thousand miles by sea. The advance-guard was to be gotten away with all possible speed. An empire might be lost by a week's unnecessary delay. During the voyage the troops must pass from a mildly temperate climate to a fiercely tropical one. Ships for transportation had to be dredged from the shipping of a coast which has, in proportion to its population and importance, fewer good sea-going vessels than any other civilized part of the world. Gravest of all, there was not an officer in the Pacific station and hardly one in the whole United States who had the first idea of transport construction or management. West Point and the students of the War Department had passed that subject by—it was a part of the general unpreparedness of the country and the army.

The burden was thrown upon the Quartermaster's Department, under which the new branch of the army was placed. The other day I asked Colonel Long, chief quartermaster of the Department of the Pacific, how he managed to do it all.

"God knows," was his laconic answer. In fact, when the officers in charge had time to think, after the first rush, they were all amazed, not so much at the fact that it was done well, but that it was done at all. The first step was a general investigation of the transport service of other countries. The city of San Francisco was scoured for retired officers and non-coms. of the European armies. A few of these were found and they gave valuable assistance. Still more information on the subject was obtained by writing and telegraphing to English officers who happened to be acquaintances of Colonel Long and his associates. The information thus obtained was one of the quiet helps given by England to this country in the time of trouble.

But before this information could come in, the officers of the Transport Service were obliged to act on their own meager knowledge and experience in securing and fitting up vessels for the first expedition. By great good fortune the Oceanic Line happened to have available two passenger vessels, the *Zealandia* and the *Valencia*. They were pretty well adapted for troop-ships already, needing only a certain amount of overhauling in the hold and the addition of bunks and conveniences to make them available. To these was added the *City of Pekin*, which had been previously chartered by the Navy. In three weeks time these vessels were prepared and off to sea, and the first battle was won. It is not pretended by even the most enthusiastic admirer of the army that these were model transports; unavoidable mistakes were made, but they served the purpose. The fine points of the system had to be learned later.

The crush was not over by any means. For many months the coast was scoured for transports. Every tramp steamer looked for the Pacific Coast was held up on arrival, with a view to bargaining for transportation. Once or twice it seemed as though expeditions would have to be delayed, but luck favored the service in these emergencies, and they pulled through somehow.

At the present time there are twenty-nine transports connected with the Pacific Service, of which seven are government-owned and the rest are chartered for temporary use. The Philippine army is now complete, it being almost a certainty that no more troops will be sent to the front, except recruits to keep the various commands up to their full strength. When the war is ended, the returning troops will be brought out gradually, a command at a time. Therefore the number of ships in service will be greatly reduced by the release of leased and chartered vessels. Possibly a few will be retained as freighters and animal transports. The bulk of the freighting, however, will be done by government-owned transports—the *Sherman*, the *Sheridan*, the *Meade*, the *Warren*, the *Hancock*, and others—in the regular bi-monthly trips now instituted. This piling up of chartered vessels waiting for release has caused a congestion of transports in San Francisco harbor. Last week there were eight, the greatest number assembled here since the war broke out. On February 17 the number was reduced one by the sailing of the *Sherman*, called the model troop-ship of the American service. Before this is in the hands of its readers, the eight will be made complete again through the arrival of the *Warren*, the pet and darling of the Pacific station.

The chartering of a hired transport for government use is hedged about by certain formalities. A board meets to consider the business end of the arrangement and set a fair price for the hire of a ship. This is settled on a basis of the percentage on the ordinary earning capacity of the vessel, the owners furnishing and paying the officers, crew, and engineers, and the government paying earning expenses. Upon an agreement being reached and approved by Washington, an inspection is at once made, first by the Treasury Department, and then by a board from the Marine Inspection Service, a sub-department under the Transport Service, and finally by Lloyd's special agent. After that comes the medical inspection, to determine what changes are necessary to insure the comfort and health of the men and to ascertain how many passengers may be carried in cabin and steerage without unhealthy crowding. This done and reports made, the ship is turned over to the refitters. If the vessel has been a passenger steamer, this is not so great a task; here, only wider steerage room and additional facilities for cooking and sanitation, have to be provided. Tramp steamers, regular freighters, are more trouble. Some of them need almost entire rebuilding of the interior before they are fit to carry troops. When the government has finished with the transport and she is to be returned to the owners, a board of survey is appointed to adjust the matter. This body consists of two officials from the Transport Service and one representative of the owners. They inspect the vessel thoroughly in order to determine what must be done to restore her to her former condition. This done, the report is sent on to Washington, where the necessary alterations are ordered. No allowance is made for ordinary wear and tear on hull or machinery. The government is responsible, however, for damage to the ship, while the owners must stand for any injury to passengers or cargo not caused by the "perils of the deep, or the acts of God or the enemy." The agreement in this respect is like any other charter, except that the leasing party has the right to take the vessel to any destination, instead of one or more specified ports.

The *Sherman* is an example of a modern troop-ship in the United States service, and is more or less typical of all. As she lay in port last Saturday loaded for the voyage, she shone with white paint and polished brass—the neatness which appertains to all things used in the government service. She is a steamer of 5780 tons burden, and was formerly a fast freighter on the Atlantic Coast, having a traveling speed of thirteen knots. She was purchased for a Cuban transport in war time, and was entirely refitted by the Cramps last year, just before starting on her famous around-the-world voyage—New York to Manila to San Francisco. The Treasury certificate states that she is built to carry 1876 steerage, deck, and cabin passengers, with a crew, all told, of 157. On her latest voyage freight was the main consideration, only some 350 recruits in the steerage and a few nurses and officers in the cabins going as passengers. About 4500 tons of stores went in the hold. Thus a great part of the equipment for ordinary transport purposes had been taken out; enough remained, however, to show how the system works. The troops are housed in the lower decks in bunks three tiers high and two wide. These are made by frames of iron tubing on which canvas hammocks are slung. They are comfortable beyond belief of a landsman—I tried one myself on the day of my visit and can make certificate to the fact. They are narrow, of course, but no one, steerage or cabin, expects a double berth on an ocean voyage. Above are the cabins and the cabin accommodations usual to ocean-going steamships. On the lower deck are the ship's hospital and general mess-room and a well-appointed lavatory, with ample conveniences, including stationary washstands and mirrors. Except for its plainness, this apartment is as near like a lavatory in a modern hotel as can well be imagined. Throughout there is electric lighting and artificial ventilation by electric fans, which keep either cold or warm air circulating through the ship. There is also on this and every other government-owned transport a cold-storage plant which provides fresh meat and cold water through an entire voyage.

Technically, the transport is under control of a quartermaster appointed by the War Department, and an officer. On the present voyage Captain James Read, who brought the ship around the world, holds this position on the *Sherman*. He is responsible to the government for the vessel, and the sailing-master who navigates her bears the same relation to him that the sailing-master of a yacht bears to the owner. Besides his aides, there are no other army people among the officials who attend to the ship's business. The transport clerks are civilians; the crew, from master and engineer to cabin boy and stoker, are hired under the Merchant Shipping Act.

How do our transports compare with those employed in Europe? A basis for this comparison was afforded at the time of the *Sherman's* long voyage mentioned before. The vessel made a four days' stop at Gibraltar, where she encountered some English troop-ships and where she was inspected by the officers of the garrison. Later she ran into a Russian transport at Singapore and a Japanese in the Indian Ocean. The English vessel was crowded to the limit, with only about two thirds the individual space given our own soldiers. There was no artificial ventilation and no cold storage plant. In fact, this feature of our ships is the wonder of European officers. No other government has dreamed of it. Sanitary accommodations were the most primitive imaginable. When the English officers saw the lavatory of the *Sherman*, it is recorded that they broke their calm reserve and laughed. "Mirrors!" said one. "Why, she's a regular hotel!" In the same way, the Russian ship lacked all the comforts provided by our own government, and was crowded beyond the limits of health into the bargain. She carried double the number of men allowed on a United States ship of the same tonnage. The Russian officers are said to have been disgusted at the thought of granting such favors to mere bayonets. It savored of luxury.

CAPTAIN JOHN BARNESON,
Marine Superintendent.

It is undoubtedly true that American soldiers require more of these comforts, having been reared in a country wherein the standard of living is the highest in the world. But even allowing for that, the Transport Service, with a yellow press to watch its every slip, has gone far over the margin of requirements. It has not all come at once; it has been an evolution. The officials have been ready to listen to suggestions coming from the ranks and have heeded them whenever practicable. The unnecessary features have been eliminated, and the service is now on a permanent and substantial working basis.

"Honor to whom honor is due." In a previous paragraph mention was made of the services of Colonel Long, chief quartermaster of the Department of the Pacific. The problem of expert help faced him at the outset. Army officers with no practical knowledge of ships and shipping would not do as heads of departments. He saw this and cast about for expert civilians. Captain Barneson, an old skipper, one of the most experienced sailing-masters on the Pacific Coast, was installed, and has had charge at the government's Folsom street dock ever since. For engineering superintendent, Mr. Mathews, a former chief engineer of the Pacific Mail Co., and a man of great executive ability, was chosen. Captain Dunn was made chief stevedore; and to Mr. Bissell, in the capacity of port steward, was given the duty of purchasing stores for the stewards' department. These are all civilians, but two army officers were given places of strong responsibility. Captain Batchelder, U. S. V., in the capacity of assistant quartermaster, is Colonel Long's right-hand man at the dock, while Lieutenant Lyman, known on the coast as aide to General Ruger in former days, acts as assistant marine superintendent under Barneson, and is Colonel Long's chief assistant at headquarters.

Dawson is again enjoying the yellow and golden beams of the sun. The great orb, which has been absent from the view of the people of the Klondike metropolis and of the surrounding country, has come back after six weeks, and there is "day all day, for there is no night in Dawson." It must give the newcomer there a peculiar sensation to notice this to him unnatural condition of things, but like other strangers in other places he probably gets used to it in time. Old Sol disappeared from the view of Dawson people about December 1st and again made his appearance late in January. A high range of mountains south of Dawson hides the king of light from view for several days after he should make his appearance, but allows him to bathe the city in a gentle twilight. So now the Klondikers and those who are rushing to Nome may operate in view of each other and their tasks.

All the lumber mills in Washington are in full blast now and everything points to a promising season for all industries and products, unless the cold snap of the past week should injure the fruit crop. There was such a spell of warm weather before the frost appeared that trees began to bud and their owners feared for just what happened. However it is possible that they may have escaped serious injury.

Certain German schools have an annex in which girls are taught housekeeping. They are gathered in families of from six to ten, under the care of a teacher, and all the work of the house is done by the inmates. At stated times receptions are held, to which the pupils may invite their friends, and they alone are responsible for the entertainment provided. It is said that these "housekeeping schools" have proved remarkably successful among the home-loving Germans.

Four diet kitchens are maintained in New York to furnish nourishing food to the sick poor. In the year 1899, 111,945 quarts of milk were distributed, at a cost of $1,907 32, the total expenses of the association being $7,536.91.

The postal authorities are considering the proposition to place two-cent postage stamps in books of twelve to sell for twenty-five cents. The stamps are to be separated by a sheet of waxed paper, and the book will fit in the waistcoat pocket.

The annual report of the superintendent of the New York institution for the blind calls attention to the steady decrease in the number of children who become blind in New York after birth. This decrease he attributes to the rapidly increasing knowledge of sanitary science; the careful medical inspection of the public schools; the recognition by the ignorant poor of the danger of diseases of the eye, and their effort to cure, if not prevent, them; the increased knowledge of the medical profession about the eye and its treatment.—*Outlook.*

LONDON THEATRICALS.

THE "BELLE'S" SUCCESSOR AND "A MIDSUMMER'S NIGHTS DREAM."

CORRESPONDENCE OF THE WAVE.

AMERICANS who are talking and writing about the dearth of native plays and the need of encouragement for American playwrights ought to look over the situation in London, where three of the four top-notchers are the work of Americans. The four are "San Toy," a sort of sequel to "The Geisha," "The Masked Ball," "The Wrong Mr. Wright," and "The Belle of New York." Of these, the three last mentioned are Transatlantic. It is hardly fair to mention the last one in the list, for "The Belle," as it is now called for short, has been withdrawn after a money-making run which excelled all records. The success of that slight play has been a three-years' wonder in London. It came here with only a fair New York record ; it was but a venture at best. Behind it were the ruins of "Hotel Topsy-Turvy" and a dozen others of the same sort which had fallen flat on London audiences. Besides that, one of the leading actresses had retired just before its appearance and the part had to be filled from the chorus. It was a doubtful venture at best, yet the play took the town from the first week. The little chorus-girl who was taken from a "fifteen-a-week front" to fill in, proved to be the actress of the season ; the money came in so fast you had to dodge it, and receipts kept up until the last night. On that occasion, the box-office took £330, the largest sum ever recorded at the Shaftesbury Theatre, probably the largest received, outside of benefit performances, by any London house. They say that Musgrove, the enterprising manager, has cleared $300,000 out of it.

Edna May, she who came from the chorus to take the town by her Salvation Army "stunt" and her naughty, awfully bold song, likes London as much as London likes her. She goes back to New York with Musgrove because of a contract which does not expire until April; then, she returns to the city of fogs, although she is offered in America once and a half the price—$500 a week—which the London managers are willing to pay. Her new play is "The Whirl of the Town," by Morton and Kerker, authors of "The Belle."

The very prettiest and most elaborate production of the year, however, is not American at all, though there is an American woman in the cast. It is Beerbohm Tree's staging of "Midsummer Night's Dream" at Her Majesty's Theatre. Even for these days, when the dramatist can command all arts to minister unto his own, I do not believe that any classic comedy ever had such a setting. Stage fairies are generally most unsatisfying, an insult to the intelligence of a child nurtured on Grimm and Anderson, but Mr. Tree has worked so artistically with the means at his command that he has produced the illusion and charm of fairyland. The flock of little people who make up Oberon's train are not of the usual set kind ; they are real, sure enough fairies, little tots who enter into the fun of the thing. So, too, the scenery is not the glittering, splendid, hard affair of a burlesque transformation It is made dim and strange, full of suggestions of mystery.

Some of the most famous stage beauties of London are in the cast. Here again Tree has chosen well. His women are picked for their fitness to the *mis en scene*. Miriam Clements as Queen of the Amazons is a tall, strong woman of the American prairies, with a classic beauty that is mostly animal. Dorothea Baird, the Trilby of the English production of that play, is also of the classic type, but with a spirit and *verve* that adapt her to the part of *Helena*. Sarah Brooke as *Hermia* is a bewitching little brunette of the mignonne variety. But Julia Neilson as *Oberon* carries off the palm. She looks the regal boy in her shimmery, evanescent robes, and she puts a fantastic witchery into her rendition of the King of Faerie. Her singing of Mendelssohn's setting of "I Know a Bank" is beyond all praise. Mrs. Tree as *Titania* has the same entrancing grace. Her dressing of the part is the talk of London. She wears a series of delicately luminous robes typifying the gradations of the morning hours and varying from the faintest blush to the rosy hue of the aurora. *Puck*, as rendered by Louie Freer, is the only failure. Miss Freer looks the part until she speaks, and then a pronounced Cockney accent spoils the illusion.

Apropos of actresses, it is interesting to note what charming homes they do make for themselves in London. I was at the beautiful residence of Ellaline Terriss, who plays the part in "The Masked Ball" which Maude Adams did so charmingly. In private life she is the wife of Seymour Hicks, the well-known actor, and they have a large and beautiful place in Gloucester Terrace, near Hyde Park. The drawing room has scarlet striped empire walls, with elaborate white wood decorations, and the most inviting ingle nooks formed each side of the china-tiled fireplace. On the mantelshelf is a collection of rare china cups and saucers. A beautiful life-size bust of the late William Terriss stands on the piano, and endless signed portraits are scattered about the tables and walls. Miss Terriss is passionately fond of flowers, and as she has no garden, she devotes all her energies to the window boxes and the conservatory. For pets she has a valuable cat—a present from Mrs. W. S. Gilbert—and a pair of dogs, a Scotch terrier and a lovely little spaniel.

This Mrs. Hicks is a wonderfully energetic young person, and has a variety of accomplishments. She writes songs, photographs, drives, and mothers a dear little six year old girl whom the twain have adopted. In addition she is a capital housekeeper, at least if the delightful little supper that was served us indexes her talent.

There have been no end of shows, bazaars and the like, in aid of the South African warriors, and all feminine England is sewing and cutting and packing to provide creature comforts for Tommy Atkins out at the front. An English lady expressed it the other day—"We would be ashamed to be idle when the men are doing so much." Bazaars and concerts and ordinary things are worn threadbare, and they have taken to strange and *outre* things. The latest was a cat show, given by Lady Marcus Beresford at the Aquarium. Five hundred aristocratic pussies were on exhibition, and a half as many aristocratic ladies, including Lady Maitland, Lady Hood, and pretty little Lady de Trafford, who, together with Lady Beresford and Lady Claud Alexander, managed the affair. And now, the children are in the movement. The proprietors of *Mellin's Food* have opened a children's fund for the worthy purpose. How much of this is charity and how much free advertising, I leave the American reader to judge. Incidentally, I am advertising them myself by mentioning the fact. Let the business manager collect his regular rates for "mention in reading columns."

KATRIONA.

AMONG THE MAGAZINES

IN the February magazines there is a variety of excellent material, but no contribution of distinguished note save that of Dr. Quackenbos on the "Moral Value of Hypnotic Suggestion" in *Harpers*. This has already been alluded to in another department, but, it may be added here, that the subject is of intense interest and this is a noteworthy addition to it from a source which is above suspicion. In his *Sleeper Wakes* and *Tales of Space and Time*, H. G. Wells lays special stress on the astonishing utilization of hypnotic force in the days to come, but the investigations of Dr. Quackenbos indicate that the time is not far distant when its value as an agency for the cure of crime and the correction of certain phases of perverted mentality will be generally recognized. Mere allusion is all that may be attempted here so the curious are referred to the magazine. Therein, also, I should advise that Julian Ralph's "True Flavor of the Orient" be read. About the stories he tells of faithful guidance through India which certain letters of introduction obtained for him, there is a charming quality of the mysterious. He inspected palaces that were fairy-like in their beauty, and in one place was shown a collection of jewelled presents, the list of which might be an extract from the "Arabian Nights." "Russia in Central Asia" is historical in this number, but next month Mr. Colquohoun will doubtless bring the narrative so it will bear on the forthcoming invasion of Afghanistan. The description of the Marine Biological Laboratory in Naples and Poultney Bigelow's article on Singapore are also worthy of attention.

To pass on to the *Century*. For a feature it has reverted to Napoleon, a series of whose talks with Dr. O'Meara it publishes. O'Meara was a physician in attendance on the great exile with whom he formed a friendship. This extended over several years. The Doctor had the excellent habit of keeping a note book wherein he recorded memories of the talks with his patient. A gleaning from these was published many years ago, but the bulk remained and really constitute a priceless document. At least they ought. The first installment, however, is full of trivial details and show Napoleon in an unworthy light. "Paris of To-Day" is very clever and readable—good descriptive comment done in a smart way. "Midwinter in New York" is a series of admirable pictures by Jay Hamblin. The text is unimportant. *Scribners* is as successfuly compounded as ever. No magazine is more skillfully composed. It presents a poem by George Meredith, an episode of a spider web, the first of a series of articles on the Boer war, a study of Ike Marvel, and the proper installment of Oliver Cromwell, with some superb illustrations by F. C. Yohn and a number of delicate little drawings by Peixotto, who, in this number, quite excels his master, Pennell.

Herbert Putnam's contribution to the *Atlantic* is a history of the creation of the congressional library and an exposition of its accumulations. It is also a catalogue of its shortcomings. In startling contrast to the munificence of Great Britain to her British Museum is the niggardly apportionment of funds to this national collection. To this must be attributed the absence of literary treasures that should certainly be found therein. "Journalism as a Basis for Literature" is rather smart writing than the logical treatment of an interesting subject. In James Ford Rhodes' paper on "History" there is an admirable adjusting of the qualities and pretensions of the great historians. R. L. Harte on "The Mormons" seems unnecessarily vehement. He charges the sect and polygamy as though he were a British regiment assaulting a Boer outpost. The most helpful article in the number, though it be but a summing up of the facts is "Science in Philanthropy," by C. R. Henderson, in which the progress of scientific relief of the poor is most succinctly treated. It is full of hints to the thoughtful mind acquainted with the characteristics of our far western jails and alms institutions.

The extraordinary colored prints which *McClure's* is so proud of strike me as rather ludicrous. One cannot help comparing these chromatic extravaganzas with the charmingly refined pictures the *Century*, *Harpers* and *Scribners* gave us at Christmas and which the *Studio* submits every month. There you had delicate effects, exquisitely toned and modulated—here grotesque daubs. "The Race for the Pole" is fair stuff though one can have too much of icy exploration ; the inside of the earth instructs. The stories are better than usual, at least brisk though not one has any revelation. "From Ore to Armor-Plate" is a first-class idea in the *Cosmopolitan*, but as usual, is better pictured than explained. W. T. Stead presents a gossipy article on the Czar of Russia, in which he strenuously denies that his Majesty is a figure head or an invalid. The Saltus article is literary acrobatics. The stories, however, are fairly entertaining.

Appleton's *Popular Science Monthly* has some excellent contributions, and an extraordinarily strained effort at humor by David Star Jordan. "South Sea Bubbles of Science" is decidedly interesting, while the articles on the trolley in this number and its predecessor are most instructive. Since its reorganization *Lippincotts* has not failed to be worth reading each month. "The Bread Line" in the January number was a capital story, original in scheme and exceedingly well done. Mrs. Hudson, who is doing the Mormon stories, has material she does not know how to use. She makes a series of awful examples out of what should be artistic incidents. An incident will carry a moral much better than a framed precept, though most writers seem unable to realize as much.

C.

IN a recent interview James H. Pierce, Superintendent of the Peerless Oil Co., gave some interesting information regarding operations on the 160 acres of the corporation's property in the Kern River field. One well is finished and two more are under way. The first is 415 deep, and will be used as a water well; well No. 2 is down 728 feet, of which 196 feet is in prolific oil sand and 30 feet in indifferent sand. This well at a trial was pumped six hours at the rate of five barrels an hour without reducing the oil level, which stood 500 feet in the casing. It is good for 100 to 150 barrels a day of the finest kind of oil. Well No. 3 is down 400 feet. It is proposed to sink 160 wells altogether, and preparations are now being made for the establishment of a pumping jack to pump all the company's wells as fast as they are completed.

Mis' Mawnin'

SO softly cum Mis' Mawnin'
Dat yo' hardly know she cum;
En she set de worl' to yawnin',
En de hummin' bees to hum,
En de bowahs!
En de flowahs!
Nod along de line "welcum!"

On de eas' yo' see her veilin'
Spreadin' laiké a line ob lead;
Den yo' spy her skirt a-trailin'
Wid its flounce ob fiah red,
En she flushes!
En she blushes!
Laike a lub wurd had been said.

Every dewdrop lub dis lady,
En foh her it turn a blaze;
Down among de meddahs shady
Ebery songster sing her praise.
En Mis' Mawnin'!
Smile her dawnin'!
When yo' see de new sun rays.

Look about, Mis' Mawnin' Glohy,
Open up en staht to climb;
Dar might be a purty stohy
In yo' velvet heaht sublime
En Mis' Mawnin'!
Ah's a-yawnin'!
Kase yo' whispah breakfas' time.

If Buller can cross the Tugela
And capture the slippery Boer,
His name will be almost as famous
As that of the old "Jesse Moore."

Babblings of a Belle

THIS last week, my dear Diary, I have been having quite an unpleasant time at home. Mama and papa have not been very nice to me. Somehow, they do not seem to be able to realize the necessity of letting me severely alone. They talk by the hour, day in and day out, of my foolish desire to marry my "ideal lover." It does not do them a bit of good, and is decidedly irritating to my nerves. It really is bringing out the worst side of my nature, and I do think parents should make it a sacred duty to use a generous amount of diplomacy when their small daughter is undergoing the painful operation of being in love. They may do their worst; I am quite determined to marry, even though it may necessitate a severe family row. Arthur and Aunt Sybil are my friends in this affair, and will stand by me until the very end.

I often think how different things are to what I anticipated when I used to write to you, Diary dear, of what I should do when I married. Nothing was further from my mind then than marrying against my family's wishes. Of course I anticipated a big wedding, a gorgeous trousseau and all the accessories of one of the marriages of the year. Perhaps now I may be joined in a tailor gown, with none there but my best friend and Arthur and dear old Aunt Sybil.

I spend half my days writing to the "ideal" and half my nights in tears. Several fellows have told me they believed I was beginning to take myself seriously, but it really is not that. It is being in doubt as to what will come of all this. I accept every invitation and endeavor to be very cheerful when I am out with girls or boys. But to say the very least, it is at times an arduous task. I do not mind the dances so much, but the hours one spends luncheoning and dining are simply awful. Yet I am the jolly little Cricket, and my favorite song now is Punchinello. Half of those who hear it only partially understand the depth of pathos contained in it. Most people object to the sorrows of others, so Diary dear lest, you be one of them, I shall cease my moaning and tell you of my doings since last I wrote. We have had a gay week, for there were two dances—Charlotte Ellinwood's on the 14th, and the last Fortnightly. Every one is doing her best to get in some sort of an entertainment before Lent. I for one am against Lent unless one packs one's trunk and gets away. There are a good number of girls going away to Coronado. Leila writes to say that Bertha Dolbeer is the most striking looking girl down there. She has some very stunning gowns. Sara Collier is also there; so are Mrs. Avery McCarthy and Helen Wagner. Owing to the number of officers now on hand, the girls are having a pretty good time. The Kanes, Mrs. Gibbs and the Huntingtons went down last week, and the latter expect to go to Mexico. I should have been glad to have gone with them but I could not bear the idea of letting the remaining dances and dinners take place without me. I had a very good time at Cora Smedburg's dinner the other night. She put me near fellows I really enjoy, and as a general air of happiness obtained during the affair, I really felt sorry when it was over. That same evening Mrs. Henry Scott had quite a large dinner party. Most of those were married people, however. As I am not yet one of them, and was having fun at the Smedburgs, I can not tell you how great a success it was.

On Thursday Therese Morgan had sixteen of us to luncheon with her. Therese has excellent taste in the arrangement of flowers, and the table was, I think, prettier than any I have seen this winter. We were all very lively, even more so than usual with our crowd, and we had such a nice time. I think that Anna Voorhies looked prettier than any other girl there. Mary Scott too looked nice. I think Helen Hopkins, Mary Scott, Katherine Dillon and Caro Crockett are in every sense of the word day girls. They always need hats to set off their faces to the best advantage. After the luncheon I went to the Symphony concert. It was such a beautiful day, I really wanted to drive out to the Presidio, but I feel it a sacred duty to attend every Symphony concert. I of course was very disappointed in Holmes's Symphony. Mama does not think I have any right to criticise music, not knowing so very much about it, but I can tell you, Diary dear, the last concert did not once rouse me to my usual enthusiasm. In fact it did not make me forget where I was.

Wednesday night Arthur and I went to the Ellinwoods. Their fine big house was decorated with palms and ferns and flowers and was exceedingly pretty. It is one of the finest of houses for a big dance or entertainment of any kind. All of us girls went in tissue paper costumes with masks. No one recognized me for a long time. I went as an orchid and was, I thought, very picturesque, but the fellows said they considered the girls who looked best were Lottie Cunningham who appeared as poppy in black and yellow, Katherine Dillon, a scarlet poppy, Edith Preston and Bessie Ames as American flags, Charlotte Ellinwood and Leontine Blakeman as pink poppies, Grace Spreckels as night, a black gown with moon and stars on it, and Addie Murphy and Florence Josselyn as the ace of spades. Ethel Hager as a sport was inimitable. She wore a scarlet coat, a bright yellow waistcoat with hearts on it, green kilts—the real green—and a red wig with a black Derby hat placed on her head in the true sport fashion and a blue tie. Ethel has the prettiest hands and feet of any girl, I think, in town. A great many girls just wore wigs and ball gowns. Of these, Manie McNutt looked the handsomest. Marie Wilson was awfully sweet in grey and pink. None of us kept on our masks very long, for they are such hot, uncomfortable things. It was an awfully successful affair and I really love to see girls in costumes. They were all so well made, and the effect of these gay and unusual looking gowns was exceedingly pretty. I really like Valentine parties. I received any number of flowers as valentines, but I think that may have been on account of my telling all the fellows I know the Sunday before, when they were calling, that I should feel very disappointed if I was not remembered on that day. It is really now only a day for the children. They are tremendously enthusiastic about it too. Mrs. Rudolph Spreckels gave her two small boys a party. It was most interesting to see the youngsters amuse themselves; they, for the most part, were absolutely at their ease, and before they went home were each given a souvenir of the occasion, and the really right sort of a repast for youngsters. The Spreckels house will be about ready for occupancy in May or June. I believe it will be furnished from New York.

Friday night we all mourned, for it was our last Fortnightly. As we were to have a supper and were to dance until one o'clock, we did not arrive quite so early. Georgia and Edna Hopkins and Caro Crockett led the German with the aid of Bobbie Eyre, Fred McNear and Mr. Hart. We had a fine time for we had favors. Being a popular person I went home laden with all sorts of baubles. I really love "favors." These leaders have not the executive ability of Therese Morgan, but they did very well, and we had one or two new figures. Frances Moore, who is at present staying with the Josselyns, looked very nice. She is a bright, interesting girl and exceedingly popular with all the men. Charlotte Ellinwood looked particularly well, so did Margaret Salisbury and Beulah Stubbs. I could hardly keep from weeping when I bade Mrs. Salisbury good-night, and thanked her for the fine time I have had at each of her dances. I am so sorry we shall not have any more until next year. It seems so very long to look forward to, but then, of course, time flies.

We were all rather surprised to hear of the engagement of Hubert Gee and Ellita Redding, daughter of Mr. and Mrs. Alfred Redding. Lita is an awfully nice girl, bright, vivacious and exceedingly popular.

The Pi Delta Kappa Fraternity gave an awfully jolly party at Cotillion Hall the other evening. These enthusiastic young people had their Fraternity pin outlined in electric lights over the stage. The girls who seemed to have a particularly good time were Olive Middleton, Emma Brown, Lola Davis and Gertrude Dutton. The boys who managed the affair so successfully were Du Val Moore, Sheldon Potter and Robert Craig.

We are to look forward next week to several theatre parties, to the Irving M. Scott dinner and dance on the twentieth, the Maurice Casey cotillion on the twenty-first, a luncheon at the Josselyns in honor of Frances Moore the same day and La Jeunesse on Friday evening.

A number of the girls went down to Palo Alto Friday of last week to a dance given at the S. A. E. house. They had a great time and I'm ever so sorry I was not with them. The house is really pretty and the boys had it decorated with great taste. They were awfully nice and put themselves to endless trouble that their guests should be perfectly comfortable. Mrs. McClung and Mrs. Warfield chaperoned the party, and the girls who went from here were Bessie Mills, Alma McClung, Eleanor Morrow, Edith Stubbs, Azelia Keys and Miss Van Wyck. The dance went off splendidly. There were men in abundance, including some interesting young professors, who I think should be persuaded to make more frequent visits to town. I told the girls I should be willing to have any of them call on me, for I do like intellectual men, for a change. There were some very pretty co-eds at the dance, so maybe they find entertainment enough without going so far afield.

I hear from Berkeley that they are to have no more meets of the Cotillion Club until after Lent. The last is to be given April 18th.

The Mardi Gras this year is to be an event of special importance. The preparations are tremendous and I think every girl I know is going. The new gallery, "Mary Frances Searles" will be opened on this occasion and the grand march and dancing will take place there. The students are decorating the entire house in carnival colors and I really believe we shall have very nearly as magnificent an affair as they do down in New Orleans. Any number of people have secured the boxes that have been built in the upper gallery.

I received the announcement cards of the wedding of Jeanette Black and Frank Norris, which took place in New York, February the twelfth. I think now, Diary dear, I have told you all the news of this week.

MISS CRICKET.

The Sketch Club at its charming new house, 1308 California street, is to have an exhibit of Oriental fabrics and curios on Friday and Saturday of this week. Under its present direction the club is flourishing like the green bay tree and excellent work is being accomplished by its members.

A well known teacher, (English, German, French) going to Europe beginning of May, wishes to chaperone ladies going abroad. Highest recommendations.
Address CHAPERONE, this office.

If Buller can cross the Tugela
And capture the slippery Boer,
He'll find that his name
Will be equal in fame
To that of the old "Jesse Moore."

Champagne Record Smashed.

109 303 cases imported in 1899 of G. H. Mumm's Extra Dry was never before approached. Carrying an enormous stock of choicest wines, its fine quality can not be excelled, regardless of price. Its remarkable 1895 vintage now imported equals its best predecessors.

TANK NO. 3 WINS OUT.

"ONE morning I turned over drowsily and woke up in a bug-ward that I couldn't exactly place," said ex-Tank No. 3, the Secretary of the Harlem Club of Former Alcoholic Degenerates. "Before I had a chance to look around and try to study the thing out, I found myself fixed by the gaze of the man in the bunk on my right. He was resting on his left side, with his head in his hand, and he was regarding me with a curious grin. Maybe it was his steady gaze that woke me up; I've often been awakened out of a sound sleep that way. This man in the bunk on my right had a big, good-natured, smooth-shaven face and twinkling Irish eyes. His grin deepened when he saw that I was awake. I wasn't feeling cheerful.

"'Funny, ain't it?' said I, sarcastically.

"'Kind o',' he replied, still grinning.

"I looked around the bug-ward wonderingly.

"'Is it a new one on you?' asked the good-natured chap in the bunk on my right. 'If it isn't, put me next to where it is, what town it's in, and a little stuff like that.'

"'Search me,' said I. 'I am in-no-cent. Don't you remember breaking in?'

"'Nope,' said the man with the twinkling Irish eyes. 'Don't remember anything. If this zebra-shack's in Chicago, then it's one that I've missed. Don't you recall when you butted in here?'

"'Nay, belike, sorry the day,' said I.

"'Just touch that button there and we'll have a couple of those things with cherries in 'em,' said my bunkmate facetiously.

"'Is Chicago the last you remember of it?' I asked him.

"'Yep,' said he. 'Last thing I remember before I got into this hop-trance was shaking dice for pints at the Auditorium bar. This outfit may be in Chicago, for all I know. Don't remember leaving Chicago, anyhow.'

"'Same here,' said I. 'Last thing that stands out in my recollection is matching quarters for high-balls in the House of David.'

"Just then a big bruiser of an Irish attendant sauntered by.

"'Hey, there, Hugo,' said the man in the bunk on my right, calling after the Mulligan attendant, 'tip us off on the name of the cave and the town it's in, will you? We're twisted.'

"'Oh, yees two Injuns has come to, has yees?' said the ward man, wheeling around and walking up to our bunks. 'This is th' dizzy-ward o' th' Moonisippal Hoshpit'l o' St. Paul, if yees wants t' know, an' th' divil's own pair yees are, t' say th' laste.'

"'St. Paul, hey?' said the man in the bunk on my right, wonderingly. 'Now, how the devil did I get to St. Paul, I'd like to know?'

"'Hand me an easy one,' said I. 'The same one's got me going about how I did it myself.'

"'How long have I been in here, Mike?' asked my bunkmate of the wardman. 'Two days, ye and yees pardner,' said the Mulligan, indicating me with a nod of his head when he said 'pardner.'

"'Why, did the two of us land here in a bunch? Was it a dead heat?' asked my bunkmate.

"'Yees finished roight on th' wire t'gither,' said the wardman. 'Yees came here in a cab t'gither, an' no cop along wid yees. Yees must ha' made up yees moinds at wan an' th' same toime t' bale yeezselves out.'

"Then the Mulligan wardman went along about his business.

"'So we landed here linked-arms,' said my bunkmate. 'Queer deal, ain't it?'

"'May have met on the train,' said I. 'May have run into each other in Chicago, for that matter. The game now's to get out.'

"'They won't stand for it,' said my bunkmate. They'll hang on to us for a week, anyway.'

"Just then the young doctor in charge of the ward came in. Seeing us awake and engaged in conversation, he walked over to our bunks.

"'Oh, you two have got around, have you?' said the young doctor. 'How do you both feel?'

"'Well, speaking for myself, I've got a hunch to go home,' replied my bunkmate.

"'The same dog's biting me,' said I.

"'Impossible!' said the young doctor. 'You're both in a condition of prostration. If I were to turn you loose now, you'd both be back here before night.'

"'Well, you don't want to stand to go broke on that proposition,' said the man in the right-hand bunk. 'Henceforth and forever I abjure the Flagon.'

"'I won't take a drink out of a Pompeiian tear-jar as long as I live,' said I.

"'Oh, I've heard that kind of stuff before,' said the young doctor, jauntily. 'If I signed your release, the both of you'd be spiflicated by noon, and then when you came back the Super would hound me for letting you go.'

"Well, we both started in to con that young man, and we made it stick.

"'You both belong in Chicago, you say?' asked the young doctor, yieldingly. 'Well, that's a long walk from St. Paul. I think there were 17 cents between you when you got in.'

"'Touched, all right,' said my bunkmate and I, together.

"Well, anyhow, we got out all right by noon. When I saw my bunkmate togged out he proved to be dressy and a good-looker. I had a front of my own at that. The young doctor had under-estimated our joint wealth. I had 85 cents in change, and my bunkmate had 28 cents.

"We went to the barber shop to get shaved and think it over. It was a hotel barber shop. The man who had the chair next to mine was beefing to his barber about the lack of shorthand and typewriting facilities around the hotel.

"'It's a jay outfit, right,' he was saying. 'I've got twenty letters to get off in the next mail, and not a darned key-puncher around the place.'

"I cut in right there.

"'You can dictate 'em to me,' I said to the man, 'and I'll dig up a machine somewhere and transcribe the notes.'

"'I'll go you,' said the man, and when I had my shave I went up to the writing-room within, and he dictated his letters to me. I went to a typewriter agency, and, on pretext of trying the different machines, ran off the letters in an hour, telling them that I'd reserve decision as to which machine I'd select. The man I did the work for handed me a ten-dollar note, which I showed gloatingly to my pal, who was waiting for me.

"'Well,' said he, 'it's not up to you to do all of the hustling. I guess I'd better run out and tackle a turn at carrying the hod.'

"'Wait'll I run this button up to a billion,' I said. 'You stay here in the writing-room and keep warm.'

"I noticed my ex-bunkmate of the bug ward looking at me shrewdly out of the tail of his eye, and I was rather tickled to have a chance to exhibit my hustling abilities before him.

"'You've done some winning-out before, chum,' said he, eyeing me craftily.

"Henry Irving was playing in St. Paul that night. I hustled down to the box office. There was a line in front of the window about a block long. I skinned up the line, beginning at the rear, and quietly suggested to a lot of the swell ducks that were shivering and stamping their feet—some of 'em had been in line for hours—that I could get 'em their seats inside of five minutes for a bonus. I picked up fourteen customers. I made a list of the number each wanted, and where, and they handed me their money freely. I hustled into the box office and tackled the manager.

"'I'm the Board of Aldermen's messenger,' said I to him, 'and they've sent me down with a list of the seats they want. Can you dig 'em up before the good ones are all gone?'

"It went with a whoop. The manager was only too tickled to oblige the Board of Aldermen. I got the seats, turned 'em over to my people in the line, and yanked out $2 on each deal, which made $28. That made me $38 to the good altogether.

"I could see that there weren't going to be half enough seats for the people who wanted to see the Irving show, and so, with the $38, I hustled back to the box office and shot one into the manager about being delegated by the City Hall employees to get them seats, too. He sort o' passed me the searching look then, and I prepared to edge out backward when I saw him making a move toward the telephone. But he reconsidered and gave me nineteen good balcony seats for $2 per.

"Well, at 4 o'clock that afternoon the box-office people turned the box on the big line of people still standing in front, waiting for a chance to buy, and the 'No More Seats' sign was hung out. I was right there at the time, and it was like taking a candy cane from an infant to pass up and down the line and offer to purvey my $2 balcony seats to the disappointed bunch for $5 a throw. They ate 'em up at that figure, and I cleaned $57 on the job. That made me $95 strong, and Chicago was right across the street for my ex-bunkmate and me.

"I flashed the roll on him in the writing-room of the hotel where he'd been waiting just when the shades of early dusk were falling.

"'We'll take a mild eat,' said I, 'get in a night's sleep, and join the varnished-car-caravan Chicagoward to-morrow morning. When we get to Chicago we can respectively find out why and how we ever left there.'

"'Say,' said my bunkmate of the bug ward when we were at the table in the hotel supper room, 'what I want to know is, where do I cut into that wad you've picked up so scientifically? You don't know me. I've got no claim on you. How do you happen to count me in on this ride back to Chicago? I've done none of the hustling. I don't know how to hustle that way. Consequently, why should I let you pick me up on your shoulders and pack me back to Chicago?'

"'No reason, particularly,' said I, 'except that you speak the language of my tribe, that you're the same sort of an irresponsible idiot that I am, and that you're up against it. Isn't that enough?'

"'Oh, you'll do,' said my pal, looking at me in the peculiar way I'd noticed during the afternoon.

"The next morning we took the train for Chicago.

"'Well,' said I to my ex-bunkmate when we pulled into the station there, 'here's where we break apart. I suppose you're going home? I am. Hope I'll run in with you some other time,' I wound up, at the same time trying to slip him a ten-spot.

"He looked at me, and then at the ten, and smiled.

"'Let's get into a cab and take a little ride first,' said he, hustling me into a roller. Then he ordered the cabman to drive to the swellest club in Chicago. I was mystified, and looked him over to see if he was all there.

"'You'll be waking up presently,' I said.

"'Oh, I guess I haven't been expelled,' said he, coolly, and then the cab pulled up before the club. We went in. Twenty swell geezers were around my bunkmate of the bug ward in half a minute, shaking hands with him, asking him where he'd been, and making much of him. It got me going. Then he introduced me to the whole mob as his old friend and guest. Next he went to the club treasurer and had a personal check for $500 cashed. This he handed to me.

"'You'll do all right,' said he, with a smile. 'Make a raid on the haberdashers in the morning, get out what stuff you've got in, and come around to my office about noon,' handing me his business card, that of a building contractor, with offices in the topnotch office building of Chicago.

"Well, I did see him at his office at noon the next day. He certainly was a Prince Charlie to me. He was worth about a million, that's all, and he put me on his staff as his confidential man.

"'I've needed a resourceful, hustling man in my business for some time, and you're it,' said he, while I tried to hide my blushes behind my hat.

"'Why didn't you make the wires sizzle when you were broke in St. Paul day before yesterday?' I asked him.

"'There was too much fun in studying the win-out methods adopted by a man just turned loose from a bug ward,' he said.

"That's when I became good and learned the building contracting business," concluded ex-Tank No. 3.—*N. Y. Sun.*

Hall's Family Pills are the best.

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

Hotel St. Nicholas, corner Market, Hayes Larkin and Ninth. American or European plan. Ira R. and James H. Doolittle.

How can the British trooper bold
Defeat the wily Boer,
Unless he tones his system up
With good old "Jesse Moore?"

Dr. Parker's Cough Cure.—One dose stops a cough. It never fails. Try it, 25 cents.

The Orignal Swain's Bakery, 213 Sutter St., stands without a rival and has stood the test for years. The most delicious meals are served by gentlemanly attendants, and the management takes pride in having everything orderly. It is just the place for business men and ladies out shopping to-lunch.

In BooKdom

HENRYK SIENKIEWICZ, whom Californians remember as one of themselves in the long ago, when the little colony of Arcadian dreamers from Poland were trying to raise chickens and bees on their co-operative ranch in the South, is again before the American public with a historical romance. This time it is *The Knights of the Cross*, a tale of medieval chivalry. Jeremiah Curtin, of course, is the translator, and the publishers, Little, Brown & Co., have been intimately associated with the name and fame of Sienkiewicz from the beginning as the publishers of *Quo Vadis* and company.

Chivalry is "the unbought grace of life, the cheap defense of nations, the nurse of manly sentiment and heroic enterprise," says Burke in a celebrated passage in his *French Revolution*. "Never, never more shall we behold that generous loyalty to rank and sex, that proud submission, that dignified obedience, that subordination of the heart which kept alive even in servitude itself the spirit of an exalted freedom"; and he adds, "that sensibility of principle, that chastity of honor which felt a stain like a wound, which inspired courage whilst it mitigated ferocity, which ennobled whatever it touched, and under which vice itself lost half its evil by losing all its grossness." It is Burke, the poet, who speaks these things, as it is the poet always who gilds and idealizes and makes beautiful what comes under his hand. But it is a very different estimate of chivalry that obtains from the hard-headed and unpoetical historian. "The chivalrous spirit," says Mr. Freeman, "is above all things a class spirit. The good knight is bound to endless fantastic courtesies towards men and still more towards women of a certain rank; he may treat all below that rank with any degree of scorn and cruelty. The spirit of chivalry implies the arbitrary choice of one or two virtues to be practised in such an exaggerated degree as to become vices, while the ordinary laws of right and wrong are forgotten. The false code of honor supplants the laws of the commonwealth, the law of God, and the eternal principles of right. Chivalry, again, in its military aspect not only encourages the love of war for its own sake without regard to the cause for which war is waged, it encourages also an extravagant regard for a fantastic show of personal daring which cannot in any way advance the objects of siege or campaign which is going on. Chivalry, in short, is in morals very much what feudalism is in law: each substitutes purely personal obligations, obligations devised in the interests of an exclusive class, for the more homely duties of an honest man and a good citizen."

It is between this Scylla and this Charybdis that Pan Sienkiewicz steers his boat. For his romance would be no romance worth the reading were he to stand off and throw snow-balls at the manners and customs of the time, as the author of the *Norman Conquest* is allowed to do by virtue of being in the snowballing business; and he would be untrue to historical facts, and therefore unconvincing as a historical novelist, were he resolutely to close his eyes upon unpleasant things as he knows them. He does neither. Instead, he presents, simply and graphically, a picture of that life when knighthood was just past its zenith in Poland—apparently towards the end of the fourteenth century, somewhat later than the flowering of chivalry in other European countries—and he paints this picture with the utmost feeling and sympathy. This old Poland is his Poland. It is the reader's Poland also, if he will allow himself to be borne off to it, with a shield on his arm and a spear in his hand, to do battle "for God and the Ladyes."

Whatever may have been the inherent vices and defects of chivalry, it was at least the great inspiration of the time to noble deeds. It animated poetry and art; it determined individual ethics, modified the policy of states, and, under ecclesiastical teaching, came to be regarded from a judicial standpoint, to use the words of Bacon, as "the highest trial of right when princes and states that acknowledge no superior on earth shall put themselves upon the justice of God for the deciding of their controversies by such success as it please Him to give on either side." Even when locked in mortal combat Christian knights obeyed the dictates of honor. Prisoners were safely released on their parole to pay ransom, and never failed to return to captivity if their ransom could not be raised. Thus it is in the customs of medieval chivalry that the most humane portions of the laws even of modern war must look for origin.

Mr. Sienkiewicz has got into the spirit of all this. And he supplies in addition a vivid account of the wrongs committed by the Knights of the Cross—an insolent and powerful religious order of the time—upon the people, and the righting of some of those wrongs by the knightly hero. It need not be said that the weaving of his materials has been most dextrously done, nor that the resultant cloth is brilliantly colored and pleasing. Only the first half of *The Knights of the Cross* is as yet from the press. The remaining volume will be published as soon as translated.

There used to be published not so many years ago a useful series of brochures "for the edification of females," under the generic title, *Advice to Young Ladies*. The brochure always contained a chapter entitled, "What to Read," the beginning and the end of which was that "novels are lies, and lies are the invention of the devil; and since there is no way to tell a good novel from a bad one, see that ye do not put your head in the noose prepared for the entanglement of your soul, but eschew all novels, as beseemeth young ladies of breeding." I hold in my hand *The Crown of Life*, by George Gissing, published by the Frederick A. Stokes Co., and I repeat over and over again, "novels are lies, novels are lies." Stupid lies they are, many of them, not overmuch worth the telling or the reading. There was an ordinary young man, who fell in love with an extraordinary young woman. This young woman refused Members of Parliament and other geniuses because she did not love them. The ordinary young man hoped and despaired for five or ten years, and then the extraordinary young woman discovered (we are told this lie) that she loved him. For the light, aimless reading of a summer day, hit or miss, this will do well enough; but it is an invention of the devil. Young men do not wait ten years while a chance acquaintance is experimenting with the other strings on her bow, and any young lady that thinks that they do will wish before she is through with it that she had followed the advice of her grandmother's brochure, and eschewed all novels, "as beseemeth young ladies of breeding."

A much better book by the same publishers is *The Light of Scarthey*, by Egerton Castle; although the self-conscious preface might not lead one to suspect it. The author seems to think that he has found a new problem to solve. "The haunting thought," he says "round which the tale of the sorely tempest-tossed dreamer is gathered is one which, I think, must at one time or other have occurred to many a man as he neared the maturity of middle life: what form of turmoil would come into his heart if, when still in the strength of his age but after long years of hopeless separation, he were again brought face to face with the woman who had been the one passion of his life, the first and only love of his youth? And what if she were still then exactly as he had last seen her—she, untouched by years even as she had so long lived in his thoughts: he, with his soul scarred and seamed by many encounters, bravely sustained in the battle of life?" Well, what? Any one of a number of things might happen. The man might adopt the girl as his daughter, or he might remember her in his will, or obviously, if his heart had been so badly crushed in the first place that he had remained single, he might marry her.

The author seems to think that such a problem is interesting of itself. It is not. Nobody cares a whit about the problem. Least of all the reader, after he has read the tale. Any problematical newspaper puzzle-column would supply better cuttle-bone to whet one's beak upon; and besides, the romance is no place for a problem to live, even a good problem, a church-going problem, a problem that is respectable. Let the problem stay where it belongs, in the large-domed novel of ethics.

The Light of Scarthey, however, would not be suspected of having such a thing as a problem concealed about its person, were it not for the introduction; and the introductory pages are the very ones that the reader will skip to begin with. The book is a romance, pure and simple. There are thrills, and adventures, and narrow escapes; there is a good brother, who is the honorable hero, and a bad one, who is the honorable villain; there is a gentlemanly sea-pirate, who is a sort of sub-hero, in love with the sister of the girl the hero marries, hanged at the end for killing the villain and others; and finally there is a black-eyed heroine, "Murderin' Moll," no less, so dubbed because of her heart-conquests. The characters are well-drawn for their kind, and the book is interesting.

The great English literary review, the *Athnaeum*, two or three weeks ago reviewed the English edition of *David Harum* to the extent of the following curious paragraph:

David Harum, by Edward Noyes Wescott.—Mr. Wescott has the makings of a good novelist. He has the gift of appreciating and portraying character. His people are real and vivid, and he does his love scenes very prettily. In the art of narration he has a good deal to learn. He is too full of detail and does not know what to omit, he is too ready to let his characters relate anecdotes, and he is apt to introduce irrelevant anecdotes. It requires a patient reader to find out the good parts of his work, and he should bear in mind that there are not too many patient readers."

The spectacle of the *Athnaeum* advising Mr. Wescott, who has been dead a good while, that "he has a good deal to learn," and "should bear in mind that there are not too many patient readers," will interest the people on this side.

Mr. Wescott died of consumption, that scourge of writers. A great deal has been done, even since his death, in the way of scientific treatment for this disease, and were he alive today it may be he might hope for complete recovery from what has heretofore been hopeless tuberculosis. One of the best accounts of modern methods of fighting consumption is the late book, *Consumption and Chronic Diseases*, by Emmet Densmore, M.D. (Stillman Publishing Co., New York). The book is especially intended for the lay reader. It tells, simply and without technicalities, of the best methods for treating tuberculosis, and especially of the modern "open-air" treatment, which, combined with the modern system of nutrition, has accomplished some seemingly miraculous cures. "The object of this book," says Dr. Densmore, "is to make known the methods and the success of this treatment; and that it can be followed by the patient at his own home." And then he quotes Dr. Oliver Wendell Holmes: "I cannot help believing that curative medical treatment will, by and by, resolve itself, in great measure, into modifications of the food swallowed and air breathed. Food and oxygen—the body and breath of life—are before all, through all, and back of all vital action." That is the basis of the modern treatment. The patient is made to eat proper foods in great abundance, and to live hygienically. He is made to accustom himself to open windows. Treatment is even possible, in the case of those dependent upon themselves for their livelihood, at the factory and workshop, without prejudice to the [illegible] wages. That is bringing the matter [illegible] practicability; for the poor man cannot always change his climate, merely because he is [illegible] The book apparently is of the greatest [illegible]tical value.

WILLIAM J. NEIDIG.

The Frenchman likes his native wines,
The German likes his beer,
The Irishman likes his whisky straight,
Because it brings good cheer.
The Englishman likes his 'alf and 'alf,
Because it makes him frisky.
But they all go back on their favorite drink
For Jesse Moore "AA" Whiskey.

San Jose and Way Stations. Arrive at San Bruno at 12:45 P. M. Leave San Bruno at 4:00 and 4:45 P. M.

Rates. San Francisco to Tanforan and return, including admission to Grounds, $1.25.

Racing! Racing! Racing!

CALIFORNIA JOCKEY CLUB.

Winter meeting, 1899–1900, beginning MONDAY Feb. 26 to Mar. 10, 1900.

OAKLAND RACE TRACK,

Racing Monday, Tuesday, Wednesday, Thursday, Friday and Saturday. Rain or shine.

Five or more races each day,

Races start at 2:15 P. M. sharp.

Ferry-boats leave San Francisco at 12 M. and 12:30, 1, 1:30, 2, 2:30 and 3 P. M., connecting with trains stopping at the entrance to the track. Buy your ferry tickets to Shell Mound.

Returning—Trains leave the track at 4:15 and 4:45 P. M., and immediately after the last race.

THOMAS H. WILLIAMS JR., President,

R. B. MILROY, Secretary.

AT THE THEATERS

THE Bostonians are at an interesting stage of their career. With the exception of Barnaby, the original standby of the company, the old, tuneful guard is gone—Cowles, Jessie Bartlett Davis, MacDonald the first, Alice Neilson. In their place is a body of beautiful women and handsome men, but there is not a voice in the company. Nor, saving Barnaby, is there a passable actor. There is no doubt about Barnaby; he is a genuine comedian with a style all his own, but he is with the rest of the company in his lack of voice. The thing in which the Bostonians, as they go at present, shine pre-eminent, is in stage pictures. The costuming is elegant, and the scenic effects all that could be asked of a traveling company; and Marcia Van Dresser, one of the most beautiful women on the stage today, is one of a number of principals who are more than pretty. This, then, seems to be the policy of the management—to slight voice and dramatic ability in the make-up of the company, to fill out the repertoire with such saccharine harmonic operas as "The Viceroy" and "The Smugglers of Badayez," and to make it up by elegant costuming, setting, and stage pictures. It remains to be seen whether this policy will hold the immense houses which have greeted the Bostonians in all the prosperous ten years of their stage career. Myself, I doubt it.

* *

And now little Edna May, the Salvation Lassie who charmed New York and enthused London in "The Belle of New York," has set her foot down hard on her manager, George Lederer. Just after "The Belle" came back from a triumphant three years' run in London, an article concerning Edna May came out in a New York "Sunday supp." In it, Lederer told how he "made" Edna May; how he found her a little, demure chorus-girl in the back row and, being suddenly in need of a principal, put her into the part of the Salvation Lass and trained her, with much toil, into a success. It was an excellent newspaper "story."

Edna May looks demure enough in her photographs, but the manner in which she answered the aspersion that George Lederer or anyone else "made" her was anything but demure. "I never was in Mr. Lederer's chorus and he knows it. He never saw me 'in the line,' besause I wasn't there. He never 'called me out,' because I was not there to be called. . . . . When he engaged me for 'The Belle,' I had been playing a small part in 'A Contented Woman,' and was a pretty good ready-made actress already."

Furthermore, she has it that Lederer never taught her anything, although he tried to, and that he is trying to make a reputation for himself as a genius of a stage-manager, when his chief talent lies in advertising and in holding down the wages of the company. She doesn't care if she is under contract to play in his company until April, she is going to leave him then, so there!

Miss May's reply closes with this beautifully feminine bit: "Something was said by Mr. Lederer about the brevity of my conversational powers. The resources of conversation are usually within the limits a woman desires them to be. My manager says: 'Talk with her all day and you will find her conversation limited to Yes and No!' Perhaps my manager is correct about this. I *do* find conversation with some people rather hard."

* *

The Alcazar this week is presenting "The Prodigal Father," a farce-comedy that is full of funny situations. The test of a farce, I suppose, is the volume of cachinnation that is elicited from pit and gallery; and judged by this test the week is a success. Our old friends the stage butler, the stage parson, the stage tragedian, the stage head-of-a-family, and the stage adventuress, were in evidence, and mixed things beautifully. Mary Hampton as *Dollie Bonde* allowed herself to work a little too hard. The rest of the cast got into the spirit of the thing with greater ease. As for the farce itself, in plot it is curiously suggestive of Gillette's "Too Much Johnson" and the comedies of that class, wherein a respectable gentleman goes to the city on a spree and deceives his family with tales of travel in distant parts of the world. He has to lie pretty hard to get out of it, and the harder he lies the further he gets into it. Therein lies the fun. Next week "The New South," by Clay M. Greene and Joseph Grismer, the former an old San Francisco man, will be presented.

* *

Maggie Moore, the old San Francisco favorite, comes back to us next week, bringing as leading man H. R. Roberts, an Australian actor who is said to be one of the most versatile leading men on the stage. On Sunday afternoon and Sunday, Monday and Tuesday nights, "The Silence of Dean Maitland," a dramatization of Maxwell Gray's story, will be produced for the first time in San Francisco. The rest of the week the company shifts to farce-comedy, in "Mrs. Quinn's Twins."

Beside the fact that musical performances in San Francisco are almost exclusively patronized by the feminine section of the population, there is another reason for the partiality for afternoon recitals. In San Francisco today there is but one concert hall available for important musical performances—the Metropolitan Temple—and that is undesirable for two reasons, location and construction. The public seems prejudiced against it on the ground that egress would be difficult in case of fire. The other halls—Golden Gate, Sherman & Clay's, and Native Sons'—are all too small. Consequently important attractions are compelled to use the theatres, and as they are occupied at night the afternoon alone is left. Little doubt exists that a large concert hall would prove a profitable investment. Therein the symphony concerts would be given and it would be available for lectures, balls, and all extraordinary entertainments. I am persuaded that a structure on the lines of Carnegie Hall, New York, would prove profitable to San Francisco. There the prominent music teachers of the metropolis render it the headquarters for all musical events. In San Francisco, music has no center and it needs one.

* *

The Orpheum bill this week is a good average somewhat on the even tenor of the bill of last week, and that of the week before. The acrobatic work was clever, but for that matter all such work has become so. The first to gain any strong appreciation were Monroe and Mack in color sketches and dialogue. The second awakening was due to the comedy sketch called "The Editor," in which Kathryn Osterman is especially strong in comedy, and perhaps the interest was not entirely in the play.

* *

The fourth and next to the last of the series of Symphony concerts, under the direction of Henry Holmes will take place at the Grand Opera House next Thursday afternoon at 3:15 sharp. The programme, the strongest yet offered and is as follows:—1. Overture—Fingal's Cave, Mendelssohn; 2. Symphony in C, op. 61, Schumann; 3. Symphonic Poem, Dause Macabre, Saint-Saens; 4. Overture, Oberon, Weber. The sale of seats will begin this Saturday morning at Sherman, Clay & Co.'s. The last concert of the series will take place Thursday afternoon, March 15th.

* *

The Orpheum's new people for next week include the Frank Trio, acrobatic comedians, in a sketch called "Pastimes in the Dark," Trovalle, a ventriloquist with some original automatons of his own invention, Pauline Moran, a clever singer with two dancing pickaninnies, and the Passparts, two Italian dancers.

* *

There are to be two new faces at the Grand Opera House in the near future—Hanford A. Cleves, a comedian from the East, and Edward Adams, a descriptive singer whose specialty is coon songs.

* *

Denman Thompson and his ever-popular "Old Homestead" follows the Bostonians at the Columbia in a two weeks' engagement.

If Mr. Forbes Robertson, the English actor, had not wandered into a Parisian bookseller's in London to while away an idle hour, he would be much lower in the profession than he is now, and a French playwright of the first rank would have remained in obscurity, at least for the time being. In the bookstall, Robertson picked up a bunch of yellow-backed play-books, a bargain lot going for a few pennies. He bought the lot, and, in turning them over, came upon one whose title struck him. He read it to the end, and was impressed with the strength and originality of the leading role. He decided at once to have the play translated and adapted. It was the wisest move he ever made. "The Sacrament of Judas" became the hit of his career; indeed, it stands with "The Tyranny of Tears" as the production of late years that has the clearest road to lasting favor. The author, M. Tiercelin, was dragged out of obscurity and came to London to superintend the production. He proved to be a Breton gentleman of the old school, and a lawyer, but he has abandoned the brief for the pen—for critics are saying that the man who could write a play like "The Sacrament of Judas" has great things in him.

The kopje smote the blithergong
And scrooned the trencherloon;
And trekked the busy day along,
And veiled the wintry moon.

The kopje caught it in the Nek,
And froomed the laagers all,
Then calmly flimmed a quart of sec,
And dodged the lancers tall.

The kopje is a frumous sight
That's rarely seen by men;
It's here at dawn, its gone at night—
And then it's back again!

Ladies Do Not

Seek assistance from new and untried preparations, but use the old, time-tried and reliable CREME DE LIS. It removes every trace of sallowness and other cutaneous defects, and the skin regains that softness and purity of color so rarely possessed by adults. Blackheads, freckles, muddy skin, wrinkles, and red nose, or face, acted upon as if by magic.

The whiskey that touches the right spot every time is Jesse Moore. To be found at all first-class bars and saloons.

New Stories Re-Told.

x x x

A FORTUNATE ESCAPE.—The wife of a little country church sexton had died rather suddenly, and the vicar went to condole with the bereaved husband. "Now, tell me how it happened," said the vicar. "Well, sir, she was bad, and I went off for the doctor, four miles away, and when I gets there he was gone off somewhere else; so I turns back, and in coming home remembered I had a bottle of medicine which he guv me last year, so says I, 'That will do for the missus'; so she takes it and dies." Then, lighting up his pipe, the old sexton added: "Wasn't it a good job I didn't take it myself?"

x

A READY SOLUTION.—A Baptist and a Methodist minister were by accident dining at the same house. As they took their seats there was an embarrassed pause, the hostess not knowing how to ask one minister to say grace without offending the other. The small son quickly grasped the situation, and, half rising in his chair, moved his finger rapidly around the table, reciting: "Eny mene miny mo, catch a nigger by the toe." He ended by pointing his finger at the Baptist minister and shouting "You're it!" The reverend gentleman accepted the decision, and said grace, but it lacked the usual solemnity.

x

A BIBLE FOR OCCASIONS.—A woman in a small Welsh farmhouse being taken very ill, a neighbor went for the clergyman, who said he would come directly. The neighbor, going back to the farmhouse, said they had better get out a bible, as the parson might ask for one. The farmer thereupon told the woman she would find one, he thought, at the bottom of an old chest, "for, thank goodness," he added, "we have had no occasion for them sort of books for many a long year—never since the old cow was so bad."

x

WAR A PERSONAL MATTER.—Elliott Hook was cooking a beef-steak at Caloocan when a Mauser bullet hit the pan in which the steak was sizzling, knocked it about a rod and sprinkled Hook with hot grease. The disappointed soldier immediately loaded his rifle, and watched all day long to get a shot at the rebels, saying to his comrades: "I went into this war at the call of my country, but since that fellow spilled my meat it has become a 'personal matter.'" And he so regarded it until he sailed away from Manila.

x

DEPEW'S STATION.—At a recent banquet in London, Embassador Choate sat next to a distinguished nobleman, who during the course of the conversation had occasion to inquire: "And to what station in your country does your Mr. Chauncey M. Depew belong?" "To the Grand Central Station, My Lord," replied the diplomat, without a quiver. The Englishman's face clouded for a moment with uncertainty. "Ah! I see, I see, Mr. Choate!" he exclaimed, "Mr. Depew belongs to your grand, great middle class."

x

A VERY TRIFLING INCIDENT.—A clergyman was called upon to perform a marriage ceremony for a couple in middle-life. "Have you ever been married before?" asked the clergyman of the bridegroom. "No, sir." "Have you?"—to the bride. "Well, yes, I have," replied the bride laconically; "but it was twenty years ago, and he was killed in an accident when we'd been married only a week, so it really ain't worth mentioning."

x

GODS TO BURN.—Father Enright, a good priest of Bernice, Penn., was teaching catechism to a class of youngsters whose ability to understand theology is not commensurate with the holy man's desire for their advancement. On a recent occasion he asked the first boy, "How many gods are there?" The lad promptly responded, "Three," and the good father boxed his ears. "Now," said the angry urchin, "I wouldn't tell you if I knew where there was a whole field full!"

x

A REASON FOR VIRTUE.—The chaplain of an English regiment had been striving strenuously with a full private who had a perverse way of falling from grace. Expostulating with him once and suggesting the necessity of his turning over a new leaf, the soldier replied to the Chaplain: "Yes sir; I know that I ought to be good, for my mother is cook to General Booth!"

x

THE INFALLIBLE PRESS.—Professor Palmieri, of the Vesuvian Observatory, had been misquoted in a Neapolitan daily paper about some seismic matter, and he wrote to the editor to protest; but the only consolation which he received was a communication from the editor to the effect that, "We have made you say it and you must now stick to it!"

PALACE and GRAND HOTELS

For nearly a quarter of a century these Hotels have been the recognized headquarters for Tourists and Travelers visiting San Francisco.

Their popularity has been acquired by reason of their unique location (being accessible to wholesale and shipping districts and amusement centers), the peculiar excellence of cuisine and service, and moderate charges.

The Grill Rooms for ladies and gentlemen have an international reputation, and the recently added Supper Room is now recognized as *the* place to obtain after-theatre refreshments.

EVENTS CURRENT.

Roberts Captures Cronje's Army.

From a British point of view, the situation in South Africa grows brighter with each succeeding day. Kimberley has been relieved, Buller has forced the passage of the Tugela and is near Ladysmith, General Cronje and a Free State army of at least 4,000 men have surrendered, the Boers have been placed on the defensive, and all within ten days. This complete transformation—for the period just preceding the relief of Kimberley was the most discouraging one in the whole war—has been brought about by the military genius of Generals Roberts and Kitchener, who have proved that the need of Great Britain in South Africa has been generals rather than reinforcements. Immediately after General French made his unexpected dash into Kimberley, General Cronje, with a force numbering somewhere between 4,000 and 8,000, withdrew from his position at Magersfontein, where he had been holding Methuen at bay, and headed eastward toward Bloemfontein, the capital of the Orange Free State. Roberts started his main body in pursuit, and dispatched Kitchener, with cavalry, mounted infantry and artillery, to cut off the retreat. The Boers fell backward for two days, their rearguard fighting splendidly. At the end of that time, Kitchener accomplished his flanking movement and drove the van back upon the main body of the British. It was a trap, in which Cronje was caught fast. Either Roberts laid his plans very wisely as regards the topography of the country or else fortune favored the British, for Paardsburg, the place where Cronje was forced to halt, is an almost untenable position. It is on the banks of a river, with hills rising abruptly on either side, and the British anticipated the enemy by seizing these elevations. The Boers held one or two kopjes on the first day of occupation, but were driven out, until the whole force lay entrenched on the river bank. Roberts posted all his available guns on the hills, and prepared to shell Cronje out. The Boers, realizing their situation, tried to escape in small parties along the river, but French's cavalry was posted at the outlet for that very purpose, and took 500 prisoners before Cronje realized the futility of this course. Shut in beyond all chance, Cronje waited for relief from the outside. Small detachments of Boers coming from the force around Ladysmith made several desultory attacks on Roberts's rear, but were beaten off. To the repeated demand for surrender, Cronje returned a curt refusal. Deserters reported in the British camp that the Boer general wished to give up, but was held back by the young burghers from Transvaal. Thus the situation stood until Feb. 27, the nineteenth anniversary of Majuba Hill, when the Republican force surrendered unconditionally, after a week's resistance. Roberts's next battle will be somewhere in front of Bloemfontein, to the defence of which the detached commandos of both republics are now hurrying. Particulars of this whole campaign are lacking, and will be until letters come in, as the censorship over telegrams is strict. Certain it is that Cronje was badly outgeneralled, first in the flanking movement by which a British force of inferior mobility was permitted to get into Kimberley without substantial opposition, and again in the maneuvers by which he was surrounded in an untenable position.

Buller's Campaign against Ladysmith.

While General Roberts has been operating in Orange Free State and has succeeded in gaining the first substantial British success of the Transvaal war, the situation about Ladysmith has brightened considerably. Buller's fourth advance was conducted with more care and caution than the others, and he already held two important positions, one on each bank of the Tugela, when Roberts relieved Kimberley and began to press Cronje. This resulted in a movement of the Transvaal forces at his front; some of them seemed to be leaving their entrenchments and retiring. Ladysmith, also, reported that the siege was being lightened and that small parties of Boers were seen limbering their guns and packing their belongings as though to retire. It was thought that this meant the abandonment of the siege, until Buller found, upon advancing, that the remnant was resisting as stoutly as ever. The real significance of this move is probably a march of the Free State burghers to defend their capital, menaced by Roberts. At no time during the war has there been full co-operation between the armies of the two republics, and this explanation seems a natural one. After throwing his army across the Tugela for the fourth time and fortifying the positions already taken, Buller began a slow and steady advance. The first line of defense, a series of low kopjes, was taken on the second day of fighting. It is now ten days since the British army moved forward, and, after continuous fighting, they have hammered their way to a point which lacks only two miles of being in touch with Ladysmith and just outside the third and last line of defense. This is likely to offer the hardest obstacle Buller has yet encountered. The attack has been cautious and well advised, artillery supporting the advance in every case. In his three former advances, Buller has never gained a foothold more than a mile or two beyond the Tugela; in view of present conditions, London has every hope that the relief of Ladysmith will be the next piece of good news.

The Yaqui War in Mexico.

At latest advices, Mexico seems to be having no easy time with the rebellious Yaquis in the State of Sonoma. Within two months after the opening of the war last fall, Mexican reports stated that the Indians were pushed back into their higher strongholds and that General Torres was gathering his forces to rush them out. Very little information has emerged since then. A censorship which is, in effect, more drastic than that enforced by the British in South Africa, operates over the whole affair by the absolute inability of the Mexicans to tell the truth. The only reports which emanate tell of Mexican victories in small skirmishes, yet now, when the war is six months old, we find the army of the southern republic shoved back on the seaport of Guaymas, and barely able to hold the town at that. An engagement which was remarkable for the proportion of losses to the numbers involved took place before that town on Feb. 23. The Indians were intrenched along the hills above a river which flows into the ocean near the town. The Mexican general, with 700 troops and a gunboat, attempted to drive them out. The natives replied with small-arms and a Maxim gun, and not only decimated the Mexican troops, who seem to have attacked with great bravery, but disabled the gunboat. General Torres fell back on the town, pursued by the Indians; later, a flanking force from his army surprised the enemy and drove them back in time to save a siege. The Indian loss is not known, but is supposed to be heavy. The Mexicans lost 227 men out of 700 engaged. It is claimed that the Yaquis are led by Americans, and that two veterans of the Rough Riders smuggled in the Maxim gun which played such an important part in the fight and operated it during the engagement. This is not at all unlikely, considering that the Americans of the border States are anything but friendly to the Mexicans.

Plague Spreads in Hawaiian Islands.

While there have been no new cases of bubonic plague in Honolulu for ten days, and residents of the town hope that the disease passed with the passing of filthy Chinatown, the scourge has broken out in two of the other islands—Hawaii and Maui. On the former there has been one death, and on the latter seven. On Maui, the disease has been confined to the town of Kahuihui, where the first death occurred Feb. 4. The disease was at first classified as malarial fever, but the fact that several persons in the same house died in quick succession aroused suspicion. The authorities, becoming suspicious, quarantined the infected Chinese district, cremated the bodies, and sent cultures from them to Honolulu for microscopical analysis. The experts pronounced it plague, and sent physicians at once. The very day of their arrival a Chinaman dropped dead of the disease on the streets. This was just before the departure of the latest boat, and further news is awaited with great anxiety. The case on Hilo was a white woman, the wife of a Portuguese merchant, and cultures from the body proved that there was no mistake about the diagnosis. Both the islands are enforcing a strict quarantine. At Honolulu, most of the Chinese and Japanese held in quarantine camp have completed their term of detention and will be released. The care of these people, rendered homeless by the big fire, will be a serious question for the provisional government. Industry has been temporarily paralyzed by the quarantine, so that there is no work for most of them, and they will have to be fed and sheltered by State or private charity. The citizens of Honolulu have contributed large sums, and a government appropriation will be added. Two large camps for temporary occupation are to be opened, pending the rebuilding of Chinatown.

End of the War in Luzon.

It seems as though the war in the Philippines were practically ended. This statement has been made and disproved by events so many times, that it should be taken with a reservation. Nevertheless, there is a strong basis in fact for the present statement. It has been several weeks since the United States troops now scouring Luzon have met an organized body of insurgents. In his last campaign, which is probably the final one of the war, General Bates met with no organized resistance. The time has come, according to General Otis's opinion, when the rule declaring all Tagalos found in arms as bandits should be put in operation. It is presumed that he has issued an order to that effect. Just what will be done with these captives is a mooted question. Even if they have employed their arms to kill American soldiers, to execute them for the offense would be a little too much like the Spanish practice. Probably a distinction without a difference will have to be made between fair fight in the open and assassination. The army of the Philippines will now be reorganized for police duty on a system somewhat resembling that of the Canadian mounted police. Acting on the advice that our force has reached the end of its functions in the islands, President McKinley is paying special attention to the creation of the Philippine Commission, in order that civil government may be established throughout the archipelago as soon as practicable. They will be charged with the important duty of setting up local municipal control on the plan outlined in the report of the first Philippine Commission.

The New Financial Bill.

The Republican majority of the Conference Committee appointed to draw up the new financial bill have agreed on terms. They will report the measure to Congress, and it will without doubt pass as it stands. The changes in the present system are not very important. Although the new measure does not declare unequivocally for the gold standard any more than does the one now in operation, it leans to the gold side of the question and is correspondingly distasteful to the Democrats. As the law now stands, there is no single coin or metal designated as the standard or unit of value. The Secretary of the Treasury has always been allowed to redeem silver dollars in gold, heretofore, with discretion to refuse to do so if he wished. In the new law, this is apparently unchanged. The United States Treasury Notes representing the cost of the silver bullion purchased under the act of 1890 are, by the proposed law, made payable in gold coin instead of in "coin," as heretofore. The silver certificates issued for deposits of that metal made in the Treasury are hereafter to be issued in denominations of $10 or less, unless the Secretary of the Treasury, at his own discretion, decides to issue not over 10 per cent. of the total in larger denominations. This will result in confining the use of silver and silver certificates to small transactions. To assure the prompt redemption of all legal tenders and treasury notes, a surplus of $150,000,000 must be kept on hand, segregated from all other moneys. Two new bureaus, one of issue and one of redemption, are created in the Treasury Department to take care of redemptions. If at any time the gold reserve is reduced to $100,000,000, the secretary is authorized to sell 3 per cent. one-year gold bonds to replenish it, the proceeds to be applied to no other purpose. The secretary is authorized to refund outstanding 3, 4 and 5 per cent. "coin" bonds into thirty-year 2 per cent. gold bonds, redeemable at the pleasure of the United States after thirty years. The rates of payment are fixed by the bill, and are such that there will be a large saving of interest for the time which the old bonds have to run. The tax on the circulation of national banks remains at 1 per cent, except in so far as the new 2 per cent. bonds are deposited for security, and on circulation based on these bonds the tax is reduced to one-fourth of 1 per cent. National banks may issue currency to the par value of bonds deposited instead of upon 90 per cent. thereof as heretofore. National banks with not less than $25,000 capital may, at the discretion of the Secretary of the Treasury, be established in towns having a population of not over 3,000. There are a number of minor provisions, but these are the really important points. The act closes with a sop to the silver advocates, as follows: "The provisions of this act are not intended to preclude the accomplishment of international bimetalism whenever conditions shall make it expedient and profitable to accomplish the same by concurrent action of the leading commercial nations of the world and at a ratio which shall insure permanence of the relative value between gold and silver."

German Commercial Activity in China.

In spite of the conservative reaction in China and the anti-foreign stand of the Empress Dowager, German capitalists are now building a railroad from the seaport of Tsing-Tan to the commercial metropolis of Shan-Tung, with a branch line running to Po-Shan. In all, the road is to be 280 miles long, and is to connect important coal-bearing districts, while forming, at the same time, a way of entry to a thickly-populated district with heavy needs for European goods. The company in charge is capitalized for over twelve million dollars, with about three million dollars paid in. It is under contract to put the main line through in five years. The German government reserves the right to buy the line and all its appliances at the end of sixty years. Contracts for material are let far ahead, and thousands of tons are already on the ground. The Chinese government grants the right of free entry for all materials. The Germans are said to be more energetic in their efforts to spread their commerce in China than any other nation holding a "sphere of influence." The latest plan is an Oriental Commercial Museum in Berlin, operated on precisely the same lines as the Philadelphia Commercial Museum, but relating to China. A sample warehouse shows the industrial and agricultural products of the Oriental countries and the principal articles of export and import, while a library attached has a full supply of reading matter, and the management of the concern acts as an unincorporated Chamber of Commerce. Great results are expected to follow the establishment of this museum.

Present Conditions in Cuba.

January 1st, 1900, marked the first anniversary of the withdrawal of Spanish rule from Cuba. In that one year the provisional government inaugurated by the United States has been put into operation and has wrought a great change in conditions on the island. At the time when the United States army assumed control, the island was reduced and devastated by a long war, the population had been cut down by 800,000 souls in the space of two years; hunger and want were universal. In this one year so much has been done that the island people in general are more happy and contented than they were at any time during the last half-century of Spanish rule. There is no more hunger, the cities are clean and orderly, the industries are rapidly getting on their feet. Political conditions are equally satisfactory. The people seem satisfied of our good faith in promising withdrawal as soon as institutions can be put into good running order, and meanwhile are con-

ented with the provisional government. There is one set of malcontents, the "Patriotic League," a union of place-hunters formed just after the close of the war. Disappointed at their failure in obtaining government appointments, they have taken revenge by stirring up some opposition, but it has been mild. General Wood declares that the "League" could not muster over 500 men for a revolution. The trouble between the Spaniards and Cubans so much feared before Spanish withdrawal has never material zed. The truth is that all parties are too busy rebuilding the island's industries to stop for quarreling. If a vote were taken on independence *vs.* annexation, the majority would doubtless favor independence, although the property-holders would be overwhelmingly for annexation. President McKinley has announced that intervention will be withdrawn when a stable government is secured. General Wood interprets this to mean when a condition has been attained in which money is cheap and mortgages are easily affected on real estate at a rate of interest not exceeding six per cent. per annum. If this year's rate of progress continues, such a state is not far off. There is no more actual want; the greatest necessity for public relief just now is among the orphans of the war of independence. Private funds have done a great deal in this direction, but it is yet not enough; the government must do the rest. As soon as the census is completed, the first municipal election will be held—probably some time in May. Universal suffrage with a residence qualification w ll be the rule. Just now, the military governor and his staff are contemplating two important changes in administration. The first has reference to the courts. These were conducted by the Spaniards on a fairly just system of laws, but with rotten methods of procedure. These methods of procedure, designed to foster bribery and corruption, will be changed as soon as possible. The other institution to be overhauled is the school system. In Spanish days, the schools were strengthened in the secondary and advanced grades for the benefit of the rich and influential classes, while the primary grades, which were of most use to the poor, were almost utterly neglected. The entire organization is therefore to be remodelled. The army of occupation now numbers ten thousand. This will be reduced during the year to five thousand, and further cut down during 1901, by which time Cuba will be very nearly ready for self-government.

Public Opinion on the Cable Question. Since the entry of the two Pacific cable bills into Congress, the one calling for its construction by the government, the other for a subsidy enabling a private corporation to lay and control the line, there has been a hot discussion pro and con in the newspapers of this country. It has been fought, of course, on Socialistic and Popocratic lines, by those who believe in government ownership of everything in sight; this was to be expected. But conservative journals which are committed neither to government ownership nor to the reverse policy have found much on both sides. It is urged on the one hand that it is against the policy of this government to operate any industry which can just as well be left in private hands, that the cable is a commercial rather than a political undertaking, and that the terms asked by the private corporation applying for the subsidy are so liberal that the government will lose nothing. The other view has more supporters, and seems more popular all over the country. Those on this side argue that for many years government messages will be the principal business transmitted by the cable. Why then, should not the government own and operate the line as a part of the government machinery? Again, the terms asked by the company and incorporated in the bill are regarded as manifestly unjust. The company asks for an annual subsidy of $400,000, for twenty years; in return for this, government messages are to be transmitted free of charge. Engineers outside the company's employ estimate the cost of the line at $8,000,000. The subsidy arrangement would mean, then, that the government would pay 5 per cent on the company's original investment, leaving the money obtained from private tolls for clear profit above the interest on the investment and the light operating expenses. This seems to be the sentiment of the country regarding the question of ownership. On one point all are united, however: the construction of the cable should be commenced at once.

EDITORIAL COMMENT

The Railroad and Politics.

COLLIS P. HUNTINGTON, writing to a friend concerning California politics, has this to say:

"Certain newspapers have sneered and jibed about my professed determination to keep the railroad out of California politics; but, if the railroad company has seemed to fall short of quite fulfilling that honorable desire, these newspapers have themselves to thank for it, for they have day in and day out screamed their maledictions against the railroad, lied about it, and done their best to incite everybody they could reach—citizens, legislators, and municipal and national officials—to injure and destroy the business, which is the very life of the railroad. When things reach such a point the railroad is placed in the position of one in peril of his life, and the railroad will always, while I am at its head, exercise its prerogative of self-defense. We are in California to stay, because we have a right there. We are giving, and shall continue to give, the people of California the best railroad facilities and service that we know how to give; but we shall resist the confiscation of our property, whether it should be attempted by direct acts, or by the forced reduction of the rates of fares and freights below a point where the railroad can continue to live; and when any man, no matter who he may be, no matter how great or how popular he may be, runs for an important office on the platform of avowed hostility to the railroad, it is not only the railroad's right and privilege, but it is its duty, to protect itself against that man."

This is a plain, straightforward statement from the one man above all others who can keep the railroad out of politics. He points out in a clear and plain fashion that the question of the railroad's participation in politics may be solved by the people themselves. The *Wave* long ago pointed out that the demagogue who ranted of railroad interference, and shouted from the stump his determination to abuse it, is responsible for the corporation's being in politics. It is the foe of vested rights and the enemies of the corporation that compel it to enter politics. It is not for the purpose of rewarding friends that such an institution deserts its legitimate pursuits to mix in the pool of politics. There is neither profit nor glory to the corporation in winning empty political victories. No sane man could blame it for opposing Judge Maguire in the last gubernatorial campaign. His whole career had been marked by open, vigorous and biased opposition to the corporation. It could not expect even fairness at his hands. If the body of the people in California would agree among themselves to crack the head of the first railroad agitator who appeared for nomination before their conventions; if the press of the State would refuse to support any unfair or prejudiced candidate for office; if they would make it unpopular and unprofitable to be a noisy, agitating, demagogic railroad-hater, you would probably hear no more of this corporation in politics than you would of any ordinary citizen. Put yourself and your business in the place of the railroad, and ask yourself the question as to whether or not you would enter politics if confronted by open and avowed enemies anxious to wreck you and destroy your business.

The solution of this problem of the railroad and politics seems very simple. Everyone who knows Mr. Huntington knows that he speaks out his mind; that he *fears* nothing; that when his word is out no power on earth can change him. He has given his word to the people of California that he desires to divorce the corporation from politics, and he says to them "keep the open and avowed enemies of railroads and vested rights off of your tickets. Don't permit the rascal who has hate in his heart and falsehood on his tongue wrongfully to oppress your citizens and the railroad *will* keep out of politics."

Developing Oriental Trade.

THE committee in charge has gone quietly ahead with the Pacific Commercial Museum until it looks as though the dream had become a reality. The work is still in the committee stage, but enough interest has been stirred up and enough support promised to give assurance of success. The movement has proceeded so quietly and has taken up so little space in the newspapers that it is perhaps advisable to state here the nature of the undertaking. The Commercial Museum is to be a permanent exhibit of all materials or manufactured articles exported by the Coast to foreign countries or imported from them, and a collection of all books, papers and documents relating to our foreign commerce. It is tacitly understood that the exhibits and documents collected by the museum will have to do with the Oriental nations almost to the exclusion of all others, since practically the entire commerce of the Pacific States is with the Orient. For purposes of mutual benefit, there will be a connection established between the new museum and both the Philadelphia Commercial Museum and the American-Asiatic Association. The purpose of the enterprise is, of course, the encouragement of commerce by placing knowledge of conditions within easy reach. A Congressional appropriation has been asked for; failing this, the money will be raised by subscription among the not over liberal merchants of the coast.

It is doubtful if, at the present time, we shall have any great extension of trade among the Oriental peoples proper. The products of the Pacific coast, except, perhaps, flour, are all luxuries. The standard of living in Oriental countries is low, and luxuries are not in demand among the yellow races. It is among the European settlers of the region around the Pacific that we have the best opportunity of developing our commerce, and here we require no commercial museum to teach us the nature of conditions. The need is rather for commercial travelers. There is a market all along the shores of the Pacific and Indian oceans for almost all our wares, and it is practically undeveloped. Years hence, when the coast has become a manufacturing center through the development of the oil industry, and the iron industry in Washington, the time may be when we can make the attempt at supplying machinery to the awakened Orient. Then, too, in China and Japan a demand may have arisen for our dried fruits and canned goods, our prunes and wines. But in the mean time we must look to the Europeans of the Oriental coasts for purchasers. They obtain such supplies from England and Australia, and there lies the opportunity of the Pacific coast.

The Campaign in South Africa.

IT was pointed out by military experts long before the war in South Africa had obtained headway that the only possible line of advance into the Transvaal from Cape Colony was via the railway from Colesberg and Stormberg to Bloemfontein and thence to Pretoria. This form of attack was selected by General Buller and would undoubtedly have been followed but for the error of General White in holding Ladysmith, the Boer invasion of Natal, and the outburst of sedition and disloyalty in Cape Colony. It became necessary to check the invasion of the Boers in Natal and to relieve Ladysmith. Therefore Buller began to concentrate troops south of the Tugela, diverting them from the true strategic line of advance and paralyzing all action in the British centre. The skilful tacticians who directed the Boer campaign quickly appreciated the opportunity this mistake afforded them and at once pushed on at Colesburg and Aliwal North, inflicting the serious reverse on General Gatacre's force, which was one of the earliest disasters of the war. This situation might have been counteracted had the force of Lord Methuen followed the original line of attack, instead of proceeding via the Orange river bridge to the relief of Kimberley. The Home government, however, yielding to the importunities of Cecil Rhodes, had agreed to send a force to his assistance. This could have been accomplished almost automatically by directly moving towards Bloemfontein with a strong army corps, for all the Boer forces, both on the Modder and at Kimberley, must then have been massed to oppose it. The events of December and January detail the fatal consequences of these errors of disposition; one disaster after another has befallen British arms.

Now, however, the change has come. Lord Roberts and General Kitchener, by following out the line of natural advance, have retrieved the fortunes of the war. As soon as a definite and intelligent system of operations had been arranged, results began to accrue. The retreat of Cronje, the relief of Kimberley, and, latterly, the capture of Cronje's army, are but the beginning of the consequences of able tactics. The Boers are massing a force between the English armies and Bloemfontein, proposing to contest the further advance of Roberts. To do so, however, it has been necessary to divert burghers from all parts of Natal, thus partly relieving Buller and aiding his attack. Comparatively open country intervenes between the British and the Orange capital, and it has been proved repeatedly that on the veldt the Boer is no match for Tommy Atkins. We shall doubtless have news of another great battle within the next week, or possibly of the relief of Ladysmith. This latter can only be accomplished at a terrible cost, though in material results victory would be fully worth it.

That the capture of Cronje's army will greatly discourage the Boers is not believed by the experts. Stout resistance must be anticipated until a series of successes are credited to the British arms. Then we believe that both Transvaalers and Free Staters will begin to weaken, and finally, after spasmodic resistance, submit to the inevitable.

CORRESPONDENCE.

The Spring Valley Controversy.

WE publish the subjoined communication with pleasure, partly because the writer expresses our own views, and for the reason too that we welcome criticism whether for or against the policy of this journal. One can never get within striking distance of misinformation or an acqaintance with truth without open and free discussion:

"*EDITOR WAVE:*

"I am not informed as to whether or not communications are published in your columns, but I will hazard this in any event. It will give me some relief to discharge myself of the ideas herein expressed. I am a stockholder in the Spring Valley Water Company—that is to say, I bought through a broker a small block of stock which represents first a small legacy, and second the savings of a thrifty helpmeet from a not very large salary. Of course I know nothing of the inner workings of the water company, know nothing of their interfering in politics, but only know that I own this block of stock, which, should I die before my wife—a most likely happening—will offer her a means of support, a fixed income, and a certain insurance against her ever becoming a charge upon her friends or the county. How many more men or women or estates are so situated I do not know, but I do know that this investment represents every dollar I have. I am conscious of the fact that because this *is* so in my case or hundreds of others, the Supervisors should not be influenced to visit penalties upon the consumers. I recognize that the consumer has rights. They are not superior to my rights, however. The consumer is entitled to his water at a fair price, and I am entitled, if the corporation can earn it, to a fair dividend—a fair rate of interest. Nature may send an earthquake, or a drought, and so destroy the earning capacity of the corporation in which I am a stockholder. If this happens I must suffer loss, perhaps of dividends, perhaps, through assessments, of all of my stock, but the rights of the consumer are not such that I may be stripped of the legitimate earnings of my investment by an artificial drought or earthquake in the shape of a stringent or unfair regulation. I imagine, however, from your article of last week, that it was conceded that the stockholder is entitled to a fair rate of interest, and that five per cent per annum will, by both sides, be regarded as fair. The question now to be determined, as I understand it, is, upon what valuation will the board base its computation for rates? It seems to me that in settling upon that valuation the board should leave a reasonable margin for the expense of pumping. This year threatens to be dry from now on. How can any one determine with any accuracy how much pumping will be necessary the coming season? I notice that the cost of pumping varies greatly from year to year. Any deficit or extraordinary expense that may occur during the coming twelve months cannot be deducted from interest account or operating expenses. It must be borne by stockholders like myself, some of whom can poorly afford it.

Don't you think it a good thing for the community to have some forms of investment for people who have small sums of money they are anxious to put out at interest? Don't you think it a good thing for the community to have this question put out of politics beyond the reach of the rascal and the demagogue? and don't you think it a *bad* thing for the community to have the reverse of this true?

I don't like to say anything about Mayor Phelan, for he is one of my own people, but he is acting strangely over this matter, and it looks to me as though he might be trying to have some one else pull his chestnuts out of the fire. There are as big men on the board as Mr. Phelan, and I don't believe they will let him sway them to play to the gallery.

If you publish this letter you will oblige me. It is what I feel, but it is not written as strongly as I would like. I only ask for fair play. I pay my own water bills and do not find them excessive; indeed, I don't know of a single man among my friends who complains of excessive rates, and I sometimes wonder where all this howl comes from.

Yours truly,

A. F. B.

ALASKAN DOGS.

CANINE BURDEN-BEARERS OF THE FAR NORTH.

I HAVE just killed a dog, and am the most unpopular man in camp and a busted prophet to boot. It happened because I became filled with the pride that puffeth up, and set myself up as a rifle shot. Barring some experiments with a pea-shooter in my early youth, I had never tried shooting at all until I went "into" the Klondike this fall. It was not many days after we lit out across the Dalton trail before the expedition organized a hunt, and a rifle was forced into my unwilling hands. I innocently allowed them to explain the mechanism to me, and followed along the trail with the sensations one experiences in holding a new baby. They raised a caribou bull before long, and he came my way. I heard someone howling "shoot, shoot!" and I raised the gun, squinted along the sights and shot, according to directions. I here make affidavit that, although I aimed, it was at nothing in particular; I simply veered the muzzle around to the same quarter of the compass as the brute—and shot him square through the shoulder and spine.

My reputation as a shot was firmly established after that, and still more my reputation as a liar. I had not been nicknamed, up to the time of my grandstand play, and they dubbed me at once "Ah Sin," from the gentleman who held out the cards "in the game he did not understand." I asked, a day or two later, to have the mysteries of a Winchester rifle explained to me, and was smothered with scorn and laughter. That afternoon, Fate put another spring in the trap she was laying for me. They were sighting their guns at a point of rock some three hundred yards distant, I judge. The major said to me, 'Ah Sin, you try it." Made insolent with success, I raised the gun, took a wobbly aim, and splintered the rock just at the point.

That settled me. I made up my mind that I was a wonder, a natural Buffalo Bill, one of these shots who are born great. The trap was laid.

It was sprung to-day. We took the dogs out of the sleds and gave them a bear-hunt by way of vacation. They chased one of the measly little black bears of this country into a corner, and fought him there, howling for us to come up and finish him. I happened to be well in the lead of the other men. I stood fifty yards away, took the cool, calm, deliberate aim you read about—and killed the best dog in the pack, who was dressing his bruises ten feet a way from the bear.

My crime is held the more heinous because a dog is almost as valuable as a man in this quarter. Horses were prized to the lynching point in the early days of the West, but their real value in human economy was far less than that of Alaskan dogs.

It is a mistake to suppose that the pesky little Esquimau brute pictured in the geographies of our youth is the characteristic sled-dog of the far North. Mongrel, puppy, spit and whelp and cur of low degree are equally popular with Northern trailers, so long as they are big enough and strong enough to be worth their keep in hauling power. Our eight-dog team that was, before I conceived the idea that I could shoot, was made up of two Esquimaux who acted as leaders, one common yellow cur of most doubtful ancestry, a Gordon setter—a gentleman ranker he, two big brutes with a predominating strain of St. Bernard, a Newfoundland, and the late lamented victim of my untrusty rifle, a cross between a mastiff and a St. Bernard. Each of these brutes has an individuality. In the long days of lonely travelling, when the world you have known before grows to seem only a phantom and a dream and only the snowfield and the Arctic sun seems real and tangible, one grows to know his companions. Were I a hermit, seeking solitude from my kind, I would hunt it out in a great city. In the wilderness you are blood-brother to any living thing which comes your way. We met a wandering Stick Indian yesterday; he joined us and went on our hunt. Alien in blood, in life, in sympathies, that man is nearer to me than men with whom I have toiled in offices for a year. So with our dogs. We don't pet them, in especial, but we appreciate them, feel for them and would do for them. I am overcome with remorse, even now, because of the murder of "Juneau," the mongrel mastiff.

Our leaders, the Indian dogs, are very different in personal character, however much they resemble one another in their ways. Coyote, the nigh one, is really an admirable character, a diamond in the rough, while the other, once known as Jim, but now called by names which reflect doubt on his ancestry, is despised through the whole camp. When we first bought this pair, they were just out of Indian hands and as wild as a plains broncho. They ran away with the sled the first thing and scattered our belongings over a mile of trail. Then, Jim tried to tear the throat out of an Indian who happened along, and, having been knocked down for this, he turned and vented his spite on Coyote. His partner was not feeling so very chipper himself, and the dog fight that followed was one of the prettiest exhibitions of howls, hair and pure delight that I ever beheld. After they had worn each other out, they became more tractable, and consented to take their first lessons in the ways of the whites. Coyote became docile and accommodating by degree but Jim is still the———. I was about to express myself, but I pause.

It was the second night out that these two Indian members of the pack developed their most troublesome manners. When we asked their former Indian owners if they would run away and leave us, they answered:

"Two sleep, two muck-a-muck; they no run away."

Which was equivalent to saying that if we kept them tied up two nights they would not bolt. So we roped them for three, and endured as best we could the genuine wolf howls with which they made night hideous. The third evening, we filled them up to the muzzle with rice and bacon, made them a clean bed of spruce boughs and expected peace. Vain hope! It was the best straight and fancy howling I ever heard, and I have listened to coyotes on the plains. At times, it seemed as though they were fighting; then they would chime in together in a chorus of quick, sharp yelps which sounded like the doings of a dozen dogs instead of two; but their most horrible variation was a long, wild shriek like that of a soul in torment.

Bill, my partner, arose the second night, after such an explosion, and put on his moccasins.

"I think, he said, "that I know what those blankety-blank-blank-blank dogs want."

He took a birch switch from the sled and gave them something to howl for. The noise was much more subdued the next night, but got well under way toward moonrise. Bill applied his remedy again, and worked a complete cure, for after that we were seldom disturbed.

The most amusing beast in the pack is the Newfoundland, Towser. He is a dog of dignity, gentleness and character, whose qualities fit him for a domestic fireside rather than the hardships of the North. I am persuaded that he was kidnapped from a hearth when they brought him to Klondike. The trouble with Tows is that he objects to going to work. He never quite bolts; he knows, well enough, that if he doesn't stay with us he will starve; but he does his best every morning to secure a day off. When hitching time comes and the others are worked into harness, he never responds, and there is a long hunt for him. He is sometimes dragged from a bush along the trail, sometimes from a hole which he has burrowed in the snow. When discovered, he trots ahead of his captor to the sled, and takes his place with a look which is as near a blush as a dog can assume. Gordie, the Gordon setter, is an example of thoroughbred grit. He was never made for this sort of thing and is coughing his life away with some sort of distemper, but he pulls more for his weight than any other brute in the team and fairly tears his heart out on the hard places. The best dogs left after my escapade of this afternoon are the wheelers, Mike and Dutch, St. Bernards of gigantic size. Together with Juneau, the dear departed, they could pull a thousand pounds over any sort of trail.

The Indian dogs are the only ones which have thoroughly accustomed themselves to the mode of life. For example, they alone take care of the snowballs which gather on their feet without assistance from the drivers. At every stop, they bite and lick them off before resuming. Gordie and the St. Bernards have just learned to do this, while Towser and the cur, Patsie, have never caught the trick. So, too, the native whelps are the only ones which can forage for themselves.

The great event of the day is dog-feeding, after supper. Bill puts a big, iron kettle on the fire and melts snow for water. When the pot boils, he cooks a mass of rice and bacon and sets it in pans to cool. There were eight separate pans last night; tonight, because I cannot shoot, there will be only seven. The brutes sit in a semi-circle, their heads on one side, watching the steaming pans with fierce intensity. The fall of the heavens would not cause one of them to look up except Gordie, who is of an affable disposition and gives you just one glance and a wag of the tail as you pass. But not a brute among them all moves until Bill gives him the word. The pans cool but slowly, although they are set in snow. Bill watches with the dogs and reports progress in a confidential tone. "Steady, now, Tows, we're a-coming." "A bit more, boy, and I'm with you." "Damn you, Patsy, you'll burn your face off." The steam comes up slower and slower, Bill gives the word "now!" and the pack leaps forward as one dog. Long after the dishes are lickedclean, the red tongues of our hungry pack are polishing them. They have worn the plate off their tins searching them for thelast possible morsel. They give it up, presently, and sneak away to find beds, all but the two Esquimaux, which fight around the edge of the fire until Bill goes out and puts them to bed with a club.

Dalton's Post, via Sitka, Nov. 1, 1899.

A SCENE OF SNAKE RIVER.

INTERVENTION.

HOW NATIONS ARE ROBBED OF THE SPOILS OF VICTORY.

THE best proof, I think, that intervention in the present British-Boer War would be prejudicial to British interests is the fact that the French are all hot for it understanding, for the French are skilled in matters of diplomacy to an extent unknown in America or England—that the fate of intervention is a loss to the winning party. It is impossible for an outsider to realize how strongly the Parisians are with the Boers. It is second only to their anti-Dreyfus feeling in the late unpleasantness. I have heard the statement made somewhere that seven-tenths of the civilized world is with Kruger and his people. Be this true or not, I myself know what part of that seven-tenths is most loud among the French. There are the anti-Dreyfus people, led by the vilest of the boulevard sheets, papers so nasty that the New York and London "personal" journals are pure as the driven snow beside them. There are the Nationalists, the blatant brawlers, who tried to kick up a revolution last summer. There are the tin-plate nobility of the Castellane variety, puny holders of ancient titles. And there are the brawling demagogues who howl down the parks and streets of a Sunday afternoon, patriots for revenue only, who go with the side which pays best. These are the people who lead in the French outcry against England. If all the seven-tenths are like these, give me the other three-tenths on a venture.

It is from this class that we hear the howl about intervention, and anyone who can put two and two together knows that they would not raise the howl were England to profit. Besides this, I happen to know that Dr. Leyds, European agent of the Republic, has been hovering between France and Germany, doing his best to win them to intervention. This means two things: he and the others of his ilk are sure that the British will win in the end, and they are determined to wrest her share of the spoils away if intervention will accomplish it. I have but very lately looked over the ground, and have been surprised, my elf, to find how well-grounded are Leyds's hopes. Intervention has been a potent factor in all the great wars of the century, and it has checked not only puny states like Greece and Turkey but great empires like Russia.

Thus, in 1877 the Russian army was halted before San Stefano, close to Constantinople, a position which had been gained by a bloody campaign. A coalition of foreign powers, headed by Great Britain, had intervened. The English threatened to bring their entire Mediterranean fleet to Constantinople if the Russians advanced on that point, and the Czar, knowing the weakness of his own fleet, gave up his hope of restoring the cross to the dome of St. Sophia's. Not only this; the Berlin Congress, which arranged the terms of peace, divided among the powers all the fruits of the Russian victories. England took Cyprus, and Austria acquired Herzogovina and Bosnia, while France secured her coveted territorial rights in Tunis. Germany received no share in these spoils, but profited nevertheless by the strengthening of Austria.

Bismarck's memoirs prove that intervention on behalf of France in the war of 1870 was headed off only by a bribe. Russia and Italy were both preparing to step in; Bismarck bought off the Czar by abrogating the humiliating Black Sea Treaty of 1856 and neutralized Victor Emmanuel by permitting him to treat the Pope as he wished. Germany was the more ready to buy off these powers because she had lost prestige and territory in this manner shortly before. In 1866, when knocking at the very doors of the Austrian capital, her armies were checked by Napoleon, who had massed his troops across the border ready to back up his "bluff." The Germans halted and made peace at once. Had it not been for this incident, a great part of what is now Austria-Hungary would be German territory.

Germany intervened in to 1859 prevent Napoleon III and the victorious Italian allies from seizing Rome. Nearer home, the United States interfered in the conflict between France and Mexico. Again, Japan, like a guileless child, gave up all her gains in the Chinese War, except the poor island of Formosa. Russia, the intervenor in this case, took the greater part of the winnings. The same thing happened to Turkey in the Greek War. In fact, the history of intervention is like the history of lawsuits; the lawyers get the lion's share.

One more example of an intervention that didn't work, just as a mild example to my countrymen. Two years ago, the Kaiser and the French government strove with all their might to bring about a coalition of the Powers to intervene between Spain and the United States. No one who understands the subject can doubt that this would have resulted in a loss of most of our winnings; Germany would probably have taken the Philippines, some other power would have pounced on Porto Rico, and we would have been left with a small indemnity and the consciousness of a duty well done to reward us for our trouble. One power alone stood between the Kaiser and his object—England. All good Americans remember—though from the attitude of some of them on the Transvaal war one would think that they had forgotten—how the British ships came between our fleet and the Germans at Manila Bay. This action was an allegory

THINGS & PEOPLE

Californian Athletes and Eastern Trips.

I GIVE the track management of the University of California the credit to believe that they will revise their decision concerning an eastern trip. That California has the best track team in her history may be true, although I doubt it; that Stanford will be defeated on field and track this year as heretofore is almost a foregone conclusion. But this does not argue that the team would make any such showing in the East as the one which went travelling in '95. I believe that the '95 team was a better one for exhibi ion purposes than this, but even granting it was not, the present aggregation would accomplish very little on such a trip, because of the immense strides track athletics have taken there in the past five years. When the last U. C. team went East, the collegiate record for the broad jump stood somewhere about 23 feet; it has gone up to 24: 6; the hammer was thrown in intercollegiate meets somewhere in the neighborhood of 130 feet; several athletes are now putting it past 140. The records for the hurdles and the distances have gone down several pegs, while no man can expect a point in the high jump at the intercollegiate games unless he is good for six feet. The sprints alone remain below the marks of 1895 and 1896; Crum and Wefers have had no successors. There is just one man in the U. C. track squad who could hope for a first place in the intercollegiate—Plaw in the hammer-throw. Broughton might possibly show in the broad iump, although against Krantzlein he would have no chance of a first place, while there is a remoter possibility of Woolsey's making a place in the shot-put. This exhausts the possibility of points in the intercollegiate. In the flat races, the hurdles, the high jump, the pole-vault, the East has gone so far beyond coast marks as to preclude every other chance. Pennsylvania, which the Californians tied in 1895, has point-winners to cover every Berkeley man except Plaw and Woolsey; Princeton, which the Californians beat, though not nearly so strong as Pennsylvania, has yet men good enough to assure victory. The Eastern colleges have gone ahead in this respect, while ours have stood still. Until we catch up with their pace, it is of no use to send a team abroad to be beaten.

Down With the Slot Machine.

IN Seattle they have a successor to Dr. Parkhurst in the person of a Rev. Sawyer, who foams at the mouth when confronted with a slot machine. As the happy hunting ground of the Nomite and the Klondiker, the Queen City is hardly an ark of the covenant for virtue. On the contrary, it is run "wide open," and gambling and kindred forms of happiness are only curbed by the convenances of sport. The poker resorts, the roulette establishments, the faro banks, have not roused the ire of Rev. Sawyer, but against the slot machine he has risen in his wrath, and great is the excitement thereat. To commence with, he has had a number of saloon keepers arrested for cherishing these alluring devices of the devil, and promises to inspect the entire city with the purpose of removing the others. Actually the bar men have grown terrified at the depredations of this godly man, and there has occurred a most extraordinary disappearance of the objects of his enmity. At the moment the machines have been put out of sight until the courts have had the opportunity of expressing judgment on the merits of Mr. Sawyer's contention. In the meantime one is compelled to buy one's cigars and cigarettes without the excitement of testing one's luck beforehand. My own impression is that the Reverend Sawyer is flying at rather small game considering his opportunities. If he will track the tiger to his gilded lair he will certainly make a sensation, and perhaps prove a prominent factor in the election.

***

The End of a Republic.

JOHN A. DEXTER, the Nome gold king, brings out a bit of unwritten history from the great diggings. It appears that when the camp was first opened the riff-raff of Dawson City swarmed in and made considerable trouble. The best hill-claims had been taken by the first comers, and the beach-claims, which gave work to all, were not yet discovered, so that most of these men found mischief to do. A few agitators among them went about stirring up trouble. It was a far country, they said, and Uncle Sam could not reach them. Why not take the law into their hands, declare the United States mining laws null and void, and restake the district on their own plans? The scheme took with the sharps and hoboes in town and even with many unemployed miners. To the number of nearly two thousand, they met and passed resolutions declaring the United States laws void in the Cape Nome district. At that juncture Lieutenant Spaulding, commanding the army post at Nome, appeared on the scene, accompanied by a half dozen soldiers. "Mr. President and gentlemen of the Miners' Association," he said, "I give you two minutes to withdraw those resolutions." There was a storm and an uproar, but no one made a move, either to change the resolutions or to attack the soldiers. The agitators who had been howling defiance at the United States army were quiet before the handful of blue-coats. The lieutenant drew out his watch and counted off two minutes, then he turned and gave an order which brought his men's rifles to a "present." "I declare the resolutions withdrawn," he said, "and I give all good citizens of the United States two minutes more to leave this hall." In a minute and a half the soldiers were alone with the janitor. That was the end of the independent republic of Nome.

***

Vice vs. Virtue.

THE political situation in Seattle is so delightfully mixed that one hesitates at attempting its elucidation without the aid of a diagram. In the mayoralty contest, however, the issue is direct between good and evil in the theological sense, the parties thereto being one Geo. F. Cotterill, a Prohibitionist who has been set up by the Fusion forces, and Mayor Humes, the incumbent, who bears the Republican standard. Mayor Humes believes in "wide open" Seattle. A man of liberal views and broad humanity, he has the impression that the Queen City should not be run on Sunday school principles. Its floating population demands strong forms of amusement, and will not be satisfied without easy access to red liquor and chips. But he regulates the manner of this indulgence, and rather prides himself that in Seattle any man may have a fair run for his money. For suspicious characters the police watch out, and the average bunco steerer gets short shrift. This condition, however satisfactory to the horde of Alaskan millionaires who winter in the Puget Sound metropolis, is regarded by the theological element as crying out for vengeance to high heaven. They propose that virtue shall assume her pale and gloomy sway, and that gaming in all its forms must be banished. So there will be a great rallying of forces on both sides—blue ribbon against red, Non-Partisan, Silver Republican, Populist, against Straight Republican. To me it looks like Mayor Humes, for he should draw out the full strength of the party which hitherto has had a majority of the city's votes.

Scaring Death out of Town.

HAD the Board of Health of San Francisco not knocked its head up against the Deficit it would have had half the Directory on the municipal pay roll. Assistants and deputies were being appointed at such a rate that almost any one a man might meet on Market street was liable to be in its service. An excellent motive directed its actions, for Dr. Williamson really believes that by legislating men into office under the name of Health Inspectors he could scare death out of town. This idea he inherited from the late Dr. Morse, and if one could obtain trained assistance the results might justify it. The experiment was ill-timed, however, for San Francisco's finances are in a strained condition, and economy must be enforced in every department. For proper regulation of pure foods, milk and plumbing, we must wait another twelvemonth. Due provision will then be made for them.

***

Ho Yow and the Sons of the Revolution.

A CURIOUS commentary on the change of sentiment in regard to the Chinese in California, was the presence at the annual banquet of the Sons of the American Revolution in San Francisco on Washington's Birthday, of Ho Yow, the Mongolian Consul General. One may be pardoned for dubbing this distinguished Celestial an "elegant gentleman." He has the fine diplomatic air, and his robes, on this occasion especially, were a delight to the eye. Otherwise Hoe Yow is a graduate of Oxford University and of the Hastings College of Law, and is decidedly a personage at home. He was down for a speech on "American Interests in the Orient," and really he quite caught the spirit of post-prandial oratory, complimented the eagle and the flag, expansion, the Philippines and the *entente cordiale* between his gentle Dowager at Pekin and our William McKinley at Washington. And he was applauded to the echo. Otherwise the occasion was notable for the debut in non-theological circles of Rev. Dr. F. W. Clampett, who has recently had the courage to accept the rectorship of Trinity Church. He spoke on American manhood, and developed a brisk and forceful eloquence that captivated the gathering. There was also a thoughtful speech from Prof. Duniway of Stanford, and another on the "Destiny of the U. S." by Henry Melvin, who with broad and lusty strokes painted the national signature on the western hemisphere. Otherwise the sacred occasion was justified by a first-rate dinner to which the 135 Sons of the Revolution did ample justice.

A Tribute to Gavin McNab.

A VERITABLE ovation was given Gavin McNab at the banquet of the Iroquois Club on the evening of Washington's birthday. He had been down for a reply to one of the toasts, but illness prevented him speaking. He was persuaded to appear for a few moments, however, and, much to his surprise, was lustily cheered and the club drank to his health standing. Such distinctions have been conferred ere this on less important men, but in the instance of McNab the tribute was extraordinary In the past there has never been much love lost between the Iroquois and the hero of this occasion. On the contrary, they have been on opposite sides of every movement within the party. McNab has generally been in the right, however, and has prevailed, and his position today in the Democracy, of which he is the virtual leader, is a testimony not alone to a skill at organizing, but to honorable methods and disinterested service. I do ubt if McNab's attitude to the power he wields is paralleled by that of any prominent politician in the country. Politics is not an occupation for him, but rather a pastime, and to it he gives no more than the few hours a week he can spare from his law practise, nor has he sacrificed one jot or tittle of personal independence or freedom of speech. No man has said more bitter good things of his opponents or cared less for the dictates of policy. But he has been the factor in all the reform movements of the last twelve years, and has built up round himself a following of young men—most of them leaders in their districts throughout both city and state—who thoroughly believe not only in his integrity and disinterestedness, but in his political sagacity. He has frequently been offered office, but has invariably refused, and has been so consistent throughont that the respect of his bitterest opponents is now accorded to him. At the Iroquois banquet there were prominent Democrats from all over California, and the gathering was thoroughly representative, including many of the subjects of McNab's choicest epigrams. Considering all this the compliment was indeed worth having, however well deserved.

BOSWELL, JR.

The owner of a complete set of the books printed at William Morris's Kelmscott Press may some day be master of a modest fortune. The latest price paid for a copy of the Kelmscott Chaucer was $320. Many of the Morris books are coming to this country. The Kelmscott woodblocks are all in the British Museum, and cannot be printed from again until the expiration of a hundred years.

DINNER ON THE MARCH.

THE CALAVERAS GROVE.

THERE are three great natural wonders in California: Mount Shasta, the Yosemite and the groves of big trees at Calaveras and Mariposa. Two of these are likely to stand forever. Mount Shasta cannot be levelled by mortal hands, and the Yosemite is guarded, as regards its destructible features, by a wise reservation of the United States government. The Calaveras trees, however, form a national phenomenon of such a nature as to be a prey to the greedy, and far-seeing Californians have looked forward with trembling to the time when the lumberman would reach out for them.

That time is at hand, and unless something is done before April 1 of this year, this big sequoia grove will be only a memory. J. L. Sperry, the present owner, has held the tract of 2300 acres embracing these trees for many years. This property was almost his only possession, and he has lived in very moderate circumstances all this time in the hope that they could be saved to the State. From time to time bills providing for their purchase have been presented to the Legislature, but they have invariably been slighted. Now, at length, the owner has accepted an offer of $100,000 from a lumberman of Minneapolis, and has received a guarantee to hold the option until April 1. If action is not taken by that time, the giant grove is lost to the world. No one is specially to blame. The owner can hardly be expected to live in comparative poverty for the joy of keeping a park for California; neither can the purchaser, a man who has no direct interest in California and her natural wonders, be condemned for jumping at a good business proposition when it is thrown his way. If anyone is to blame it is the whole body of Californians, and their Legislature in especial, who have adopted the Californian apathetic attitude toward things for the common good, and who are now paying for their lack of public spirit.

These groves are the last survivals of many which extended all along Kings River and into the high Sierras in the early days. Now they are the only ones of any considerable size, the others, if they have not disappeared completely, being represented by two or three solitary survivors. In Tuolumne and Fresno counties, where there were fine growths when the white man came, only stumps remain. This big grove in Calaveras county was pre-eminent in California even when the others were standing. It covers 2,300 acres, on which, besides many smaller trees, there are about one hundred and fifty of the giants. There are ten of over thirty feet in diameter, and eighty-two over fifteen feet. The highest rises about four hundred and fifty feet, while few fall below three hundred. The grove has been noted for its "freak" exhibitions illustrating the bigness of these trees. A monster, ninety-two feet in circumference, was cut down in 1854. The smoothed stump was made into a dancing-floor, on which balls and theatrical performances have been held from time to time. It is said that thirty-two people with musicians and spectators have danced four sets of a quadrille on this floor. An examination of rings showed that this tree was about 2,000 years old at the time of its destruction. Another exhibit is "The Horseback Ride," a hollow trunk through which a man can ride on horseback for seventy-five feet, coming out through a knot-hole.

These great trees are of a characteristic shape. They are almost all trunk, the branches being very scanty in proportion. For perhaps a hundred feet the wood grows bare; then the branches begin and continue to the top, where the tapering trunk ends abruptly, as though broken off. In spite of the age of the surviving trees, a geological bed of similar but older growths lies under the present grove, and contains trunks even larger.

THE MARDI GRAS BALL.

THE fourth Mardi Gras Ball of the Hopkins Art Association of San Francisco was the largest of the bunch, although hardly the merriest. Merriment there was in plenty, it is true, but it was of the subdued sort. There are, consequently, no post mortems for this affair, no overcolored stories of persons who weren't just exactly what they pretended to be doing shocking deeds on the floor or cutting capers in the supper-room. The artists had been given to understand that this ball must be respectable with emphasis, or society would withdraw its gilded smile from all future "blow-outs" of the Association. This had a beautiful effect upon the manners of the festivity, but it wrought injury to the general effect, because the chief measure for insuring decorum was an order that no man should wear a mask. Men are never over-ready to decorate themselves in those quaint and outlandish costumes which are the joy of the feminine heart, and the only condition upon which the average male creature can be dragged into a costume is the assurance that his identity may be hidden. Robbed of this assurance, the male ticket-holders came in conventional evening clothes, which helped to give the occasion a formal air that must have delighted the dowagers and been a great grief to the irreverend gentleman to whom the world bids *au revoir* at Mardi Gras.

But it was a good time, anyway. Society was more largely represented than ever before, and the attendance was beyond all previous records. Eight hundred people subscribed for tickets and the cause of art in San Francisco was assisted to the tune of about four thousand dollars, minus expenses. The decorations excelled anything ever done at the Hopkins; perhaps, all things considered, they were ahead of anything of the sort ever done in San Francisco. The spacious house, built for a palace before it was made into a school, was turned back to its original use. The *piece de resistance* was the Throne Room transformed from the new art gallery. The walls were draped with tapestries and hangings and hung with arms, with banners and with shields in heraldic designs, the work of students of the Art School. In the Jester's Room, in every-day life the main hall of the building, carnival colors, red and yellow, dominated. A great lantern, flanked by hundreds of smaller ones, dropped from the center of the ceiling. The Court of Beauty, otherwise the ladies' room, was done in yellow.

The trumpets sounded shortly after nine o'clock. King Carnival, alias Orrin Peck, made his annual announcement of the revels. Ned Greenway as the Jester led off the grand march, and the merriment was on. It lasted until the usual early hour, when the buds and matrons withdrew, leaving certain of the men to straggle home at daylight—just in time to meet the devout going to the early mass of Ash Wednesday. Taken as a whole, however, there was nothing about this particular Mardi Gras to add to the burden of sins which San Francisco society must carry through Lent.

Edmund Clarence Stedman, having sold his seat in the Stock Exchange, has retired to his home in Bronxville and promises to devote the rest of his life to the production of poetry and criticism. Mr. Stedman used to practice finance between the hours of 10 and 2:30, but after that gave no thought to the Stock Exchange. Though keen enough in business, he never could keep in his head after closing hour, the ruling quotations.

A paragraph appearing in the New York *Journal*—wherefore it must be true beyond the peradventure of a doubt—states that a long-lost brother and sister down in Kentucky were "united by the label on a can." This would seem to be a rather slender band of union, but maybe they didn't want to tear loose. It is a touching story, relating how the brother had kissed his sister goodbye and had gone away weeping "for a farewell that would seem as long as all eternity," and how she had never seen him again for thirty-eight years, until she found his name on an oyster can down in Mexico, where he had become a prosperous canner. The one point where the space-writer of this delightful tale falls down is in not explaining just why the brother who went away weeping didn't communicate with his family all those years. Let us be charitable, however. Perhaps, coming from Kentucky, the land of Taylor and his mountaineers, the *Journal* wants us to understand that he didn't know how to write.

ROBERTS VICTORIES—TWO GENERALS.—CRONJE AS A HERO

TWO men concentrate the world's attention to-day—General Lord Roberts and Commandant Cronje. One is trapped in a river bed with eight thousand men, surrounded by a British army of four times that number. It was the other's strategy that set him there. At writing the Boer leader holds out against a bombardment of lyddite and shrapnel, his courage and fortitude in facing an implacable foe rousing the admiration of the world. Call his stand what you will—murder or suicide—it is heroism of the highest type, however mistaken or ill directed. It is the spirit of him who, confronted with the pistol of the highwayman, refuses to turn out his pockets, preferring death to surrender. Brave but indiscreet the average man will tell you, but history is full of such glorious indiscretions, and in the English army they reward it with the Victoria cross.

I met the other day a man who had recently come from South Africa, and naturally the conversation turned on Cronje. I was inclined to rate his skill higher than that of Joubert, but my friend would not have it so. The commandant at bay in the Modder river is a military farmer and owns some 12,000 acres of veldt close to Potchefstroom. His home is a stone structure one story in height, the inevitable stoop in front, containing half a dozen dirty rooms, the contents of which might be replaced for $100. Here he lives in patriarchal style, with his wife and children and native servants, and rules them with a rod of iron and a hide sjambok. A hard, rough man is Cronje, ruder than the average Boer—even more cruel and relentless, cunning and unscrupulous. He led Transvaalians in the campaign of 1880 and was guilty of acts contrary to the usages of civilized warfare. He executed several British subjects on suspicion of participation in the movement against him, and on another occasion he placed prisoners of war in the forefront of besieging operations, compelling them to work in the trenches in exposed positions, so that they should be—and actually were—shot by their friends.

Nor is this all. When Jameson surrendered, Cronje was conducting operations against an isolated British force which held out against the Boers. Instead of notifying the garrison that an armistice had been arranged between the forces, he continued the siege until the British were compelled to surrender in order to save the lives of their wounded and women and children refugees. Then this amiable hero proposed to shoot all the English officers of the garrison and was persuaded to mercy on the plea that they would be worth more to the Transvaal alive than dead.

Those who would depict Cronje—by the way, my South African friend pronounces it as though spelt *Crony*—as the ideal hero of romance should not forget how Baden-Powell handled him at Mafeking. Several thousand Boers, Cronje leading, set forth to conquer the odd thousand Britishers at Mafeking. A messenger was sent to the Colonel summoning him to surrender.

"Why surrender?" queried Baden-Powell.

"To avoid further bloodshed," was the reply.

"Ah! really?" said Baden-Powell. "Will you be so good as to let me know when the bloodshed is going to begin? Haven't had any in here yet, don't you know. Awful sorry if any of your men got hurt."

A few days later Cronje sent a similar message, and after the envoy had had a cup of tea with Baden-Powell he went back to Cronje, reporting that he could do nothing with the "rooinek." Whereupon Cronje, with his 4000 Boers, gave up the siege of Mafeking and treked for Kimberley.

My friend told me of meeting this uncompromising hero at Pretoria. Cronje was sojourning for a week at the Transvaal Hotel and was evidently enjoying himself. He looks like a tramp on the rampage—is of medium height, thickly bearded, strongly featured and dirty. His watery blue eyes have an unpleasant leer and he is not in the habit of looking men in the face. At dinner, one heard him all over the hotel, bragging in the most bombastic fashion. However, even his enemies credit him with a species of blind courage and tell how splendidly he fought in the Kaffir wars. But they remember also how he and his valiant brothers-in-arms blew up with dynamite the caves containing the native women and children. A thoroughly characteristic Boer trick this. I cannot conclude this record of the latest international reputation without quoting my friend's comment on American sympathy and its generous expression in the yellow journals.

"My, my," he said; "before going to South Africa I read a great deal in our press about the Russian knout, the cruelties of Siberia, and noted with fine admiration how our people writhed with indignation over the 'paddling' some small boys had been given at the Elmira reformatory. The small boys were spanked with a bit of wood. In the *Journal* the punishment was described as of blood curdling severity. Well, I had to spend a week or two on a Boer ranch and saw a couple of Kaffirs—one a woman—"sjamboked" It's a memory I don't revive save when my nerves go wrong. Well, the Kaffirs died. I was told they were rather fortunate Kaffirs. But I'm prejudiced against Boers. They're as cruel as Apaches—even Mrs. Schreiner admits as much—and as ignorant as Huns. One might hope for better things if it were not that they justify cutting the hide off a Kaffir by bible texts and really believe themselves a superior race." "Its funny," he added, "this sympathy of the Irish. They hate the English, do the Boers, but they regard the Irish as a species of white Kaffir. For Catholics they have as much use as for Jews. Indeed they like only Boers, but that is because they are a unit against foreigners. If they ever get the country to themselves they'll split into a dozen pieces in half a decade and there will be no more business in South Africa."

LITTLE BOBS.

The other is a tiny smart little Irishman with a head full of brains, as brave as a terrier, cool, sagacious and lucky. Roberts started his career in the Bengal artillery and was then a small delicate-looking despondent youngster, who, however, had a tremendous amount of ambition and the grit of the devil. He was in the mutiny and won the V. C., campaigned in Abyssinia, and saw service wherever there was fighting in England's little wars. When the opportunity was given he showed he could organize and direct a great movement. He has never yet been beaten, although there were some close shaves in his second Afghan campaign, as when the rising *en masse* of the tribes about Cabul obliged him to evacuate the city, and Bala-Hissar, to take refuge in the Sherpur cantonments. That was a very near thing, for quite one hundred thousand Afghans surrounded his small force of ten thousand, not half of them British; and when they made their great attack on December 23, 1879, but for Roberts's excellent dispositions and the pluck of his men he must have been overwhelmed.

I have seen Roberts a dozen times in the House of Lords—once I saw him there with Kitchener, with whom he is quite friendly. Sometimes he talks—he has a thin voice and a hesitant manner, but his sentences are clear cut and his manner very firm. I remember once seeing this little, great man in the outer lobby at Westminster waiting for his son. Lord Salisbury just then came up to enter the House of Lords. Lord Roberts did not approach Lord Salisbury—indeed, it looked almost as if he were not personally acquainted with him; though, of course, that is impossible. The great little soldier took off his hat most ceremoniously, as if he were saluting a superior officer, and as if he himself were the humblest nobody. Lord Salisbury, not to be outdone in courtesy, followed the example, and also took off his hat. They were a singular contrast—the civilian, with all the marks of the student in the stooped shoulders, the massive frame, and the pallid complexion; the little soldier, taut and alert, and fresh with the ruddy complexion of one who lives much in the open air, and just that faint suspicion of bowleggedness which is nearly always to be seen in a cavalry officer.

Already Roberts has shown his metal—but it's early in the campaign. Wait!

STUART PRINTISS.

Advertising vs. Art.

THE expected has happened. Olga Nethersole has been haled into a New York police court to answer for 'Sapho." It was a great day for a great many people. The W. C. T. U. were happy because it was a victory for morality, coming on top of their successful protest against barmaids at the Langtry concert tea; the sensational paper which has gained notoriety by advocating the arrest was happy because it made a half-page front; Olga and her manager were happy because it gave them advertising just when advertising was needed, and propped a falling house; every one was happy except the people of taste, and they do not count in this affair.

I have my own ideas on the morality and immorality of "Sapho"; unorthodox ideas, 'tis true, but frank ones. The immorality of the play lies in its execrably bad art. This statement needs explaining. If you have read the Daudet novel from which the play just "pulled" in New York was made, you must realize how delicately and well the author has handled his theme. There are salacious novels in existence which have the same identical plot as "Sapho," and they are horrible beyond description, whereas "Sapho" goes clear beyond mere negative morality and almost violates art in the other direction by becoming a sermon. I defy anyone to lay down the book without feeling a deep disgust for the thing which has wrecked the young student's career. Those who have read it must remember the end of the first chapter, one of the greatest single sentences in all prose literature, a sentence which always recalls the whole book and its lesson. *Jean Gaussin* has met *Fanny Legrand*, alias *Sapho*, at an art student's ball. She goes to his home with him. It is a student's room up four flights of stairs, and he offers to carry her up. She laughs, and consents. The first flight is pleasant work. She is a beautiful woman, and the burden is light; so, too, with the second. On the third, she grows heavy, and he longs for the end; the fourth, and the burden is intolerable; it is not a woman that he carries, but a monster, clinging to him, dragging him down. And then comes that surpassingly great sentence—"Their whole history, the ascent of those four flights of stairs in the gray December dawn!"

The novel is amplified on this theme. *Jean* falls into the toils of *Sapho*, who, though still the fairest woman in all Paris, is older than he by many years. He lets her keep him from everything wholesome and useful in life—from family, from friends, from marriage with the woman whom he loves with his higher self; finally, he gives up his opportunity of position and place to live with her in Paris. And just at the moment when he has made this supreme sacrifice to his guilty love, *Sapho* leaves him to run away with a jail-bird who was her lover before she met Jean. It is great, and true, and touching beyond expression, and—I dare to say it—'tis moral because it is art.

Now, behold, cometh Clyde Fitch, bungler and tinker of poor plays, and lays his blighting hand on it, and "Sapho" becomes an exhibition fit for a Bowery dive. The tribute to Daudet's genius is a sincere one; Fitch has shown what pitfalls the novel avoided. Even at this, the play "Sapho" is not so immoral as it is disgusting. To be really immoral, I think, literature must render vice attractive. It must offer

OLGA NETHERSOLE.

Miss Nethersoles "Sapho."

an incentive to go and do likewise. For another concrete example, take De Maupassant and Zola. De Maupassant treats charmingly of the pretty sins of pretty women. As he tells it, vice attracts; you lay down *Une Vie* or others of its sort with the feeling that the Puritan ideas of purity on which you have been reared are not such vital things after all. No one finds anything attractive in vice as portrayed by Zola in *Nanon* and *La Terre*. Therefore, as between De Maupassant and Zola, the former is distinctly immoral, the latter only unpleasant. The saving grace of *Sapho*, the book, is that it is neither immoral nor unpleasant, because the theme, attractive in the beginning and disgusting at the end, is treated throughout with the high and holy view of a seer. The only kind thing which I can say of "Sapho" in the Clyde Fitch version of the play is that it is not in the least subservient of public morals, simply because it is too disgusting to appeal to any but a most degenerate taste. You leave the play as you lay down the book, with a hatred of stolen loves, but from widely different motives. With the book, it is because of moral stimulus; with the play, it is because of nausea.

Excuse me from going into details. Let me speak of the acting, the one bright spot. For Nethersole really did it well, and gave the only artistic touch to a performance which is, taken as a whole, a trampling on the sacraments of art. When we saw her last, she had run to mannerisms and excess of expression, but she has now toned them down. Her acting was splendid within the lines laid out for it, being in the better, earlier manner of her *Carmen*. It is well done, assuming that it is worth doing at all.

When the police-court case is finished, the Tenderloin will once more crowd Wallack's, just as it has since "Sapho" opened, and pour bad money after bad to pay the Nethersole company for prostituting the drama. "The Girl From Maxim's," "Zaza," "The Degenerates," and now, "Sapho." Worse and worse with each remove. Where, O shades of our Puritan traditions, are we to end?

JOHN DALTON.

INTERVENTION.

Continued from Page 5.

of the British attitude toward Germany and the proposed coalition. Thence it came about that the Spanish-American war of 1898 is the only international conflict since the Crimea wherein intervention has not been a factor, the only one where a strict "hands off" policy has been enforced. To an unprejudiced American, the moral ought to be obvious.

Steel cars are in enormous demand, the company making them consuming 1,200 tons per day. It is this enormous consumption of steel in this direction that has put up the price of the commodity.

In BooKdom

FRANK T. BULLEN has been adding to his bank-account of glory through the press-clipping bureau since the publication of *The Cruise of the Cachalot* a year or two ago. It will be remembered that the critics received that book with the greatest enthusiasm. Rudyard Kipling said of it: "It is immense—there is no other word. I've never read anything that equals it in its deep-sea wonder and mystery, nor do I think that any book before has so completely covered the business of whale-fishing, and at the same time give such real and new sea-pictures. I congratulate you most heartily. It's a new world that you've opened the door to."

I have before me Mr. Bullen's latest book, *The Log of a Sea-Waif*, published by D. Appleton & Co., and although it is not to be expected that such lavish praise should be deserved a second time within a twelvemonth—and in fact is not deserved, if for no other reason because *The Log of a Sea Waif* is not so unique in literature as its predecessor—nevertheless this story of Mr. Bullen's first four years at sea is intensely interesting, and will rank with our own Dana's *Two Years Before the Mast*.

I should like to lift out a few pictures of Mr. Bullen's boyhood, nearly thirty years ago. And here is one of Port-au-Prince, in the year of Hayti's successful revolution against the sovereignty of Spain and France. The place is not very different today from what it was then; a little sleepier, perhaps, and a little healthier. Mr. Bullen's ship (he was a boy of eleven) flew the British flag. "Whether any vessels trading with Hayti paid any attention to the alleged blockade I do not know," he says; "certainly we did not." Which is not much of a compliment to the combined war fleets of France and Spain. And then he tells of the republic:

"The town was in a pitiable condition. What with the long rebellion and civil broils, in addition to the careless happy-go-lucky fashion in which the farce of government was carried on, whole streets were in ruins; business was at a standstill, and even the few merchants who still clung to the remnants of their trade were in despair. It was no place for white men, anyhow. The negro was master of the situation. He had fought long and savagely for his independence, and now that he had got it he was drunken with it as with brandy. That careless white man who omitted, from any cause, to salute in the humblest manner any functionary of the government of the hour, however ludicrous in appearance, speedily found himself in serious trouble, out of which he did not easily extricate himself. And since new officials were constantly emerging from the rag-tag and bob-tail, the only wise course was to salute every black man, no matter how menial his capacity might be. One never knew whether the road-mender of today might not be a general of division to-morrow, having the power of life and death even while wanting a decent pair of trousers.

"A party of our fellows were allowed to go ashore, by a serious error of judgment, and, as they strolled carelessly along one of the principal thoroughfares, they met a company of soldiers so scare-crow-like that they simply stood and roared with laughter. This had been crime enough, but the sailor-men must needs aggravate their offense. The officer in command, swelling with rage, demanded their salute. Instead of complying they indulged in some ribaldry, in which his get-up, as well as that of his ragged regiment, was held up to ridicule in effective fashion. This behaviour could not be tolerated. They were surrounded, overpowered, and dragged off to the *calabozo*. Then, when they saw what their folly had led them into, they repented sorely. It had been worth any amount of 'ko-tow' to have escaped from such a fate as now befell them. The lock-up was apparently an ancient cow-byre, standing like an island in a lake of sewage, which, under that blazing sun, sent up a steam of putridity into the heavy air. Through this foul morass they were dragged with every indignity their exulting captors could devise, and there, more dead than alive, they were left for twenty-four hours, when the captain managed to overcome the stubborn attitude of the sable authorities and induced them to accept a substantial fine. When they were released and brought on board they looked like resusticated corpses, and every article of clothing they wore had to be flung overboard. The doctor examined them with gathering anxiety upon his face, but his only comment was, 'the sooner we're out of this hell-hole the better.'"

The result of this experience was the death of thirty men out of the ship's crew by yellow fever, and a reign of terror aboard the vessel. But before the outbreak of the scourge an incident happened that was to have some effect upon the fortunes of the captain and first mate. It was on the night of departure:

"That evening a passenger embarked, who came alongside in a canoe paddled by two negroes, bringing with him several weighty chests. He was a well-dressed black man, with an air of nervous anxiety; and he hovered around while his baggage was being hoisted on board as if he dared not trust it out of his sight. When it was all safely embarked and carried below, to a muttered accompaniment of growls at its weight, the canoe disappeared into the darkness, while the passenger also hid himself, and rarely appeared henceforward."

It was not until the ship neared Liverpool that the black man attracted any further attention. One afternoon he left his stateroom:

"He was evidently seeking the captain, for as soon as he caught sight of him he hastened towards him and the two went straight into the captain's stateroom. From thence there soon issued strange noises as of a foreigner under strong excitement, while now and then the deep tones of the skipper chimed in as if he were speaking soothingly. Suddenly the door was flung open and the captain called for the mate. That officer responded promptly, but did not succeed in hushing the din. On the contrary, the shrill voice of the black man rose higher than ever, until he was fairly yelling with fury. The mate blew his whistle, and, when the bo'sun appeared in answer to it, he received an order to bring the carpenter with a pair of irons and three or four men. The reinforcements manhandled the excited negro, hauling him with scant ceremony on deck, and bundling him forward into an empty cabin, wherein they locked him and left him to his own reflections. This mysterious affair caused much excitement among both passengers and crew, but it was not until after the vessel had been in dock some days that any explanation was forthcoming. It appeared that, according to *his* story, the negro had been First Lord of the Treasury, and had levanted with quite a large sum (he said $100,000). Getting safely on board he had committed his loot to the care of the captain and mate, who, however, most unaccountably forgot all about it when he claimed it coming up Channel."

Such were the rough-and-ready ethics of the sea. The captain of course returned the money to Port-au-Prince by the next steamer. Later on Mr. Bullen describes the ordinary seaman with his hand in another man's pocket; bolder work, it may be, but nowhere near so smooth nor so profitable. The ship is a different one:

"Now it so happened that the stock of kindling-wood fell very low, and this furnished an excellent excuse for the cook to be very much in the forehold, seeking such stray pieces of dunnage-wood as he might burn. He was a poor cook, but a superlatively ingenious robber. For, finding that the 'tween decks held little worth his attention, he wrought unceasingly to get the lower hatches lifted—a tremendous task, from the massive weights stowed on top of them. At last he succeeded in getting into the lower hold, and laying open the vast accumulation of valuable cargo that lay beneath. Having done this he informed the 'hard-case' members of his exploit, and considerately arranged the fastenings on the forehatch so that they could get below when they listed. Thenceforward that forecastle was a scene of luxury such as I believe has never been equalled in a merchant ship. Wire chandeliers, fitted with massive wax candles, lit up the usually darksome house, the burning of costly cigars filled it with aroma, liquors of every kind were drunk from tin pots, and at meal-times all sorts of canned meats, seasoned with various condiments, tickled their palates. Yet, strange to say, there was no drunkenness. One man, the ringleader in this systematic robbery, possessed sufficient force of character actually to prevent any of his shipmates from 'giving the show away,' as he termed it. In consequence, this eating and drinking of luxuries went on for fully three months, and never a whisper of the goings-on reached the officers' ears. Even the passengers shared in the plunder. Their stores, besides being of bad quality, were so limited in quantity and variety that they were glad to purchase from the sailors a little of their spoil, asking no questions as to its origin. As the various cases were emptied the cook broke them up, carried the fragments into the galley and burnt them, so that no trace was left of the depredations.

"The nightly excursions below were attended with awful risk. In the first place the men possessed no dark lantern, so that they carried naked candles flaring in their hands as they crawled through the restricted spaces between the cargo and the deck overhead. And, on first entering the lower hold, they had to make their way over hundreds of drums of naptha. These were all sealed, it is true, but had there been one leaky can in that temperature, over which a naked light passed! More than that, in their investigations the marauders penetrated as far aft as the stern, passing among little heaps of loose gunpowder which had sifted through the hatches of the between-decks, and writhing over kegs of blasting-powder which were stowed right across the vessel amidships. At first they did this unthinkingly; but when they realized it they still went on as before. What is strange to myself about it is that I did not, could not, then realize what frightful danger we were continually in; but ever since, when I recall the events of that voyage, the cold sweat starts out upon me and I tremble violently."

It is interesting to know that these rascals, too, got off scot free. When the ship reached Australia they quietly walked ashore, taking with them a comfortable grub-stake, modern guns, ammunition, clothing, and such little luxuries as they fancied. They went, of course, to the mines, and became respectable citizens. Mr. Bullen, being honest, remained a sailor.

Some people (many of them Chinamen) like to have their back scratched with an ivory hand on the end of a stick, for the sake of the pleasurable sensation. It makes them feel almost wicked, almost uncanny, as if those delightful shivers were the identical hair-raising ecstacies that follow upon the telling of a theosophical ghost story in the dark. These same people sometimes attend the theatre; and if their hair doesn't rise up in its stirrups like Ichabod Crane when the head came at him, they deem the play a failure. They have three tests for literature. The first test is the shivers test. You can always

You Can Have Possession of the

Latest, Greatest, and Grandest

of Reference Works

IN SIX SUPERB VOLUMES.

Time is Limited. Read Carefully. Act Quickly

"The Imperial Reference Library"—An Epitome of All the World's Knowledge, at One-Half the Regular Price, and on Your Own Terms of Payment.

Heretofore all Reference Works of merit have been sold exclusively by subscription and at very high prices. After the plates have become worn, these books have, in some instances, been printed on cheaper paper, poorly bound, and sold at a lesser price. But the publishers of "*The Imperial Reference Library*" believe this system to be wrong. It not only requires the early buyer to pay an exorbitant price, but it takes years to get the publication introduced and a demand created for its purchase.

All those who appreciate good books and a genuine bargain should take advantage of this liberal offer at once.

"The Imperial Reference Library" comprises five works in one, namely, an encyclopædia of knowledge (65,000 topics), a biographical compendium (15,000 of the world's prominent people), a dictionary of language (150,000 words), a gazetteer (30,000 cities), and an atlas of the world (73 maps), and, being a new work, is *absolutely up-to-date* in every particular, containing a great deal of matter not to be found in other works of like nature heretofore published. *Its editorial staff*, as well as more than two hundred special contributors, comprises the most eminent American *educators*, *scientists*, *inventors*, *explorers*, and *specialists* of the day, and is a sufficient guaranty for completeness and authenticity.

It is bound in six large quarto volumes, 11½ inches long and 9¼ inches wide, comprising in all over *4,000 pages* and containing nearly *4,000 illustrations*, which are in keeping with the high character of the subject matter. Of these, about *3,000* are text illustrations, *500* are in delicately tinted monotone, and there are nearly *500* separate chromatic designs in seventeen brilliant colors, covering a series of beautiful single and double-page plates. In addition to all these there is a portrait gallery of the world's greatest men, comprising *200 superb full-page* wood engravings, and we unhesitatingly assert that "*The Imperial Reference Library" is the best edited, best mapped, best illustrated, best arranged, and most practically useful general reference work ever published in any country or in any language.*

It is bound in two styles of binding, viz., fine English Cloth and Half Russia Leather, the regular prices being $44 and $55, respectively, per set, but it being our purpose to introduce the work as quickly as possible to the general public we have laid aside *100 sets* to be disposed of in this territory at *one-half the above-mentioned prices*, namely, $22 for full set in cloth binding, and $27.50 for full set in half russia leather binding, the amount in either case being payable at the rate of *$2 per month, we delivering the full sets at once, the purchaser having the use of the volumes while paying for them, and also the privilege of returning the Library to us at our expense* any time within ten days provided the work does not give satisfaction.

Remember only 100 sets can be sold at this great reduction of 50 per cent. in price.

Will you be one of the fortunate ones?

Babblings of a Belle

I AM in an infinitely better humor this week, Diary dear. Somehow things seem to be shaping themselves to my advantage. My "ideal lover" is to take a six months' trip, and has promised papa not to write to me nor in any way let me hear of or from him for one hundred and eighty days. At the end of that time, if I still be as madly anxious to marry him as I am to-day—well—the wedding will astonish the people of San Francisco, for I shall make it an event. It seems, my good father and mother think that, for one who is twenty-one years of age, out of sight is to a great extent out of mind. So in separating the ideal man they will have no difficulty in finding a more suitable person for their child. I, however, am wearing a heart studded with rubies containing a photograph. The "ideal" has even my baby pictures, so I think that you, Diary dear, can anticipate a story of a "true love" in a few months. Of course, in the meantime I must make things hum. There is nothing that mama will deny me. I am to be taken numerous trips; papa even proposed the other day a trip up to Cape Nome. A girl I know went up there, and said never in her wildest dreams of men had she been rushed as she was there. The men, nearly all college fellows, who had their growth, were fascinating, and all her spare time was spent writing letters thanking this one or that for the honor he had bestowed on her in asking her to be his wife, etc., etc. So you see Cape Nome has other advantages beside the gilded ones.

Talking of gilded things, brings to my mind the Mardi Gras. That is to be a magnificent success. People who have never thought of it before are getting the swellest costumes. The decorations will stagger the eye, they are so elaborate. With Orrin Peck as Prince Carnival, what more could the exacting demand? Frank Owens and Tony Hellman are to be the chief pages, and, as they are both endowed with a marvelous capacity for having a roaringly good time, I think it will be pretty merry. I am so glad I am going. There will be any number of dominoes and masks, for some girls say that they can have a really gayer time realizing they will not be recognized afterwards. Just think of the fun one could have joshing a fellow on whom one knows an interesting little tale. He'd never discover one's identity, if she wore a domino. I am so excited about it I do not see how any one can talk of anything else, but I must tell you of the affairs of last week.

On Monday night there were several theatre parties to hear the "Serenade." Now, Diary dear, deeply as I am devoted to any number of young men, I am not going to accept a theatre party again, unless it be given by Fred Greenwood. I was not at his, but when he took his crowd to supper at the Palace a beautifully decorated table met their eye. The supper had been ordered beforehand. I was at the next table gazing over the menu wondering what I should have, when I saw the waiters serving his. I knew Fred pretty well and could easily have joined his party but refrained, for my own host's sake; but all the way home I talked of Fred Greenwood's faculty of doing the right thing, so perhaps some of the other fellows may take a lesson from him. Ed Greenway and Fred are the only two men who have been particularly generous this year. I heard a girl say the other night that she would not be in the least surprised if next year the girls would pay the men's dues to dance clubs and also their cabhire. Fortunately, by that ti me I shall be married, so will have no extra expense on my hands. Tuesday I went to Oakland, and though almost dead tired owing to the rain and trip across the bay, I managed to get to the Scotts for dinner. It was a great, big affair, awfully well served. I think there were about four tables. Three for the young people and the fourth for married people. Ours was a great big affair and was beautifully decorated with blossoms extending the entire length of the table. I think it was done by the Worns. I do dote on those girls' tables, they are so pretty that they really rest one to sit at them. We were pretty jolly, though I sat by a most tiresome young man who I believed telephoned to Mrs. Scott that he would like me as a partner. First, I thought I'd tell him the story of my life, but he did not look as though he could have one to tell me afterwards, so I just talked of the Boer War. I have not yet decided whether he had even heard of it before that night, for after dinner was over I said, "Do you see any possible chance for Cronje's escape?" He said, "I don't know, who is he?" Yet that man has sent me flowers twice since the dinner, and telephoned to Miss Dillon Wednesday night to know could he not dance the German with me. After a fine dinner at the Scotts we danced. I do like their house; it is a great big one, and I actually forgot, owing to the awfully good time I was having, to notice their wonderful pictures. Mama was terribly shocked when I told her, and said next morning to papa that she did not think there was much after all in a girl's early education. It was meant as a gentle hit at this wee, winsome maid, but all the early art education I can remember receiving was from a screen with the most hideous pictures painted on it. Laurence Scott is developing into a very clever fellow, and I should be willing for him to come and see me twice a week were I not most anxious to be true to my "ideal lover."

On Wednesday we all went to a luncheon at the Jossellyns in honor of Frances Moore, who is at present staying with them. She is coming to stay with me soon. You know Frances is one of the girls that fall into the ways of each hous-hold in which she stays so quickly, that she is always being invited to stay somewhere. Her sister Miriam, now Mrs. Ed. Pringle, is equally adaptive. The Pringles have taken a flat on Jackson and Larkin stree's. To return to the Jossellyn's luncheon. It was quite a large affair and we were all in a wildly exuberant frame of mind and talked a whole lot of the Maurice Casey cotillion which was to take place that evening. Now I shall tell you of that for it was fun. We arrived a lot of us together, for we had been dining at the McNutts at about a quarter past ten. All the furniture was out of the first floor. It was covered with canvas and most charmingly decorated with greens and flowers of all sorts. Most of the flowers were sent, I believe, to Katherine Dillon. The music, billiard and dining rooms really were beautiful. There were smilax trees, fruit blossom branches, and banks of flowers and ferns most wonderfully arranged. Jones, the florist, on Sutter street, is to be congratulated on his successful decorations. I have never seen a more artistic house. The musicians were quite hidden behind palms in the hall. I wish I lived in the Casey's house. I believe I should give a dance every other night. When every one arrived the German began. Ed Greenway led and was assisted by Percy King and Jackie Harris. It was awfully well executed, and that is no particularly easy matter in a private house, even though the rooms may be large. I was really wild for the German to begin for I am awfully fond of favors and as a great many of these had been sent from New York I was wild to get mine. Fancy my delight when they were brought forth. There were wands covered in all sorts of ribbons with bunches of silk and velvet flowers at the top tied with bright ribbons. Pink and blue and white silk gowned "Pierrots" for the men, also peonies of all-colored shaving paper, and hearts for pincushions of dainty satin with long ribbons for the girls, and ribbons with bells and icicles, and then as it was the eve of Washington's Birthday, Martha Washington caps, which most of the girls immediately donned, and the dearest hatchets for the fellows, which were tied with green ribbon with either a bunch of cherries or the cherry blossoms. The driving figure was the one in which we had a particularly good time. There were great high hoops covered with tissue paper, and on the top, tiny little baubles of all sorts which as the men went through they jumped up and pulled off. It was great fun, and then we went down to supper. The ball-room down stairs was a mass of greens, but I was so hungry I did not really notice it particularly. Gerald Rathbone, Bert Cadwalader, Harry Stetson and George Newhall, Sam Boardman, Edna Hopkins, Therese Morgan, Caro Crockett, Mary Scott and I, had a tab'e together and each one of us endeavored to see who could be the wittiest. It was a jolly evening and I just hated to go home.

Next morning I went down to Burlingame to see the hunt with Mrs. Frank. It was a gorgeous day and all the girls had a fine old time there. I love hunts; the colors of the riders and the excitement appeal to me. There were a good many people on the Links, which are at present in very good form. Arthur was at San Rafael and said it was wonderful the way in which Sam Boardman played in the tournament. Ella Morgan, too, put up an exceedingly good game and defeated Mrs. Brown of San Rafael. Friday afternoon I helped to receive at Mrs. Frank's on Van Ness Avenue. A great number of people called and cards were played during the afternoon. Afterwards I went to the Century Club to the reception given by the Fortnightly Club girls. A bright little farce was given, which was just short enough for everyone to feel its real merit. I am going to see if I cannot have it given again sometime for one of the numerous charitable affairs to which I belong. Afterwards we had excellent refreshments and the Hawaiian musicians played and sang. Then I went home and had my hair powdered for "La Jeunesse." This was their last party. Most of the girls wore costumes. The most effective were Lita Redding's and Miss Van Wyck's, each being the dress of her grandmother. Miss Florence Parks of San Jose was particularly pretty. The most fascinating girls in the room with powdered hair were Bernie Droem's younger sister, Georgia Hopkins, Leila Voorhies, Miss Merry, Charlotte Field, Leontine Blakeman and Margaret Salisbury. It was a very jolly affair, led by Percy King, who was ably assisted by some of the girls. We had a nice supper of raw oysters for a change, which I appreciated very much. I was so worn out after I had all the powder out of my hair on Saturday morning I really wondered whether I should ever get to the Presidio Links. Eventually I did, and I am glad. I feel so proud of our players. Honestly, just as soon as Lent gets here I shall take up the game seriously, for I feel it in my bones that I could play well. Alice Hoffman managed the affair on Saturday, and I think the Oakland people appreciated the manner in which they were treated. Alice Moffitt, Mary Scott, Mrs. Johnson and Alice Hoffman are really capital golfists and I think can make a great showing anywhere. San Francisco came off victorious Saturday, but I really believe that the Oaklanders on their own links will make a better record.

Saturday afternoon, Mrs. Dodge gave a large card party. Mama was fortunate enough to win the first prize, which is so pretty. I intend to take it for myself. Mrs. Dodge has her sister Mrs. Gale staying with her at present. Monday was the Doem dinner. Most of those invited were Will and Bernie's friends and we all hope to have a fine time. Tuesday was the ball, and after that I could not lift up my eyes for two days. This has been a long season and I think all the girls look pretty well worn out.

I had almost forgotten to tell you of the engagement of Bessie Shreve and Bob Hooker. It is no use telling you how nice Bessie is, for everyone knows her, and a good many nice things, too, of Bob. I can count almost a dozen weddings to take place after Lent.

MISS CRICKET.

* *

OAKLAND.

Tuesday afternoon Mr. and Mrs. Albert Miller gave a reception to Mr. and Mrs. Josiah Stanford nee Herrick. It was a very large affair Those who helped to receive were: Mrs. C. O. G. Miller, Mrs. Mark Requa, Mrs. William Henshaw, Mrs. Prather, Miss Nellie Chabot and others.

Mrs J. C. Tucker of Oakland gave a dinner on Friday evening to announce the engage- of Andy Stone and Miss Havemeyer of Riverside, Chicago. Miss Havemeyer came to Oakland recently to act as bridesmaid to Miss Mai Tucker and A. S. Macdonald.

The great success of the Palace Hotel Supper Room establishes what the *Wave* has often contended—the necessity that existed in San Francisco for some such place where quiet people might go for refreshments after the theatre. To most people, not habitues of the Grill Room, dinner or supper at the Palace has always figured as an expensive luxury, whereas the prices ruling there are lower than in any other leading caravansary in the country. The charges ruling in the new supper room, which is one of the most beautiful apartments in America—handsomer than the famous palm garden at the Waldorf-Astoria—are very reasonable. Indeed, the special supper dishes are extraordinarily moderate in price. There is excellent music, an admirable service and every requisite to satisfy the most exacting connoisseur.

Apropos of the Palace, a change in the central court is being arranged which will contribute to the comfort of its patrons. The pretty rotunda is to be enclosed in art glass and a charming and spacious conservatory constituted in which meals will be served to those who wish them, but will be especially agreeable for those who like to sit and smoke over their coffee after dinner. This improvement will be begun as soon as the rush of tourists is over.

A SUCCESSFUL WINE FIRM.

The well and favorably known firm, Napa & Sonoma Wine Company, which for the past three years had their salesrooms at 314 Post street, have removed their entire establishment to 105-115 Ellis street, where they are now occupying one of the finest and best equipped wine cellars in this State. The ground at their disposal amounts to over 11,000 square feet, which, combined with a height of 14 feet, gives them ample room for satisfactorily handling their steadily growing business; which, to-day, while only started three years ago, enjoys the reputation of being in the foremost ranks of those wine houses whose principle is to handle and sell only the very choicest wines made on the Coast. That this point is so well attained by the firm is due to the wide knowledge of the business—extending over a period of 30 years—of the president, Mr. E. C. Priber, who is ably assisted by the secretary, Mr. L. Jockers. We congratulate the house on securing quarters so well adapted to the wine business.

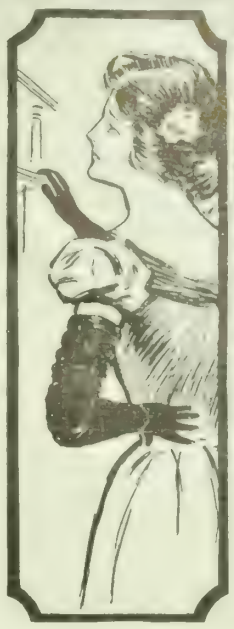
The Phenomenal Success

of G. H. Mumm's Extra Dry—109,303 cases imported in 1899. 72,495 cases more than any other brand—is due to its unsurpassed quality. The 1895 vintage now imported equals its best predecessors.

Jesse Moore "AA" whiskey is called fo everywhere. It is the drink of the people, no of the select few.

Backache.

So many women suffer from it. It mars alike their hours of work and pleasure. Backache is genera symptom of derangement of the cate womanly organs. It is use therefore to apply plasters and similar local treatments. A cure can only be effected when the cause of the ache is removed. The use of Dr. Pierce's Favorite Prescription will cure the debilitating drains, the inflammation, ulceration and displacement which cause backache, sideache, headache and many other aches and pains. "Favorite Prescription" contains no alcohol and is absolutely free from opium, cocaine and other narcotics. It agrees with the most delicate persons.



"I took your medicine six months and I feel now like a new person," writes Miss Annie Stephens, of Bellville, Wood Co., W. Va. "Have no backache, no headache, no pain anywhere. I took seven bottles of Dr. Pierce's Favorite Prescription, and seven bottles of his 'Golden Medical Discovery.' I think there is no medicine like Dr. Pierce's. I can't speak highly enough of your medicine for it has done me so much good. I don't feel tired as I used to, nor sick. I feel well and think there is no medicine equal to Dr. Pierce's Favorite Prescription."

The Medical Adviser, 1008 pages, sent free on receipt of stamps to pay expense of mailing *only*. Send 21 one-cent stamps for paper covers, or 31 stamps for cloth, to Dr. R. V. Pierce, Buffalo, N. Y.

THEIR CONVERSATION.

"WHAT do they talk about?" said the first man.

He was in a cab with the other man, and they were being driven past a house with a striped awning leading to the carriage block.

"At the Sign of the Striped Canvas?" said the other man, meditatively. "It's the old taproom habit, modified and refined. Every hostess her own taproom proprietress."

"Yes, but what do they talk about?" persisted the first man.

A bevy of big plumy hats and beautifully gored skirts showed in the lobby, and some more were lingering about the sidewalk entrance to the awning. And every pretty face under every droopy hat was alive with animation. And it sounded—of course they weren't—but it sounded as if they were doing a concerted selection at the time.

"Heaven knows," said the other man, sententiously.

"Let's find out," said the first man. "Really, I mean it. I've watched them a lot at this sort of thing. Do you believe women are bright among themselves? Do they say clever things for one another? What sort of stories do they tell? And are they really inter-sarcastic? Had you cards there to-day, at Mrs. Tudor Templeton's?" he asked suddenly.

"I had. Why?"

The first man called up to the driver, and they wheeled sharply about.

"What are you going to do?" inquired the other man in some alarm.

"Why," said the first man, soothingly, "we are going to drop in here, you and I, and find out what they talk about."

The other man grumbled as they stepped out, and laughed and followed. Now they were among the few men bidden that day to Mrs. Tudor Templeton's tea. There should, therefore, argued the first man, be ample opportunity to find out what "they" talked about. In the doorway they met smart black coats with violets pinned to them and fluffy boas and wriggling plumes. In the hall they met others. And as they ascended the stairs together, although they had listened their keenest, all they had heard and could remember were passing snatches like these:

"Beautiful seats in the second row, middle aisle——"

"Why, my dear, her hair used to be as dark as——"

"Such a stunning essay on the influence of color upon——"

"What would you have thought he meant by that?"

The two men smiled into each other's eyes and charged into the drawing room. The little tired hostess may or may not have smiled when she saw them; having been smiling for two consecutive hours preceding, it was hard for an unprejudiced onlooker to say whether she renewed it or not. But her little, thin, cordial voice took on a new assortment of selected intonations. How good it was of them to have come!

The first man, in a minute, was under a Bagdad curtain canopy with the oldish young woman, who had begun to put her hair low on her neck again in consequence of the first adjective.

"Doesn't the superficiality of contact like this at teas madden you?" she asked. The man could see her soul in her eyes ready to be swapped. He retained his own soul. He said something to the effect that it was refreshing to be superficial.

"Refreshing?" uttered the oldish young woman, intensely. "But what else is there but superficiality in most of one's meetings?"

"Poses," said the man, brutally, "and a striving after snap shots at inner consciousness. Do you come to teas to be intense?" he asked.

Then the girl who was assisting stood next him.

"Don't you love teas?" she twittered to the man; "do say you do. I want to see a man who really says he does. Though I'm sure you don't in the least need to say a unique thing to be unique!"

"What is unique?" murmured the man.

"It means delicious," said the girl who was assisting, with frankness. "We were just saying——"

So they had been saying something! The man turned to listen in a flood of genuine relief.

"Oh," cried the girl at the punch table, "do have something with a cherry in it. I have actually been talking to that last, dear, funny thing for hours. Aren't people funny? But I'm glad they are. I love them funny."

The man started a subject.

"What do you think of people who pose?" he asked, conscious that it was threadbare, but still a subject.

The girl at the punch bowl filled a cup and passed it to him daintily.

"I think well of them if they pose well," she said. "Oh, and posing reminds me. I have been asked to sit for my picture—really. I shall have to give up the gymnasium to find the time for the sittings, but I'm going to do it."

"I am only surprised that you pretend being asked is a novelty," said the man, absently, feeling his way to another subject. "Did you say gymnasium?" he said.

"Yes," she said, "and we lunch downtown on the way home every day. Don't you love to lunch downtown?"

As for the man, he vanished from the punch-bowl table as if he had melted. Meanwhile the other man was doing his best. A blonde girl was before him, and he was trying to hear what she was saying, or indeed if she were saying anything at all. About every soft third word was drowned in the buzz and babel of everybody else's words. It went like this:

"Last summer, in Kennebunkport," said the blonde girl, "I was being sketched, and——"

"Glace is much better than ice," came from the right.

"——though even if the artist hadn't been so civil about it——" from the blonde girl.

"—— box-plaited skirts having quite gone by in Paris and only——" from the left of him.

"——he actually came in a frock coat, and Isabel said——" from the immediate foreground.

"Don't you think so too?" asked the blonde girl.

"I beg your pardon," said the man, simply.

"I knew you'd agree with me," said the blonde girl; "I'd go for the sake of the voyage if I had to come straight back again."

"Now, how did she get from the Maine woods to sea-sickness?" asked the man, stupidly, of himself. He only inclined his head with the absorbed look that made him a tete-a-tete idol.

"I said the club had no right to put her in as Corresponding Secretary. I knew she would do something outrageous," came from the left again; the group had changed, he saw, and the ponderous woman in a great deal of jet was talking.

"It was she who made us vote for that course in parliamentary practice," said the brisk little woman, snappily.

"Oh, no, Paris will not be Paris at all while the Exposition is on," came from somewhere. "I shouldn't care to go over."

"It's such an intense book," said the blonde girl. "Don't you think so?"

The man made an adieu—it may have been several, he was not sure—to the blonde girl and others, and moved to the door. He threaded his perilous way past snatches and wafts and murmurs of conversation, and mechanically groped for the flying end of the connection. And at the door he met the first man. Together they went down the stairs and one held up a finger to the cabman.

"Such a nice time," quoted the first man, absently.

"Good Lord!" said the other man.

"Funny, wasn't it?" said the first man. "I haven't been to one of those since I was beginning here, and thought that sort of thing meant social recognition and helped me on. But, now, take these same women at a dinner table or in a ballroom, or even tete-a-tete, and they would be—well, other women quite. Now why is it?"

"I wonder how the club would seem to an alien—to a woman, for instance?" said the other man, slowly. "Do you know—I don't believe it would show up very well, along side of this afternoon. Say what you like, however, trite or conventional or artificial it all may have been; still at the same time there wasn't a hint of anything."

"No," assented the first man, "there wasn't."

"Still, I don't care about going again," said the other man, "if I did have a nice time."

They stepped out just then at the door of the club, and the first man laughed.

"Well, what did they talk about?" he asked the other man.—*New York Sun.*

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

How can the British trooper bold
Defeat the wily Boer,
Unless he tones his system up
With good old "Jesse Moore?"

THE LANGTRY ENTERPRISE.

HOW THE JERSEY LILY MANAGED THE "MAINE" BENEFIT IN NEW YORK.

WE are seriously wondering in New York, just now, whether the social reign of the Empress, Mrs. Astor, is not over. The reason for her downfall—if downfall it is to be—is her connection with Mrs. Langtry's concert and bazaar in behalf of the *Maine* benefit fund. Somehow the Jersey Lily got Mrs. Astor down on her list of patronesses for the affair. Just how, no one seems to know, although the society reporters have a story for it. They say that the pressure comes through the Prince of Wales. Here is the tale as it is told: Mrs. Langtry approached the Empress with a request that she act as patroness for the concert. Mrs. Astor politely refused. So did the other matrons of New York. Thereupon, it is said, the Lily obtained from the Prince of Wales a strong intimation that unless the approval of Mrs. Astor were forthcoming, the latter's married daughter, Mrs. Drayton, a divorcee and a social struggler in London society, would find herself ostracized. Armed with this, she went to Mrs. Astor and obtained a reversal of decision. As soon as the Empress gave in, the other matrons followed, and the list of patronesses was long and distinguished.

This is the story as given. I will venture to say that there is just a fragment of truth in it. Mrs. Astor was probably urged to her action by fear of consequences to her daughter, but that the Prince sent the note described in this story no one believes except the chambermaids to whom the society gossip of the *Journal* and *Town Topics* is gospel. But sign Mrs. Astor did, although she did not, like others whose names were lower on the list, back her name by attendance. But the affixing of her name was enough to hurt her position, since the concert tea was noisome and of bad repute even beyond expectations. To begin at the very beginning, we don't know how to do those things on this side of the water. You see, the daily routine of life in England includes the use of a certain amount of stimulant. It is never thought anything of at all. Consequently, the brightest and best of England's ladies can serve drinks behind a bar and seem to be doing nothing inconsistent with their native gentlehood. But here, in the land of the W. C. T. U.—ye gods! The very suggestion of it called down the wrath of the reformers and a warning from the police. Then the half-world of New York heard of this opportunity to come and see the whole world by daylight. This was known in advance, and the two facts—the police warning and the knowledge that the demi monde was coming—put a "queer" on the proposition in advance. Of society people, a few came because their names were down and they wanted to appear consistent, and a few more because of the liking of the irreproachable matron for peeping at her sister just across the line. But they kept to the gallery, and watched the crowd on the floor.

And what a crowd! Actresses as clearly on the right side of the line as any lady looking down from the boxes, and actresses as clearly on the other side of the sphere; women whose names all New York speaks but never prints, and which I shall not print because it would please them too well; plain people but foolish, who thought they were looking at the real thing; demi-mondaines who had not even the saving grace of style; horsey men and cheap clubmen; respectable actors and actors as far across the line as their female companions—all these crowded the floor to do honor to the feast of the Lily. The American bar, at which women were *not* allowed to serve drinks by grace of the W. C. T. U., was presided over by the Earl of Yarmouth and a dozen actors. Outside, a score of the handsomest actresses in New York, with Mrs. Nat Goodwin at their head, sold programs and flowers and bled pocket-books. There was a vulgarian air about the whole thing which was decidedly unpleasant. Plainly, everyone had come to stare and be stared at, to gaze on the rest of the attendance. The program received but scant attention; eyes were busy elsewhere, turned on the boxes, where that group of the four hundred who had sold themselves for a prince's favor sat and looked uncomfortable, on the actresses at the door, most of all on the Lily herself, who, clad in white and ermine, was followed wherever she went by a curious crowd. Did I say two weeks ago, in reviewing "The Degenerates," that age had passed her by? I must revise that. Off the stage she is as a bejewelled death's-head—powder gathering in wrinkles, paint restoring lost color—altogether a very unpleasant face, I thought, and not at all a beautiful one, seen so close at hand. The costume she wore, of white lace and ermine, was more worthy of admiration, even from a man, than the face above it. Of course, she took in the most money of any of the saleswomen, over a thousand dollars in all, but this was to be expected, since the affair was considered mainly in the light of an advertisement. That was the thing which gave it all—to me—the most thoroughly vulgarian touch; this sprinkling of the upper world and pouring of the half-world was there, not to aid sweet charity primarily, but to advertise this woman and her well-named show.

To change the subject, I have been given by one high in authority among builders the privilege of looking over W. C. Whitney's new Fifth Avenue home, the like of which, for tasteful interior decoration, has never been seen in New York. It is done in the style of the Italian Renaissance, and, while splendid and beautiful, it is still kept within the lines which belong to a home. The quiet exterior of the house is not changed from its former appearance, but the whole interior of this shell has been changed and remodelled. The scheme of decoration is worked out in marble and wrought iron, and most of the furnishings are genuine antiques. The Cupids on the newell-posts come from an ancient palace in Greece, the exquisite marble mantle above these stairs is the spoil of a Florentine palace, and in front of this is a monster oak table, splendidly carved, from an Italian monastery. The stained glass windows in the grand hall of the house are from an ancient chapel in the south of France, while the ceilings of that apartment are formed of carved Italian wood. So it goes throughout the mansion, the effect being heightened by a judicious distribution of Mr. Whitney's picture collection, which he has distributed through the rooms instead of grouping in a gallery. The pictures include several of the most famous portraits in the United States, numbering among them one of Chas. I, by Van Dyke, and a group of portraits of Maria Theresa and her court.

NETTA DYKE.

LONDON.

A HERO'S QUEER DOMICILE. WESTMINISTER'S NEW DUKE.

I HAD the privilege of visiting this week—never mind how—one of the best-known houses in all England. It has been brought into prominence by recent events, for a few months ago it was known only among the officers who enjoyed its hospitality. 'Tis the home of Mrs. and Miss Baden-Powell, mother and sister of the colonel who is now holding Mafeking. It is a quaint home and a curious one. I have heard it said, somewhere, that every man of genius has a remarkable mother. It would be rather an exaggeration to call Baden-Powell a genius, for he is not, but only a bright young Englishman with a remarkable variety of talents; but Mrs. Baden-Powell is unusual enough to be the mother of any genius you want to name. She is a dear, quiet, soft-spoken English lady, with old-fashioned ways and a prim bearing. She displays her love of the unusual in her surroundings. If the Baden-Powell house were in America, it would be a newspaper gold mine for "Sunday stories." First and foremost, there is an apiary in the drawing-room! I have a horror of bees, remembering a youthful experience of my own, and I went down the gravel walk to the quaint old house through a gauntlet of my terrors, buzzing among old-fashioned border-flowers. It seems that there are two hives of them in the drawing-room. These hives have glass windows, so that visitors may watch the insects at work, and exits and entrances are made through a lead pipe which runs out-of-doors. They are the aristocracy of all bees, I am told, being purest Moorish in blood, and they are not allowed to build honey on any merely plebeian frame. Wooden models of various objects, such as a bicycle, are inserted in the hives and the comb is attached thereto. Mrs. Baden-Powell has a way of draining off the honey and putting up these combs under glass cases. It is a variation on the old-time worsted motto which is all her own. Over the chief mantel in the drawing-room is the *piece de resistance*, a set of frames on which the combs spell the family name.

But that is not all. The house is not only an apiary, but an aviary. Above the great staircase stands a young fir tree, covered by nesting birds, not caged or confined in any way, but left to their own sweet will. They fly about the house, mixing in all domestic matters, and are so tame that they regard human beings as pieces of furniture, to be lit upon at pleasure. These are the special pets of the Colonel's sister, who is said by the London papers to be as beautiful as her brother is talented. In the expectation of this beauty, I was disappointed; she is fairly handsome, with a tall, svelte figure and fine golden hair; that is all.

Nevertheless, Miss Baden-Powell is, in common with her mother, a fluent and easy talker and a mightily interesting woman. It was this quality of the family which made this now historic home one of London's army centers long before the son of the house became famous. The calm with which these women accept the situation is marvelous. They have firm faith that nothing can hurt their soldier, that his bravery and skill and fortitude will carry him through.

Art, rather than war, is the chief talent of the Baden-Powells. Frank, the youngest brother, is a painter of much skill. His sister is perhaps the world's best female metal-worker, while the Colonel himself prefers sketching to fighting. Before I close with the house, let me mention the fact that Miss Baden-Powell's birds play around the greatest lion-skin in London, which stands, stuffed, at the head of the great stair-case. It was shot by her brother in Matabele-land, years ago.

A young man who is dividing public attention with the generals at the front is the Duke of Westminster, who has succeeded not only to a princely title but to the greatest estate ever owned by a man not yet of age. The new duke was in South Africa when his grandfather's death brought him the estate, having been sent there to be cured of a romantic love affair. Now that the Grosvenor fortune is in his hands and he is about to become his own master, the public is curious to know whether he will respect his dead grandfather's wishes or will follow his heart.

The Duke was born in 1880, the year when Bend Or of the Grosvenor stables won the Derby, and his childhood nickname was that of the celebrated horse. He took it with him to Eton, where he was a school athlete, and one of the most popular boys in attendance there. He had been reared in great simplicity, and avoided, therefore, the snobbery which has been the wreck of the school career of many a young nobleman. It is said that he was never, as a boy, allowed to ride in a carriage; it must be foot, or bicycle or public conveyance. One night, when he had ridden from his mother's home to his grandfather's mansion on a bicycle, a heavy rain set in. The old duke would not break the rule by ordering out a carriage for his benefit, and he was sent home in the market cart which happened to be going his way.

At school his allowance was just equal to the Eton average. He took a lively interest in racing, as became a Grosvenor, and used to go out to the tracks on every half holiday, but when he backed the horses it was with his own money. One quarter, he was very, very "short" as a result of a losing streak, but he got no assistance from home and had to pinch through as though he had been the son of a country squire. By these heroic means, the old duke tried to educate his grandson to simplicity. And now, at twenty, he looks like a boy who would stand the test. He is your typical "Barbarian" of Matthew Arnold's classification in appearance—tall, athletic, handsome. In character, he is kindly and pleasant. The one characteristic of their new family head which bothers the conservative Grosvenors is a tendency he has shown in these early days of his fortune to be free with his money. And it may be that the regime of simplicity in which he was reared is to give rise to a reaction. But he gives promise of a successful career, for all their fears.

KATRIONA.

In time of peace: in time of war
The favorite drink is Jesse Moore.

In Mexico.

THE cactus towers, straight and tall,
Through fallow fields of chaparral;
And here and there, in paths apart,
A dusky peon guides his cart,
And yokes of oxen journey slow,
In Mexico.

And oft some distant tinkling tells
Of muleteers, with wagon bells
That jangle sweet across the maize,
And green agave stalks that raise
Rich spires of blossoms, row on row,
In Mexico.

Upon the whitened city walls
The golden sunshine softly falls,
On archways set with orange trees,
On paven courts and balconies,
Where trailing vines toss to and fro,
In Mexico.

And patient little donkeys fare
With laden saddle bags, and bear
Through narrow ways quaint water jars,
Wreathed round with waxen lily stars,
And scarlet poppy buds that blow,
In Mexico.

In liquid syllables, the cries
Of far fruit vendors faintly rise;
And under thick palmetto shades,
And down cool covered colonnades,
The tides of traffic gently flow,
In Mexico.

When twilight falls, more near and clear
The tender Southern skies appear,
And down green slopes of blooming limes
Come cascades of cathedral chimes
And prayerful figures worship low,
In Mexico.

A land of lutes and witching tones;
Of silver, onyx, opal stones;
A lazy land, wherein all seems
Enchanted into endless dreams;
And never any need they know,
In Mexico,

Of life's unquiet, swift advance;
But slipped into such gracious trance,
The restless world speeds on, unfelt,
Unheeded, as by those who dwelt
In olden ages, long ago,
In Mexico.

EVALEEN STEIN,
—*Kansas City Journal.*

Glory.

I SAT upon the bleak North Pole
And shivered in the wind,
Wondering why it was that man
Had sought so hard to find
So bleak a point, so bare a place,
Such an ungodly spot;
And wished that some poor other fool
My place in life had got.
My bones were iced, my nerves were gone,
I should have died, I'm sure,
Had I not pictured to myself
My coming lecture tour.

—*Life.*

If Buller can cross the Tugela
And capture the slippery Boer,
He'll find that his name
Will be equal in fame
To that of the old "Jesse Moore."

AT THE THEATERS

MAGGIE Moore brings back to California a lingering remembrance of the old days in San Francisco, the days which were so much less governed and so much more interesting than those in which we live to-day. She is probably the last survival of the old California Stock Company, which was the school of more good actors than any other ever known in this country, Daly's in New York not excepted. The others have gone on, Morrison being the last to retire, but Maggie Moore joined the company when she was little more than a child and is still in the business. To hear her name over the famous players she has supported is to renew a long list of theatrical reminiscences of the days that were. Boucicault, Tom Keene, Raymond, Maggie Mitchell, Lotta Southern the elder, John McCullough, and a dozen other actors of fame in the days of the storm and stress period, before San Francisco becomes "Jay."

* *

Probably few actresses have ever played in such a variety of styles as Maggie Moore. Her parts have embraced the whole range of drama from minstrels and burlesque to Shakesperian tragedy. She began at the age of ten as a child dancer in the old Olympic at Kearny and Clay. Her first speaking part was that of the injured innocent in "Ten Nights in a Bar Room." Then she played boys' parts in black-faced minstrels for a long time. She was not yet fifteen when she broke into the "legit," supporting Lotta and Maggie Mitchell in soubrette roles at the old Metropolitan Theatre, having played fairy parts in a burlesque just previously. Her engagement with the original stock company of the California Theatre came soon afterward. In those days, the stock company was conducted on a plan of its own. 'Twas a collection of competent players, such as Tom Keene and John T. Raymond, with McCullough as the bright particular. Stars were brought from the East to take leading roles with the company's support, and in the intervals. McCullough would put on one of his Shakesperian productions, or the troupe would take a hand in society drama, a despised form of art in those days of storm and stress. And so, before she was twenty, Miss Moore had played melodramatic heroines, old woman pathetics, emotional roles, Shakesperian parts, including *Ophelia* to McCullough's Hamlet, comedy parts, and soubrette roles, in which she shone especially and in which she starred after leaving the stock company. She was a reigning favorite as a soubrette, her benefit at the California yielded over four thousand dollars, which is near to being a record.

* *

Coming back to San Francisco now when it it has become like a different city, this veteran of the California stage has been impressed by the change more forcibly than us stay-at-homes, who have lived here and grown used to it, and the difference which strikes her most forcibly is in the line of her own business. "The only way I can see now," she says "is to return to the plan we used to have in the old stock company. Get a good lot of people together and then bring out your stars separately for them to support. You can't expect managers to send whole attractions all this distance when they would pay better at home. The one trouble is that good stock company actors are rare nowadays. They train up an actor in a dramatic school to one line of parts; he goes on the stage before he has learned the business thoroughly and never gets out of the line. As it used to be, we began young, learned our business on the stage, and played all sorts of parts in learning."

* *

The record-breaking run of "The Idol's Eye" at the Tivoli is the present theatrical wonder of San Francisco. It passed the fifty-night mark last week and goes on with undiminished houses. Ferris Hartman is the person mainly responsible for the Tivoli's "brace." In the period between the Grand Opera season and the coming of "Teddy," the old play-house seemed to have fallen into the sere and yellow leaf. Some of the productions given along in November and early December were things one tries to forget. Then came Hartman, and the whole company went at it and did something. There is a reason for this. The Tivoli's leading comedian is one of those actors who have a value to a company clear beyond ability to act. He has a strong personality and a genius for work, coupled with the faculty of making others join in his enthusiasm. This, and this alone, is responsible for the improved work of the whole Tivoli company, chorus and principals alike. When "The Idol's Eye" runs down, which may be many weeks to come, "Manila Bond" will be presented.

* *

News comes from abroad of the continued success scored by Holbrook Blinn, a player who was without much honor in his own country. It will be remembered that he invaded London with "The Cat and the Cherub," Fernald's Chinese play, and made his first hit there. Now it is announced that he and his wife, formerly Miss Ruth Benson of San Francisco, will have leading roles in "Don Juan," a play just forthcoming the Prince of Wales' Theatre in London. Incidentally, Mr. and Mrs. Blinn have had much flattering attention from the London press. T. P. O'Conner's M. A. P., the journalistic dictator in all personal matters, gave a column recently to a press-agency story of their lives. How much this means to an actor, only one who has been in the professional life of London can appreciate. California actresses are an innumerable company, but California actors are a greater rarity.

* *

The Orpheum bill next week includes Si Hassan Ben Ali's Imperial Troupe of Arabs, the cleverest combination in the acrobatic line the world has ever seen. The Smedley Sketch Club presents a one-act comedy drama, "The Little Mother," by Katherine Stagg. Martinetti and Grossi, grotesque novelty musical artists. Newhouse and Ward do a comedy bicycle act which includes hurdle jumping. Anna Whitney, a monologue artiste and the originator of some famous songs, one of which, "A Little Bit off the Top," she will sing while in San Francisco.

* *

The long-expected Damrosch-Gadski-Bispham lectures and concerts on the Wagnerian drama open at the California on Tuesday afternoon, March 6, at 2:15. "Tannhauser" is the theme of the first programme. Thursday and Friday afternoons will be devoted to "The Flying Dutchman" and "Die Meistersinger" respectively. The second week, the concerts will occur on Monday, Tuesday and Wednesday evenings, and the programmes have not yet been announced. Subscription tickets for the series of six performances sell for $10 to $15, and seats for single performances cost from one to three dollars.

* *

There was a picturesque revival of "The New South" at the Alcazar this week, beginning with Monday night, when the Native Daughters attended in force. The boxes were decorated with the stars and stripes, and the ladies, many of them, went so far as to dress in the national colors. The performance was quite satisfactory. Mr. Hastings had his share of the applause, being the hero of things; Miss Blayney was hissed because she was bad, and so was Webster, the villian; and Miss Hampton played the part of the noble girl in the story. Next week "Never Again," from the French, will hold the boards.

* *

"Darkest Russia," presented by Edwin C. Jepson's company, is the attraction at the California for the week of March 4. The play has been a successful one wherever presented, and is said to have the advantage of a strong party.

* *

The "Old Homestead" will continue next week at the Columbia. Gillette's latest comedy, "Because She Loved Him So," follows.

* *

"Never Again" is one of Chas. Frohman's latest successes, which will be the bill at the Alcazar next week.

* *

"The Greatest Thing in the World," in which Liebler & Co. are starring Sarah Cowell LeMoyne, promises to be one of the greatest successes of the season of 1900. It has caught on wonderfully wherever it has been played, and should make a winning in New York.

* *

Ada Rehan, who is depicted on page 8 in several of her favorite roles, is now under the management of Klaw & Erlanger. She will doubtless visit the Pacific coast.

$100 Reward $100

The reader of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

BOOKS.

Continued from Page 11.

tell a genius, they say; for he will make you feel as if he had just poured a gill of ice-water down your back, and your hair will stand on end. And then there is pathos. That makes you weep. And comedy makes you laugh.

The Watchers, by A. E. W. Mason, whose publisher is the Frederick A. Stokes Co., is a novel that will probably make your hair stand on end, if your hair has been trained to do that sort of thing. Mine has not. The author obviously did not write the book for me. Not being a connoisseur of thrills, I have no right to discriminate between thrills *ab intra* and thrills *ab extra*, ice-water thrills and those that escape from within through the hair. My uncritical judgment in the matter is that the thrills are dry thrills, for evidently the book contains, as the saying is, thrills to burn.

Padding is generally considered to be bad form. The most serious criticism I have to make upon *The Watchers* is that its pipe-stem nether limbs are padded to look like piano-legs, and the padding has got shifted. Several pounds of Poe, finely shredded, a like amount of Stevenson, and some two or three dozen ounces from Du Maurier's *Trilby*, the whole felted up with a divellicated dictionary or two of dialogue—result, a manly appearance. And I presume to suppose that the wearer of so much splendor will never have felt the pin-pricks I am directing at his foolish legs. After all, Poe and Stevenson and Du Maurier make better muscle than many another, and Mr. Mason, who will be older next year, can be forgiven them in his make-up. The dictionary of dialogue is another matter. It separates the thrills and makes knotty padding. The intelligent reader will not be disposed to forgive the dictionary of dialogue.

I hold in my hand a romance of the land of the Bryan dollar, meaning the Colorado silver district. The action of the tale lies most largely in Denver. *The Helpers*, by Francis Lynde, is a Houghton, Mifflin & Co. publication. While it does not stand out above its fellows, and would never be mistaken for the book of the year, it nevertheless holds up its head right bravely with the great average of new fiction. The story itself is interesting. The author, however, is a little inclined to encumber his show-windows with that gingerbread the critics call "fine writing"; and his hypothesis, suggested, I take it, by certain commonplaces of Shakespearean criticism, that a character can be rendered convincing and lifelike by endowing it with imperfections, is altogether a false one. The great novelist does not deliberately set about making his characters "a little bad." If he is clear-sighted enough to see life as it is he will see that humanity is infinitely various in every moral as well as every physical respect; but he will not begin with a Sir Galahad and deliberately set about making him "more human" by applying a tar-brush to his white armor. Characterization is a more subtle matter than that. Characters live, not by virtue of how bad or good they are, but by virtue of how clearly their creator can see through and past the type into the individual life of a breathing man. The question of ethics *per se* has nothing to do with it. The author of *The Helpers* is not alone in his reliance upon the fallacy that it has. The "realistic" school of history (by a misnomer), treading closely upon the heels of the "realistic" school of fiction, within a year or two has thought to paint the statues of Washington and Lincoln in their "natural" colors, clothing, hair, eyes, skin, even to the extent of mud upon their boots, in order to make them the more 'lifelike." Men and women are willing to take certain things for granted, and especially the supposition that other men and women (if they be real men and women, and not tailors' puppets) are not essentially unlike themselves. But they will not take a certificate to that effect, tacked on the collar of the coat, as evidence of life and breath and sensibility and power of movement.

WILLIAM J. NEIDIG.

Those of our readers who are without a reference library should read the announcement of the Syndicate Publishing Company on page 10, in which an encylopædia of knowledge, a biographical compendium, a dictionary of language, a gazetteer, and an atlas of the world, which had heretofore been sold at $44 00, are offered, in cloth binding, for $22.00. The purchaser has the privilege of paying for these valuable volumes at the rate of $2 00 per month, the full set being delivered at once.

New Stories Re-Told.

x x x

SENSE IN BROKEN ENGLISH.—When the proposition to subdivide the Cherokee reservation was on foot a delegation of United State Senators visited Tahlequah and addressed a meeting of Indians in the Opera House there. They advised the Cherokees to take their lands in severalty and to become a territory of the Union. In the audience was Soggy Saunders, a full-blood Cherokee, who had held office ever since he had learned to talk English brokenly. He had listened attentively and arose with true Indian dignity. "White mans who jus' talk put me in min' of a story I once heard it. Man goin' to get hung; he's lawyer tole him dis: 'I can save it neck from being hung.' 'How do dat?' ask it prisoner; 'I pay you $1,000 you save it my neck.' 'All lite,' said it dat lawyers, and he gave it dat lawyers moneys—$1,000. Den dat lawyers he tell it dat prisoner: 'You go shoot it yourself in bed.' Dat's what white mans want it here now—he want it Chulluckee Indian to kill hisse'f." The speech brought down the house.

x

A STRANGE PROBLEM.—A bed-ridden old fisherman at a Scotch watering-place was frequently visited during his last illness by a kind-hearted clergyman, who wore one of those close-fitting clerical waistcoats which button behind. The clergyman saw one day that the old man's end was very near, and asked if his mind was perfectly at ease. "Oo, ay, I'm a' richt!" came the feeble reply. "You are sure there is nothing troubling you? Do not be afraid to tell me!" The old man hesitated and at length said, "Weel, there's just ae thing that troubles me, but I didna like to speak o't." "Believe me, I am most anxious to comfort you!" "Weel, sir, it's just like this," said the old man eagerly, "I canna for the life o' me mak' oot hoo ye manage tae get intae that westkit!"

x

A TOADY REBUKED.—When the Duke of York was in Halifax years ago, he was entertained by the Colonel of the British regiment stationed there. The good wife of the Colonel was much set up with the honor and "Royal Highnessed" him at every opportunity. He took her in to supper, and she, of course, redoubled her attentions. Fancying the prince would like some oysters she called to a young lieutenant, who was busily engaged in looking after his own partner: "Mr. H., fetch His Royal Highness some oysters, and look sharp!" "Mr. H.," a quiet, collected youth, turned to a waiter, who was passing, and said, with a slight emphasis in his voice, "*Waiter*, will you kindly take some oysters to his His Royal Highness as quickly as possible!"

x

THE BETTER CAMPAIGNER.—Two candidates for municipal office in a North Missouri town while out canvassing, happened to strike the same locality about the same time. The hindmost one called at a certain house, where a bright little girl came to the door. Said he, "Sissie, will you please bring me a drink of water?" which she quickly did; then he gave her candy and said: "Did the man just ahead of me give you candy?" "Yes, sir." Then he gave her a nickel, and said: "Did he give you money?" "Yes, sir, he gave me 10 cents. Then picking her up, he kissed her and said: "Did he kiss you?" "Yes, sir, and he kissed ma, too."

x

A COMPLETE EXPLANATION.—General N. B. Forrest, the distinguished Southern cavalry leader was once at a dinner party to which he had been invited as the guest of honor. Beside him was a loquacious widow, with hair of raven black, who rudely interrupted the conversation by asking General Forrest why it was that his beard was still black, while his hair was turning gray. With great politeness Forrest turned toward her. "I fear I cannot give you a satisfactory answer," said he, "unless, possibly, the reason is that I have used my brain a little more than I have my jaw."

x

HUSBAND NEVER THERE.—The Metropolitan Club's telephone bell rang about nine o'clock in the evening two weeks ago and a hallboy answered it. "Is my husband there?" asked a voice. "No, ma'am," answered the hall boy. "Wait a minute," said the voice. "There is something queer about this. You don't know my name, and before hearing it you answer promptly that my husband is not in the club. I shall report your conduct." "It doesn't matter, ma'am, what your husband's name is," said the hallboy, "because no one's husband is ever in the club."

x

OBEYED ORDERS.—Professor Huxley was once staying at Belfast when the British Association met there. He wanted to go to a breakfast-party, but was rather late, so, stepping on a car, he told the "jarvey" to drive fast, quite forgetting to say where he wished to be taken. Remembering after a while, he called to the driver, "Where are you going?" "Troth, I don't know," the man replied, "but didn't I drive you fast?"

PALACE and GRAND HOTELS

For nea ly a quarter of a century these Hotels have been the recognized headquarters for Tourists and Travelers visiting San Francisco.

Their popularity has been acquired by reason of their unique location (being accessible to wholesale and shipping districts and amusement centers), the peculiar excellence of cuisine and servi.e, and moderate charges.

The Grill Rooms for ladies and gentlemen have an international reputation, and the recently added Supper Room is now recognized as *the* place to obtain after-theatre refreshments.

Have You a Piano that You do not Use?

Is the piano in your home a musical instrument, and do you enjoy it as such, or does it remain unused for months at a time and become practically nothing more than an article of furniture.

The Pianola

Is bringing into use thousands of pianos that have been silent for many years.

It is bringing music into homes where it has long been a stranger.

It is making players of people who, lacking musical training, had never expected to experience the pleasure of producing music for themselves.

It is increasing the repertoire of amateur and professional pianists by making the entire literature of the piano instantly available without study and without practice.

The Pianola looks like a small cabinet. It has small felt-covered fingers that rest on the keyes of the piano and, operated by pneumatic power, strike the keys with a pliant, yielding and remarkably sympathetic touch that is almost identical with that of the human fingers.

When not in use the Pianola may be easily detached from the piano and moved to another part of the room.

The Pianola can be used in connection with any Grand or Upright piano, and does not in any way mar or disfigure the instrument. It can be easily and quickly adjusted by any one.

The action of the Pianola is so simple that even a child can readily learn to play it; at the same time it is capable of so much expression that its greatest admirers are those who best understand and appreciate good music.

Price $250 Upward.

The Pianola can be bought by monthly payments. Our instruments are gladly shown to the merely curious as well as to intending purchasers.

IMPROVING THE STREETS OF SAN FRANCISCO WITH NATIVE CALIFORNIA BITUMINOUS SAND ROCK FROM THE WORLD FAMOUS MINES AT SANTA CRUZ BELONGING TO CITY STREET IMPROVEMENT COMPANY.

San Francisco is the only city in the world whose monolithic pavements are composed entirely of this material. No other city in America has a larger proportion of its paved area covered with monolithic pavement than this city, with possibly the exceptions of Washington and Buffalo. No other pavement can show a lower average annual cost for maintenance than our pavements laid with this material.

The Western Addition, which eight years ago was a howling wilderness of sand, has long since been reclaimed. The principal business streets are rapidly yielding to its spread, as witnessed by the views given herewith; and the Mission District will soon be fully surrendered to its civilizing influences and economic uses. No other pavement has been found which can resist successfully the encroachment of Santa Cruz Bituminous Rock. From the days, a decade since, when it was denominated as "sand and tar" and "poultice pavement" and roundly abused by nearly all of the public prints of this city and looked upon with a feeling of general distrust by property owners, it has come to be accepted by the authorities and by owners of lots and lands as the pavement "par excellence." The general character of the pavement throughout San Francisco attests to its worth; and wherever progressive ideas are allowed to hold sway, it goes.

The General Offices of the Company, whose ownership of the Santa Cruz Mines makes it of necessity the foremost contracting company in this branch of municipal engineering, are in the Mills Building, Rooms 10, 11, 12 and 45, fifth floor. The Directors of the Company are as follows: J. W. McDonald, president; H. Dutard, vice-president; W. E. Dennison, secretary; C. B. Stone, treasurer; T. B. Bishop.

EVENTS CURRENT.

Code Laws for Alaska.

A code of laws for Alaska is now in the hands of the Senate Committee on Territories, where it has a good chance of being reported favorably. There has been some doubt as to the chances for Alaskan legislation in this crowded session, when such important matters as laws for the new possessions, government for Hawaii, Alaskan boundaries, and the Nicaragua Canal question, have to come up for settlement. Nevertheless, Senator Carter has given assurances that the bill will be reported this session, so that the first trench is won. Governor Brady and Delegate Price have been conducting a vigorous lobby in Washington. This has been hampered somewhat by a disagreement over two important clauses in the bill, the ones relating to the removal of the capital from Sitka to Juneau and the appointment of a delegate to Congress. Brady is for keeping the capital where it is, and is against the delegate plan, which he believes would entail an enormous expense for an election. Price wishes the capital removed to Juneau, since, he claims, the recent gold discoveries have put Sitka far out of the line of travel, rendering it inaccessible. So strongly were they opposed on these points that the Senate bill will not touch upon either of them. It is more than likely, however, that if Congress gets around to it the capital will be changed. Otherwise, the measure provides for the organization of municipalities and for those changes in the mining laws which all Alaska has been demanding since gold was first discovered in the Klondike country.

Changes in the Subsidy Bill.

The strong opposition throughout Congress and the country to the Hanna-Payne Shipping Subsidy Bill has led to substantial changes in the original draft, which have finally been incorporated with the main items of the old bill and submitted as the minor bill in the House of Representatives. The members of the Committee on Merchant Marine and Shipping held widely different views on the subject, and the new measure as introduced is largely a compromise. The idea of giving bounties to our merchant shipping, which must compete with foreign ships built and manned by cheap labor and subsidized into the bargain, was not opposed, but views on methods of procedure differed widely. Nor can it be said that the wishes of any one member of the committee finally prevailed, for individual theories were subordinated to the known wishes of the country at large. One important provision is that the subsidy provided for in the first section of the bill is conditioned upon the carriage of a certain amount of cargo from this country. In order for the vessel to secure full compensation she must carry at least one-half of her gross tonnage outward bound. A ship cannot simply run for the subsidy. This accomplishes one of the great objects of the bill; that is, the exportation of our produce. In the compensation for speed vessels, only two-thirds of the subsidy given for the outward voyage is allowed for the home voyage. The annual amount of subsidy is limited to $9,000,000. If the amount earned in one year exceeds that sum, this excess shall be deducted, pro rata, from the speed compensation. This is to encourage especially freight carriers. Existing vessels, whether foreign or domestic built, are to be allowed bounties for only ten years, while new vessels receive the benefit of full compensation for twenty years. The speed test shall be for a six-hour run, instead of a four-hour one. All subsidized vessels must live up to the Lloyd A 1 rating. Tank steamers and others peculiarly constructed for the transportation of mineral oils are shut off from the subsidy, because such ships are generally owned and operated by corporations for their individual use and are not general carriers. Foreign-built vessels, of which at least one-half the ownership is American at the time that the law is passed, may receive subsidy as soon as their ownership becomes wholly American. As in the former bill, it is provided that only mail shall be carried free and that free accommodations shall be provided for postal messengers whenever they are required.

The Boers Placed on the Defensive.

The British have won their second great success in South Africa. Ladysmith is relieved, and the Boers are now fighting wholly on the defensive. At Mafeking alone are the British still beleaguered, and a column from Roberts's army is said to be moving across country to raise the siege there. The second phase of the war, the attack of the interior of the Boer Republics with the Transvaal people on the defensive, is fully begun. Buller's fourth and final advance on Ladysmith occupied almost two weeks, during which time his losses were very heavy. It was a steady, hammering movement with no brilliant achievements, only a consistent gain. On Majuba Hill Day, when Cronje surrendered to Roberts, Buller gained a valuable position on Pieter's Hill, which formed the key to the entire position of the enemy. This was held in the face of a strong resistance, which slackened two days later. Buller followed on, his advance column facing a range of hills held by the Boers and some six miles from the city. March 1, noticing that the enemy's fire seemed slack, he threw out a flying column toward Ladysmith. It had been a day of anxiety in the town. The fire of the relieving force, which they had been hearing for nearly a week, was faint, and the rumor passed around that they had given it up again. This meant surrender, as ammunition for just one more engagement was left in the armories. In the afternoon it was noticed that the Boers were attempting to remove one of their big guns. Subsequently, a force was seen advancing around Bulwana mountain. Believing that these were Boers, the garrison rushed to arms; the troops drew nearer in the twilight, and were made out to be British. The scene, as they rode in among White's starving men, is said to have been most affecting. The garrison was in sore straits. There was not enough ammunition left to hold out for even one more fight; had the Boers pressed them again, White's force would have had to cease firing. The men had been living on a scanty diet of lean horse-meat for many weeks. Of the original army of 12,000, about 8,000 had passed through hospital in the course of the siege. The total losses in the operation were 695, of whom 346 died of disease and 259 of wounds; 590 were wounded and recovered. The fact that the greater part of White's force was cavalry really constituted a safeguard, since their mounts furnished food and enabled the garrison to hold out. Immediately after Dundonald's entry, the Boers fell away from the surrounding country, leaving it clear. It is asserted by some that, from the time of the storming of Pieter's Hill and the surrender of Cronje, Buller has been fighting a rear-guard only, which was covering the retreat of the main army, falling back to assist in the defense of Bloemfontein. If this is true, Roberts and not Buller is the true victor of Ladysmith and the Tugela. Yet it must not be forgotten that Buller was pursuing his Tugela campaign under orders from London and not of his own motion. His own plan of campaign was like the one by which Roberts trapped Cronje. Roberts is now advancing on the Free State capital of Bloemfontein. The Boers are concentrating along his line of march to oppose his advance. Already the cavalry in his van has had several brushes with their outposts, and an engagement of some sort is due this week. The Free State capital and the country around it are poorly located for defense, while the temper of the Free State people is cooling. For this reason, war experts believe that Roberts's forward movement will be a comparatively easy one. His real opposition will come when he invades Transvaal. Buller is reported inactive, resting his army after their two months' fighting, and giving the Ladysmith garrison time to recuperate. It is probable that, in the event of Roberts taking Bloemfontein and invading Transvaal, Buller will make a military diversion by going straight against Laings Nek, the famous pass into Transvaal, where the first British-Boer battle was fought twenty years ago.

The New Army Bill.

A bill recently sent to Congress by the Secretary of War will make some very important changes in the constitution and control of the army. These changes have been contemplated for some time, and are aimed at certain abuses of the old system which were laid bare in the early stress of the Cuban war. The chief reform introduced is to remove from the field of political and social influence the transfer in officers from the line to the staff, and at the same time to secure the advancement in the line of energetic, ambitious, capable officers. Promotion by seniority alone does not stimulate an officer to exert himself in behalf of the service, and officers who are ambitious are retarded by those who are willing to sit still and wait for their advancement. By this bill every third promotion to the grade of Colonel, Lieutenant-Colonel and Major, respectively, shall be filled by the President. Political and social influence cannot affect these selections, because the President is limited in his selection to but three names. These names are to be chosen by a board of officers of the army, who are sworn to make their selection impartially. Details of officers from the line to the staff will also be eliminated from the sphere of political influence, the bill providing that selections for details shall be made by a board of officers also sworn to impartiality. In both cases the service records of the officers will govern the boards. It is thought that the high standard of honor among army officers should conduce to render the decision of these boards absolutely equitable. Secretary Root's idea is to make army officers perfect masters of all details of the service rather than specialists Therefore, a clause in the bill provides that staff officers shall be appointed from the line and shall serve only four years. This rule is popular with army officers in general, who have always claimed that the "fat" positions were dispensed to a few favorites, leaving the others to frontier assignments and hard campaigning. It is unnecessary to say that the holders of bureau and staff positions in Washington are opposed to this measure and are mustering all their political influence to defeat it.

Tariff Laws for Porto Rico.

The House of Representatives has finally passed the Porto Rico Tariff Bill, over which they have debated much of the past week. It has been one of the hottest discussions of this session, involving as it did not only the quarrel between expansion and Atkinsonism, but that between protection and free trade. The Democratic free trade advocates and a great part of the Republicans stood for the free admission of all Porto Rican products with no greater restrictions than those ordinarily placed upon interstate commerce. The dissenting Republicans were whipped into line, but not before they had obtained a substantial reduction and a promise that the act would be temporary in character. As amended, therefore, the bill provides that all imports to the United States from Porto Rico shall pay 15 per cent of the regular tariff imposed and that the act shall hold in effect for two years only. This measure passed the house on a close vote—172 to 161—and went on to the Senate with a strong chance of success. There, it will be incorporated with the full Porto Rican Bill about to be reported, which provides, among other things, for an educational qualification for the franchise, the formation of a Territorial Assembly, with the lower house elected and the upper appointed by the President, and for the election of a Porto Rican delegate to Congress. This last point is expected to be the one contested most bitterly in the Senate.

The Calaveras Grove Saved.

It is now certain that the Calaveras grove of giant sequoias will be saved to the State of California. On Saturday, March 3, the House of Representatives unanimously passed the De Vries resolution, which orders that the Secretary of the Interior shall open negotiations for the purchase of the grove, and that, if possible, he shall bond the tract. The contention that the measure comes within the province of the State of California and not of the national government seems to have carried little weight with the Congressmen, who were persuaded by the strong lobbying of the California delegation. The measure comes up in the Senate some time this week, and has every chance of passing, so that by the time this issue is out the Calaveras grove will be saved, the national government having done what California ought to have done long ago. The action means that an amicable attempt to purchase the groves will first be made. Robert Whiteside, of Duluth, Minn., is in the position of owner, he holding the option on the grove. If he refuses to sell, nothing further can be done under the provisions of the bill, but it is believed that he is deposed to be reasonable in the matter. If he declines, however, Congress will doubtless pass another measure condemning the tract and ordering the purchase. At any rate, the famous grove is saved.

British Treasury Increases Taxes.

The Boer War has been an unusually expensive one for Great Britain, owing to the distance of the scene of operations, the short notice on which preparations had to be made, and the size of the armies sent to the front. Parliament is confronted with the necessity of raising funds at once, since there is every reason to believe that the war will continue for some time yet. Accordingly, the budget of the Treasury was introduced into the House of Commons on March 4th instead of March 31st as formerly. This was done with the sole purpose of gaining time in taxing goods, by which means much of the required additional revenue will be raised. Besides this, the early passing of the budget is expected to shut off much commercial gambling on the rise in prices and the withdrawal of dubitable articles from the bonded warehouses. The *Statist* shows that if the government estimates of expenditures are realized Great Britain will have to borrow £60,000,000, and that the Secretary of the Exchequer will be compelled to increase this year's taxes by £7,000,000. It suggests that the income tax be raised a penny, that the tobacco duty be increased 8 pence a pound, that the beer duty be raised a shilling a barrel, and that there be an increase of a shilling a gallon in the tariff on spirits. This, it is believed, would cover the required amount.

A Suspicious Quiet in Luzon.

Associated Press reports sent in during the past week assert that the Philippine insurrection is not nearly so well under control as the official dispatches of last week would go to indicate. It is asserted that, while the insurgents are quiet now, they are only resting until the rainy season, when they intend to come out of the brush and renew a guerilla warfare. High officials of the American government in the islands say that Aguinaldo's cause has taken on new life lately, especially in the Northern provinces. They assert that the insurgents there have a wide-spreading secret organization, something like the Katipunan society that fathered the first rebellion against the Spanish, which, even in the strongly garrisoned towns, keeps up perfect communication with the insurgent leaders, that the society is managed from Manila, some of the chiefs being natives supposed to be supporters of the American government and many of the municipal governments installed by the army being cogs in the machinery. Two correspondents of American weeklies are quoted as saying that, in their travels through the island of Luzon, they have found the common people everywhere strongly in favor of the insurgent cause. The town of Paterno, although governed by a municipal system organized by the army, is yet a hot-bed of insurrection. All the municipal officers of Tarlac, capital of the province of that name, have been arrested and charged with plotting. Two of them had, besides in-

SAN FRANCISCO—March 10, 1900—SEATTLE

An Empire of Opportunity.

Reflections on Conditions in San Francisco.

WHEN the hand of Nature ceased its world-labors she left behind her on the western coast of America a harbor unequalled by any in the world, backed by an empire whose hills and mountains were seamed and stored with precious metals, whose smallest rivulets were bottomed with sands of gold, whose broad valleys were rich and fruitful beyond the dream of ancient husbandry, whose airs were soft and balmy, and whose climate was genial to a fault. Here she stored her wonders of vegetation, here cached her riches, here staged and set the most gorgeous of her scenery and painted the very skies a richer and a deeper blue than elsewhere on the globe. As her labors ceased, having pride in her art, she must have looked back upon this spot as the most beautiful of her creation, and as the ideal land wherein man might live and thrive with all that nature could provide within convenient reach.

For San Francisco, and its environments, Nature could not have done more. It is to be regretted, perhaps, that she did not see fit to construct wharves and docks and railroads. She might, too, by some cosmic law now unwritten, have compelled commerce, under heavy penalties, to enter the harbor fashioned with such consummate skill. She did the best she could; she stretched a continent from the northern pole, southward to the antarctic circle, and so compeled all mariners to round a stormy cape and risk a long and perilous voyage if they would intrude upon the commerce that properly belongs to this favored port. No niggard hand dealt out the gifts that Nature here bestowed: to man, she left an empire of opportunity, of which he might take advantage. What has man done? Upon the peninsula that divides the inner harbor from the ocean he has built up a city, which for beauty of architecture could never be commended. Her merchants sit in their doorways and wait for costumers, while they curse the "luck" of stripling cities to the north and to the south, who have reached out and wrested their trade away. How much of foreign trade have these merchants brought to this great harbor? To the port of San Francisco belongs, of right, the trade of the Australias, the trade of our Latin neighbors living southward in a long and fruitful tier down the west coast of South America as far as Patagonia; the Orient with its consuming millions, with its teas and spices, its silks and rice, belongs to us. The islands of the Pacific, particularly the fast developing Hawaiian group, of right should be commercially ours. Here at this port should our swarthy neighbors market their products, here should they school their children, here should they come to gather our manufactures, and returning distribute the handiwork of our craftsmen among their people.

With reference to foreign commerce, San Francisco does not stand within gunshot of her rightful, natural place. Shipping and the fruitful trade that follows intelligent adventure on the seas have been almost strangers to the greatest harbor of western America. Why? Because among her merchants there does not live the proper spirit, because with them there has not dwelt the enterprise to venture.

Perhaps, now that the war in the Philippines has opened the mercantile eyes, we may hear more of "Merchants' Lines" of clipper ships or of tramp steamers from the port of San Francisco invading commercial territory now monopolized by the German, the English and New York merchant. We know to-day that Grace & Co., of New York, and an English and a Hamburg firm have snatched from under our very noses the trade of the west coast of South America. We know that their vessels take hides, ivory, nuts, tallow, cochineal and other raw products of South America in exchange for the manufactured goods of other lands. Why should not we take their tallow and return them candles and soap; take their leather and return them boots and shoes? Aside from a woeful lack of enterprise, there is no good reason. So long as we ship our own hides by rail to the East, and re-purchase and re-ship them in the shape of boots and shoes, manufactured in the East, we can scarcely be credited with a large degree of business sagacity.

Had San Francisco taken advantage of her commercial possibilities seaward, her citizens would to-day arise in arms against the construction of a canal to the southward that will give to New York and the Eastern seaboard advantages that by geography and by right belong to her alone. But having in all things depended upon an inland commerce with neighboring states, there has never come a full realization of the unique position vouchsafed to us by Nature. Failing fully to realize our own advantage, no protest has been filed against the artificial rival, but by some perversion of the rule of self-interest we have approved and urged its prompt construction. A canal across the Isthmus, it is now conceded, is one of the certainties of the future. The problems and new conditions growing out of it must be faced and solved.

There is of course another side to this; for the Nicaragua Canal with its detriments is by no means without compensation. With its construction the future of San Francisco will, more than ever depend upon the development of the State's resources, and the growth of its farming population. The soil of this commonwealth is capable of supporting millions of people, to all of whom may be assured a comfortable living. It will, in a measure, restore to San Francisco her place as a *local* distributing point. True, she must still share honors and commerce with the harbors to the north and to the south, but cheap sea freights will wipe out interior competitors along lines of railway, now known as "common points." With the canal will come lower wages in every walk of life. Either that or a suspension of manufacturing. The *Wave* has before now amplified this conclusion, which seems to be apparent to every one except Labor itself. In a thousand ways this new waterway will bring about changes. Whether it will eventually prove a benefit or a curse will largely depend upon the enterprise, the courage and the intelligence of our own people. Its mere construction, and the enterprise of other men of other lands, will not bring home prosperity. Without a corresponding commercial energy, without perception to discover and a willingness to take advantage of opportunities, profit will not come to us. Misfortune comes uninvited, but Prosperity must, like any maid, be wooed and won.

Some trade, some present advantages, we must conclude will be lost to us. The steamship line to Australia, which is now maintained by a colonial subsidy, because in conjunction with our transcontinental lines of railway it offers the speediest means of transporting the mails from the colonies to the mother-country, will in all probability cease to exist. Take down your map of the world and you will discover that with the canal constructed the quickest and most profitable route will lie through that waterway. England is never slow in the matter of trade; nor does she for the sake of trade hesitate to extend subsidies to establish direct communication with her colonies. Our natural commerce with the Australias will scarcely justify the continuance of the present line; unless generously subsidized it must be withdrawn. When this takes place our dealings with Australia will dwindle down to an exchange of lumber for coals by sailing vessel.

The same factor that brings us our present advantages with Australia gives us our trade with the Orient. Again it is the transcontinental lines of railway that distribute eastward the teas and silks. How much of this trade we will retain, or whether with its natural growth we will be able to hold sufficient to justify the further maintenance of present steamship lines, will depend upon *local* enterprise, and possibly national subsidy.

Years ago *The Wave* suggested that the merchants of San Francisco employ agents to investigate and report upon the trade possibilities of the Pacific. Let them be instructed to investigate and set forth a list of the markets open to us, the character of goods required, the current prices, and what is quite as important, outline routes for proposed lines of ships—steam or sail—that would yield profit to its owners and bring trade to this port. If in the matter of general manufactures we cannot compete with the world, we should be able to dip into specialties to fill the needs of our seaward neighbors.

With an abiding faith that is fortified by a familiarity with her natural advantages, we have full confidence in the future of San Francisco. Her destiny was marked out when the hand of Nature shaped our coast. If man alone has fallen short in his zeal, then it becomes a sacred duty to spur him on to venture along the smiling but neglected paths that open the way to profitable commerce. The items that most need our attention lie outside of the city itself. Once they are hastened and assured the metropolis will take care of itself. The first of them is the upbuilding of the interior of the State, the second the upbuilding of our seaward commerce. These two are the blood and bone of our body and their growth or decline will determine the future.

A Suspecious Quiet in Luzon.—(*Continued from page 1.*)

criminating papers, $4000 collected for the insurgent cause A fresh issue of insurgent literature is being distributed. The old plea to hold out until Congress should give recognition is abandoned and replaced by a statement that we have seized the islands solely for commercial exploitation. This pessimistic view is controverted by the fact that no active opposition, regular or guerilla, has been reported for nearly a month. The army is working hard, scouring the country to capture armed insurgents. General Bates and expedition have moved far inland and have not been heard from for several days. The country from Manila to Dagupan seems thoroughly cleaned out, no insurgents being encountered. General Funston and Colonel Keenan took 200 men through the mountains to Baler, on the eastern coast of Luzon, without meeting any armed force. There is some opposition along the northern coast, where an American soldier is murdered or disappears now and then, and in the south there is an occasional night demonstration against a garrison.

RATHER a hard case is that of the man or woman who, leaving home, entrusts his belongings to the tender mercies of a storage company, and returning finds himself deprived of them. This is what recently befell a friend of mine. He had a quantity of curious and interesting prints and books which, prior to breaking up his abode in San Francisco, he carefully packed and sent to the establishment of the Commercial Transfer Co. A receipt for the trunk was given him, which, unfortunately, he did not read. It made the company responsible in case of loss for but $25, whereas the contents were worth at least $500. In due time he returned to town and demanded his belongings. They had disappeared. By way of remuneration he was offered $25, which he refused to accept. He sued and obtained a verdict for $40, from which, however, the transfer corporation has appealed, claiming that its liability is but $25. The predicament is complete, and merely instances the care which should be exercised in examining receipts from all institutions that pretend to perform such services.

THINGS & PEOPLE

By BOSWELL Jr.

Concerning the New San Francisco.

IS the "New San Francisco" to be a reality or a name? It has been the fashion, the last four or five years, to tack the adjective "new" on everything. It is the "new" woman, the "new" journalism, the "new" science, clear down to the "new" medicine of the sensational advertisements. It is a phrase, like "*fin de siecle*," and may mean anything. And the meaning of the "New San Francisco" is just exactly what the citizens of the town of the Golden Gate make it. The opportunity is here. The nation is opening up westward, with San Francisco as one of the gates of entrance—some say the chief gate. The city comes under an improved and enlightened code of laws with the beginning of the new century. Everything is favorable for an immense growth, providing the citizens will take advantage of their opportunities. If they choose to wake up and employ modern business methods and ordinary American "hustle," they will assure for the city and port of San Francisco the larger part of the trade coming in as the result of the awakening of the country, and make her the metropolis of the greater Pacific Coast; if, on the contrary, they pursue the methods which have too often marked the business policy of California, they will see the commercial leadership of this coast pass to Seattle, which has awakened and "got a move on."

***

The Chances in Siberian Mining.

CONSIDERABLE interest in Siberian mining has been aroused by the discovery of the Cape Nome deposits. The theory of the origin of the Nome gold, as held by many northern miners, is that the mother-lode lies in the sea. If this is true, it is very likely that the sands on the Siberian shore of the strait will be as rich as those on the American side. Moreover, prospects have shown that the creeks and small rivers emptying into the northwest shore of the sea of Okhotsk bear gold, both free and in quartz. Considerable interest was aroused, therefore, among the "spring stampeders" by the announcement that the Siberian deposits were to be thrown open to American miners. This report is untrue, however. In reality, the Russian government, which never loses its grip on any cash in sight, has decided to offer the Okhotsk deposits for lease, and at terms which are prohibitive to anyone not a capitalist. The leases will be made by auction to the highest bidder, in lumps comprising an entire river-bed each. The bids must be made on a basis of a percentage for each pound of gold extracted. Individuals or corporations must show their legal right to engage in Siberian mining and must deposit 100,000 roubles (about $50,000) with the Minister of Finance as a guarantee of good faith. Of this, 30,000 roubles will be kept from the deposit of the successful bidder until his contract expires. The contract requires that the lessee shall pay for the services of a physician, an inspector, an engineer, and a police force, all government servants, and shall furnish them houses and fuel. All preliminary prospecting must be finished inside of three years and active mining begun, or the deposit is forfeited. The contract runs for fifteen years. At the end of that time, the lessee may renew his lease on the original terms for such lands as he desires, while the remainder shall be thrown open to prospectors. These are the terms. It will be seen that only a millionaire or a stock company can hope to comply with them. The sole chance for miners without money is an opportunity to glean over, after fifteen years, ground already worked. Moreover, in this, as in all other Russian affairs, the corrupt practices and itching palms of the Czar's servants have to be taken into account. Therefore, the surplus Cape Nome miners have no chance in Siberia.

***

The Latest from Nome.

I SEE that a San Francisco newspaper has declared the Cape Nome excitement to be largely a "paper" boom, gotten up for the benefit of the transportation and trading companies. No authority is given for the statement, and no grounds of proof are offered. This is remarkable as being the only dissenting voice heard along the Coast since the first beach-diggers came out. I have talked personally to all sorts of returned Nome men in the past two months, and not one but has declared the newspaper reports substantially correct. It is a fact worthy of note that most of these men were miners, because, while transportation companies and business men are always inclined to exaggerate regarding a new mining camp, miners, who object to crowding locations, will generally run it down. Certainly, these reports and those coming out in the Nome City papers could be toned down one-half and still show that Nome is a wonderful camp. The latest winter news left the new town Dec. 10. At that date, food was plenty but fuel was running short. Two men, Carl Van Knobelsdorff and Chas. D. Campbell, brought this last mail out, travelling overland to Dawson in fifty-seven days. Their trip proved that the winter route between the two points is open and practicable, and that a traveller will never be more than a day's journey from human habitation. Encouraged by this news, eighty outfits of miners, each with a dog-team, left Dawson within two days of the travelers' arrival.

***

The Theatrical Situation.

AT LAST, San Francisco is to have a few passable "shows" to replace the mediocre road companies, which have furnished us with an excuse for theatre-going this year. It has been a fearsome, dull season. Nothing first-class, the only approach being the Bostonians, fallen into the sere and yellow leaf, and Modjeska, now long past her effective age and hampered by a tenth-rate attempt at a tragedy. But now, they promise us John Drew and Henry Miller and "Because She Loved Him So," and already Gadski, Bispham and Damrosch are here with their Wagnerian recitals. It is a poor excuse for a theatrical season, but 'twill serve. Such as it is, we should be thankful. We might as well resign ourselves to the conclusion that the best companies and best attractions will visit the Coast but rarely. This is inevitable, and due to the geography of these United States, not to any more or less mythical syndicate. San Francisco is too far removed from the center of things to make the venture profitable. The town, in spite of all that has been said to the contrary, has good theatrical taste and knows the real thing when it comes its way, but the aforesaid real thing is not going to come our way for the pure pleasure of exhibiting before an appreciative public, so long as New York pays fancy prices.

* * *

The plan of Architect Cahill for beautifying the city includes a modern theatre, which is designed to stand at the very point of the division of Market street, in what will be, in time to come, the real heart of the city. It is all very well to plan for a theatre of the sort, but if the attractions are to remain at the mediocre level of the past two years, the plays will be unworthy of the playhouse. For a solution of the difficulty, we must look back to the old days of storm and stress, when the famous stock company held the boards at the California Theatre. It was the custom to keep as strong an aggregation as the city could stand for, employed at the theatre. Then, from time to time, the stars of the eastern season were imported to fill engagements. It was worth while to pay the salary of one star where it was not worth while to pay for an entire company. In this way, the Coast heard the great actors from Booth down, which it would never have been possible under the other system. The plan would be as successful to-day; it is our best chance. Get together the strongest possible stock company; fill in through the season with good actors and good plays brought from the East, paying both salaries and royalties out of extra receipts, and filling in the interim between stars with old plays produced by the home company. This will give us a city theatre worthy of a good playhouse. More than that, the stock company idea is the highest development of modern drama. In France, in Denmark, in Germany, where the theatre has risen highest, this is the standard. In this sense, our present theatrical "jayness" may be a blessing in disguise.

***

An Old, Old Story.

BECAUSE of the tremendous personal following of Rev. Peter Yorke and his influence on his co-religionists, I feel bound to protest whenever his enthusiasm leads him beyond the bounds of common sense. And I feel that Father Yorke has gone far beyond common sense when he raises in the pulpit the old cry about San Francisco being the most immoral city in the world. Suppose that this is true—it is not, but let us suppose for the sake of argument—does it do any good to "root" about it? Will it help to correct it? Will it attract to the city new residents of that desirable class which will raise the average morality? Will one sinner see the error of his ways or one saint labor the more zealously through learning that he lives in the most immoral, etc.? Tell a man that he himself is morally rotten and it may cause him to look within and reform, but fire at him a glittering generality about the low morals of the rest of his city, and he takes it philosophically. It is easy to be complacent with the sins of other people. If Father Yorke believes that this is the most immoral, etc.—the statement is so old that the newspapers keep the line in stereotype—his wisest course in bringing about a change is to go ahead telling the individual sinner of his shortcomings and leave the general proposition to right itself. The statement does no good to the city in a spiritual way, and it injures it badly in a material way.

* * *

I have still another kick coming. The word "immoral" covers a good many things. I believe that Father Yorke teaches his confirmation classes the Ten Commandments. As I understand it, the breach of any one of these is a breach of morals. Yet the charge against San Francisco is aimed at one offense only. It is not charged that the good citizens of this burg are lacking in honesty, or uprightness, or charity, or anything else numbered among the cardinal virtues, but that they commit the social evil. And yet, I would like to pin down Father Yorke and other traveled and impartial reformers to this one question: "Are you absolutely sure that San Francisco is more dangerously affected by the social evil than Paris?" I do not see, myself, how anyone who has seen Paris with eyes other than those of a priest or a school-girl can answer this question in the affirmative. If we are worse, I say heaven help us, for I have seen Paris.

***

Railroad Extension in the Northwest.

WHILE thousands upon thousands of men are pouring into Seattle to prepare for the Cape Nome rush, at least a dozen eastern railroads are looking toward the city as the northwestern terminus of their lines. Seattle will always be the gateway for the Alaskan trade; the railroads have recognized this, but they have doubted the future of Alaska. That is now assured by the discoveries around the Cape Nome region, and the eastern lines are reaching out across the continent. The Queen City is now the terminus of three lines, the Great Northern, the Northern Pacific and the Canadian Pacific. The Burlington has closed a contract which permits the use of Northern Pacific tracks, the Union Pacific is about to close a contract of the same sort, and the Chicago, Milwaukee and St. Paul and Chicago and Northwestern are asking for like privileges. There are those in Seattle who believe that ten lines will be coming into the city by the end of the next decade.

Potter Palmer, the Chicago millionaire, has expressed a desire that his two sons, who lately graduated from Harvard, shall work while at the bottom of the ladder in order to learn how money is made and kept. Potter Jr., the younger, has not yet found a job, but his elder brother is working as a bank messenger at a salary of $25 a month. This recalls to a Chicago man the story of a young heir in that town who was left a cool million on condition that he went to work. He accepted a position as a bank messenger at $30 a month and went his rounds in a cab, for which he paid $30 a week.

THE NEW CITY HALL OF SAN FRANCISCO.

HOW TO BEAUTIFY SAN FRANCISCO

BY WILLIS POLK

MRS. HEARST having suggested the idea of securing designs for the beautification of San Francisco, much good has, and more will result, for the idea will grow. The development of any scheme for beautifying the city would be a utile undertaking except with the entire city's co-operation, every one working in concert to achieve harmonious results. The city, naturally very picturesque, is a difficult subject to handle. It is nearly certain that almost any work undertaken would fall short of an ideal such as the site deserves, but as improvement is a foregone conclusion. let us be moderate in our ambitions, hopeful in our anticipations and courageous in our actions.

Nature has been prodigal to San Francisco, and it needs only that mankind shall pause in their work of desecration that nature may recover herself, and beautification of the peninsula will be assured. Parks, panhandles and boulevards are the safest, easiest and the most appreciated forms of adornment, but they are seldom intelligently planned and very rarely successfully executed.

Golden Gate Park, the city's pride, is a mere flower garden to what it might be. It is a "midway plaisance," with its ridicuous collection of lodges, pavilions, bridges, etc. Such work should be immediately stopped. New York has realized this, and taken steps for the preservation of Central Park. Almost any garden in France offers suggestions to us for the improvement of Golden Gate Park. Up to date there is one single appropriate work therein, and that is the granite bridge on the main drive near the museum. Versailles, with its terraces and fountains, has been apparently unknown to our park commissioners.

In extending the panhandle to Van Ness avenue, the utmost formality should prevail. The opportunity exists to create a veritable Champs Elysées of our own. The grades, with the bridges and terraces they necessitate, would give it an original touch and the local flavor that every work of art must have to be complete. The present panhandle, with its straggling eucalyptus and its unconfined shrubbery running riot, is commendable but for a single praiseworthy feature. It screens the hideous, crazy, bay-windowed and be-gabled houses and flats that face its length on either side. But a simple, beautiful treatment of the space in a formal manner would soon lead to an improvement in the architecture facing it.

The hills of the city would be the next point of importance in a scheme of beautification. Many excellent opportunities exist for their adornment, but their preservation should be the most vital point in planning for the future. Terraces and gardens, simple and dignified, of which many examples exist in Europe, could be devised and would add greatly to the fame of San Francisco as a beautiful and picturesque place. The creation of a place in the heart of the metropolis that by its breadth and openness would afford opportunity for impressive architecture is very cleverly suggested by Mr. Cahill, and his design is worthy of careful study.

The water-front ought to be one of our ch[illegible] attractions. The sea-wall should extend its entire length, and no doubt it will, but open spaces should be preserved in the form of parapets or balustrades looking directly over the water. The property facing the bay ought to become the most valuable in the city and maybe it will.

New San Francisco as it is pictured in the minds of those citizens of to-day who have given it much thought is perhaps as chimerical and illogical as imperialism would have been to the framers of the constitution, and no doubt new San Francisco will be just as different.

While the people of to-day will play but a small part in forming the city of the future, those who so desire and will exert themselves sufficiently, can and will influence the future in no small degree. They can achieve the dignity and command the ensuing respect that is always accorded to precedents. It therefore behooves us to prepare to become precedents. Those precedents at home that appeal for recognition strongest are mostly very bad precedents, and are useful only as warnings. For good precedents we should look to older communities. Take for example Rome or Paris. New York has already accepted Rome and is really studying Paris. San Francisco could not follow a better example nor find better models.

Public spirit is commendable and necessary when the time for action arrives. The time has arrived and the public spirit is ready. The mere will to do a thing must be properly directed to do it well. All the qualities must be comined. Public spirit is only one. Knowl- must accompany energy. Artistic taste must guide the skilled artisan. The more energetic the conception, the more skilled the artisan. The more energetic the public spirit he more intelligent should be the work it undertakes. Nothing should be done hap-hazard in the blare of trumpets and the shouts of the multitude. Calm reason and deliberate planning should prevail. The wave of public spirit that is rising will engulf the scant wisdom at our disposal unless our leaders prepare very carefully for the discharge of their trust.

Our leaders are the men who are or may become prominent in the city's affairs. They are in office and out of office. They are the presidents of clubs, universities, banks, art associations and rolling mills. They are mostly very public-spirited and all are vastly energetic. It only remains for them to find the practical application to the present of the precedents e-tab'ished in the past. They will then realize the difference between the as yet unperpetrated mistakes and successes of the future. That is, they will realize the difference to a degree equal to their understanding of the mistakes and successes of the past. But as they are all very much up to date in the detail of their various avocations, as is attested by the success with which they each pursue them, and as they are devoting all their surplus energy to the cause of public spirit, they are all doubtless more or less deficient in exact knowledge of intricate details of other matters.

Art for example; yet each and every one of them is a patron of some fine art.

Their patronage is not however disinterseted. It is not a love for nor an understanding of art. A pure love for art is given only to the artist. Therefore our leaders, well qualified as they are, in other respects, are lacking in this one, unless there is an artist among them.

In framing laws it mostly rests with lawyers to give advice, but in planning for a future city it is seldom the lot of the artist to be consulted. This is true for there as on that nearly all successful men consider themselves competent judges of art.

This spirit manifests itself very strongly in San Francisco and is the greatest danger that threatens the successes of new San Francisco.

As for New San Francisco, she is coming and coming soon.

The Center of San Francisco.

Architects and lovers of art will, we imagine, says the *American Architect* open their eyes at the announcement that "the plans are all drawn" for additions to the Capitol at Washington, consisting of porticos and "aprons," to be "thrown out" on the east and west sides of the building, "to match and correspond with the porticos of the two great wings." As anything of the kind on the east side would, independent of ruining the effect of the building, be nearly inaccessible, on account of its height above the ground, we are informed that "of course," the portico will have a "magnificent flight of steps, having ascended which the visitor will pass through a pillared pylon into a great marble vestibule, vieing in beauty with the famous marble room of the Senate." What sort of thing a "pillared pylon" may be we cannot even guess, but the rest of the description suggests the probability that it is some evolution of the "Romanesque-Picturesque," or the "American Ovo" style. The purpose of making these extraordinary changes in what we still consider to be the the most beautiful building in the world is to gain additional rooms, partly in the pylons and aprons and other features, and partly by "chopping up" spaces already existing in the Capitol; and, in all these ways, ninety-three extra rooms are to be obtained, "every one" of which "will be lighted by exterior windows, an obvious advantage."

Paris possesses about 80,000 trees in the streets and public places of the city. It is calculated there are 26,000 plane trees, 17,000 chestnuts and 15,000 elms.

The Park & the Panhandle.

By JOHN McLAREN.

THE inauguration of the New Charter and decision of the citizens of San Francisco to extend the Panhandle of Golden Gate Park to Van Ness Avenue considerably complicate the duties of the Park Commission and present for immediate solution problems of great moment and interest.

To begin with, the charter vests in the Commission the custody of all the squares and minor parks that are dotted through the city. The manner in which these shall be improved and beautified must be carefully studied. Some time will elapse before the ground constituting the Panhandle is ready for the landscape gardener, but it is not too early to commence consideration of the system of decoration. The parkway connecting Golden Gate Park and the Presidio is a third proposition requiring attention, and though, perhaps, the simplest, it yet requires due deliberation and experiment. The improvement of Golden Gate Park is planned several years in advance, so in that direction it is only necessary, perhaps, to follow approved designs. The subject of boulevards is also much before us, and it may be well to give this phase of the problem of beautification some solicitude.

To commence with the city squares, my opinion is that they should be treated in as simple and natural a manner as possible, remembering that they are maintained for the comfort and pleasure of our citizens. Plenty of grass and romping ground, with hardy trees planted so as to protect the visitor from our prevailing winds, should be provided. Only the smooth-leaved plants do well in smoky, stuffy atmosphere. The lofty-growing pine and fir of our mountains should not be introduced, as they soon sicken and fade and become, instead of a pleasure to the beholder, a scar and a blotch, and must soon be removed, whereas if smooth-leaved, strong-growing plants are set out they keep clean and healthy and are always attractive.

Along the Panhandle considerable grading will be required to give a comfortable grade to the approach and in order that the visitor, whether on foot, on horse, bicycle or in carriage may be able to reach the park without crossing car lines on the same level or run the risk of colliding with electric cars. The possibilities in landscape effects in treating the grounds of the extension of the Panhandle are many and varied. Between Van Ness avenue and Buchanan street the dignified approach should be strictly adhered to; between Buchanan and Steiner streets much variety, both in curvature of the drives and walks and in the shaping of the slopes as well as in the grouping of the trees and shrubs should be carried out. There is opportunity here for many striking and picturesque effects not possible in any other part of the grounds.

The parkway connecting the park with the Presidio might be treated on entirely different lines. As this boulevard crosses the prevailing wind, it can be made reasonably level. Straight lines might be followed, with stately rows of tall young trees arching the different paths and drives, giving shade and shelter to the visitor. The Commissioners have many improvements in contemplation in Golden Gate Park and only the lack of money prevents the introduction of a number of interesting attractions that might be added to our great pleasure ground. The work now under way in the park is in addition to the usual work of tree thinning, at which are engaged over 50 men; the hauling of loam, at which sixteen teams and thirty men are engaged; the construction of the boulevard driveway; the improvement of grounds about the northern link of the chain of lakes, where many pleasing landscape effects are being introduced in the way of fine groups of deciduous trees and great masses of rhododendrons and other flowering shrubs as well as climbers and ferns.

The Affiliated Colleges from Golden Gate Park. By J. W. Street.

The second link in the chain is about graded. A walk is being laid out around the margin of the water and the work of loaming and fertilizing is about to commence. Among future possibilities in this section, is a great fern collection in some sheltered, shady valley, along the bottom of which a trickling stream would meander between rocky banks; in the crevices of the rocks the more delicate species would find a home; stately tree ferns should line the paths, while our native woodwardias, lady fern, maiden hair and other native species would form the ground work. All have proven to be perfectly hardy and to thrive well in the park, so it would be no experiment. Ten acres should not be too much ground to include in this fern dell.

A salt water pond is another feature that has been talked of, and that would be enjoyed by large numbers of our citizens near the west end of the park. It could be constructed at a comparatively small expense. A few acres could be lowered about ten feet and a supply pipe at the level of low water installed so that the pond could be emptied and filled with the ebb and flow of the tide. The material scraped out of the bottom of the pond could be used raising a shelter embankment on the west side, so as to protect it from the prevailing west wind. The slopes and surrounding ground could be handsomely improved, a bath-house built and the luxury of sea bathing enjoyed at very small expense and in perfect safety.

A fine aquarium is another feature that has been much talked of and would be a great attraction, but aquariums are extremely expensive to build, and costly to maintain, and doubtless it will be some time before it will be a reality, unless some of our public spirited and wealthy citizens should provide the necessary money. The park is now pushing well ahead with a fine collection of native and other trees. West of Strawberry Hill are a hundred knolls; each should be planted with a separate and distinct family with its varieties. Our own state can supply half the number and other states many more; from Chili we can get the *Araucaria*, from Spain the majestic *Pinsapo*, from Italy the stone pine, from Russia the stately Nordmann spruce, and so on. The leading principle in the plans of the present management is to make the natural configuration of the surface the basis of the intended improvement. The hills and hollows each should be planted with great groups of some special kind, with single specimens studded on the outskirts of the main body of the group, so that a study of each kind may be made either in single specimens or in the group. These groups should blend with adjoining groups so as to form a grand whole as seen in nature when in her best moods.

While the reservations and parkways all ready secured must be our immediate care, we must think of the future as well as of the present, in considering a comprehensive park system. Nearly all the great cities of the world have suffered because of the overcrowded condition of the people living in their midst, and have at great expense and difficulty provided open spaces and recreation grounds necessary to give a reasonable amount of ventilation to the crowded dwellers of their towns. Of course, on account of the closely built character of San Francisco south of Market street and east of 20th street, it would be expensive purchasing large areas in that neighborhood, but property there will never again be so low in price. South of 20th street other open spaces and playgrounds should be reserved, always keeping in mind that some day every foot of property is to be built upon, and that it will then be necessary to provide recreation grounds within easy walking distance for the youths and children, who will some day require them. In several places where the marsh lands meet the hilly land, a number of acres could be graded at small expense. These would make excellent recreation grounds, and there are numerous sites available close to the large manufactories located in this district

The necessary open spaces and recreation grounds having been selected, the prominent land marks, places of interest and higher points should be secured; for instance old Telegraph Hill, which the ladies of the California club are endeavoring to save, should be purchased; Lyon street hill, where one of the grandest views on the peninsula may be had; Sutro hill, situated behind the Affiliated Colleges, the highest point in the county and one of the best wooded—also the Twin Peaks and many other prominent land marks and places of interest ought to be rescued from vandal street contractors and goat breeders.

The parks, squares, recreation grounds and prominent landmarks having been mapped out, the next consideration would be a boulevard system, connecting the many different points of interest secured. There should be a broad, well planted parkway leading from Van Ness avenue to the Presidio. Another route leading from the Presidio to the park might also be had, via the cliff at Baker's beach to the Cliff House, thence along the great highway, past the west end of the park, following the present Ocean road to Lake Merced, thence along the southwest bank of the lake, meandering by its many coves and inlets and joining the county road near the village of Colma; thence crossing the county road to South San Francisco, and returning to town by way of the old toll gate, past the bay shore, thence along San Bruno road by the grounds of the City and County Hospital, thence along Potrero avenue, up Eleventh street to Market and Van Ness avenue, making a grand drive of many miles.

Another very fine boulevard that should be laid out as soon as possible, and which would be a great convenience to people living in the Mission district, would be a driveway leading from Mission road at Bosworth street, going under the new railway bridge and up Rock canyon to the Corbett road, the Alms House grounds, down by Lake Honda, and entering the park at Seventh and H streets. This would be most interesting and attractive and perfectly protected drive way, affording grand views of all parts of the county.

The Chain of Lakes in Golden Gate Park. By W. J. Street.

Two Months *Under the* New Charter.

BY MAYOR JAMES D. PHELAN.

TWENTY years after the adoption of the new constitution, which provides for freeholders' charters for cities, and after four futile attempts, the Charter of San Francisco was adopted and inaugurated. Two months' trial is, however, no test by which to judge the thought and the work of twenty years. The seed has been a long time in the ground and the new Charter gives every promise of sturdy growth, but as yet it has borne little fruit. Two years from now it can be fairly judged.

The Charter promised the people home rule, civil service reform, and an economical, business-like and progressive government. Home rule has been secured. The first official act of the Mayor under the Charter was to proclaim the municipal election; and the people, when they elected their officers and inaugurated the new law, divorced themselves practically from meddling interference by the Governor and the Legislature.

CIVIL SERVICE.

The Civil Service Commissioners have been diligent in their work. They have already classified the Civil Service at the City Hall, and have certified to the departments needing them laborers from their registered list. The Board of Public Works reports that these laborers, so selected, owing no allegiance to anyone except the city which pays them for their work, have shown a marked increase in efficiency over previous employes under the "spoils" system. Early this month the Civil Service Commissioners announced the first examination for copyists. The number of applicants for this employment, as for all other work, shows the confidence of the people in the absolute fairness of the competitive examinations about to be held.

ECONOMY.

There will be no way of judging the economy prescribed by the new Charter until the next fiscal year, beginning July 1st, has passed into history, because the first tax levy under the Charter will not be made until the last Monday of next June. Unfortunately for this administration, it came into power in the middle of a fiscal year, and is now engaged in the task of conducting the government by employing the funds raised by the Board of Supervisors which went out of power on January 8th, leaving a large deficit for the succeeding six months. To conduct the government for six months on less than one-half of what was originally a low levy, requires a degree of economy bordering upon apparent parsimony, and which is not understood by many people. This shortage of funds cripples efficiency, and that is the kind of economy which the people do not want. Economy in the true sense is the production of desirable results with the least expenditure of money. But we are now engaged in the task of seeking the absolute necessities of municipal life without adequate means.

MUNICIPAL EXPANSION.

The progressive features of the Charter can only be determined by time. In the next tax levy, the Board of Public Works will be given the means of ascertaining the cost of municipal water and light works, a telephone system, and other municipal utilities. Municipal ownership is the permanent solution of the questions of water, light, telephone and transportation, which constantly come before the local legislature for periodic regulation. The corporations now controlling these utilities have in the past been the cause of corruption, and one of the objects of the Charter is not only to improve the service and reduce the rates, but to save public officials from constant exposure to the attacks of selfish interests.

BONDS FOR IMPROVEMENTS.

The bonds for park extension, and school houses, hospital and sewers were generously voted by the people, and will produce a large sum of money for these desirable purposes. The Board of Supervisors has passed a resolution directing the city attorney to prepare ordinances preliminary to the issuance of the bonds; and, in order to determine their validity, a suit has been begun to enjoin the Supervisors from taking any further action in the premises. Where such a large issue is contemplated, it is common, before the bonds are offered for sale, to have the courts pass upon their legality. This was done in the case of the Market Street Railway Company in this city, and when the question is once adjudicated, which will probably be in a few months, there will be nothing in the way of acquiring the lands and making the improvements.

APPOINTIVE BOARDS.

The boards and commissions appointed by the Mayor have organized and have taken up their work with enthusiasm. The Charter provides that no one political party shall have a majority of the members of these bodies, excepting the Park Commission and the Board of Health, where there are no restrictions. Notwithstanding the bi-partisan character of the boards and the temporary absence of Civil Service regulations as to appointments, there is harmony throughout the administration. Civil Service rules, by eliminating the question of patronage, will absolutely cement this harmony. There is nothing more trying upon an officer charged with the duty of making appointments than the question of patronage. There is always a score of men equally eligible for every place to be filled, and it is an ungrateful task to be required to discriminate between them. I have endeavored in my appointments, first, to select men in whom I have confidence that they will do the work before them efficiently and honestly, and that they, at the same time, possess the confidence of the people. Secondly, I have tried to give representation to various shades of opinion, and to various representative classes of the people, so that in this cosmopolitan city all interests may feel that they are safe. I have discovered that all that they ask is fair treatment; that is to say, they will not permit themselves to be discriminated against, but at the same time they make no selfish demands for undue recognition. The problem was, therefore, to get the best service and at the same time so balance the commissions that no interests would have reason to complain.

THE WORK OF THE COMMISSIONS.

The *Board of Public Works* represents capacity. The members have no pronounced political sentiments. This is a purely business body. For the first time in its history, the City Hall has been kept clean, and the sewer and street work has been done on scientific lines.

MAYOR JAMES D. PHELAN. BY THORS

The *Board of Education*, consisting of three professional educators, one of whom is a woman, and of an attorney-at-law, the first paid board established in this country, and the results of the experiment are being closely observed by educators throughout the land. It is engaged in the task of correcting abuses which have crept into the system due to the flagrant mal-administration of the department in past years. It has already eliminated unnecessary and unfit teachers, appointed by favoritism under the "spoils" regime, and consolidated classes, without fear or favor.

The only friction which occurred was in the *Police Commission*. The former conditions were condemned by the people, and a change demanded. An attempt was made, however, to perpetuate the old order, which died very hard. The Chief of Police is the executive arm of the Police Commission, and there were few men in the department who were qualified for the position. After a stormy attempt to elect one of the lieutenants, in line of promotion, as Chief of Police, in which all the disgruntled elements took part resulting in a deadlock, the Commission finally selected a Chief who had no connection with the department, but whose probity, executive ability and military training gave promise of splendid results. This was not accomplished, however, until the Mayor exercised his power by removal and appointment to re-organize the Commission that he had originally named. This case demonstrates probably one of the benefits of the Charter, by fixing responsibility and conferring power upon the Mayor at the same time. He could hardly be held responsible for the important acts of the commissions named by him unless he had the right at critical times to re-organize them. It is a power liable to great abuse, but it must be reposed somewhere. Under the old system the people would have to wait years for a change. Under this system, where there is a wrong there is an immediate remedy. As long as the Mayor has the discernment to know what is the people's will and the disposition to enforce it, the people are safe against any of the abuses of administration. Otherwise they will have to wait for two years, or until the next recurring election, to put their own judgment again on trial.

The *Fire Commission*, obedient to the demands of the Charter, has put the Fire Department upon a fully paid basis. While this will cost the city about $80,000 a year more than the old system, still the efficiency of the department is proportionately increased, and every man under full pay is ready at a moment's notice to do his duty. This Commission elected a new secretary, the Court having thrown out the objections raised against this procedure, whose object was simply to carry out the true meaning and spirit of the Charter by taking this important branch of the public service absolutely out of politics, where it had been occasionally placed in other years much to its detriment and demoralization.

The *Election Commission* has begun under the law a new registration of the whole body of electors, which must now be done every two years. They are making ready for the Presidential election in November.

The *Park Commission* has assumed, in addition to the Golden Gate Park, control of the smaller squares, and, with a reduced force, has already shown improved results. They have begun already to remodel Union Square.

The *Board of Health* came into office without any appropriation, the whole amount set aside to this department having been spent during the first six months by their predecessors in office. This was accomplished by decisions of the Superior Court, which empowered the Board of Health to expend practically whatever they deemed necessary and to draw therefor on the general fund. Having been assured support by the Board of Supervisors, the new board re-organized the department, expressing at the same time a willingness to reduce the standard of efficient organization so established, to be measured solely by the funds which would be allowed them. They said that they would not take advantage of the decisions of the courts confirming their right to draw freely on the general fund. In pursuance of this policy, many of the officers and employes, in the absence of sufficient money, have volunteered their services, and the police force under the Charter is being schooled in the duties of health inspection, so that under this administration, during the next fiscal year, excellent results will probably be attained for a comparatively moderate outlay of public money. The work of the Board of Health is of great importance, not sufficiently appreciated, in a large seaport and imperfectly drained city. It is its duty to create healthful conditions, to prevent the spread of disease, to inspect food, to provide free treatment and vaccination for the poor, to disinfect houses, to record births and deaths, and to maintain the almshouse and hospitals. The members of the Board of Health, as well as the Park Commission, work without compensation, because, in the contemplation of the Charter, it is a labor of love. But so wedded are all the commissions to the new Charter and so eager are they to see it succeed, that the first

Continued on page 7.

A NEW MARKET STREET

By B. J. S. CAHILL

THIS scheme may briefly be described as a plan to open up the City Hall and the new Post-Office to Market street; to provide a site for a new Public Library and an opera house; also sites for parks, monuments and trees, at no cost to the city.

The scheme is rather startling and strikes the beholder at first sight as chimerical. On closer examination it convinces one that it is not only eminently desirable but eminently feasible. Any man with the slightest reasoning faculty to follow the arguments and the faintest glow of imaginative faculty to realize its conception is impelled to admit that, whatever the disadvantages may be, the advantages far outweigh them.

That the old City Hall lots should have been sold is universally regarded as as act of criminal folly. That the new Post-Office should also be blocked out of view by the shanties now obscuring it is an equally disgraceful fact. Now, just as two negatives make a positive, so can these two wrongs be made into a right by a device which is as simple and economical as it is bold and ingenious. Moreover, the resulting architectural vistas, open spaces, and ensemble of fountains, trees and monuments, are both picturesque and beautiful. Added to this the change would at once give a metropolitan character to Market street in place of the provincial aspect it now bears, and finally establish an active business nucleus in the real and civic center of San Francisco, whose beneficial effect would be felt in a rise in realty values along Market street as far as Castro!

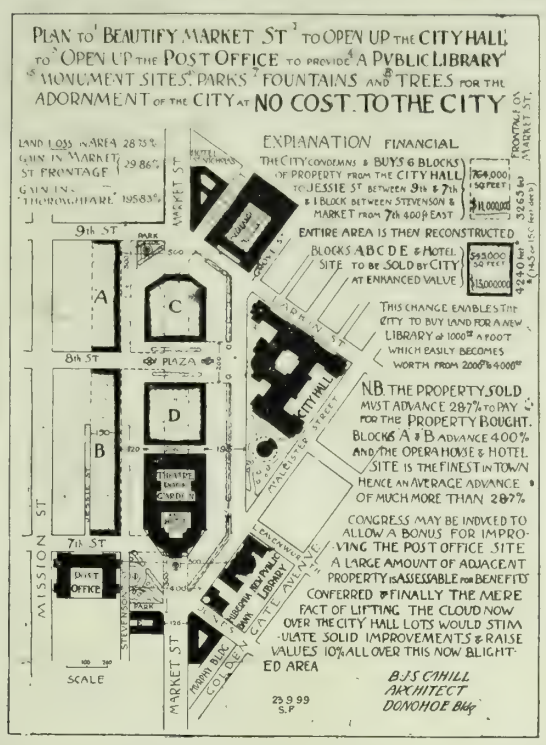
Parks set opposite the City Hall and Post-Office would to-day cost at least six million dollars; moreover such an investment would utterly break the continuity of Market street on the north side as far as retail business is concerned, even more effectively than it is broken now by the wretched shanties aligning its course from the Murphy Building to the St. Nicholas Hotel. Without any such business disadvantages and with two or three millions to the good, the new scheme saves the whole situation commercially, financially and artistically.

To effect the change the city must first condemn and then buy for purposes of public improvement all the six blocks of property from the City Hall to Jessie street and from Ninth to Seventh, also four hundred feet on Market street east from Seventh. This property is to be purchased at full market values plus ten per cent. This should mean an initial outlay of about eleven million dollars. All the buildings in this area would then be removed. And here it may be stated that the only structure of any importance that would have to come down would be the Odd Fellows Hall, a building that was never satisfactory to its owners, that does not and cannot be made to pay, under whose basement runs a living spring and whose crowning finials are a perpetual menace to life below during every earthquake. This old-fashioned, dilapidated, unprofitable white elephant of a building must come down. And in getting from the city a good price for the site—more than any other capitalist could afford to pay—the building will, in its demolition, be doing its owners probably the best turn of its entire ill-fated existence.

Having cleared the entire area the streets are then entirely re-arranged. Market street is doubled like the arms of the letter "Y" only that the south arm which runs diagonally across the front of the Post-Office is as wide as the main stem of Market street is now, and the other arm which goes across to the City Hall is seventy-five feet wider. The twin street diverges at the corner of McAllister and Jones and reunites at the junction of Ninth and Larkin. Meantime gas, water and sewer mains, and power, light and cable conduits are re-arranged to suit the change, and incidentally means should be taken to tap the subterranean stream that is known to traverse this region and which by many is thought to threaten the foundations of the Post-Office. When the operations are completed the city has for sale property marked blocks A, B, C, D and E on the plan, besides an incomparable site for a monumental building at the head of metropolitan Market street, a fitting vis-a-vis to the splendid Ferry at its foot.

The value of this property has been conservatively estimated at from thirteen to sixteen millions of dollars. In addition to this, property in the immediate neighborhood would very much increase and could be assessed for benefits conferred accordingly. Judge Tobin is an authority for the statement that the change would be worth $50,000 to the Hibernia Bank property, while Mr. Ernst Denicke thought the Mechanics' Pavilion site would easily be enhanced twenty per cent by the scheme, which on a valuation of six hundred thousand dollars would mean one hundred and twenty thousand dollars. Under the new scheme these buildings it must be remembered are actually brought onto Market street. That the city may not miss a grand opportunity, the scheme further proposes that all the property between the Hibernia Bank and the corner of Leavenworth be purchased by condemnation process at McAllister street prices. After the change is made the city would own this property at Market street values and the site would be unsurpassed for a much-needed independent Free Public Library—a simple and beautiful granite structure comparable to the Hibernia Bank, each helping the other in forming part of an ensemble not often surpassed in the finest cities of Europe.

Let us imagine the scheme realized, and station ourselves at the corner of the Murphy Building. On the extreme left a new corner building faces the triangular park in front of the Post-Office, whose granite facade and grand entrance we see gleaming over the trees and shrubbery. A grove of plane-trees and yucca palms leads the eye along the fringe of Post-Office Park and indicates the trend of traffic to South Market street and the Mission. Then in the center of our vision towers the superb Opera House and mammoth hotel with a magnificent monument in front of it. Still further to the right the north deflection of Market street is indicated in another row of trees dividing the great avenue which sweeps grandly along the entire spread of the City Hall at a width of two hundred feet—the new Mechanics' Auditorium at one end the Library and Hibernia Bank at the other.



GROUND PLAN OF THE CAHILL SCHEME.

SCHEME TO BEAUTIFY MARKET STREET ETC. B.J.S. CAHILL ARCHITECT

PARK AND PANHANDLE. (*Continued from page 5.*)

Delores street, being a part of the Panhandle scheme, need only to be mentioned. It should not terminate at 18th street, but rather should be continued over the hill and planted with shade trees out to the Mission road connecting with Bosworth street, Rock Canyon and the Sunnyside district.

There are several more driveways that might be had; for instance, from the northerly end of Van Ness avenue, going east through the North Beach district to the water front and Market street.

These are a few of the many fine boulevards and driveways that might and ought to be set aside for pleasure purposes, adding very much to the appearance of our treeless city and giving great pleasure to our citizens, as well as to visitors.

UNDER THE NEW CHARTER.

Continued from page 6.

two months of their administration show clearly their disposition to prove its worthiness; and the work of each and all is love's labor, which certainly is not lost in the appreciation of their fellow-citizens.

The Board of Supervisors is, under the Charter, a purely legislative body. The several boards and commissions perform the actual work, the Supervisors providing the money, and in a ministerial capacity approving the demands, except for salaries. These demands they cannot question, except that they be in excess of the appropriation allowed, and be illegally contracted. So there is a nice balance between all the departments, which so far has been automatically maintained. The Board of Supervisors, consisting of eighteen members, seems to be structurally an improvement upon the old board consisting of but twelve. In other years the fixing of gas and water rates developed cliques and combinations, from which this board, having passed that crucial test, has been free. They have done this important work with expedition, thoroughness, and satisfaction to the people, within the time allowed by law. They have saved the consumers, beginning next July, in the matter of water and artificial light, $300,000. They have closed the cemeteries, and now await the adoption of an official organ next week before inaugurating numerous reforms. The City Attorney, the adviser of the Board of Supervisors, has clearly expounded the new instrument, meeting the numerous demands which have been made upon his office with astonishing celerity. Even the atmosphere of the police courts, under the administration of the District Attorney, made by the Charter for the first time the public prosecutor in these tribunals, has been clarified.

What more can be said of two months under our new organic law? Every sign and augury is favorable to its ultimate success. But it cannot be judged by its promise; it can only be judged by its performance. Every one associated in the administration of the Charter is willing to submit to this test. I believe time will be on our side.

THE ALMSHOUSE.

THE Almshouse at present provided for the poor of San Francisco consists of a group of four buildings situate near Lake Honda and admirably adapted to immediate requirements, although somewhat strained for capacity. The institution was moved from North Beach to the present site in 1867, and placed in the administration structure known now as building No. 1. The old pest-house was added to its equipment about the same time, and two more buildings and a cottage for the superintendent were added in 1887, 1893 and 1895 respectively. A concrete laundry with the best modern machinery, a concrete lavatory, thoroughly modern and sanitary, a fire system which is one of the most effective in any public institution in the United States, and a reading room, the gift of Mayor Phelan, are among the late improvements. The Almshouse tract contains seventy-eight acres, fifty being under cultivation. Upon this cultivated section are raised the table vegetables used in the institution.

Within the range of its advantages and facilities, the Almshouse is provided amply for the number of inmates which it shelters at present. But the time has come when substantial improvements are needed. The capacity of the present buildings is taxed already by the 995 inmates. Withthe sure growth of the city, it becomes certain that the number of the city's indigent poor will rise to 2,000 in the next ten years. Building No. 1 is a rather flimsy frame structure over thirty years old and will soon be unsafe. It is the purpose of the present administration to replace all the old frame buildings as rapidly as possible by brick and concrete structures. As planned, these buildings are to be laid out with an eye to safety, convenience, sanitation, and to an increase in capacity. It is not too much to say that with the execution of these designs the home of San Francisco's poor will be a model institution of its kind.

The Almshouse comes under the new charter wiht bright prospects. From the beginning it has been a well-directed institution. Considering that appointments have always been made on a political basis, it has been excellent, and the liberal policy followed has been changed but little from the very first. The charter, which takes the appointments out of politics, will be a further assurance of efficient employes. Further, the new regime will make it possible to run the institution much more economically. This is effected by the provision that all supplies shall be purchased by contract from reliable firms. It is calculated that this change in method will reduce expenses from 27 cents a head per day to less than 20 cents.

It would be better, however, if the comfort of the inmates and not the curbing of expense should be made the standard. I should much prefer that the margin of seven cents or more per inmate each day, which will be effected by the change, should be spent in additional comforts rather than saved. Our poor should not be made to feel any more than possible the burden of their hard condition, and any reasonable outlay which will render their unhappy lot less unhappy may well be considered.

P. REDDY.

ARCHITECTURE OF SAN FRANCISCO. PAST & PRESENT. BY NEWTON J. THARP.

FROM the limitations of this article an avoidance will be made of any mention of the down town or business architecture of which San Francisco has many logical and beautiful examples, it being the purpose to deal chiefly with the mass of buildings that gives to any city its dominant architectural note.

If an observing man visit London, the general impression that he would carry away with him would be the miles of red brick houses with stone trimmings. If the same man should visit Paris, the impression that would survive would be that of long avenues of bent and tangled alleys of grey stone. If he should visit Florence, the pictures that would come to his mind in after years of that ancient art center would be rows upon rows of stucco houses with tiled roofs along devious and winding streets, and surrounding miniature piazzas. Leaving aside certain particular monuments and details, his final impression of each of these three and typical cities of the old world would be an impression of material; of how each city has had its status set by the characteristics of the materials most easily obtained and convertible to the needs of man's habitations. In other words the lasting and final impression would be of that which has given the city its key note; and from this, if his observation be keen and his reason clear, he will discover the causes that have lead to most of the characteristic refinements of detail and color. Mankind will build in the materials that are nearest to hand and most easily manipulated, and from the proper or improper handling of these materials comes nearly all that is good or bad in architecture, no matter what the age, nor what the stress of ulterior feeling under which its examples may have been created.

Reasoning from this standpoint it is easy to see that should the same man visit San Francisco, the lasting impression that he would carry away with him, after eliminating a few of the down town business monuments, would be that of miles upon miles of straight streets, climbing steep hills, and lined upon either side with interminable rows of fantastic wooden houses of a prevailing leaden hue, giving the impression that wood, with the planer and jig saw, were abroad in the land, and that paint was dirt cheap.

As sad as it may be that this should be the characteristic impression af San Francisco that every visitor carries away with him, yet it is but natural that it should be so, considering the rapidity of the city's growth, the environing conditions, and the bounteous way in which nature has reared the redwood tree.

It may seem strange to those who have not thought upon the subject that this tree, which is justly considered in its natural growth as one of the wonders of California, should be indirectly responsible for a metropolis with the worst characteristic architecture of any city in the world. Yet this is but a natural sequence, since the most easily worked material is the most easily perverted, and with perfect mechanical equipments coupled with small exercise of the logical and artistic faculties, what could be a more natural line to follow than a riotous indulgence in the absurd and fantastic forms of the Queen Anne and "Mary Ann" styles of architectural construction.

While it is true that wood is not a noble material for exterior architecture, and that no great style has ever been evolved from its use, yet buildings so constructed are capable of being treated in a manner that gives them an individual and dignified appearance, common to no other material.

Throughout the whole history of architecture, the Japanese are the only people who have developed wood to its fullest and most artistic possibilities as a means of architectural expression, and the majority of our architects might study to a great advantage the manner (not necessarily the lines and forms) in which they have accepted the material with its possibilities and its limitations.

While it is true that San Francisco is still suffering in its general architectural impression from the pretentious and characterless creations in wood of the generation past, yet it must not be understood that no buildings worthy of study or comment have been erected. Within the past decade a new order of things has been gradually taking place in this regard. Our younger architects have devoted more time to the study of the artistic preliminaries to architectural practice; the difference in cost between wood and the enduring materials—brick and stone—has more nearly reached a balance, resulting in a generally better type of building in the former material, and a greater frequency of those in the latter The fantastic mill-work creations of the past are gradually giving place to those of simpler lines and expressions in shingles, or to a less militant if not altogether sincere combination of wood with plaster, while the city block in the better residence districts without its brick or stone house is fast becoming a rarity. But two steps backward are noticeable in this general forward movement to our architecture, and those are in the numerous pretentious mansions in the Pacific and Presidio Heights districts that have been recently and are still being erected in wood, in close imitation of the styles that have been evolved in the correct and logical use of stone, and in those residences with simple brick walls but elaborate cornices and porticos of painted wood. Of the former it can be said that the lines and proportions as such are better than in the so-called Queen Anne, but the fact remains that the forms are inimical to wood and the examples are but more or less interesting pieces of architectural scene painting. Of the latter it can be said that if the brick or stone business block down town with a galvanized cornice and bay-windows is a just object of derision as an architectural abomination, then certainly the brick residence with an elaborate wooden cornice and portico in imitation of stone is a still greater one.

A Picturesque Doorway.

However, all that is needed hereafter to make of San Francisco a city of architectural renown in its general impression, is a frank acceptance by her architects of the possibilities and limitations of wood, with an earnest endeavor to hasten as much as possible the coming of a brick and stone age by the rendering of all such commissions in as simple and artistic a manner as possible, to the showing that the original expense is not much greater, and that the joy in the possession of a house in enduring materials is increased a hundred fold.

WILLIS POLK'S PERISTYLE.

SEE PAGE 10.

THE entrance to San Francisco through the ferry building at the foot of Market street is a situation unique in itself, and is the scene of an activity unusual to a degree, surpassing almost any other focal point in cities anywhere.

But the point of first importance is that it is the entrance to the city. It therefore affords an opportunity for impressive architectural effect that could not be excelled anywhere. Mr. Willis Polk has conceived the idea of putting this opportunity into practical form. His design for an arch and peristyle, presented on page 10, will appeal to the imagination of all lovers of beautiful architecture, and to the pride of all public spirited citizens.

The idea is to erect a huge triumphal arch spanning Market street, making it a veritable gateway or entrance to the metropolis, and to connect this arch to the ferry building by a semi-circle peristyle or quadruple colonnade. The space between the ferry building and the arch which would be thus enclosed would form a grand plaza or court of honor. It would be the court-yard to the ferry building, and the vestibule to the city. All the street cars and carriages would pass into this court to reach the ferry. In the colonnade could be placed elevated sidewalks, just above the tops of the cars, so that pedestrians could pass over the ever increasing traffic of the street.

East street itself, with its heavy traffic, would be slightly deflected to pass around the western side of the grand arch, and the property facing East street, he proposes shall be improved with buildings, architecturally in character with the ferry building and the peristyle and arch, similar in treatment to the well known arcades of the Rue de Rivoli in Paris.

The project in its entirety is not beyond the possibilities of the future and is one that promises unrivalled effect in architectural grandeur. East street at present is a disgrace to the city and its improvement in the course of time is a foregone conclusion. Why it should not be done in a formal manner and thus enhance the appearance of the city is a question about which there should be no argument.

Prince Albert of Prussia has bought the Wilhelmi vineyard in Germany at a price of about $5,600 per acre. There are said to be other vineyards in the Rheingau region, the one from which come the cream of the Rhine wines, which are worth even more. Of these, the Johannesburg, owned by Prince Metternich, is the most valuable. In 1893, this property yielded wine to the extent of about $5,000 an acre, and in 1898 the value of the product went even higher. The quality which gives value to these great vineyards has never been explained. Two fields beside one another may have the same exposure, slope and chemical constitution, and yet one will produce wine of first quality and the other wine of inferior grade. In the Rothschild vineyard near Bordeaux, for example, only a wagon-trail divides the choice section which produces a world-famous vintage from a tract which is comparatively valueless.

S·F· SCHOOL DEP'T UNDER THE NEW CHARTER ·BY·CECIL·W·MARKS

The Mission High School.

FOR half a century, the school department of San Francisco has been struggling slowly toward the highest ideals in education. The struggle has been long and the improvement has been slow; for the laws under which we were governed made it impossible to reorganize the system in accordance with modern ideas.

The Consolidation Act provided that twelve school directors should be elected every two years. They were nominated by political conventions, no attention being paid to their fitness for the position. Usually, men sought the place as a stepping stone in their political career, or to advertise their particular business or profession, or for the purpose of placing their friends and relatives in the school department, or, in instances, for the sole purpose of increasing their yearly income. Is it wonderful, therefore, that our school department does not take rank with the leading city school systems of the United States?

While this New Charter is not all that it might be, educationally, it is a vast improvement over the "Consolidation Act." The Public School Section, which the "Committee of 100" discussed and partially adopted, was more satisfactory than the one finally agreed on by the Free-holders. This is because a municipal School System cannot exist independent of the State system, the general law applying over all. As long as this is the fact, we can hope for but slight improvement, for what would be best for San Francisco would be out of place in the rural districts.

The Charter has now been in force two months. Some of the changes already brought about may be enumerated.

The appointment by the Mayor of a Board of Education consisting of four members, who are directly accountable for the administration of the Public School System. This fixes and centralizes responsibility. It is a continuous body, one member going out of office each year. No argument is necessary to prove the wisdom of this, for in past years changes of policy, and shifting of school boards have almost wrecked the system. The Board is given great latitude in employing such teachers and persons as may be necessary to carry into effect its powers and duties and is authorized to purchase its own supplies.

Principals are held directly responsible for their entire school. In former years they were ignored, and in many instances dared not even reprove a janitor for derelections of duty. The Board has begun a series of principals' meetings, which will make for harmony and co-ordination among the various forces now working independently in the department. The system of supervision has also been broadened on intelligent lines.

The policy of granting special teachers or favors to certain schools at the expense of the department has been abandoned. To employ enough special teachers to properly conduct instruction in special branches is impossible, so it is desirable that the general teaching force should by degrees acquire skill and knowledge to enable it to give instruction not alone in sewing, but also in drawing and nature study.

It was apparent early in our incumbency that many consolidations of classes could be made without affecting the efficiency of the department. Shifts of population enabled also several schools to be closed. The effort to divide the municipality into school districts we regard as pernicious, and as most cities have already done, expect to abolish it and to treat the system as a unit. A parent reserves the right to send his son or daughter to any school he desires, providing there is room, and we believe that more latitude should be given in this matter of transferring children. Unless there are good reasons for refusing a transfer it should, in our opinion be granted by the principal.

At the financial end the new Board of Education will be able to make many economies. Without imparing the efficiency of the schools an initial saving of $1000 per month will be effected. The fact is that no department of the Municipal government was so loosely conducted as that of education. More teachers and other functionaries were employed than was necessary. Enormous rents were paid for such properties as were occupied for school purposes. All this has been ended. Outside class-rooms are being consolidated as quickly as possible. An intelligent system of furnishing supplies has been put into operation. The supply department will be removed from the premises at Pine and Larkin into the basement of the City Hall. Principals are authorized to expend small sums per month for petty repairs, and a recommendation was made to the Board of Public Works, which has this matter of repairs in charge, that the responsibility for janitorial service in each school be vested in the principal. This the Board accepted and the fruits of it are generally apparent. In course of time it is to be hoped that only men possessed of mechanical skill and competent to do odd jobs of carpentering will be engaged in these positions.

THE HALL OF JUSTICE.
Shea & Shea, Architects.

The financial condition of the department is good. While the Charter imposed an additional expense for January, of $1139, the salary roll was diminished by $809. The monthly allowance is $100,000 A comparison of the expenditures of January 1899 with that of January 1900 is as follows:

Total amount expended for month of January 1899, $105,254 78 Same for January, 1900, $96,663.54.

It may be well to state the policy of the new Board of Education in certain directions in which public interest has been aroused. First as to the debatable question of home study. We believe that a certain amount of home work of a definite character should be given, but not to exceed a half-hour for the 5th and 6th grades, for the 7th and 8th grades, not more than an hour, and in the ninth grade 1½ hours. The most important factor in education is, however, the cultivation of a taste for good reading and if this be accomplished it will outweigh all other work in primary and grammar schools. We propose to interest teachers in this direction and to aid them in inspiring their pupils to select books fit to read.

In the matter of examinations of teachers, as the test of promotion, it may be briefly stated that however useful the examination system may be incidentally, in our opinion it should certainly not be the sole basis for advancement. The educational thought of the country is opposed to it and it gives rise to the pernicious habit of cramming. However the Charter gives to the superintendent the power to recommend such rules of promotion as he sees fit and it is for the Board of Education to reject or adopt his report. We do not propose, however, that the real purpose of all tuition, the development of character and the awakening of interest in the child shall be lost sight of. Educational work must be judged not by the number of facts crammed into the pupil's minds, but rather by the degree of power given him to master himself, to improve his environment and to overcome the forces of nature.

Owing to delays in the appointment of deputy superintendents, I am unable to give information here in regard to the plan outlined by the superintendent of schools. San Francisco and Buffalo are the only cities of the United States that elect by popular vote the superintendents of schools. In all others this official is appointed by the Board of Education. For this reason, our Board does not feel justified in delegating extraordinary power to one who is not in any way responsible to it for his election.

In conclusion I may say that the Board of Education considers that it is directly responsible for the administration of the school department of San Francisco and looks to the people to sustain it in its endeavor to improve and strengthen the system.

SAN FRANCISCO.

A DREAM, THE REALITY AND SOME POSSIBILITIES.

IF this year were 1860 instead of 1900, this suggestion might have been offered as an aesthetic leavening in that piece of cold engineering which to-day is known as the map of the city of San Francisco.

Clear out a great circle where Market street Van Ness avenue and the Panhandle meet, their intersections to be taken as a center. In the middle of this circle, right in the path of Market street, set down the City Hall, and then, taking a rule, draw two more boulevards southward. Market and Castro streets, the Panhandle, Van Ness avenue and the two new boulevards would constitute the spokes of a wheel, with the Hall as the hub.

Imagine, at the same time, that the triumphal arch and peristyle surrounding the Ferry depot, as designed by Architect Polk, is realized. Passing under the arch on leaving the depot, you go up Market street with its rows of tall buildings, and drive to the City Hall looming up against the hills directly before you in the distance. Reaching it, you find it surrounded by noble lawns strewn with fountains and statues. You walk around it and see six wide streets radiating from you to as many points of the compass, each one of them a noble boulevard lined with trees. Pass on westward and you enter the Panhandle, and finally reach Golden Gate Park. From the moment the traveller lands at the depot till he drives past the Cliff House, he is vis-a-vis with ever-changing scenes that surprise and impress him. If, to this plan, we add a boulevard around the cliffs to the sea wall and some improvements on Telegraph Hill, we have a system perhaps unrivalled in the whole world, all of which would cost no more than what we had expended up to this date.

What would be the cost of all this today? Perhaps one hundred millions. We would have to begin afresh from the very beginning. It is simply the costliness of an ignorant beginning. A great structure that is to be the center of attraction in a city must occupy such a position as to be the fountain head from which great highways, so to speak flow. We have splendid examples in the Grand Opera House of Paris, that stands at the beginning of the Avenue de l'Opera, and in the Louvre Palace, which is the head of

SAN FRANCISCO.

Continued from page 9.

the Tuileries Gardens, that merge into the Avenue des Champs Elysees beyond. This principle was applied in the designing of the city of Washington. Its streets, radiating from the Capitol, were undoubtedly designed by the great architect who once, when there was a dispute about his salary, said to the President of the United States: "Anybody can be a President, while it is I alone who could design the Capitol." Here our City Hall, the leading mark of the city, is nudged aside and is invisible, except for its dome, till within a few blocks, and, what is more disgraceful, it is surrounded by shanties. Realizing all this defect, I had advised before the election that the Panhandle be given a twist somewhere in the hills so that it will strike the City Hall directly and surround it.

So much for criticisms. There is quite a difference between making an unintelligible beginning with its ultimate blunders and costly changes and laying a well-planned foundation on which embellishments may afterwards grow. We are compelled to be content with the conditions as we find them today, and it should be our care to perfect these conditions. For example, what should the Panhandle be? There were pictures of it in shop windows, showing a crazy quilt of flower beds. This design must be condemned. The Panhandle must be no other than a noble avenue, wide and uninterrupted in its vista till the top of some hill is approached, on which we may place an arch to break the sky line. Except at the entrance from Van Ness avenue, there should be no monuments, and, where fountains are wanted, they should at best be low basins with small center pieces.

DOUGLAS TILDEN.

Two Reasonable Petitions.

IF the Congressional authorities rate commercial bodies by the number and size of their petitions to Congress, they must rate the Seattle Chamber of Commerce high on the list. It has always been a favorite diversion of that body; when stocks were dull and business flat, they fill in by mamorializing the Senators and Representatives of these United States in Congress assembled. However, two of their latest communications deserve attention. The first one, in which they are joined by the Chambers of San Francisco, Portland and Tacoma, asks that the Pacific Coast be represented on some of the new commissions and government boards. The Pacific Slope has never been recognized by such an appointment. Yet two commissions now authorized and in process of selection—the Philippine Commission and the Oriental Commerce Committee—will deal with matters affecting the Pacific Slope more than any other section of the country. This is especially true of the question of trade with the far East. The second recent request of the Seattle Chamber is equally reasonable. The government has been asked to appropriate three million dollars to improve the Port Orchard Navy Yard. Three millions is a large sum; nevertheless, while the great spread of the nation westward makes our Pacific naval stations of special value, thousands of dollars have been spent on the Atlantic station to one dollar laid out at Mare Island and Port Orchard. The citizens of Seattle wish to see Port Orchard made one of the great naval stations of the world.

***

The Law and the Zodiac.

AN astrologer, an ancient Persian magi with a flowing beard and an impressive manner, has been trying to read the secrets of the solar system from a private observatory in Seattle in an attempt to discover how the stellar inhabitants of infinite space would go about forming a mining corporation. The Man in the Moon must have surely revealed to him the way in which it was done, for the company was incorporated all right. But his blind attention to Venus probably caused him to slight his own interests, for the other day he had to institute a civil suit to secure pay for his services. He wants 20,000 shares of the mining stock, or $10,000, a very respectable fee even for an astrologer. And he is suing a woman, who has some pithy arguments to use in her defense. A veritable Portia, she makes some staggering statements, and by her shrewdness has hinged the case on one point, whether the man is an astrologer or a lawyer. He says he is both. If he is, so his fair enemy says, it matters naught. She engaged him as an attorney and is willing to pay an attorney's charge. He didn't read the stars with her consent, so she does not propose to pay an astrologer's exorbitant fee. If the astrologer's supernatural influence extends over mundane things, he can probably read his fate in the judge's eye.

***

The Boy Wonder in the Pulpit.

WHILE it is not in my province to ridicule the religious faith of anyone, I think that I only speak for the best class of evangelical Protestants when I protest against the public exhibition of the Boy Evangelist now performing at a Methodist church in San Francisco. I do not pretend to say whether the child in question is freak, degenerate, fake or genius. I have not been to see. But, happening to know something of what goes on in the newspaper offices of the city, I can say this much, any "boy evangelist" who makes it a business and supports his family thereon, and who employs a business manager to work the newspapers with all the tricks and devices of the press-agent is doing some one's else work than the Lord's. It degrades what ought to be the highest and most dignified of professions to the level of a travelling side-show.

Some Practical Philanthropy.

PRESIDENT HILL of the Great Northern Railroad has discovered a way of doing a quiet and substantial service to the northwest. One of his hobbies is the raising of blooded cattle. It has just come to the public ear that the surplus of his stock farm, near St. Paul, has been given away for years to growers along the line of the railroad, in order that the standard in the northwest might be raised. Now, he has further extended the plan by making extraordinarily low rates of transportation for blooded cattle on the Great Northern. It is a rate so low that the railroad loses money on this class of freight, but it is done as a bit of practical philanthropy, in order that the scrubby and short-bred stock of the western farms may be replaced by thoroughbred cattle, the kind that give a maximum of return for a minimum of feed, the kind of stock that really pays.

The Japanese have begun to ship cotton to Japan by way of sailing ship. A vessel leaves New Orleans every two weeks for the land of the Mikado, the cargo being made up of cotton and fertilizers. An agency to purchase cotton is to be established in the Crescent City and it is proposed to purchase American looms for weaving. Indeed, both the machinery and the raw material produced in America are preferred by the Japs to the Indian article, though the distance is a great detriment. It now takes seventy days to get cargoes from New Orleans to Kobe; with the Nicaragua Canal open it will take but twenty-two days. It will reduce the freight nearly two-thirds. Although the distance to Japan is less than half by way of San Francisco than *via* the Suez Canal route, the rate is much higher. At first shipments were made by rail and then by steamer from San Francisco. It is much the shorter route, but it is far more expensive. It costs $1.35 a hundred pounds, while cotton can be sent direct by sea for only 87 cents a hundred.

The nation most in sympathy with Great Britain in the present war is Greece. The newspapers of Athens are all enthusiastic, and only considerations of international courtesy on one hand and a strict rule of the church on the other have prevented the Greek Deputies from passing resolutions expressing moral support for England and holding memorial services for the British dead.

A remarkable new deep-water dredge, the invention of an American has been accepted by the Russian government to clear out the harbors at the mouth of the Volga. According to contract, the dredge was to deliver 1,600 cubic yards of earth an hour, with a bonus of one half its cost if it would deliver 2,400 cubic yards, which was greater than that of any dredge then built. At the official test, it ran over 7,500 cubic yards. The motive-power of this craft is electricity.

NEW BUILDINGS IN SAN FRANCISCO.

That San Francisco is going ahead rapidly and is increasing both in business and in population is best evidenced by the number of handsome buildings rising in various parts of the city. In this issue of *The Wave*, devoted to new San Francisco, we have pictured the most important of the new structures. Some are for business, others for residences and hotels, and all denote development and progression. It is not so long ago that building was almost suspended here. To-day, two great caravansaries are in contemplation—one to replace the demolished Baldwin, the second to be erected by the Crocker Estate on Van Ness avenue. The McDonough Estate has a new store on Market street. A new structure for Hale Bros. is rising near Sixth street. The Callaghan Estate is to have a seven story structure on the corner of Market and McAllister streets. The structures of Miller, Sloss & Scott, of the Crocker and the Clark Estates, of Mrs. Shotwell, the Bothin Building, and the Hall of Justice are mentioned at greater length below.

The Crocker Estate Building.

The most prominent commercial architectural structure, now in course of erection in San Francisco, is the handsome building of the Crocker Estate Company, upon the corner of Post and Gardner streets, which is the substantial culmination of negotiations entered into with them by W. and J. Sloane & Company, to build and lease, spacious, modern and elegant quarters for the accommodation of their exhibit and sale departments.

With this purpose in mind, Messrs. Tharp & Holmes, the architects to whom the commission was entrusted, have designed the building and have equipped it with every appurtenance essential to the modern store of this character.

This building is the most approved type of fireproofed steel skeleton construction, being enclosed upon the street facades with a rich reddish brown terra cotta brick and ornamental terra cotta; the effect of the design being quiet and dignified, and successfully expressive of its commercial purpose, being evolved logically from the constructive and economic elements presented, and therefore a more vital architectural creation, and more full of promise for the realization of a characteristic commercial architecture for our city and country, than the result of the method which vainly attempts the adaptation and development of the forms of classic and foreign styles; grand old styles no one can gainsay, but inspired by the demand of their peculiar and their special conditions.

The building has a frontage of 100 feet upon Post street and 137 feet upon Gardner street, also having an "L" in the rear adjacent to Ashburton place; it is seven stories with basement in height and contains about 118,000 square feet. All the floors are entirely open and unobstructed with the exception of columns generously spaced, and a few private offices. The book-keeping offices are placed upon a mezzanine floor between the first and second stories. Communications between floors is effected by electric elevators of the Fraser pattern. The interior finish throughout is of Eastern oak.

An unique feature of the building is a apartment, the design of which employs an Oriental motive, to be an appropriate exhibition room for Oriental goods. A comfortable temperature is to be maintained in cold weather by a low pressure steam-heating system. The cost of the structure when completed will be about $250,000.

The Crocker Building is fireproofed throughout with expanded metal by the Western Expanded Metal & Fireproofing Co. and is covered with P. & B. felt and gravel roofing, the work being done by the Paraffine Paint Co. of this city.

ELECTRIC FITTINGS.

The electric work in the Crocker Building was performed by the Wybro-Hendy Company, who have placed therein a Loricated Iron Armored Conduit System, which embraces the latest practice of the electric art in equipping fire-proof buildings with high class installation for electric service.

The wires are protected from mechanical injury by being enclosed in an iron pipe enameled with the Loricated Insulation, materially adding to the life of the pipe, protecting the iron from rust, etc., as well as effecting a smooth, glossy insulated surface for the electric conductors.

In the basement is located a main marble switchboard, at which point the street service brings the current for distribution throughout the building. On this board are mounted all the safety fuses, main circuit switches, etc., so that each floor is controlled separately

On the different floors is located one main distributing center from which all circuits diverge, both for light and power. At each one of these distributing centers is a marble slab on which is mounted safety fuse and snap switches, so that the attendant can turn the current on or off any light or motor on any particular floor by the switch located at these distributing centers.

The installation is fire-proof and is as good as the best of material can make it, conforming with the high class construction of the building throughout.

NEW SAN FRANCISCO.

The Miller Sloss & Scott Building.

The latter-day history of San Francisco does not abound in records of great mercantile successes. Few men or firms have managed to thrust themselves above the average level. Most concerns have been satisfied if their balances were a few dollars on the right side of the ledger and have blamed conditions for their failure to do better. Into the midst of a line of business in which there was supposed to be more competition than in any other in California there leaped a new firm composed of young men, and its rapid growth and development furnish another example of the old law that there is always room at the top. Messrs. Miller, Sloss & Scott commenced business with an excellent equipment of knowledge of the field and backed with capital sufficient to take advantage of their opportunity. They started at a period when conditions in San Francisco were very depressed, but their vigorous entry into the arena and the energy with which they prosecuted the interests of their institution have actually vivified the hardware business in California. The concern has progressed by laps and bounds. Having succeeded to the assets and good will of the Huntington Hopkins Company it occupied the splendid store of that firm on Fremont street, and on being driven out by fire took over the premises and possessions of Hawley Brothers, another old California institution. Now the concern is to occupy a fine building designed for its specific wants, located on the corner of Fremont and Mission streets. This structure, pictured on page 21, is of Colusa stone, five stories in height, and is one of the best instances of commercial architecture in San Francisco. The construction has been most careful, the foundation consisting of 750 piles forty feet long, the basement being concrete. The total cost will be $200,000. Albert Pissis is the architect. The structure is fireproofed throughout with expanded metal by the Western Expanded Metal & Fireproofing Co.

NEW BUILDINGS IN SAN FRANCISCO.

THE CITY SEWERS.

IMPROVED SANITARY SYSTEM FOR THE NEW SAN FRANCISCO.

OF all her municipal works, San Francisco is farthest behind in her sewer system. As it stands to-day, the city is fairly well provided for present uses in the central portion, but in the outlying districts there is slender provision for sewage collection, and there is no system to the sewer arrangements. That is, there is no provision made for extending their capacity when the city shall have grown beyond its present size, and no means of joining the various lines into a connected whole to effect proper disposal of sewage. When those who planned the new San Francisco took up the question of sewage disposal, they decided that the first necessity was a coherent plan, upon which the isolated sewers could be constructed from time to time, as needed. The idea is analogous to that for the University of California building plans; a connected and harmonious whole is designed without any thought of immediate construction, but with the expectation that as each part is built it will fit the other parts to be constructed in the future. By this method, waste of money is prevented in two directions. There is no loss of material and time in unnecessary connections, and, enlargements being provided for in the original plan, the pipes and mains will not have to be torn up and replaced by larger ones when the city grows.

The construction of an elaborate set of plans embodying these ideas was entrusted to C. E. Grunsky, Marsden Manson and C. S. Tilton, who studied the question most thoroughly and drew up complete plans for sewage collection and disposal. These were submitted to Rudolph Herring, consulting engineer, and were approved by him. As the scheme stands, it will doubtless be the basis for San Francisco's new sewer system. The plans may have to be changed in some minor details, but in the main they are thoroughly practical and have been approved by expert engineers. A complete and sanitary system of sewers must provide for the disposal of both rain-water and the sewage of buildings. It must provide an outlet at sufficient distance from the city to prevent contamination on the water-front, and it must be so constructed that there will be no pollution of the atmosphere through escape of gases and through clogging of the mains. It must be largely self-cleaning, and quick turns in the pipe-lines, which cause dangerous and noxious eddies and drifts, must be avoided.

All these things have been provided for in the proposed system. At the outset, there was a choice between disposal on the "fertilizer" plan and disposal in the waters of the ocean. The "fertilizer" plan, as used in Glasgow and other European cities, is based on considerations of economy rather than sanitation. The refuse matter is run outside the city limits and turned onto farms, where it is used both to irrigate and to enrich the soil. The city of Glasgow, for example, keeps a large municipal farm which turns the refuse into agricultural products. This plan is not feasible for San Francisco, however. There is no need of irrigation in the immediate vicinity, and fertilizers are still so cheap in this country that the extra expense involved in saving the sewage for this purpose would have no return. Over and above that, the fertilizer system is open to criticism on the score of public health. The disposal of the outflow in the ocean was unhesitatingly recommended by the consulting engineers. Under the present imperfect conditions, the sewage, dumped in the bay or the ocean, is frequently driven back on the coasts of the city and is a nuisance and a menace to health. This is avoided in the new system by sending the discharge-pipes further out from shore and by taking advantage of the currents in the ocean or the bay. The ocean proper has been rejected, because the currents there are slight and the winds, running generally toward the shore, will tend to throw refuse back on the beach however far out it is discharged. It has been rather deemed advisable to run the discharge pipes into the bay, north and east of the city. At the points selected for outlets, the tide-currents are strong and will carry the refuse well out from shore, whence, by the daily process of the tides, it will be carried far out to sea. The experience of other cities has shown that this plan is entirely practicable and disposes absolutely of sewage. A bay like that of San Francisco is a natural flush-pan. Engineers have calculated that, under favorable circumstances and proper sewage-construction, it could receive and disperse the waste of a population of 30,000,000. About ninety per cent of the total will be discharged north of the city, while the rest will be disposed of through an outlet at Hunter's Point.

There are two systems of sewer construction, the combined and the separate. In the former, both rain-water and the refuse from buildings and drains are disposed of by the same pipe; in the latter, they go separate ways. The combined system is most useful when there is a gentle, even, down-hill flow, and is recommended on the score of economy, as flush-water is saved thereby and extra pipe laying is unnecessary. The separate system is usually preferable where sewage must be pumped, and sometimes where rain-water may be discharged at a near point, but where sewage must be taken to a more distant outfall. In cities of regular topography, one or the other of these two systems is consistently adopted, but the surface of San Francisco is so irregular that it has been deemed advisable to make use of both. For example, the Bay View and Lower Islais districts are to be provided with the separate system because their sewage requires pumping, and because they are so sparsely settled as to make an underground rain-water disposal unnecessary at this time. The West Richmond, Lower Sunset and Ocean View districts will be sewered on the same plan for the reason that the sewage proper must be carried to the Golden Gate, while the harmless rain-water can be left to discharge along the ocean beach until the districts become thickly settled, which will be many years to come. Considerations of efficient service and economy led to the adoption of a separate system for the Mission Flats and Yerba Buena districts. Here, the existing sewers are improperly built for the sanitary disposal of sewage, while they can handle rain-water with perfect safety. Therefore, the small and less expensive separate channels will be provided for sewage proper and the old pipes will be devoted to rain-water.

The rest of the city will be provided with the combined system, with overflows or relief channels to allow excessive rain-water, such as may come from a violent storm, to flow off without flooding the regular line. This question of sudden storms was the uncertain factor in the calculations of the engineers. Weather reports for California have been accurately kept only during the past few years. Certain persons had, however, kept a more or less complete register of excessively heavy storms. These were carefully investigated, and it was found that at no time since the city was founded has there been a rainfall reaching one inch an hour.

The greatest one-hour rainfall was on November 23, 1896, when .55 inch fell, but this was exceptional, the nearest approach recorded being .36 inch in January, 1894. Therefore, the channels and run-offs are designed with this amount as a maximum. The use of reliefs will hardly ever be necessary, and when such a contingency occurs, they will cause no offense, as the sewage in the regular pipes will have been carried away by the excessive flow long before the overflow occurs.

Another puzzling factor was the question of San Francisco's future population, a thing which had to be taken into consideration in determining the size of the sewers. It would have been manifestly absurd to build for a population of, say, two millions, because even at the most rapid rate of increase it will be many decades before such a growth will have been attained, and, no material being absolutely indestructible, the sewers may be expected to be worn out by that time. The probable growth was calculated from the records of other American cities, and it was set down as a liberal guess that the one million mark would not be reached before 1955. This was regarded as an excessive estimate, but the calculation was purposely made on that basis, because it was felt that it was best to be liberal in this estimate, as in that of the rainfall. Roughly, therefore, the system is calculated to provide for a population of one million and to last safely until 1955. The calculation of probable density of population in separate districts was a harder task. It is certain that some sections will increase faster than others, but it is hard to prophesy where the disproportionate growth will come. In making their estimates on this point, the engineers studied all conditions most thoroughly and made their estimates as careful as possible, with a considerable margin for the unforeseen.

In the plans as presented, it is presupposed that the new sewers are to be constructed of the best materials and in a manner consistent with the best principles of engineering. Throughout the city they have been given such a grade as to prevent undue deposits. To accomplish this end, whole hills will have to be tunneled through in various places, but it is believed that this extra expense is justified. While means of flushing will be provided, the operation will rarely be necessary. In past time, flushing the old and imperfect sewers of the city has been so common and so noisome a process that we have grown to regard it as a necessary part of sewage-disposal. This is not true. Sewers made without eddies, sudden grade changes or turns, and with a proper gradient, take care of their own flow. In the sewers as designed, the mean flow is held to be sufficient to remove the suspended matter. In some cases, the lower flow of the night will cause a temporary deposit in some sewers, but the greater flow of the day will attend to this before it becomes obnoxious. A sewer receives all sorts of matter, and will sometimes become clogged in spite of everything, but appliances for flushing and manholes for more direct methods provide for the removal of such deposits whenever they occur. To facilitate this the interior of sewers will be made perfectly smooth, because in sewers of rough interior small particles are likely to gather and putrify. Nature herself provides fairly well for the flushing of combined system sewers by sudden and heavy rainfalls. In the combined system, heavy storage tanks are provided for the purpose.

Finally, the ventilation of the city's refuse-carriers has been carefully considered. Atmospheric pressure must be maintained on the sewage, or the rising and falling of the flowing sewage will compress and rarify the air within the pipes, thus blowing out or siphoning the various traps along the line. It is customary to perforate the manhole-cover to prevent this, but this method may here be supplemented by the admission of air into the traps connecting the sewers with house drains through an open pipe running above the roof of the house.

As to the important question of cost, the engineers, basing their estimates upon the price of first-class labor and materials and of adequate superintendence, put the price of constructing the proposed system of main sewers at $4,600,000. This is in favorable comparison with the price paid for sewer systems by other cities of the same size, with the important exception that San Francisco is providing for the adequate sewerage of districts far away from the center and as yet sparsely settled.

The main line, the great artery of the system, may be described as a sample of the whole plan. From its rise at Mission Road and Islais Creek to its outlet near Telegraph Hill, it is four miles in length. The material is to be brick and concrete. It will be five and a half feet in diameter at the beginning, gradually widening to eight feet on Montgomery street at the point where it enters Telegraph Hill. At the water-front, the flow is taken by several four-foot iron pipes, which carry the sewage a quarter of a mile from low-tide mark into water fifty feet deep, thus insuring protection to the wharves and the water-front.

JOHN STO LARD.

THE CITY AND COUNTY HOSPITAL.

THE two illustrations, "Bird's-Eye View" and "Ground Plan," published in this issue of the *Wave*, give a general idea of how San Francisco's new City and County Hospital will look when completed.

Last year the Board of Supervisers advertised for plans for an hospital to contain 500 beds at a cost of $500,000, and left it to the three medical colleges to appoint one physician from each to form a committee of three to select a plan. Dr. C. N. Ellinwood of Cooper's, Dr. Wm. Watt Kerr of California College, and Dr. J. R. Laine of the College of Physicians and Surgeons, formed the committee. There were twenty competing architects, of which number the plans of Martens and Coffey and Wm. Mooser and Son, as associated architects, were recommended as being the best and were approved by the Board of Supervisors. The plans thus adopted call for a hospital on a large scale and with all the modern ideas incorporated. The plan follows the pavilion system, which is used now in all modern hospital building. The wards are two stories in height, face north, and are connected with covered corridors. The sun rooms are to the south, and the administration buildings are outside the system of wards. Under the corridor is a tramway for the transportation of meals, linen and bedding. Steam heat will be used to preserve an even temperature. It is admitted that the one story pavilion system is better than that adopted here, but the expense and the number of beds to be provided precludes its use in this instance. However, this hospital is to be otherwise thoroughly up to date, and will be as well equipped as any institution in the country. Indeed, with the City and County Hospital, the French Hospital on Point Lobos avenue, and the Military Hospital at the Presidio, San Francisco will be exceptionally well provided. It is to be hoped that the legal formalities may soon be complied with and the funds raised to begin work on this structure, which is badly needed, for the present hospital is little better than a breeder of disease. There are in all twenty-three buildings, generally described as follows:

Administration Building. Contains offices, reception rooms, consulting, dark and receiving rooms, library, matron's quarters, etc., and sleeping apartments for resident physician and interns.

Operating Pavilion. Contains a large amphitheatre for serious operations and lectures to students from various colleges, minor operating rooms and all other rooms necessary in connection with operations. This pavilion is one of the most important of all, and not only will it be made fireproof, but all the walls, floors, etc., are to be made so that they may be washed and will absorb no germs. What little wood is used will be chemically treated.

Nurses' Home and Training School. This pavilion will be used exclusively by the women nurses, not only for sleeping apartments, but it will be equipped with library, lecture and cooking rooms, and gymnasium.

Pathological Pavilion. A very important part of a hospital. This pavilion will be finished similarly to the operating one, and will contain an autopsy theatre, rooms for research, photographic apartments, salesroom, specimen room, crematory furnace, etc., etc.

The *Kitchen Pavilion* will contain dining-rooms for patients well enough to be around, employees, and kitchen store-rooms, etc. The *Power House* will contain the machinery for lighting purposes, heating, ventilation plant, laundry, etc. The *Bath Pavilion* will contain all the baths known to science, perfectly equipped in every detail. The *Recreation Pavilion* will be a sun room for patients.

There will be four *Common Medical Wards*, male and female, each containing 64 beds—total, 256 beds, with nurses' room, tea kitchen, isolated rooms, elevators, clothes closets, toilet, bath, etc.; minor operating room and sun room to each ward. Three *Surgical Pavilions* will contain 64 beds each, or 192 in all, with same equipments as in medical wards. The *Contagious or Isolated Ward* will be a one-story pavilion containing 25 beds. The *Tuberculosis Pavilion* will contain 52 beds. The *Maternity and Children's Ward* will contain 84 beds—making a total of 609 beds.

Babblings of a Belle

DIARY, dear, it is useless to begin this week with the wail that Lent is here, for I am so glad I can hardly keep from shouting "Hip, hip, hurrah!" However, when Ash Wednesday came I did say to myself in a soft, sympathetic sort of way, "Cricket, dear, how will you spend the time?" But it will pass pleasantly enough, of that I am sure. Lent is a beautiful rest. It gives us a chance to have a dressmaker come in and use some of our old silk party gown linings for the under skirt of a foulard or an organdie. It is also an admirable opportunity to take short trips to different southern spots of which we read so much; also to repent, if one be old enough, of one's sins. Of course, I have not yet reached that age. Papa does not approve of fasting, and mama thinks it absurd for a girl to give up any pleasure. She says, at the very best there is such a very little true happiness in life. So you see Lent in our household is not the bugbear of which other people tell me. My "Ideal Lover" is very greatly missed. Each day I realize my loss and determine to be true to him, for he is a very fine fellow. My dear father gazes at me with eyes full of attention and devotion, but how little he fancies his blithe little Cricket spends many hours lying awake wondering how this must all end. However, my family shall never know, and as it is Lent it is easy enough for me to take an afternoon nap to make up for the hours I lose at night.

I wonder in these hours what sort of a parent I shall make. I notice the average mother is irrelevant and inconsistent. Yet either of these qualities in her child would be serious, and cause every day at dinner a discussion as to from which side of the house it had been inherited. But I suppose these family details do not much matter, and by the time I am married a few years to the "Ideal" I shall have forgotten that such a thing as a fault ever existed in either of my parents.

Now, Diary dear, let me tell you of the end of the season. I know you are dying to hear of the Mardi Gras. You must wait, however. I forgot last week to tell you of the dinner the Mountford Wilsons gave to Mary Scott at the Wilson home on Pine street. There were twenty of us there, and as we all were the crowd who knew each other so well it was very jolly. I like the Wilson house; it is large, and old-fashioned to a certain extent. The ceilings are very high, and the window draperies are heavy and luxurious and rather reminded me of the rooms which one hopes resembled those in which one's grand and great grand parents lived. They are mighty comfortable, and the whole atmosphere made me feel sentimental. A sort of sweet romance seemed to pervade the high walls and wide halls. With it all we were very jolly. I often wonder if this feeling of sentiment and romance is not one of the symptoms of love. If it be it is quite worth while being in love to have it. Sunday I had a greater number of callers than any other day during the season. I believe I am still the most popular girl of my season. There are very few of this year's girls who can count every Sunday her men in the "teens."

Monday night I went over to the Berkeley Cotillion. Mrs. Hearst, you know, is Berkeley's angel in disguise. I should like to take a day off, Diary dear, to tell you just one or two things she has done to people who really needed help. She has also put herself out, though she does not look at it in that light, to entertain every boy and girl attending the University. She has had several entertainments each week—luncheons, dinners, musicales, besides numerous small affairs. To crown it all last Monday night she gave her hall, which by night is a veritable fairy palace, and a fine supper to the University boys for their dance.

I have never seen a lovelier sight than this hall was. There were big ferns and greens of all sorts softening the background and the new lights made both girls and men really wonderfully good to look at. Mrs. Hearst wore a stunning gown and her handsomest jewels. Her sapphires and diamonds are beautiful. We did have such a fine time. The boys invited a lot of us to stay at each of their "Frat" houses and previous to the party gave dinners. We were really surprised at the dinners and the service and the artistic manner in which these youths arranged our sleeping apartments. It is wonderful how versatile a youth becomes after he joins a Frat. What should colleges do without them? The boys say the success of the whole affair was due to Mrs. Hearst, and I think she can safely take the credit for it. I hope that she will not be repaid as the average philanthropist is by criticisms and harsh words.

That same evening Arthur went to the dinner that the Reddings gave to announce their daughter Ellita's engagement to Herbert Gee. They had a jolly dinner and dance afterwards. On Monday night the Drowns had a dinner. It was Willard's affair, and a most successful one at that, I have heard on all sides. People left the Reddings and the Drowns rather early on account of the knowledge that the next night they would be up to all hours. Addie Murphy's luncheon at the University Club was large. For the last time of the year the buds sat at a table alone. I looked over at them, and wondered if they really had any pangs of regret passing out of the "are" world into that of the "has beens." Had any one of them been original she would have given a bud entertainment as I did my first season. I asked all the buds to a dinner. No men, just twelve girls, and each told in the most humorous manner possible of the trials, tribulations and successes of her first season. It was awfully interesting, and each received an enamel bud with the date as a souvenir of that year. The buds at Addie Murphy's luncheon, I thought, were beginning to take themselves quite seriously. Very few of them look as fresh as at the beginning of the season. The greater number have been over-doing it. It is all very well to go out night after night, but it is exceedingly foolish to arise early next morning just to play golf. No girl can stand that for any length of time, and keep her good looks or for that matter her health. And health nowadays is no secondary consideration.

Now I can tell you of the Mardi Gras. I just like to sit here to tell you, Diary dear, of the wonderful success of that affair. I went to dine at the red room of the Bohemian Club. The Joe Grants gave a big dinner there. I did not think that the cook did so well on that occasion as he has on others. The dinner was admirably served, however, and I found the guests quite interesting. There were very few of these whom I had met at any of this year's functions, so it was quite a relief to hear a change of small talk. The red room decorates to better advantage than any other in the city, and it is delightful to eat a deliciously cooked duck in such an atmosphere. Arthur went to the Whittiers. Their dining room was lovely; he said he had forgotten what the color scheme was, but that the cooking was capital and the girls looked very nice. Mrs. Whittier was superb. I can answer for that, for I saw her afterwards in her handsome pompadour gown. Gertrude Carroll, Ella Goodall, who is as bright as she is good to look at, and Ruth McNutt, quite won Arthur. He said any one of those three girls could have had him. I felt sad when I found Nat Wilson had been there. Nat is one of my dear old crushes, though I have not been so much to him this winter. Will Sanborn's dinner was also a jolly affair at the University Club. Josephine Longhborough, Mamie Polhemus and Charlotte Ellinwood were the prettiest girls there. I saw a good deal of Will later in the evening, and he said "Cricket, dear, unless I can be sure of you at my future dinners I shall call it all off between us. You somehow make things go as no other girl in town can." It is a glorious reputation to have to live up to, is it not, Diary dear?

At about half past ten we arrived at the Hopkins Institute. There the very air seemed to breathe a spirit almost unknown to the ordinary American. Everyone seemed so happy. Fancy my surprise when I went down stairs to find the walls lined with young gentlemen in evening suits and each girl, dance after dance, with one of the males of her party. Until twelve o'clock it was simply the most monstrous affair I have ever seen; then as soon as it was discovered who was who the fun began and everyone had a really capital time. The decorations were very effective, though of a rather conventional sort. Four of the young art students are to be congratulated for their being even as artistic as they were, I believe. The new room makes a fine dance hall and I spent a good deal of time there trying to find out why it was so few of the women were really handsomely gowned. Mrs. Joe Tobin was the one figure in the house. I really believe she was the only one who took particular pains with her gown. It was a wonderful affair of chiffon covered with sequiro so it gave the effect of armor. She was stunning and suggested Joan of Arc. There were lots of others in the room, but really not one that was worth remembering. Any bit of color with a few spangles or a piece of flowered silk, anything that one could not wear on an ordinary occasion, was put together somehow and called by some fancy name. I much preferred an evening gown and domino, for that at least is without pretension. Edith Preston, Molly Thomas and Ruth McNutt I thought were the handsomest girls in the room, but even them I have seen looking better. I asked Mr. Peck, who was a capital Prince Carnival and looked quite to the manner born, to whom any number of unfamiliar faces belonged. He told me, and we wondered why it was in this cosmopolitan city of ours there were not more than a handful of really handsome girls. Financially the affair was a success. There was nothing in any possible way unconventional about it, and there was no wine but champagne, so I think there was not a vast amount of drinking—un-

Special Introductory Offer to the Readers of The Wave.

The response to our liberal offer of **"The Imperial Reference Library"** contained in the **Wave of March 3rd,** has been most gratifying, a large number of the 100 sets offered at half price having been spoken for, and it will be necessary to **act at once** in order to obtain this **greatest of all reference works** at this price.

All those who appreciate good books and a genuine bargain should take advantage of this liberal offer at once.

"The Imperial Reference Library" comprises five works in one, namely, an encyclopædia of knowledge (65,000 topics), a biographical compendium (15,000 of the world's prominent people), a dictionary of language (150,000 words), a gazetteer (30,000 cities), and an atlas of the world (73 maps), and, being a new work, is *absolutely up-to-date* in every particular, containing a great deal of matter not to be found in other works of like nature heretofore published. *Its editorial staff*, as well as more than two hundred special contributors, comprises the most eminent American *educators, scientists, inventors, explorers*, and *specialists* of the day, and is a sufficient guaranty for completeness and authenticity.

It is bound in six large quarto volumes, 11½ inches long and 9¼ inches wide, comprising in all over *4,000 pages* and containing nearly *4,000 illustrations*, which are in keeping with the high character of the subject matter. Of these, about *3,000* are text illustrations, *500* are in delicately tinted monotone, and there are nearly *500* separate chromatic designs in seventeen brilliant colors, covering a series of beautiful single and double-page plates. In addition to all these there is a portrait gallery of the world's greatest men, comprising *200 superb full-page* wood engravings, and we unhesitatingly assert that "*The Imperial Reference Library" is the best edited, best mapped, best illustrated, best arranged, and most practically useful general reference work ever published in any country or in any language.*

It is bound in two styles of binding, viz., fine English Cloth and Half Russia Leather, the regular prices being $44 and $55, respectively, per set, but it being our purpose to introduce the work as quickly as possible to the general public we have laid aside *100 sets* to be disposed of in this territory at *one-half the above-mentioned prices*, namely, $22 for full set in cloth binding, and $27.50 for full set in half russia leather binding, the amount in either case being payable at the rate of *$2 per month, we delivering the full sets at once, the purchaser having the use of the volumes while paying for them, and also the privilege of returning the Library to us at our expense* any time within ten days provided the work does not give satisfaction.

Remember only 100 sets can be sold at this great reduction of 50 per cent. in price.

Will you be one of the fortunate ones?

It Saved My Life.

Extreme cases of disease test the real value of a medicine. Many "tonic" and "stimulant" preparations, which have no real medicinal value, seem to brace up the users when they are feeling "played out." Any stimulant will do this whether bought at the liquor store or drug store. The true test of a medicine is when life itself is staked on its remedial power. In hundreds of such cases Dr. Pierce's Golden Medical Discovery has been the means of saving life when even the "family doctor" had pronounced sentence of death.

"I had been a great sufferer for several years, and my family doctor said I would not be a living man in two years, but, thank God, I am still living," writes Mr. George W. Trustow, of Lipscomb, Augusta Co., Va. "Dr. Pierce's Golden Medical Discovery is what saved my life. I had heart trouble so bad that I could not lie on my left side without a great deal of pain. I was nearly past work when I commenced your medicine, but I can do about as much work now as any man. I cannot say too much for the benefit I have received."

Many diseases, named for the organs affected, as "heart disease," "lung disease," "liver complaint," etc., are perfectly cured by Dr. Pierce's Golden Medical Discovery, which cures through the stomach diseases which originate in the stomach.

CLAUS SPRECKEL'S ENTERPRISE.

THE GREAT PROJECT OF THE INDEPENDENT LIGHT AND POWER CO.

THE most important enterprise that has been undertaken in San Francisco during the past year is that of the company bearing the above name.

Just one year ago Mr. Claus Spreckels, associated with his two sons, John D. and A. B. Spreckels, decided to organize a company and install in San Francisco an electric plant for lighting and power. It was his purpose to sell current for lighting at prices that would make it a successful rival of other sources of artificial illumination, and to provide cheap power for the various manufacturing plants, now, in most cases, dependent on small and inefficient steam engines. Most of the electric plants of the country have grown from small beginnings, being hampered by old machinery of inefficient types, purchased at high prices in the earlier days of the industry.

The Independent Company, coming into the field at a time when the production of electrical machinery has settled into definite lines, has been enabled to lay out a plant that, with minimum first cost, can produce energy at low expenditure, and distribute it without serious loss.

The work done in the East during the last few years was carefully investigated before any purchases were made, and advantage taken of the experience gained there.

The main power-house of the company is located at the corner of Twenty-Third and Georgia streets, where fuel, whether coal or oil, may be brought by both rail or water and laid down at a minimum of cost. The machinery now being installed will be capable of developing eight thousand horse power, but the plans of the company will permit an increase to forty thousand as the demand increases and the city grows.

Overhead coal bunkers will be placed in the boiler-room, into which coal can be delivered from ships at the dock by an elevated railway. From these bunkers the coal will pass to automatic stokers, which feed the furnaces of a row of huge boilers. Arrangements are being made to use both coal and oil as fuel.

Every device that can be used to decrease cost of production is being installed, and the plant will be a model of its kind, not excelled in point of completeness by any in the world. The present power-house covers a ground space of 134 by 255 feet. The main engines each have a capacity of 2,500 horse power, and drive dynamos rivaling in size any steam-driven dynamos in existence. Over the engine room travels a huge electric crane, capable of handling a fifty-ton weight with ease and rapidity.

To bring such a large amount of power into the center of the city requires a very high pressure; and to guard against possible interruption of service on the trunk line, by fire or other accidental cause, the wires are laid in terra cotta ducts, buried in the ground. The pressure used is 11,000 volts, being the same pressure employed in the celebrated transmission from Niagara Falls to Buffalo.

The current from the main station is delivered to four sub-stations located as follows: One at the corner of 8th and Mission; streets one on Hyde street, between Golden Gate and McAllister streets; one on Mission street, between 2d and 3d streets; one on Sacramento street, between Montgomery and Sansome streets.

At these sub-stations the pressure is reduced, and the current is transformed for distribution on the various streets. Work is being pushed with great rapidity on the distribution system of the Independent Co., which will be most complete, covering, as it does, the whole central part of the city. The construction is such as to insure permanence; once built, additional wires can be installed without the necessity of reopening the streets again.

Over four hundred men are now employed on this work distinctly, and employment is given to a large number additional in manufacturing material. Terra cotta ducts laid in an encasement of concrete form the conduits, through which wires will be drawn, and ample space has been provided to meet probable future increase of business.

Conduits are being laid in over thirty-five miles of streets and about one and one-half millions of feet of single duct will be installed. In the outlying districts, overhead wires will be carried on poles. It is the intention of the company to extend its system eventually to all portions of the city. There has been considerable delay experienced in getting materials and machinery from the Eastern factories, but the company expects to be in a position to begin service about July 1st, 1900.

It is perhaps useless to dwell, here, on the public spirit thus displayed by one who has already done much for the city. That it will be a public benefit, no one can doubt. Individuals will gain through the copious supply of electricity for lighting purposes at reasonable prices. Still more will the owners and proprietors of small manufacturing concerns receive encouragement from this assurance.

BABBLINGS OF A BELLE.

Continued from page 22.

necessary drinking. So I suppose all and all it was an excellent finale to our season. Nevertheless I do not believe we shall have another as formal an affair on Mardi Gras. There is no carnival spirit in us people. Why assume it and make it a failure? Would it not be infinitely better to call it an art association ball and make that a success? Seeing an affair like that on Tuesday night disillusion one who has ever read anything of a real Mardi Gras in a foreign country. MISS CRICKET.

A rumor circulated last week and given some credence by the press of California has it that the Hotel Del Monte is to be closed. It is hard to say just how such a report could have originated; certainly, it has no foundation in fact. Del Monte, the most famous of California resorts, is a great institution in itself, and since its occupany has been open the year round. Its closing would be in the nature of a public calamity.

THE BOHEMIANS OF AMERICA.

A thoroughly agreeable "Smoker" was given last Friday evening at Golden Gate Hall by the Bohemians of America in honor of Host Henry Kowalsky, who leaves in the early future for Europe. This organization is of very recent origin, and its institution was inspired by the guest of honor, who in the arts of cooking and good fellowship has few rivals. A very jolly gathering assembled in the hall—lawyers, politicians, doctors, newspaper men, bankers and merchants, and partook of an admirable clam chowder, together with a variety of other delicacies, and listened to a programme notably varied and excellent. W. S. Barnes was toastmaster and chairman, and acquitted himself with proper grace and skill. There were dozens of good things—notably a paper of Judge Ferrall's, a violin solo by the clever daughter of Colonel Kowalsky, who has real musicianly talent, and a spirited bout with the sword between M. Tronchet and E. Lastretto. Handsome tributes were paid to the guest of the evening by T. J. Pierce, who presented eulogistic resolutions from the organization, and by T. J. Crowley. Fred Myrtle read an amusing poem which touched in verse an episode of the Colonel's career. Miss Gallick recited in fine style, and altogether everyone was charmed.

NEW BUILDINGS.

The trend of the city's business and hotel center is westward. In the region bounded by Bush, Geary, Stockton and Jones streets, there is going on, just now, the greatest activity in high-class building. The new structures going up there are in the highest modern style and a credit to the city. One of the best of these is a seven-story apartment house just finished for the Clark Estate. Albert Sutton is the architect, and Sidney Walker held the building contract. The structure is 55x87½ feet on the ground, and contains 108 rooms and five stores. Brick on steel and cast-iron skeleton were materials used. Cast-iron colums run from basement to roof with all joists hung to girders on steel hangers. The interior is finished in redwood and oak; the double floors have sewed quilts between. There are 133 basins, 49 toilets, and 30 baths in the building. Total cost was $80,000. This structure is fireproofed throughout with expanded metal, by the Western Expanded Metal & Fireproofing Co., and is covered with P & B felt and gravel roofing, the work being done by the Paraffine Co. of San Francisco.

The rapid completion of this building reflects great credit upon both architect and contractor. The first brick was laid Sept. 5, 1899, and now, six months later, it stands ready for occupation.

The plumbing is worthy of special note having been put in by R. Rice of 107 Geary street. Mr. Rice is thoroughly *au fait* with the latest sanitary plumbing and the admirable installation of the system of pipes, baths, baisins and toilets in the Clark building is a testimonial of his skill.

The Hayward Building.

Alvinza Hayward's new building, the construction of which is to begin at once on the north-east corner of California and Montgomery streets, will be the most up to date structure in the city, and will in its way set the pace for new San Francisco. The architect, Mr. George W. Percy, of the old firm of Percy and Hamilton, has the work in charge, and associated with him is Mr. Willis Polk, whose reputation as an artist makes the new building an object of interest to the public. The Hayward building will be eleven stories high and

NEW YORK.

HOW THE YELLOW JOURNALISTS PREY UPON SOCIETY.

THE yellow journals have been making copy rather fast lately out of supposed esclandres in the smart set. This season has been rather barren of genuine sensations of a scandalous order. Therefore, the columns set apart for that mixture of toadyism and vulgar caricature known as society notes has been filled with rather mushy twaddle, mostly manufactured to order. Here is a sample: At a recent dance of Mrs. Astor's, a youth in the exclusive set is said to have approached a matron and said something or other which offended her, whereupon the lady threatened to slap him, and Mrs. Astor, overhearing, said, "Not in my house, madam!" Nice story. It was read with a thrill of excitement by the chambermaid subscribers of the *Journal* and stirred up wrath at the naughtiness of York society in farthest Hackensack. Of course, it was purely a matter of manufacture in the office. It is always safe to tell such things of a person like Mrs. Astor. Unless the thing is scandalous beyond bearing, she will never go out of her way and court Sunday supplement notoriety in order to refute it. This consideration makes fillers of this sort a safe and profitable thing to do at intervals. A variation on the pure lie is the distortion of fact to make a story. Here is one which has made considerable copy: It is alleged that Baron Oppenheim came to Mrs. Stuyvesant Fish's vaudeville entertainment uninvited, and that when the hostess found an unbidden guest in the house she went up to him and threatened to have her husband throw him out. The beauty of this story is its likelihood. It is so common for a society matron to come up to a supposed guest in her house and offer him personal violence. The true source of this story is the fact that Baron Oppenheim was sent an invitation by mistake, and, taking it in good faith, attended the vaudeville. Mrs. Fish may or may not have noted the fact that he was there. At any rate —I have this from a source as reliable as that from which any society column gets its "stuff"—she made no mention of it at the time, and the Baron never learned of the mistake until later.

So much for the manufactured stories. For the rest, the tales and anecdotes and twaddle which happen to be true and which sift into the papers weekly, come from various sources. *Town Topics*, that society sheet of unspeakable fame, has alleged recently that the managing editors of the great dailies pick up these items at their clubs. This is almost too absurd to need refutation. Should an editor pick up and publish an "exclusive" story from his club, the members who dropped the information would know it; two or three "breaks" of that sort would end his connection with that set. Moreover, the assertion brands every managing editor in New York as an unlimited cad. Consider for a moment what would happen if a guest, visiting in your own house, should worm in and uncover your family penetralia. That is just what would happen to a clubman who used the institution for probing scandal. And the final absurdity of "*T. T.*'s" story is the assumption that the head of a big newspaper does the work of a small reporter in raking over ash-barrels. "*T. T.*" and others of that ilk are to be excused for taking this view, on the ground that a man always thinks that the world revolves around his own little specialty. Journalists of that sort, from perpetual swooping, believe that the minor and scandalous happenings of the smart set make up the only news worth having and ought to be scare-headed on the front page daily. Any one who knows journalism as it is knows that a scandal in the street-sweeping department is worth ten in high life.

Society news is of many sorts and comes from many and varied sources. First, there is the regular report of functions, with the list of assistance and the description of gowns, from the regular society reporters. These are generally known as reporters to the people of whom they write, and are given, by the subjects of their writing, pretty free chances to gain the information they are after. Do not believe for one moment but that society leaders, in the present frankly vulgar state of American society, are glad to be shown off before the public, providing, always, that the showing is made in a pleasant light. A great deal of this society business is notoriety, anyway. The *jeunesse doree* may carp at the newspapers and at newspaper notoriety, but they like it just the same—when it isn't venomous. So, the professed society reporter is generally given every chance to find out the list of persons and costumes at this or that function or wedding, and all things belonging to the comings and goings of society folk. There may be some who object to this sort of thing, but they come in, nevertheless; only for a far different reason. They are afraid of "roasts." It is a system of mild blackmail. This is the way in which the ordinary society items are gathered, and the reporters who bring them in have no special difference in method from the water front or business district news hunters, or from reporters of any other specialized class. They are men and women with the sort of externals which fit them to get along with the people they must encounter, and they gather up their news in an open and business-like way.

It is far different with chit-chat and small scandal and the other banalities which fill the Sunday editions of the yellow journals or the unspeakable little weeklies. This stuff comes in *sub rosa*, and is paid for. There are certain persons, I believe, who make a living by hunting and purveying it. There are many others who bring it in occasionally and as an addition to their incomes. I was told the other day that ladies' maids and club waiters are heavy contributors of this matter. When you come to think of it, the assertion appears true enough on the surface. A ladies' maid must hear many things not intended for strangers' ears; what is to prevent some of these women from betraying their employers? The same thing is true of valets and club waiters, although necessarily in a lesser degree. But I am inclined to think that the most fruitful original source of all is the gossip of the servants' quarters. In this lower world, the scraps and bits picked up from the conversation of the drawing-room and boudoir are given out and pieced together. Being then bandied about from mouth to mouth, these fragments of gossip leak to the outer world, and are picked up by the sharks and hyenas of the sensational newspapers. This accounts for the fragmentary character of many stories, and it also accounts for their inaccuracy.

RAYMOND RUSH.

LONDON.

A POLITICAL RECEPTION. COSTUMES IN THE LATEST PLAYS.

IT is a sign of the times that the only late social event which could be called grand by any stretch of the imagination whatever had a political trend. It was the dinner and reception of Mrs. R. K. Causton, held at her mansion in Devonshire Place in honor and behalf of the Liberal Party. True, the affair was not so announced, but it might as well have been. All the whig world and his wife was there. Sir Henry Campbell-Bannerman, leader of the Opposition in the Commons, was guest of honor at the dinner. Mrs. Asquith and a daughter of Sir Charles Warren were notable among the ladies present, while among the men were almost the entire late cabinet. Conspicuous in his rich robes was the Chinese Minister, who has been surprising all England lately by his wit and his liberality He actually makes puns—some of them not half bad either.

I did not have a chance at the dinner, of course, but was favored later on by a glance at the reception, an elaborate affair with five hundred guests. It was held in the big white and gold drawing room of the Causton mansion, one of the handsomest houses in London. This apartment is decorated in bold masses with large pillars and elaborate ceiling. Much of its attractiveness centers in valuable china and other precious antiques and in an unusually fine collection of family portraits in white and gold frames. The Caustons seem to have been fortunate in their selection of portrait-painters. I cannot say that it differed much from other receptions of the sort; perhaps, being wholly political in character, 'twas a shade duller. I watched the dress-suits bow before the evening gowns for a while, had some celebrities pointed out to me, and then got away to the St. James to see Miss Fay Davis play the heroine in "Rupert of Hentzau" and to observe what she wore.

I missed the first act and the splendid gown she sports therein, but was given a dressing-room view the night following. It is of white silvered brocade in *princesse* shape; the front, from the square yoke to the foot, is a mass of tiny tucks of white chiffon. This chiffon is continued in minute flounces headed in silver, running around the gown. Gleaming silver outlines the chiffon and there is a silver girdle at the waist. The sleeves, quite close, are in material and design like the front of the gown and finished at the shoulder with corded satin bows. Her most fetching garment, in my way of thinking, is a long cloak of rich white brocade worn over a white satin gown in the second act. The lining is decorated with trails of convolvuli in their natural colors. The Medici collar and the revers of brocade are veiled in point lace. There is a deep cape of brocade on which lies a thick band of gold and silver embroidery with raised flowers formed of pink and heavily-studded sequins. A gold-tasselled girdle at the waist, and cords and tassels of gold at the sleeve, just over the frills which fall above the hand, finish this remarkably effective garment.

Next to Miss Davis's regal robes, the smartest gown on the stage that evening was worn by Miss Esme Beringer. It is of palest peachy mauve, of merv and chiffon. There is a pattern of roses in white satin, outlined and bordered in the finest white embroidery. The bodice has a vest of mauve accordeon-pleated chiffon, with a fanciful brace in a darker shade of velvet, heavily embroidered and with appliques of lace. Chains of tiny beads unite one strap to the other and veil the chiffon.

The house as well as the stage was conspicuous for smartness. Indeed, it was in one of the stalls that I saw the garments which stand out in my memory above all others. It was on the beautiful form of Mrs. George Alexander, wife of the actor-manager, who is an artist in costuming. Her gown was not only an artistic wonder, but it was also of value as an antique, for the material, *rose du Berri* brocade, was woven some hundred and fifty years ago and never made up into a gown before. It has lain in bolt, securely guarded from moths, all this century and a half. There is that little deadening of age, which artists love, in the colors, but otherwise 'tis as firm and bright as the day it came from the loom. The gown was cut in princess style and quite plain. The rich old material was drawn half way across the bodice and fell plainly to the feet, over a petticoat of tucked rose chiffon, every tuck overlaid with narrow silver passementerie. The other half of the bodice and the elbow sleeves consisted of the tucked and silvered rose chiffon. The brocade was trained at the back and had a deep band of gold and silver jewelled trimming. This descended from one shoulder back and front, was caught up at the waist with a diamond buckle and, continuing to the foot, ran around the hem. One side of the bertha of this gown was finished with a riviere of diamonds, and the finishing touch was a cluster of deep crimson roses.

Some time ago, I wrote about the system of exchange whereby smart and semi-smart ladies lightened the expense of dressing in fashion. This set me to collecting "straw" statistics on cost of dressing in London. I have seen much, in doing it, of the society woman who makes $500 do the work of $1000, and have learned that she has more ways than exchange of effecting small economies. Let me quote some of the lowest prices at which modistes who can be depended upon to equal or imitate the best French originals hold their products. A simple foulard comes to £20; so does a plain serge. If there is any braid or trimming to speak of, the price rises to £25. The simplest cream lace or black lace frock for summer wear is at least £35, and the same figure may be quoted on *crepe de Chine*. These are the lowest. Winter clothes, especially reception toilettes and cloaks with the expensive laces and furs of this season, run to a greater height. Many a woman gives £500 for a sable cape or sealskin trimmed with sable. Tea-gowns and dinner-gowns command fancy prices. Hats are in proportion. No hat worthy a smart wardrobe is less than £5, and a lady of fashion generally places her millinery bill at £100 or more for the year.

And yet, at a recent trial in chancery, a stupid, fogy, misunderstanding, masculine judge decided that a lady of fashion could dress on £150 a year!

A Fire-Proof Hotel.

The California Hotel is the only modern-built, absolutely fire-proof hotel in San Francisco. It is strictly first-class in every respect. Many of our best families make it their permanent home, while it is undoubtedly the favorite stopping place for tourists from all parts of the world and for our army and navy officers. General R. H. Warfield is the manager, and he has drawn about him an able corps of gentlemanly assistants, all of whom study the comfort of guests, and who are thoroughly acquainted with all the details attached to the managing of a large and first-class house. San Francisco may well feel proud of her only fire-proof hotel—the California Hotel.

Catarrh Cannot be Cured

with LOCAL APPLICATIONS as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure you must take internal remedies. Hall's Catarrh Cure is taken internally and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarrh. Send for testimonials free.

AT THE THEATERS

When Mme. Gadski was here with the Ellis Company last spring her position as lesser star in the Melba constellation prevented her taking her proper place in Wagnerian roles, and the clamor of the German population served only to strengthen the ban. I remember that Gadski felt sufficiently uncertain of the *Aida* music to have a rehearsal called, for which onerous exaction she apologised and was promptly forgiven by the people concerned, being beloved by the company. Her triumph in *Aida* but excited the more the German longing for Wagner. The expression of that desire has borne fruit in the prima donna's present visit, coming back to give us the music, without the drama, and while that longing may be appeased a little it is certainly not satisfied, for obstinate memories of *Aida* return to remind one how greatly the dramatic setting would add to her singing. One felt that the impassive singer must move to gesture for relief to the dramatic nature struggling to free itself with the music. Even facial expression was denied us, the stage being lighted by a chandelier, the effect of which the songstress's matinee hat neutralized so far as her face was concerned.

* *

Mr. Damrosch, at the piano, made up for the want of detail about as well as one man could have done. He gave very definite pictures, in an unpretentious but convincing way, though he shattered them a little by reciting in his peculiar flat voice some of the passages he was playing. Equally quiet was Mr. Bispham, rich-voiced and restrained, and Herr Schott roused local admirers to somewhat unreasoning demonstration by his hearty singing. There was a suppressed impersonation in the manner of all the singers, coming out in Schott to the extent of an evident flood of memories. Then, too, there was an informality in the manner of all concerned that divested the occasion somewhat of concert form and intensified the lecture aspect, thereby adding to its charm.

* *

At the California this week that roaring melodrama, "In Darkest Russia," is being presented to appreciative audiences. The Jepson company seems to be quite at home in the line of this particular extravagance. Herbert Portier looked and acted the part of the hero-in-chief most exceptionally; John De Gey made a good villain; George Morton played the part of the agent of justice to everyone's satisfaction; Kate Jepson was in every way adequate to her unthankful role as a blood-drinker; Alpha Perry did very well indeed as the young widow who spoke the English not well; and she had Harry Byers to make love to her as the ubiquitous American; while Kathrine Willard, the heroine, clasped her hands and raised her eyes to heaven in the most helpless manner imaginable, and saved her lover's life, when it came to that, as many times as she had fingers, almost. The combination is certainly the real thing in melodrama.

* *

In the new Orpheum bill will be six acts, which rank among the best on the vaudeville stage to-day. Mr. and Mrs. Sydney Drew head it with a one-act comedy, "Love Will Find a Way." Mr. Drew belongs to the most famous American stage family, and is a clever actor in his own right. Flatow and Dunn, the champion white cake-walkers of America present an extravaganza, "Pastimes on the Levee." Howard Thurston is a magician of fame, card manipulation being his specialty. Retained from this week will be: Smedley Sketch Club; Anna Whitney; Imperial Moorish Acrobats; Newhouse and Ward; Franks Trio; and Martinetti and Grossi. Matinees Wednesday, Saturdy and Sunday.

* *

One of the strongest theatrical attractions of the present season is "Because She Loved Him So," Gilette's latest comedy, which opens at the Columbia. Not only is the play good and new, but the company is different from the picked-up road aggregations which have presented the good plays we have had this season. J. E. Dodson, a clever actor who has risen rapidly in the profession, and Annie Irish, who needs no introduction to San Francisco, head the cast.

* *

Next week, the Bispham-Gadski-Damrosch Wagnerian concerts will be given the first three evenings of the week. "Das Rheingold" is the bill for Monday evening, "Die Walkurie" for Tuesday and "Siegfried and "Die Gotterdamerung" as a double bill for Wednesday. On the afternoons and evenings of the rest of the week, "The Brownies in Fairyland" with nearly a hundred children in the cast, is to be the bill.

* *

"Diplomacy" is next week's bill at the Alcazar. The costuming is to receive special attention; it is said that the array of dresses will be beautiful. "Liberty Hall" and "Quo Vadis" are to be given in the near future. A corps of scenic painters is already hard at work producing the elaborate scenery for the last-named play.

* *

Juliet Crosby, a graduate of the Alcazar stock company, has gone to New York to join the "Zaza" Company, which is about to invade England. Miss Crosby—rather, Miss Belasco—is a San Francisco product, and her career abroad will be watched with interest. Very lately, her work has undergone an improvement which almost amounted to a transformation. Her *Mrs. Erlynne* in "Lady Windermere's Fan," ranks with the best work ever done at the Alcazar.

* *

The Symphony season will end at the Grand Opera House next Thursday afternoon at 1:35 o'clock, with the strongest program of the series. It is as follows: 1. Overture, Manfred, op. 115, Schuman; 2. Symphony in A minor (Scotch), Mendelssohn; 3. Scherzo from 3d movement, Symphony Pathetique, Tschaikowski; 4. Overture, "Guillame Tell," Rossini."

* *

Miss Florence Roberts begins her starring season at the Alcazar in May.

Those of our readers who are without a reference library should read the announcement of the Syndicate Publishing Company on page 22, in which an encylopædia of knowledge, a biographical compendium, a dictionary of language, a gazetteer, and an atlas of the world, which has heretofore been sold at $44.00, are offered, in cloth binding, for $22.00. The purchaser has the privilege of paying for these valuable volumes at the rate of $2 00 per month, the full set being delivered at once.

Dr. Parker's Cough Cure.—One dose stops a cough. It never fails. Try it, 25 cents.

The Hayward Building.

Continued from page ...

will contain two hundred and fifty of ... ides the stores on the ground floor. ... be as nearly fire-proof as modern scien... make it; not a piece of wood in any form will be used. Every thing ordinary made of wood will in this building be either of metal or marble. Its location will do much to hold a share of the growing business of the city in a locality peculiarly adapted to business of the character that the new building is intended to house. It means that California street will maintain its commercial prestige and that San Francisco will have another important building to strengthen its title to metropolis of the Pacific, and that Mr. Alvinza Hayward will be counted among her progressive citizens.

* *

The Shotwell Building.

The Shotwell building, at the south-west corner of O'Farrel and Carlos streets, is erected from the designs of Albert Pissis for Mrs. Minnie F. Shotwell. As originally planned, it was to be the property of L. Kauffman, but the present owner stepped in and purchased the incomplete structure about a month ago. It is a modern apartment-house, six stories high and 57½ x 97½ feet on the ground plan. The material is Roman brick. It contains over 100 rooms, arranged in suites, each with its bath. There will be electric lights and elevators, and a fine marble entrance and staircase. The cost is in the neighborhood of $70,000. There are innumerable houses of this type in New York, and there is no doubt of its success in San Francisco. The building of this fine structure is in the hands of F. W. Kern, the well-known contractor, of 17th and Hampshire streets, whose excellent workmanship, strict attention to the details of his plan and conscientious supervision have gained him a valuable reputation in his profession.

Sauer says: "I can freely say that the Pianola gives me more pleasure than I have had from thousands of so-called treats of pianistic effort." Call and see it at Kohler & Chase, sole agents. 26 and 30 O'Farrel street.

NEW BUILDINGS.

IMPORTANT STRUCTURES IN COURSE OF ERECTION IN SAN FRANCISCO.

Three new buildings which will be features of permanent architectural value to San Francisco are assuming form under the direction of their architects, the Reid Bros. Two are palatial residences for W. G. Irwin and J. D. Spreckels respectively; the third is the music-stand in Golden Gate Park. Mr. Irwin's mansion is to be finished in December. It is in Italian Renaissance style and built of Colusa sandstone on a steel fire-proof construction. There are three stories and a basement in the house, which stands on what is really the finest site in San Francisco, Washington, Jackson and Laguna streets. Even in its present incomplete state the Irwin residence is a landmark, for it crowns one of the loftiest of San Francisco's eminences and commands a superb sweep of bay and hill. The interior will be beautifully fitted up, decorated with rare taste and with every imaginable luxury that unlimited wealth can compass.

The J. D. Spreckels residence is going up on Pacific avenue and Laguna street. This, too, is in Italian Renaissance style. The materials are sandstone and terra cotta. This house is fireproofed throughout by the Western Expanded Metal and Fireproofing Company, the skeleton being of fireproofed steel. Completed, it will take high rank among the few residences in San Francisco which are examples of the best in architecture.

The Park Music Stand, the gift to the city of Mr. Claus Spreckels, is also in Italian Renaissance style. The plans for this structure were a serious problem for the architects. There are few examples of this sort of building in the world, almost none of them good. The architects had, therefore, no models, and their originality was put to the severest test. That they succeeded, is the general verdict of those who have seen the plans. The structure, which will cost $60,000, is to be of Colusa sandstone, with a space on the stage for 100 musicians and ante-rooms for the use of performers, for a musical library, etc. This building is to be completed about April 1. It is another instance of the splendid generosity and public spirit of Claus Spreckels, whose great energy and foresight have proved so material a factor in the creation of the new San Francisco.

* *

The New Hall of Justice.

The new Hall of Justice on Kearney street, opposite the Plaza, pictured on page 9, is the work of Shea & Shea, architects. The building is Italian Renaissance in style, the first two stories of stone, the remaining three of terra cotta. The entire cost is $280,000 for the building and $60,000 for the furnishings. It will be ready for occupation about May 1.

The building is designed for the use of the police department primarily. Here will be situated the central police station, the city prison, and all police and superior courts. The morgue will be housed in an annex to the rear. The prison has been planned with special care. It will occupy the upper floors, away from all approach from the ground. There will be plenty of sunlight and air and good sanitation, things not possible in the present quarters given by the city to prisoners. The cell-construction is on the most modern and approved plan. The cells for minor offenders, for actual criminals, for women and for boys are kept entirely separate. This arrangement is in the interests of good morals and in line with the most advanced ideas. There are no keys to the cell doors, all being worked by a central locking apparatus, which locks the cells singly or all together. The floor is water-proofed by the Parifine Paint Company, on a process of their own.

The basement will be used for the general purposes of the police department. There will be an assembly room for officers, a drill room, a shooting gallery, and captains' and sergeants' offices. The first floor will be devoted to the administration offices of the police department, the second will be used for police courts and the sheriff's office, and in the third will be situated the superior courts and the offices of the district attorney and county clerk.

There are three electric elevators, one for prisoners and two for the general public. The heating is by steam and the lighting by electricity. All halls are tiled, and throughout the building is fire-proofed with expanded metal by the Western Expanded Metal and Fireproofing Co. The system of sanitary plumbing with which the building is provided was installed by R. Rice, of 107 Geary street, and is characterized by his usual admirable workmanship.

The electric service in the Hall of Justice, as installed by the Wybro-Hendy Co., comprises a loricated iron armored conduit system, similar to that in the Crocker Estate Building, which provides against fire and enables the electric circuits to be easily changed or increased in power.

In the main corridor on each floor is located a distributing box, in which is placed a marble slab containing switches for each circuit and also safety fuses for each circuit. In all the rooms and corridors devoted to public use each chandelier is controlled by a switch, which requires a key to operate, consequently no one can turn the lights on or off, excepting the janitor.

* *

The Bothin Building.

New San Francisco of necessity cannot consist entirely of works of art, but there is no reason why its warehouses and factories cannot be referred to with pride. Among many new structures of this class, Mr. H. E. Bothin is erecting several; one in particular is on the corner of First and Clementina streets for the Union Gas Engine Co.

It will be a substantial three-story structure in dark red brick, with arched openings and a corbelled brick cornice. It will be a model of its class and will afford property owners an opportunity to inspect an improvement combining utility, economy and durability at the same time with appropriate architectural effect.

George W. Percy has the work in charge. The Union Gas Engine Co. has long been cramped in its present quarters and in its new premises will have room to take care of its rapidly expanding trade.

* *

California Art Glass Works

The steady increase in their business has caused the California Art Glass Works to move, very recently, into a new building on Second and Minna streets. They will hence forth be able to keep ahead of orders, a thing accomplished with much difficulty in the old, cramped quarters. Those who have followed the work of this firm do not marvel at its prosperity; those who have not should inspect its stained-glass windows in the Maria Kip Orphanage, St. Paul's and St. Mark's Lutheran Churches, Grace Episcopal, St. Paul's Episcopal, Howard and Westminster Presbyterian; St. Rose's, St. Brigdits and Holy Cross Catholic, and the Ohabai Shalome Jewish Synagogue. Their work, however, is not confined to churches. Some of the finest mansions in San Francisco, such as the Hellmann, Spreckles, Upham, Clinton Jones, Roos, and many more have windows made by this firm. It used to be the custom to send designs abroad or to New York for execution. Now, few orders are sent abroad, the work going to this firm, which charges less, takes less time and turns out only the highest quality of product.

* *

The Murphy Building.

The Electric System in the Murphy Building is also being installed by the Wybro-Hendy Company and embraces the loricated iron armored conduit and double rubber-covered, double braided, white core wire. It is the most complete make and in accordance with the latest practice for large office structures. Each office contains a center chandelier, controlled by a flush switch, located near the entrance door, and in the base boards in each room are two flush receptacles, from which the current may be tapped for either desk lights or small motors or other purposes.

* *

The Ashworth.

The Ashworth, on Mason street near Geary, is a modern lodging-house just finished to the order of Thomas Ashworth, ex-Supt. of Streets. It is a four-story modern building containing eighty rooms, with all conveniences as regards elevators, electric lights, basins and steam heat. It possesses the unique advantage of having sunlight in every room. The cost of the property is $80,000.

New School Buildings.

These plans are typical plans and are made to comply with the law governing bond issues, and are subject to changes by the Board of Public Works, and they embody the result of many years of practical experience in school planning, as well as the latest ideas shown in the modern buildings in the Eastern cities. The buildings are designed to be built in stock bricks and with terra cotta or stone trimmings, and slate roofs, and the aim has been to produce an architecturally pleasing building and at the same time to avoid any excessive expenditure on the exterior, and to use the money thus saved in making the interior of the buildings complete in every respect. In every building suitable rooms are arranged for the principal, for the teachers and for waiting rooms, and for libraries.

EIGHT CLASS PRIMARY:—Two sets of plans are made, one for a lot on the north side of the street; one for a lot on the east and west side of the street. Both plans show all the class rooms exposed to the south. Two stairways are provided for each building, and both yards and basements are laid down with bitumen. The playrooms are divided from yards by means of sliding doors; when these are opened it makes a covered yard.

GRAMMAR SCHOOLS:—The grammar schools are arranged with manual training rooms for both boys and girls, carpenter's shop, physical laboratory, cooking rooms, etc., and on the upper floors large assembly rooms are planned.

VENTILATION AND HEATING:—Arrangements have been made in planning these schools for putting in a modern scientific system of heating and ventilation, ample space being provided for running fresh and foul air ducts to all the rooms.

$1,400,000 amount of bonds voted for to complete above buildings.

A SUSPICIOUS CIRCUMSTANCE.—While a member of the Nebraska Legislature, C. M. Shrader, a Populist leader, made it a rule to oppose every bill that had to do with corporations. Whenever he arose to speak on one of those measures he invariably said: "I know there's boodle behind this bill, Mr. Speaker. I know it because I have been approached." This sort of thing went on for some time. One day Representative White, leader of the Democratic side, arose while Shrader was hinting at boodle and asked permission to ask the Populist a question. "I am perfectly willing to answer any question the gentleman may ask me," defiantly announced Shrader. White levelled a long lead pencil at the Populist. "Will you please tell this body, Mr. Shrader, what there is about you that causes all these fellows with boodle to approach you?"

x

HE WAS SO DIFFERENT.—During the early days of Populism, while Stevens of Furnas county was leader of the party in the Nebraska House of Representatives, he had many bouts with Church Howe, leader of the Republicans. One day Howe finished an attack on Stevens and the Populist party, and members and spectators anxiously awaited Stevens's reply. The gentleman from Furnas arose slowly and addressing the speaker said: "Mr. Speaker, I never look or listen to the gentleman from Nemeha but what I am reminded to Jesus of Nazareth," "How's that?" shouted Howe. "Because you're so damned different," retorted Stevens.

x

NO LONG PRAYERS FOR HIM.—Dr. Morrison, president of the Scotch College of Melbourne, in an unguarded moment invited a fledgling preacher to preside at the annual commencement ceremonies, which, according to rule, begin with a very brief prayer. The good young man prayed and prayed for about twenty-five minutes to the consternation and disgust of the audience. Subsequently he approached the Doctor and asked what he thought of the performance. "I am a pious man, sir," replied Morrison, "but that prayer was a dirty trick and I'll make it a standing order in future that no clergyman, not even the Archbishop of Canterbury, can pray at a Scotch College commencement for over two minutes."

x

BEECHER STILL BELIEVED.—In the Plymouth congregation while Henry Ward Beecher was presiding there was a woman whose harsh voice and long-drawn-out, dull discourses wearied the congregation. But Mr. Beecher was patient. At last he, too, reached the limit of endurance, and one evening when she sat down, after talking nearly half an hour, he arose, and in his deep tones said slowly: "Nevertheless, I still believe in women speaking in meeting." She spoke no more.

x

A SOFT ANSWER.—One evening, at a royal dinner party, while Great Britain was in the midst of one of the periodical war scares, Princess Mary of Teck, who had been puzzled at the inaction of the government, asked Lord Beaconsfield, who was then premier, "What are we waiting for, Mr. Disraeli?" The Prime Minister paused for a moment to take up the menu, and looking at the Princess gravely replied, "Mutton and potatoes, ma'am."

x

THE DISCRETION OF THE DUKE.—An inquisitive and indiscreet friend calmly asked the Duke of Devonshire, who is Lord President of the Council, what had been done at the Cabinet meeting that day. The Duke kept his countenance and replied: "The truth is Lord Salisbury is getting old and so am I, and as he speaks in rather a low tone of voice, and as I am rather hard of hearing, I can't tell you, my dear fellow, anything about it!"

x

NOT TRUE TO LIFE.—Mrs. Craigie, the brilliant authoress, was once asked by a friend if she thought true to life that passage in the *Quick and the Dead* in which the heroine, returning to her home after an interval of two years, finds a half-smoked cigar where her husband had left it, picks it up and kisses it passionately. "Well, hardly," was the reply, "the woman who would have done that would have eaten it."

x

THE MOST USEFUL TONGUE.—A teacher in a Paisley school, while examining his pupils on general knowledge, asked one small boy what was the most useful of modern tongues. The child looked bewildered. To suggest the answer the teacher put it in another way. "What is it," he asked, "that your elder brothers learn?" A light dawned on the little chap, and he answered. "Swearin', sir!"

x

SHAKESPEARE A SCOTCHMAN.—A prominent member of the Caledonian Society was asserting in a mixed gathering at Thistle Hall that all the great poets were of his nation. "Well, but," said an Englishman who was listening, "how about Shakespeare? You can't say he was a Scotchman." To this the other replied, "But his talents would justify the supposeetion!"

PALACE and GRAND HOTELS

For nearly a quarter of a century these Hotels have been the recognized headquarters for Tourists and Travelers visiting San Francisco.

Their popularity has been acquired by reason of their unique location (being accessible to wholesale and shipping districts and amusement centers), the peculiar excellence of cuisine and service, and moderate charges.

The Grill Rooms for ladies and gentlemen have an international reputation, and the recently added Supper Room is now recognized as *the* place to obtain after-theatre refreshments.

EVENTS CURRENT.

The British-Boer Conflict.

The war in South Africa is in the lull between the first and second stages. The early period, with the Boers fighting on the offensive on British soil, is now passed; the second, in which these conditions are reversed, has begun. It follows that, while the Boers are falling back upon their second system of defense, and while the British are resting, reorganizing and preparing for an aggressive campaign, there must be a lull in the fighting. The only important move of last week was Roberts's advance on Bloemfontein, the capital of the Orange Free State. He is now reported as being within striking distance of that city, having taken two hills commanding it. All along his line of march the Boers made a resistance, though by no means such a hot one as in the early days of the war, before the successive British victories discouraged them. The heaviest fighting was on March 11, when Kelley-Kenney's division stormed two strong positions, losing heavily, but inflicting great damage on the Boers, who left 200 dead in the trenches. The following day Roberts outmaneuvered the Boers waiting for him on the Modder 12,000 strong, outflanked them, and took the heights controlling Bloemfontein. This movement has no great military significance. The Free State capital is not a rich town nor one which has particular strategic value. The approaches are easy, and it was known that an army which once crossed the Modder and held Kimberley would have no trouble in taking Bloemfontein. It will be used as a base for the important operations toward Pretoria. In the other direction, General Buller is resting at Ladysmith and feeling out toward Laing's Nek and the other passes into the Transvaal. Already his advance-guard holds one or two positions just over the border, which means that the advance into Boer territory has virtually begun. In the future as in the past, the heavy work of the war will fall on Buller, who must push his way over the rough and difficult country where the British met their disastrous defeats in 1879 80. Mafeking is in a bad way—short of food and ammunition and stricken with disease. It is known that a division from Kitchener's force is trying to reach the town, but the censorship is strict on this point, and there is no way of estimating chances. Another matter upon which all information is shut off is a reported rising of the Cape Dutch along the borders of the Orange Free State. Dispatches from Boer sources report that the defences of Pretoria are being put into shape for a siege.

America Intercedes for the Boers.

The Boer governments have made their first confession of weakness and probable defeat, and our government has unfortunately been mixed up in the transaction. It appears that President Kruger has been seeking among the foreign governments for some one to convey his terms of peace to the British, and has failed. Turning at last to the United States, he obtained consent, and on March 13, President McKinley transmitted, through the American ambassador at London, the terms of proposed peace. It was not an offer of mediation, be it understood; McKinley simply acted as an agent in passing on the proposals. It is understood that the proposition was an offer to abandon the war provided the British would consent to leave things as they were before the war. Of course the British, being now the winning party, refused to consider the proposal. Lord Salisbury, receiving the offer verbally from Mr. White, gave a courteous but decided refusal. It is not likely that President McKinley relished this position, but, knowing that demagogue-led public feeling in this country is for the Boers, he must have realized that to refuse would be to go contrary to the wishes of the country.

A Puzzling Situation in Luzon.

The Philippine situation is a puzzle which cannot be solved at present by those on the ground, and much less by those the whole breadth of the Pacific away. Our silent, sullen people have mostly withdrawn out of our sight and touch, and no American can say whether they are gathering strength to overrun the island again when the rainy season makes travelling difficult for the Americans, or are really scattered. There have been some suspicious signs lately. For instance, General Young withdrew from the town of Legaspi, leaving a battalion of the Forty-Eighth as a garrison. Immediately they were surrounded by 1,200 insurgents, who wore out the garrison by night attacks, but withdrew upon the approach of reinforcements. It seemed as though these troops had been lingering on the outskirts of the American advance, waiting to cut off any stragglers. It is also reported that the red flag of the Katipunan, the symbol of insurrection, is being passed among the Togalas of that region, specimens being seized every day or so by our soldiers. In the other direction, an advance on the towns of Donsal and Bulan met with no resistance, but the inhabitants were found building trenches and fled upon the approach of our men. Captured individuals said that they had been ordered to make trenches, upon pain of death, by three insurgent officers who passed through the town, and had been told that the Americans tortured and killed natives. Upon learning that our troops were kindly-disposed, they accepted our rule willingly. A notable fact is the treatment now accorded American and Spanish prisoners. In the early days of the war, prisoners were given humane handling, probably because the natives hoped for European recognition. Now, the murder and torture of prisoners is common, and the assassination of soldiers who wander out of camp a daily occurrence. It is reported that very recently sixty Spanish prisoners were slaughtered at one time near Legaspi. In the main this is a sign that the insurrection is falling to pieces, since the natives would observe the rules of war were they under full control and discipline.

Legislation for Porto Rico.

If all of the great mass of legislation to be gone over by Congress this session makes as much trouble and causes as much discussion as the Porto Rican tariff measure, it is hard to see how our law-givers will get through with their work this year. As has been stated before, the House passed, after much discussion, the bill providing a reduction down to fifteen per cent of the Dingley Tariff, with the understanding that the Senate would incorporate this in the complete bill for the government of Porto Rico. But the Senate objected strenuously to this and the other features of the measure and favored a policy of inaction, with the result that Senator Foraker, its sponsor, was forced to declare that rather than see the matter laid over, he would lead a fight to have Porto Rico admitted as a territory on the same status as Arizona, New Mexico and Oklohoma. This action would involve, among other things, absolute free trade between the island and the United States. The proposition whipped the lagging Republican Senators into line. A conference was held and a compromise bill agreed upon. This does away with the proposed delegate to Congress, substituting a commissioner to Washington. All reference to Porto Ricans as citizens of the United States is eliminated, for fear of creating a precedent in the matter of the Philippines. The fifteen per cent tariff is to stand for imports to the United States from Porto Rico, but all exports to Porto Rico are to go duty free. The House bill returning to Porto Rico tariff moneys collected in the United States to the amount of $2,000,000, is to be incorporated in the Foraker Bill. This compromise, drawn up by the Republican leaders, will probably be adopted by the party caucus, in which event it is sure to pass the Senate. The House would most probably concur. Much time has been wasted over this comparatively subsidiary question, and the country is set to wondering how the important questions are to be settled this year. The session is over, and not a single measure of first importance has been passed. Our policy toward Cuba, a permanent government for Hawaii, the retention or abandonment of the Philippines, the Pacific Cable, the revision of Alaskan laws, have not even come up for debate, while the subsidy bill and the canal bill still hang fire.

A Conservative View of National Growth.

In May, 1898, Richard Olney, formerly Secretary of State under President Cleveland, contributed to the *Atlantic Monthly* a remarkable exposition of the foreign policy of the United States. This was written at the uncertain period when the war with Spain was declared but not yet opened, before Dewey had performed the first hostile act. This paper declared that we would make short work of Spain and that circumstances growing out of the war would lead us out of the infant stage and into a place among the Powers. Unconsciously, we have ever since been growing in the direction indicated by this paper. Therefore, at this period, when the things he has written have become fulfilled, the appearance of a second article by the same author on the same subject is a matter of uncommon interest. Besides this, it is worthy of note as an expression of the opinion held by conservative Democrats of the Cleveland school. Roughly, the position is between that of the administration on one hand and that of the Atkinsonites and Bryanites on the other, but with a leaning toward McKinleyism rather than Bryanism. In his paper, called "The Growth of our Foreign Policy," Mr. Olney commends the mingling of our government with the affairs of other nations and the reaching-out of our commerce, expresses regret at the obligation of a close alliance brought about by our mixing with Great Britain at the time of the Spanish war, advocates the absolute annexation of Cuba, and is bitter against the purchase and holding of the Philippines. The results of our expansion of thought and interest are shown in a change in our national mind toward other peoples. Before the historic year 1898, we were accustomed to belittle other people and to exalt our own nation to a ridiculous degree. We ignored the value of a navy, and let our merchant marine go to pieces. We held an illiberal and unintelligent attitude toward foreigners, and showed complete irresponsibility for anything done or written in their injury. Politicians not only followed but often led the public in this extravagant jingoism. The Spanish war and what followed has changed all that; already, we are growing broader and in every way more tolerant. The holding of Cuba as an integral part of the country is the best policy for both peoples. The promise of Congress not to hold the island after peace should be declared was made hurriedly and without due deliberation. A vote of the best and most intelligent peoples of the island would favor annexation. We could keep order in Cuba more effectually in every way were she a part of this country instead of a protected republic. The island has always been regarded as a part of the continent, and in absorbing it the United States does not depart from the isolation policy. It is far different with the adoption of a colonizing policy on a large scale as exemplified by our seizure of the Philippines. This point Mr. Olney discusses at length. In the first place, he declares that the relinquishment of our hold, even now, would involve no national disgrace, since we acquired almost the entire territory by purchase, not by conquest. Duty has been urged as an excuse for retention, but what duty forced us into the game in the first place? Honor has been urged—it was said that, having overthrown Spain in the archipelago, we were in honor bound not to abandon it. But, he declares, we did not overthrow Spain in the whole group at all, but only in Manila, acquiring the rest of the territory by purchase. The thing has been bungled all through. We blundered into possession, we blundered into a revolt. Now, we find ourselves holding nine millions of people of every sort of race-mixture, and trying to put down a dangerous insurrection. Our naval base in case of war has been doubled, a necessity has been created for a large standing army, and for no advantage except the doubtful chance of gaining by exploitation of the island resources. The "China trade" idea is all a chimera. All we gain China-wards is a chance to race with the other nations for a little Chinese commerce. But the thing is done, and, while it is not too late to back out, the temper of the American people is such that we will undoubtedly let the "Philippine incubus" remain on our shoulders. As for foreign alliances, it is impossible to take a place among the Powers. Washington's words: "Beware of all entangling alliances," should not prevent alliances which are temporary and not "entangling." Unfortunately, we have already virtually made one of the forbidden sort, through Great Britain's attitude in the Spanish war. Nevertheless, since this entanglement is with the strongest nation in the world, and one of like blood, language and institutions with ourselves, it is as strong an alliance of the sort as we could make.

Destruction of the Theatre Francaise.

A calamity which is felt by lovers of the fine arts everywhere was the destruction by fire on March 8th of the Theatre Francaise in Paris, the most beautiful and most famous playhouse in the world. The fire, supposed to be of incendiary origin, broke out in the afternoon, shortly before the matinee, when only a few people were in the building. Consequently there was only one fatality; Mlle. Henriot, a young and talented tragic actress, was burned to death. The art treasures, the priceless manuscripts and the relics with which the building was filled are almost totally lost. The Theatre Francaise has always been regarded as the dramatic center not only of France but of the world. The theatre, and the Comedie Francaise, the company of players who appeared in it, have had a continuous history of three hundred years. The company was organized in 1600, during the reign of Henry of Navarre. From Racine and Corneille down to Rostand, the greatest playwrights of France have given their plays for first performance to this band of players, and a position in the Francaise has ever been the highest ambition of a French actor. Moliere, the greatest name in the history of French drama, was for many years the director of the theatre and the company, and Napoleon and the kings of France have made it the subject of special favor. The French Government paid it a subsidy of $48,000 a year. The building was more than a playhouse. It contained the best work of many noted French artists. The spacious foyer and halls were lined with priceless paintings and statues, some of them being among the world's masterpieces. In addition, there was a famous library of manuscripts and rare prints, and a museum of theatrical relics. Very little of this was saved. The fire department was inefficient, and the only articles rescued were taken out by volunteers from the crowd assembled. The whole French people mourns the loss as a great public calamity.

The Missionary Question in China.

The conservative reaction in China, involving some strong opposition to the missionaries and their converts, has called renewed attention to the activity of the Christian missions in that country. Except for India, Christianity has made, for the energy expended, less progress in the Celestial Empire than anywhere else in the world. Many old residents of the Orient hold that there are two sorts of religion, "white man's and black man's," and that the supposed conversions of natives are pretended and done for "what is in it." An English merchant in the Chinese trade declared recently, to the scandal of the British missions societies, that the only real Christians made by our missionaries are the orphan children whom they bring up to Christianity. Residents of the Pacific Coast will believe this the more easily from their experience with the Chinese in San Francisco, Seattle and Portland. There has been continuous effort in the Chinatowns of those cities for many years, under conditions far more favorable than those in China, and yet only the smallest fraction of the Chinese have been converted. This point of view has recently been attacked pretty severely by an anonymous writer for a New York newspaper. It is plain that he is hotly prejudiced in favor of the missionaries, and is probably a missionary himself; nevertheless, his side of the case deserves a hearing. He contends that the work of the missions, while it makes no great showing in an immense population like that of China, has been of immense benefit. It is true that conversions have not been made wholesale, but judged by any standard we have, they have been sincere. The best proof is the fact that native Christians have not

hesitated to die for their faith. But the greatest work of the missionaries and the schools has been the elevation of the Chinese people and the preaaration for Western ideas. The mission schools teach the young Chinese the useful European sciences, while making no attempt to destroy such of the national customs as are not barbarous and unhealthful. The medical missionaries have done a great and quiet work. When they began, there was a tremendous popular prejudice against European medicine; now, the people are eager for treatment at the hands of the white doctors, and are learning that European ways of doing these things are superior. It is not true, as alleged, that the missionaries lead lives of luxury and enrich themselves by trading. The existence of a missionary is one of continual hardship, and most of them are in the straitest of circumstances. The Chinese have made this an issue of politics and render the life of these people unsafe, but they seek them in times of famine and plague. In conclusion, the writer insinuates that the white residents of China who slander missionaries, are the ones leading lives contrary to missionary teaching.

Collapse of a Greedy Strike. The fourth week of the big Buil lings Trades Council strike in Chicago opens with 50,000 men idle as a result of the movement. Of these, 40,000 are out because of the strike itself, and 10,000 are operators on material businesses paralyzed by the strike. These workmen are dependent for their living on what they have saved in past times, or on the $5 a week they draw from the treasury of the unions as an insurance against idleness. The carpenters have been drawing their $5 a week for the entire four weeks. The structural iron workers have also begun to draw on their treasury, while the hod carriers have already exhausted their surplus in the payment of "strike benefits." The total amount of money disbursed in this manner is said to be $500,000. Of the 50,000 now idle, 30,000 belong to unions which pay "strike benefits." Therefore, the payroll of the unions comes to $150,000 a week. This is a sum large enough to stagger the biggest corporation. These unaccustomed straits—for the Buildings tradesmen in Chicago belong to what might be called the aristocracy of the laboring classes—have shaken the spirit of the strikers. A number of them called on their business managers last week, and asked their influence in bringing about a settlement. An attempt to raise sympathetic strikes among the machinists of Chicago and the Buildings Trades of New York has failed utterly.

EDITORIAL COMMENT

The End in Sight.

EVENTS in South Africa have assumed a phase that was not at all unexpected by those who take a broad as well as a deep view of passing human affairs. It is a turn that must be a little disconcerting to those college professors who, but a few weeks ago, were standing cheek by jowl with Clan-na-Gael agitators and pot house politicians in predicting the early downfall of the British empire as a result of that "degeneracy" of the British military power which they foolishly imagined the Boer conflict had demonstrated. One can readily understand how Clan-na-Gael orators and demagogic congressmen fell into this error, but there is nothing in the facts to explan of how men of higher intellectual power were led away by such fantastic hallucinations.

It is now fairly well established the that Dutch republics—and more particularly that of the Transvaal—were secretly and assiduously preparing for the present conflict for some years past. With them, and under the inspiration of the Afrikander Bund, it was to be a race war which was to end in the domination of the Dutch Afrikander in South Africa to reduce the Anglo-Saxon element to a condition of political servitude that would have subjected them all to the oppressions, cruelties, robberies and indignities that have been for years past inflicted upon the Uitlanders of the Rand. What these were can be gathered from the very lucid statement of them recently put forth by Colonel John Hays Hammond, a native son of California, who has spent many years in that territory. They constitute a violation of every conception of human liberty and property rights entertained by the intelligent American mind. However, that is not the phase of the subject we are discussing here. The Boers chose their own time for beginning the war and their military plans contemplated a dash into British territory and the seizure of Durban. Against them was an inadequate force of British which had a hard task holding its own until the coming of reinforcements. With the arrival of Buller and the final detachment of the army of invasion the English at once assumed the offensive, setting about the relief of Ladysmith, a problem of great difficulty. For a time the advance of the relieving force was checked; there were serious reverses due to the natural conformation of the ground and the strength and energy of the Boer defense.

It was during those weary weeks, when Buller's brave men were so heroically and so tenaciously storming almost impregnable kopjes, that the ululations of the Clan-na-Gael. and its curious associates, over the decadence of the British soldier and the impending downfall of the British Empire became loudest. To be sure, the casualty list did not indicate any particular lack of the old time pluck and readiness to go up to glory in the van of a forlorn hope that has always been characteristic of the British soldier. However, conditions were changed when General Roberts and General Kitchener took the field. A bold plan of campaign was inaugurated, and we hear no more about the enervated Briton and the collapsing empire. On the contrary, Kruger and Steyn, with an avalanche of pious profanity upon their lips, are asking for impossible conditions of peace. This brings us to the final stage of this international farce-drama and compels the more thoughtful of our people to hope and pray for a cessation of the bathos, cant and misrepresentations which have befogged this conflict since it arose, Presidents Kruger and Steyn and the Afrikander Bund have played for high stakes and have lost. Were they the kind of men they have been represented, they would pay the stakes without a whimper. They issued an insulting ultimatum to the British Government, invaded its territory, besieged its cities, and now, after two weeks or so of reverses, are whining and begging other countries to mediate in their behalf. To such extremes has misrepresentation in regard to this Boer matter been carried that the idea was promptly bruited abroad that the friendly offices volunteered by our government was an intervention upon behalf of the Boers, and in some unknown way aligned the United States on their side. Such preposterous nonsense need hardly be discussed.

Obviously there can be but one way of ending this war, and that is by the submission of the Boers. It is not in the nature of things that the British Government should allow them to retain that semblance of national independence which they have misused so as to bring on the present war. They never were, as a matter of fact, entitled to an independent national existence, any more than the Mormons were when they "trekked" to Utah and settled around the great Salt Lake. The Boers were born as British subjects, as were their fathers before them for many generations. The land upon which their alleged republics stand was always within what is known in Africa as "the British sphere of influence." In other words, it was and is British territory. If they had conducted themselves reasonably well they would no doubt have been permitted to retain their semblance of national independence indefinitely; but for years past they appear to have thought of nothing except making trouble. It is not likely that the victorious British Government will allow them to retain rights that they have several times used to assail it with. And it is well for the world that this should be so. Under Anglo-Saxon dominion, as British colonies, the Transvaal and the Orange Free State will be open to the world. Boer and Briton and American and German will stand upon even terms. Under the Boer regime only the Boer and his slave could have existed within their confines. If the Boers had won in the present conflict a wall, like that of China, would have grown round South Africa. Darkness would have reigned, and even such an ardent Anglophobe as Max O'Rell admits that civilization would have gone back two or three centuries. The Boers, fortunately, have lost, and now they should pay the stakes without so much whimpering. It is the successful and not the defeated belligerent who dictates terms of peace.

The Plague Scare.

THE action of the Board of Health of San Francisco in quarantining Chinatown on suspicion is liable to prove the hardest blow the metropolis of California has had in many a long year. The dread tidings that the Oriental scourge had broken out was telegraphed the length and breadth of the continent and has inevitably diverted the flow of tourist travel headed in this direction. It has terrified the country merchant who is in the habit of coming to San Francisco with his orders and retarded the tide of local traffic which flows in and out of the city. To compute accurately the cost of the three days' quarantine is, of course, impossible, but it will be a terrible price to pay for a piece of official blundering. We have no doubt that Dr. Williamson and his associates were inspired by excellent intentions, but the exercise of very ordinary discretion should have taught them the value and intelligence of a more moderate course. The initial symptoms of bubonic plague are shared by other less destructive maladies and some days must elapse before the identity of the disease can absolutely be determined. It was entirely proper that the house in which the suspect had died should be quarantined, but it was misdirected zeal to put a cordon round the quarter. A reputation for strict attention to duty could have been established just as easily and the health of the city as thoroughly protected.

Whatever cost has been incurred, we must now bear the brunt of, and it is little use reproaching the men whose indiscretion has so libeled San Francisco. Their later investigations, which are being conducted along legitimate and intelligent lines, have revealed an unexpected degree of cleanliness and sanitary precaution in the Chinese quarter. Nor have there appeared any new cases characterized by suspicious symptoms. Indeed, the health of San Francisco and of the Chinatown region has never been better that at this exciting period.

Lotta Crabtree, the actress, who began life in a San Francisco concert hall, and who gave Lotta Fountain to the city to commemorate that fact, is living in Boston on the income from about $1,500,000 worth of real estate, all accumulated from her earnings on the stage.

Correspondence.

THE MONROE DOCTRINE.

MUCH heat is shown in many quarters over the alleged annulment of the "Monroe Doctrine" by the State Department by virtue of the provisions of the Hay-Pauncefote isthmian canal treaty. A closer view of the matter and a fair analysis will show the fallacy of such contention.

What is the "Monroe Doctrine"? Simply an unwritten law, which says, in effect, that no European nation shall be allowed to acquire territory by conquest, purchase or by cession, on the American continent. Does the Clayton-Bulwer treaty, or its re-affirmation in modified form as made by the Hay-Pauncefote treaty, give to England or any other European government the right to acquire territory in Central America? Certainly not. Then, how is the Monroe Doctrine involved? Assuredly, it will not be contended, because the United States government agrees to allow the ships, merchant and war, of European nations to have access upon equal terms to the projected Central American canal, that this would be in violation of the interdict expressed by the Monroe Doctrine. Neither is it reasonable to infer that the agreement on the part of the United States not to fortify the canal is interpreted as a waiver of the Monroe Doctrine. Then, wherein does it appear that a treaty neutralizing a commercial waterway to be opened through alien territory on the American continent by the United States government, is tantamount to annulment of the Monroe Doctrine?

It is parading a scarecrow on the part of the opponents of the treaty (and I believe the covert opponents of the canal), intended to frighten the credulous and timorous. But, when it is approached and closely scrutinized in the light of reason, it is found to be only a thing of straw, without animation, and totally harmless.

But just a word as to the vitality of the Monroe Doctrine. It is very questionable whether that unwritten law survives vested with sufficient potentiality to interpose as a barrier against would-be aggression or encroachment by European powers upon the American continent. That erstwhile barrier has been unceremoniously dumped into the Pacific ocean by our own government's act.

Have we not, as a nation, crossed the Pacific, and, without so much as asking leave of the nations of the Old World, planted our standard and staked our western boundary at the gate of the Orient?

If we had and have the right to do this, may it not be that the nations of the Eastern Hemisphere will claim equal right to plant their standards and stake their boundaries upon the American continent? And will they not charge us with gross and unwarrantable presumption if we undertake to invoke the Monroe Doctrine? To do this most effectually, we have only to act in good faith with England and all other European powers by giving each and all of them access to the canal upon equal terms. And let us not seek to turn Nicaragua and Costa Rica into a possible battle ground by erecting fortifications at the termini, and at intervals along the course of that canal, when, if ever, it is digged. We would destroy the peaceful neutrality of that most valuable commercial waterway—that short cut-off between the two oceans—by bristling its banks with big guns.

This should not be done. It would be uselessly expensive, and would give the lie to our protestations as a people devoted to conserving the world's peace.

JOHN AUBREY JONES.

MR. JOHN STANTON of the Park Commission is in a curious position. He is the artist member of that body, it being required by law that one of his profession should sit as a member. Yet his vote caused the rejection of the Aikin fountain for Union square, the gift of Mr. Raphael Waill. Had Stanton voted against the gift on the grounds that it was bad art, he would have been consistent in his position; for tastes differ, and, notwithstanding the fact that Mr. Weill is one of the best judges of art in the west, others have a right to take exception to his opinions. But no, Stanton's objection is that the group of nude figures is "immoral." We have fondly supposed that painters, of all people, long ago recovered from the idea that simple nudity is unchaste. We have been taught to believe that, so long as an undraped figure holds no attitude which is suggestive or lewd, painters and sculptors universally regard it as proper for general exhibition. We have even read in a book by one Du Maurier, an artist and author, that "there is nothing so chaste as nudity." Mr. Stanton has reversed this decision. He has announced that a group which is not suggestive or subservient of public morals in any way except in being "undressed," is unchaste and unfit to be erected in Union square. We commend the artist member of the Park Commission to the attention of the Salvation Army people in New York who destroyed the beautiful Heine monument because there was a nude mermaid thereon.

The nasty French boulevard sheets which are keeping up their circulation, now that the Dreyfus affair is dead, by damming everything English, profess to see in the execution of Louise Masset, recently hanged in London for the murder of her child, an attempt of Chamberlain to revenge himself on France. M. Edouard Drumont, the anti-Semitic leader, write as follows in his paper, *La Libre Parole:*

"Yes, we can affirm it; the execution of Louise Masset is the revenge of England for the joy with which France has received the news of her defeats; it is the revenge of Chamberlain, this hatefully vulgar fellow, who has a woman hanged, not being able to have the French hanged en bloc. * * * The persons who thundered against the French General Staff and courts-martial, and who called for the punishment of Jehovah to fall on the French people, did not find their hearts beat—if they have any—the slightest in the world at the thought that this Papist could be innocent, and at least was worthy of compassion."

An admirable instance of "cheery stoicism" is found in the letter of a private in the Coldstreams, now lying wounded at Wynberg, describing his experiences in the battle at Modder river: "I happened to find a bit of looking glass. It made a rare bit of fun. As it was passed from comrade to comrade, they said: 'Have a last look at yourself, my boy, and bid yourself good-bye.' Then 'Advance!' and we were at it again."

CHARACTERISTICS OF THE TIRURAY RACE.

IN FERTILE MINDANAO.

MEN, WOMEN AND FESTIVALS.

OF the multitude of races inhabiting our new possessions in the Eastern seas, there is none more interesting or more admirable than the Tiruray people, who dwell in Mindanao, the second island in size of the Philippine group, and the one most tractable under Uncle Sam's rule. The Mayas of Cebu, with their alleged Arab origin, are perhaps more interesting from a spectacular and theatric standpoint, but the Tirurays are the possessors of a body of customs, traditions and observances which render Mindanao a fruitful source of material for the ethnologist and the romanticist. Indeed, there is fame and profit awaiting the scientist who will study the peoples of the Philippines. Here, as in an eddy of the Sargossa Sea, a great drift-heap of races has been piled up; it is the world's scrap-pile. The Spanish rule, which was lazy and time-serving in all things, did not favor scientists, consequently they never learned any more about "their silent, sullen people" than they knew in the beginning, three hundred years ago. With us, I hope, it will be different.

The Tirurays inhabit the mountains in the southern portion of Mindanao. Many parts of their country have never known the pressure of a white foot. The region is probably the most beautiful in the islands, magic Negros not excepted. Nowhere is there such a combination of noble lowlands, clear waters, and picturesque mountains. The northern boundary of their domain is marked by the Rio Grand de Mindanao, a wide and peaceful river; from this, their land extends south over the mountains and far inland. Their next neighbors are the warlike Moros, who made the only trouble the American army has experienced in Mindanao. The Tirurays are not especially belligerent, although they are said to fight well when put on the defensive, but the wild and impregnable nature of the country has saved them from encroachment.

In appearance, these people differ from any others encountered by the Americans. They are the largest race yet discovered, and the nearest to Caucasians in features and complexion. Nevertheless, their slightly almond-shaped eyes, coarse black hair and thin lips would indicate a probable Malay origin. They are very light-skinned in youth, before their outdoor life has tanned their faces, and the slight coloring is brown rather than yellow, as is the case with the Tagalos and the Moros. Their nostrils are wide, but their noses are well shaped and little flattened. The women are almost universally handsome; some are really beautiful, even from a Caucasian standpoint. Quite tall, stalwart, with deep, black eyes, erect carriage and good forms, they keep their charms even to middle age, a rare thing among tropical races.

The men have no typically national costume. They are generally clothed from shoulder to knee, however, and frequently in scanty clothing of European cut. The women have a costume all their own. Their long, black hair is wound around the head and bound up by a gaily-colored kerchief. Over her broad, deep bosom the Tiruray belle wears a tight-fitting waist of any bright tint; below this, two skirts, wrapped tight around the hips, drop to the knee. She is fairly loaded with cheap jewelery. From the wrist to the elbow, dozens of bracelets cover her forearm; similarly, a set of anklets interfitting like chain-armor conceal her brown skin from the knee to the ankle. A bead necklace of many strands is wound around her neck, and a broad, brass girdle, drawn tight like a corset, encircles her waist. In the lobe of each ear is set a wooden button, and from one of these to the other, under her chin, runs a heavy string of beads, interspersed with little teeth of mother-of-pearl. I have before me one of these strings, brought back from Mindanao by Mr. Coleman of the Manila *American*. It must weigh over a pound, and would be a heavy load to carry around by the ears. But this is not the only weight they carry. Over the shoulders fall other strings of beads, even heavier than the chin-strap, and all pendant from the button. As the women bring their water-jars to the springs, in the early morning, you can tell their approach by a tinkling and clatter, as from a thousand tiny bells, made by their anklets and bracelets and by their beads.

Polygamy is allowed, but monogamy is the custom. Like all tropical people, the Tirurays mature early and marry early. As with the East Indians, little boys and girls are often mated and then kept in their parents' homes until they grow up. The marriage ceremony, among those who do not profess Christianity, amounts only to an agreement, which is sacredly kept. For dowry, the bride receives hundreds of bracelets and anklets and a few household necessities. Wives are well treated, except that they are required to do all but the very heaviest labor.

They are a poor people, desperately poor, but happy, in a savage way, or were, until the unsettled conditions of the Tagal rebellion brought famine. It is a rich country, with enough natural resources to make life easy without much work. Had they been taught to cultivate the fertile soil, the Tirurays would have been a wealthy people, and would probably have suffered for it by stirring up the cupidity of the Moros. As it is, they have been contented to live on wild herbs, on the products of fishing and the chase, and on the proceeds of barter in the gums, herbs, spices and timber of their rich mountain lands. The men are famous hunters and fishermen. They use firearms but little, depending mostly on bows and arrows. The recent famine, which has kept the Tiruray people on the verge of starvation the past two seasons, was caused by the Moro uprising. The people fled to the hills, and missed one year's trading. But for the abundance of wild game, the death rate would have been heavy this year. Of rice, the staple food, for which they barter their gums, spices and woods, there has been none at all, and even sweet potatoes, another staple, have been scarce.

Their dwellings are built on piles, some ten or twelve feet above the ground; hence the origin of the name "tree dwellers," by which the Tirurays are known to the other island people. There is no regular and approved form to these houses, each seeming built to suit the individual fancy of the owner. They are woven in basket form of bamboo, floored with smoothed logs, and thatched, water-tight, with fibers of nipa palm. A Tiruray village, made of a cluster of these houses, looks like the nests of some flock of gigantic birds.

Their most distinctive custom is a weekly "tianggui," market festival. The proselytizing of the Spanish friars, while it has made little impression on this people, has taught them the grouping of days into weeks after the Christian manner. This market is held on Mondays. Mr. Coleman, who attended one of these festivals on his recent visit to the chief town of Tiruray-land, thus describes it:

"After a refreshing night's rest among the cool foothills, following a successful deer hunt in the evening, the morning found me stirring long before the glorious sunrise painted the magnificent mountains those marvelous shades and colors which are so infinitely beyond the human power of description or reproduction. I accompanied my guide to the banks of the 'Brazo Sur' or south branch of the Rio Grande river, down which we were to find our way to market. Frequent canoes and native boats, all headed down stream, showed that many others were on their way to the same destination. Two or three miles from its mouth the southern arm of the Rio Grande assumes a width of from two to three hundred yards, and rushes seaward when the tide is running out with a fierce velocity. The stream contains many alligators, some of which grow to an enormous size.

"The boat provided for the journey tianggui-ward was a dug-out canoe, thirty-five feet in length, made from a tree trunk not more than two feet in diameter. As we neared the scene of the tianggui, more than two hundred native boats of all sizes and descriptions could be seen moored to the river bank. The market place was situated directly across the Rio Grande from the town of Jamontaca, and from the tianggui the little miniature fort at that place could be seen guarding the river front.

"The Spanish maintained a garrison of less than a score of soldiers in Jamontaca, but the little band need not have feared an attacking party of twenty times their number, for Jamontaca needs but a handful of stout hearts inside its solid walls to make it well nigh impregnable. The thick walls of stone and cement surround an enclosure thirty yards square, around which runs a moat, at high tide full and at low tide never dry. A little drawbridge forms the means of ingress and egress to the stronghold.

"From the river's brink across the stream from the fort to the base of the foothills a few hundred yards distant, was the location of the tianggui. The gay garments of the assembled hundreds, among whom were Tirurays, Moros, paisanos and Chinese, formed an apotheosis of color. Tianggui-day in the land of the Moros—for the tianggui is of Moro origin—is comparable to Sunday on Coney Island. Few feasts or holidays are observed by the Tirurays, but the weekly market gathering gives Monday the tone of a fiesta day. Nearly everyone who attends the tianggui brings something to sell, but the social side of the event is also largely responsible for the attendance.

"The first department which demanded my attention was the fish market. It was not hard to find. In fact, I found it difficult to escape. The dreadful odor of decaying fish filled the air, no matter in what part of the market one might seek to avoid it. The Chinese, with cloth and other products of the outside world, conducted the bulk of the business. Gambling was carried on to a considerable extent, and the sight of a woman 'bucking the tiger' was not an infrequent one. Rice, maize, sweet potatoes, native beans, cocoa nuts, bananas, tobacco, betel nut, and many other products of the country could be found on sale at the tianggui, as well as horses, cattle, caribao or water buffalo, chickens and ducks. While kris and bolo could be seen in great numbers among the men, lance and bow and arrow were the more common.

"The tianggui lasts from daybreak until the sun approaches the meridian. By noon the market-place is abandoned and the people are well on their way to their homes.'

WRANGLERS

THE GREAT MATHEMATICAL TRIPOS AT CAMBRIDGE.

EVEN in this time of war and trouble, Englishmen have found time to become excited over an attempt to abolish the "senior wranglership" at Cambridge. It may seem, doubtless will seem, peculiar to an American to hear of all England becoming interested in a struggle over a single academic honor. To understand this, one must understand how thoroughly the two universities are intertwined with the social and civic life of the British Isles. There are other universities in England, many of them, but they are not *the* universities. Oxford and Cambridge are the gateways to preferment in the professions, the recognized homes of all the great English scholars, the centers of all culture and all high thought in England. They are supported by the government and by the church. Their word is as the word of the Pope in matters of learning. The influence of their graduates upon English thought is so great that any movement which gains headway among their students is sure to become a strong factor in the nation within a decade. It is not accident that the High Church reaction is called the Oxford Movement.

Therefore, any change in policy in either of these great seats of learning is a matter of vital interest to the enlightened and educated part of the population. They have argued the question these many months, and, now that the professors and fellows of Cambridge have sat down, with emphasis, on the proposal to abolish the time-honored senior wranglership, there is joy among the conservatives and grumbling among the liberals.

Probably a majority of Americans will ask, "What is a senior wrangler?" Primarily, he is the man of his class who takes the highest honors in mathematics. Since Cambridge makes mathematics a specialty, this means that he has taken the highest scholastic honors given by the university. It is equivalent to being a valedictorian at Yale. In the colleges at Cambridge, the honor system is carried out to its logical conclusion, and virtually divides the whole body of students into what an American student would call "grinds" and "bummers." That is, the students who come up primarily to study, "go in" for the right to append to their degrees "A. B. *cum laude*." The others, who are there partly to study and partly for the atmosphere and the social advantages and the *cachet* of a university degree, study for the plain and simple "B. A." And among the hard students, the "digs," the "grinds," the "polers," the undecorated degree is a disgrace. Honors are given in other branches than mathematics—in the classics, in history and in natural science—but these are little sought as compared with the coveted honors in mathematics.

Reverence for the Cambridge "tripos" in mathematics is world-wide and world-deep among parents and school-masters in all the length and breadth of England. For it is a scholastic honor whose only approach in America is the captaincy of the championship eleven, and that is but a faint comparison. The senior wrangler's name is proclaimed through the length and breadth of the land; he may, if he choose, be lionized in society; any teaching position in great Britain is open to him. When a school-boy shows any exceptional aptitude for mathematics, his teachers and tutors immediately pick him for a possible wrangler. Then begins for this luckless, lucky youth a ten-year course of training such as no American lad ever undergoes. The boy who is to be senior wrangler must give up everything but study from the time he enters preparatory school until the day he takes the "tripos" or final examination for mathematical honors. No play, no outdoor exercise, no outside reading, no study on other subjects except just enough to enable him to get through with them. He is in the process of making himself a mathematical machine. It is a sort of "survival of the fittest" process. Many of these embryo wranglers ruin their health, and many more find their minds giving way under the strain and cease in time to prevent insanity. And yet, in spite of these risks, a mere hint from a teacher or tutor that there is the making of a senior wrangler in a boy is enough to persuade his parents into taking the risk. For with us, scholastic honors are always regarded as looking forward to the world of action; it is for what he may become, not what he has accomplished in college, that we honor a valedictorian. But with the English, senior honors in mathematics and classics are sufficient unto themselves.

Once at Oxford, the undergrad. who is looking for honors places himself under a high-priced tutor and continues the cramming process. Coaching for the "tripos" has long been known among Cambridge dons as the best-paying branch of their business. It is an employment which requires a special aptitude, however, and but few succeed in it. One Routh of St. John's is the most famous "tripos coach," and he makes an enormous income. He takes his "cubs" in batches of fifteen or twenty, and will admit no one who does not give good promise, for fear of injuring his own reputation. Day after day, the coach wrestles with his students, sharpening their wits, drumming into them every trick and dodge in the game. And at last, after three years, or perhaps four or five years, of this sort of thing, the senior wrangler goes, with some four-score others who have passed the preliminary ordeals, to take his "tripos." The test lasts a week, each day's work being harder than the last. The questions include the matter ordinarily set down in text books, and "originals," or problems which the candidate must solve by his own formulas. Anyone who goes up for this examination is supposed to have the book work letter-perfect; a slip in this part would be inexcusable. The real test comes in the solutions of the "originals." These problems have been planned for fiendish insolubility for a whole year, by the "moderators" in charge. It is rare that any candidate finishes his paper in the alloted three hours. It is recorded that Strutt of Trinity, in the examination of 1865, finished and left each day before time was up. The other candidates took this as a proof that he was going to fail. On the contrary, he had taken the wranglership by one of the most brilliant papers ever handed in at a "tripos."
